It's a pleasure to note that several organizations recently have paid public honor to a mild-mannered man at Fargo by the name of Ed Haslerud.

These honors come as it becomes public knowledge that Mr. Haslerud will be retiring this year as director of the North Dakota Extension Service. A month ago the Northwest Farm Managers handed him an accolade when they recognized him as "Pioneer of the Year." This week the North Dakota Council of Homemakers presented a gift.

The term "pioneer" fits Mr. Haslerud's career in agricultural extension work quite well. He has been a worker in agricultural education since 1917, and has been associated with the extension service in our State for 34 years. In that period farm extension work in North Dakota has grown up with the country. It was still a new and struggling agency, feeling its way to the confidence of practical farmers, when Mr. Haslerud became one of its able advocates. Extension work has burgeoned into a farflung and considerably specialized organization, gaining general acceptance through the service it has rendered, in the 30 years in which he has been on the North Dakota staff.

In no small degree the acceptance that extension work has gained during Mr. Haslerud's directorship is due to his even-tempered, fairminded view of North Dakota and its agricultural problems. To the best of our knowledge, all farm groups and factions in the State have agreed that Mr. Haslerud has been motivated by a sense of fairness to all, and by a spirit of public service.

In Ward County we have benefited from the fact that we had opportunity to become well acquainted with Mr. Haslerud early in his career, while he worked here as county agent.

Italy Today and Tomorrow

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. SIBAL. Mr. Speaker, this year Italy is celebrating her 100th year as a unified, modern nation. The following editorial from the Saturday Review gives an excellent picture of the strength and progress of this valued partner in the free world. It was written by James D. Zellerbach, former U.S. Ambassador to Italy:

ITALY TODAY AND TOMORROW

(EDITOR'S NOTE: The following guest editorial is by James D. Zellerbach, who retired last month as Ambassador to Italy after having served in that post since 1957. Mr. Zellerbach, president of the Crown Zellerbach Corp., succeeded Clare Boothe Luce as Ambassador.)

Within the century since the establishment of modern Italy, no single period of development has produced more dramatic changes on this endlessly fascinating peninsula than the past 15 years. From the most destructive war in its history, Italy is not only emerging as an industrial nation of the first rank; it is also enjoying a major cultural renaissance whose impact extends far beyond its frontiers.

The Italian economy, stimulated after the war by American aid, has been expanding at the rate of 6 percent a year, well ahead of the rate of population growth. Due to the classic economic disparities between different regions of Italy, this expansion has been largely concentrated in the north, especially Piedmont and the Po Valley. It is the north that has provided much of the impressive statistical evidence and tempo of Italian economic growth, such as the doubling of Italy's national income in the last 10 years, the favorable blanace of payments, and the soundness of the lira.

But the south, the Mezzogiorno, the object of countless official investigations and false starts, is beginning to shake off its past of impoverishment and neglect. The Cassa per il Mezzogiorno, or Fund for the South, is providing a broad range of incentives to stimulate agricultural production and industrialization in Sicily, Sardinia, Apulia, Calabria, and the other southern provinces. New highways, railway lines, and electric power systems, including nuclear power stations, have been built or are under construction. Petro-chemical plants are rising at Brindisi, Gela, and Syracuse. Taranto will soon be producing steel.

The Cassa also performs the unique function of financing archeological excavations, in some cases combining slum clearance with the resurrection of Roman provincial cities—a novel form of urban renewal. This is not as farfetched as it sounds. The Italian Government is vigorously promoting tourism, now a $500 million industry in Italy. If the south is poor in natural resources, its wealth in antiquities is a major attraction to visitors from other countries.

Up to now, however, the Cassa has not appreciably narrowed the economic gap between southern and northern Italy. The northern industrial centers have benefited from its investments along with the south, since they have been busy manufacturing the tools for southern industrial expansion. But there is at least the possibility now that the cumulative effect of development in the Mezzogiorno will generate the spark of regional economic self-propulsion.

Because of its depressed areas, Italy continues its long struggle with unemployment and underemployment. The high rate of growth has absorbed new people coming into the labor market, and unemployment in recent years has dropped from 10 to 6 percent of the labor force. But the economic misery of the nearly 2 million Italians who cannot find work is tragic reality of contemporary Italian life. There was a time, however, when Italians despaired of ever finding a decent living for their whole population within the limitations of their economy. Now, almost for the first time in history, no Italian need regard himself as permanently surplus to the needs and resources of his country.

The confusions of Italian political life continue to baffle the foreigner, and I suspect not a few Italians. The Italian political spectrum has not been substantially altered by the country's economic expansion and rising living standards. Of the democratic forces, the Christian Democrats form by far the largest single party. However, they do not constitute a majority in Parliament and are themselves a coalition of various factions. Unless the situation changes, the Christian Democrats cannot govern without outside support, and none of the smaller democratic parties can form a government without them.

The Italian Communists are still the largest Communist party in the free world, and have the second largest representation in Parliament. To keep their electorate today, however, the Communists have to follow, not lead it. Both in politics and the labor movement, where they are deeply entrenched, the Communists now try to present themselves as the advocates of mild reform rather than of violent revolution.

The Nenni Socialists have indicated that they intend to break away from the Communists and follow an independent line. But much remains obscure about their real intentions and the ability to implement them. On the extreme right, the Neo-Fascist Party is impotent and isolated.

The persistence of the large Communist and pro-Communist vote in Italy is a source of concern and puzzlement to many observers of the Italian scene familiar with the goals of leftwing totalitarianism. There are many theories to explain it, but the roots of the problem go fairly deep and are primarily historical: the reaction to Fascism, past disunion and misgovernment, anticlericalism, the traditional influence of Marxist concepts, especially the idea of class struggle. If all this seems vaguely irrational or anachronistic in light of present-day realities, let us be broadminded enough to lament outworn prejudices in our own country which strike Italians in much the same way.

We should remember, too, that throughout the 100 years of modern Italian history, Italians have never known a period of prolonged political stability. It is probable, therefore, that the historical factors and current tensions underlying political extremism in Italy will be softened by time, the continued improvement in living conditions, and the practice of political democracy itself.

The United States can contribute much to political democracy and economic progress in Italy by its firm support of Italy's determination to remain free, and by continuing to merit Italian confidence in our own Government and people. By mutual understanding arising from deep historical associations, as well as by formal treaty obligations, we are permanent partners and allies. It is clearly in our interests that a free Italy develop its own path as a member of the European Community and the Atlantic Alliance.

No sober study of the total Italian situation would minimize the problems still to be solved. What is important is that the Italian people, through their own hard work, irrepressible originality, and individuality, have now achieved a forward momentum toward greater social and economic progress that justifies high hopes for the future of their country.

In Italy, with its infinite variety of people and landscape, its ability to renew itself out of a past of incredible richness, its creative genius and humanity, the visitor finds the world in microcosm. The country, as always, draws the stranger from a distant land as though to his own home, which in a larger sense is what Italy represents for millions of non-Italians. With the creative energies of Italy fully utilized in freedom,

there are no limits to what the Italian nation and people can accomplish. The United States has joined with Italians and other free peoples to protect their right to have this great opportunity.

Girl Scouts of America Observe 49th Anniversary

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. WILEY. Mr. President, the future offers great promise and challenge. Our best hope for effectively fulfilling our potential for the future of our youth.

The Nation—if it is to benefit to the maximum from our youth potential—needs to design more effective programs to channel the talents, energies, imagination and ingenuity into creative, not destructive, activities.

Unfortunately, there is a minority of juveniles who, by their antics, reflect unfavorably upon the character and moral fiber of all of the Nation's young folks. This is a tragedy.

The Nation cannot afford to waste its most precious asset—youth. To the contrary, constructive programs are needed, not only for dealing more effectively with delinquency, but also for broadening youth development programs for our fast-expanding population.

Over the years, a number of organizations have been created to channel the talents and energies of our young people. Outstanding among these is the Girl Scout movement. Organized in 1912, the Scout movement—founded upon the theme, "Honor the Past—Serve the Future"—continues to be one of the outstanding youth programs in the country.

Recently, the La Crosse Tribune published an informative article on the progress and programs of this fine organization.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE 49TH ANNIVERSARY OF GIRL SCOUTS OBSERVED

The Girl Scouts of the Riverland Council this week are celebrating the 49th anniversary of the founding of the Girl Scouts of the United States with the theme "Honor the Past—Serve the Future."

Local Girl Scouts will join 3.5 million girls and adults across the country in commemorating the organization of the first troop in Savannah, Ga., by Juliette Low on March 12, 1912.

Mrs. Donald Hansen, president of the Riverland Council which is a Red Feather agency, in explaining the theme for the anniversary said, "We not only encourage girls to become familiar with their own heritage and the origins of Girl Scouting but we help them to prepare for future roles as homemakers, citizens, and professional workers."

Each day of Girl Scout Week has been given a special designation. These will be marked by activities within the troops and displays in various store windows in the area.

Sunday will be devoted to duty to God; Monday, homemaking; Tuesday, citizenship; Wednesday, health and safety; Thursday, international friendship; Friday, arts and crafts; and Saturday, out-of-doors.

The 49th anniversary is a part of a larger observance of the birthday years which began March 12, 1960, and will culminate in 1962 with the observance of the 50th anniversary of Girl Scouting.

The birthday years have been divided into five areas of emphasis. In 1960 founders of the National Girl Scout movement were honored as well as early adult workers locally. October 31, 1960, was the 100th anniversary of Mrs. Low's birth.

The second area of emphasis is "Yesterday's Girl Scouts—Today's Career Women." Through a girl's experiences in scouting and from vocational counseling during her senior Scout years she will be better prepared to serve her community as an adult in the future.

"Heritage Hikes" is the area in which a Scout honors the past by exploring the history and culture of her community. Troops of the Riverland Council are planning trips to various homes and spots of historic interest in the region.

Parks and recreational areas throughout the council will be ablossom with golden flowers through the efforts of Scouts to mark their golden anniversary in late summer 1961 and in 1962.

The last area of emphasis "Serve the Future," will be centered on community service. Projects in this phase are in the planning stages but will probably be centered on service to children of the community.

Americanism Preferred

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. THURMOND. Mr. President, Mr. Allston Calhoun, a descendant of the great John C. Calhoun, presents a weekly radio program to a number of listeners throughout the southeastern part of the United States. On his program recorded for delivery the first week in March 1961, Mr. Calhoun has presented a very interesting program on an outstanding American, Mr. H. L. Hunt, of Dallas, Tex. I ask unanimous consent that this radio script be printed in the Appendix of the RECORD.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

AMERICANISM PREFERRED

(Script of radio show, delivered by Allston Calhoun over radio stations in the Southeast, Mar. 4, 5, 7, and 8, 1961)

Hello, folks, this is your "working man's friend" speaking with you on "Americanism preferred."

With the birth of every child in America another potential President of the United States comes into being. If this child does not wish to become President but instead wants to become a doctor, a lawyer, a teacher, a preacher, a businessman, a scientist, or take part in any other walk of life, it is his election to do so. In fact, the American-born child can choose the course of his future, even in his primary school days, as many of them do; or else, having once chosen a career or profession and even after having embarked on same, he may choose to follow a different career or profession, which he may decide is better suited to his God-given capabilities and energies.

This equality and independence of opportunity is by far the leading factor which, up to now, has made of America the greatest nation the world has ever known and also the most pleasant in which to live.

As concrete proof of the statements we have just made, we need only cite the lives of such men as Abraham Lincoln, who was born and lived in the utmost poverty, and yet became one of the greatest Presidents our country ever produced. By far the larger percentage of our great business and professional people were born to the humblest of circumstances and through their own God-given abilities and willingness to go the extra mile in the way of industry and work, achieved top ranking prominence and position in their chosen profession or business. More than this, many of our present day most outstanding professional and businessmen changed careers in midstream, so to speak, thus achieving what is fabled to be impossible, in bringing about the complete fruition of their lives in this land of opportunity and independence. Of a truth, America is indeed a land in which the seemingly impossible can be transformed into the possible. This freedom and independence of operation enables man to hitch his spirit and his soul to the divine power, which is often referred to as "hitching one's ladder to a star."

These facts are something that every young American, even every very young American should keep uppermost in his mind. In helping to impress this on our youngsters, your "working man's friend" is going to tell you today something about the life and career of an American, born in the ordinary circumstances of the average American home, even as you and I, and who, in this land of opportunity, has achieved great wealth in the business world and real greatness in his ideal of service to his fellowman which he carries along as a joint and companion career of perhaps equal importance to his business career in which he has achieved such distinction. In the true American tradition, this great American actually did achieve the fabled impossible by changing careers in midstream, when, through no fault of his own, he found that the career on which he had originally embarked was not giving him the complete expression in life that he longed to achieve. I am referring to H. L. Hunt of Dallas, former large-scale planter of the Southwest, who in the midstream of his career changed his interest and activities to petroleum to bring in a flood of wealth which has made him, reportedly, one of the richest men in the world today.

But don't think for 1 minute that achieving this position was easy by any means. Far from it. In fact, had it not been for Mr. Hunt's willingness to face adversity and go the extra mile in learning everything he possibly could about his business and doing everything he could to put it across he never would have achieved the position he has today in spite of the fact that he is endowed by God with one of the keenest minds in the entire business world.

Interestingly enough, after achieving his position of wealth in the oil industry Mr. Hunt has returned in part to his first interest—agriculture—and has become one of the most outstanding planters both of row crops and trees as well to be found on the North American continent.

But what has made this man distinctive from the major portion of the business world

and the factor that has lifted him far and above the ordinary walks of life is the interest he shows in his fellowmen and his active participation along these lines, which, as we said before, is carried along on an equal footing with his business activities. In fact, his interest and activities in behalf of his fellowmen take a considerably larger portion of his time and thought than do his business activities which, to a great extent, he has now turned over to his sons and to an excellent business structure known generally as the Hunt Oil Co.

It is this interest in the welfare of his fellowmen and in the future security of his country that has transformed Mr. Hunt from simply another man of vast wealth to the great man which he is today.

On this point, your "working man's friend" wants to give you a quote from the Houston Chronicle written by Sigman Byrd, entitled, "Ex-Poorboy's More Realistic Utopia Has Low Tax Ceiling." In this as the "ex-poorboy" he is referring to Mr. Hunt and the book written by this "ex-poorboy" outlining some of his own ideas and principles upon which he, himself has lived and which would certainly be conducive toward making more of a Utopia out of our own United States of America. Or rather still, in his books Mr. Hunt would help his fellowmen to find their Utopia by outlining to them some of the principles and ideas upon which he has lived. We quote Sigman Byrd:

"H. L. Hunt, of big Dallas, was the richest man in the world until the news magazines and the Yankee press bumped him to second place and named George Getty top dog. Hunt was supposed to have started out as a broke cotton farmer in 1921 with barely $50 to his name. His present income is said to be about a million clams a week.

"Ever since the news columns announced late last year the publication of a book written by Hunt, I have been waiting for a review. Here it is almost Washington's birthday, and I still haven't seen a review.

"Wondering why, I checked the file on Hunt. There wasn't much. A shy man, for all his billions, the reports said. Further, most of the stories from the news magazines and the Yankee press were slyly uncomplimentary. Too rich, they suggested. And worse.

"Then a man I know who works for a Hunt enterprise, and happens to be a member of one of the minority groups that Hunt is supposed to hate, gave me a copy of his boss' new book, 'Alpaca.' He laughed at the notion that H. L. Hunt was a minority hater, declaring that he, at least, had certainly enjoyed a happy association.

"So I read the book.

"Alpaca is a fictional country with a new and unique constitution that in many ways resembles the U.S. Constitution. Here are some of the ways in which it differs:

"1. In Alpaca, voting power is based on age, experience, previous year's taxes and interest and investment in Government.

"Thus, because of age, I would get two votes where H. L. Hunt would get only one. But he would get additional 'bonus' votes because of his higher tax bracket. Other bonus votes are given for waiving payments due from the Government.

"2. Candidates for public office are chosen by petition, not convention, and must renounce any party affiliation. Every election has a primary and a runoff.

"3. The legislative branch consists of a single house and a three-member veto board. All legislation expires automatically after 12 years unless re-enacted.

"4. There is a 25-percent ceiling on income taxes, and payroll taxes are forbidden.

"5. The monetary unit, the pack, is based on and redeemable in rice or wheat.

"6. The right to work is guaranteed.

"7. The government must not compete with private industry.

"8. The executive authority is vested in a triumvirate (reminiscent of the theory of an influential vice president plus a powerful house speaker.)

"9. Supreme court judges are elected.

"10. The death penalty is provided for treason.

"11. Each citizen at age 66 gets a monthly seniority payment from the government based on his highest previous earnings. He may waive this benefit and earn bonus votes.

"12. Politics is barred from radio, television, moving pictures and all other media except the press. The press must make 2 percent of its space available for propaganda from two opposing 'thought groups', which in Alpaca are called Liberal and Constructive.

"That's just about the briefest possible digest of the Hunt book. I doubt that many Americans have read it closely, and I suspect that many who have read it are inclined to agree with Hunt's critics—that the man's ideas ought to be discarded because he's too rich.

"I disagree. When a poor boy who has made a fabulous fortune by his wits, despite a predatory environment, stops to think and write about government, and when he does it as serenely and intelligently as poor, rich H. L. Hunt has done in this inadequate vehicle, he deserves to be read and thought about and answered by us American Alpacans."

But writing books expressing his ideas and principles for the better existence of his fellow men is only a portion of that phase of the activities of H. L. Hunt. His other activities in this same direction have extended throughout the nation, finding such expressions with the people such as through radio, television, and nationally known publications. He was founder and sponsor of "Facts Forum," heard and seen nationally over radio and TV and with a monthly journal published in Dallas and appearing nationally with sound articles and stories edited and written by America's foremost pro-American writers and thinkers.

Mr. Hunt now sponsors Life Lines, conservative weekly journal published in Washington and issued nationally and with a companion radio program expressing the wisdom of both Mr. Hunt and his commentator, Wayne Poucher, and with a background of the greatest of all wisdom from the most conservative of all publications, the Bible. One recent undertaking of Life Lines, which project is still in progress, is the sponsoring of a nationwide essay contest offering great encouragement for the expression of conservative America-first thoughts and ideas from the people throughout the nation, with valuable prizes for the best essays on some 300 or more topics related to the promotion and preservation of our American way of life. As to the content and nature of Life Lines both over the air and through the newspaper, no better comment could be heard than that expressed by several leaders of the John Birch Society who told your "workingman's friend." "It is the finest ever."

So long, folks. Thus we have the picture of a man who, through his own God-given ability and his individual application and capacity for hard work, has reached the tops in this land of opportunity which is America, and who, instead of resting on his laurels and enjoying his hard-won wealth, as most of us would do, finds his own joy and real expression in working to preserve and even improve this American utopia for you and for me and for our children.

Chain Reaction

EXTENSION OF REMARKS
OF
HON. DAVE MARTIN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. MARTIN of Nebraska. Mr. Speaker, I would like to have inserted in the CONGRESSIONAL RECORD the following editorial from the Omaha World Herald of March 6, 1961. I consider it to be an excellent comment on our foreign policy:

CHAIN REACTION

Adlai Stevenson's words sounded tough when he said that America means something "definite and practical" in its support of "the end of all outside interventions" in the Congo. He added:

"War follows when new empires thrust into the collapsing ruins of the old. So stay your ambitions."

John Foster Dulles might have used the tone of those remarks. But the content would have been something else.

What Mr. Stevenson really was saying is that the United States is helping, insistently, to kick this Nation's allies out of Africa, where they have been the one civilizing and stabilizing influence.

Mr. Stevenson said he hopes the Russians won't move in, but he is helping to create a power vacuum which invites them in. Thus once again America is helping to shape the tragic conditions by which the established power is held in check or weakened or destroyed while revolutionary communism comes charging down like a wolf on an unguarded fold.

That is what happened in Chiang's China. It happened in Korea. It happened in Vietnam. It happened in Cuba. And right now, at this very hour, it is happening in Laos.

In the 6 weeks the Kennedy administration has been in power a major change in American foreign policy has taken place. Laos is the evidence.

While Mr. Kennedy and his advisers were making up their minds whether to defend that far-off Asian country, the Russians openly piled in military supplies by air. Last week the American effort to maintain a pro-Western Government in Laos was abandoned in favor of neutralism. This is another retreat, another defeat for the United States and a corresponding strengthening of the Communist position in Asia.

To describe it by any other names would obscure what has happened there and what is about to happen, we very much fear, in the Congo, in much of the rest of Africa, in the Middle East, and perhaps elsewhere.

One who speaks plainly on this subject is America's ally, the Shah of Iran. In an interview in U.S. News & World Report he said bitterly:

"We certainly do not want any deal made between the United States and the Soviet Union whereby our country would be 'neutralized.'"

The United States, he said, always accepts the accomplished fact of Communist penetration, "and never goes all the way to try to save anyone. This was the case in Korea. It was the case in Indochina. It is the case today in Laos.

The Shah, like a good many Americans, foresees the inevitable result of neutralism.

He concluded:

"If all the countries that border the Soviet Union become neutral, then pretty

soon, all the countries bordering those countries will be neutral, and the United States will eventually find itself in a 'fortress America' with all the world's other countries neutral. Then the Communists will be able to take them over one by one. You wouldn't have time to go to their help—in fact, if all the countries were neutral, they would not have asked for your help."

As for the Shah, his Prime Minister is going to Moscow next month to hear what kind of a deal Khrushchev will make. Iran doesn't trust Khrushchev, but the momentous and truly tragic fact is that if the United States indorses neutralism and new power vacuums, nobody will be inclined to trust the United States either.

The Most Disadvantaged Children

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the Subcommittee on Migratory Labor has, in its visits to eight States, seen direct evidence of earnest, effective action by private groups and by Government agencies to overcome handicaps and hardships faced by men, women, and children in the migratory worker stream.

In my own State of New Jersey, we heard directly from those who are trying to help provide educational opportunities to these youngsters who may spend only a few weeks with us while their parents harvest our crops. An excellent example of this help is the summer school program for migrant children, started in 1947 by the New Jersey Bureau of Migrant Labor.

An article by Mrs. Lefferts A. Loetcher in the December 1960 issue of School Board Notes—published by the New Jersey State Federation of District Boards of Education—describes these efforts, the difficulties faced by migrant children, and also records a favorable attitude toward proposed Federal legislation for migrant education.

I ask unanimous consent that this very informative article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MOST DISADVANTAGED CHILDREN
(Mrs. Lefferts A. Loetcher)

In 1959 some 25,000 migrant workers helped to plant, weed, and harvest New Jersey crops worth $122 million. For more than 40 years these seasonal workers have been essential to the agricultural economy of the State and will continue to be needed in the foreseeable future. Since the 1920's, when children of Italian families migrating seasonally from Philadelphia to New Jersey would lose spring and fall schooling, efforts have been made to insure the education of migrant children while in New Jersey.

The first summer school, sponsored in 1947 by the Bureau of Migrant Labor, was held at the Court Street School in Freehold. Every year but one since then at least one summer school has been operated by the Bureau in collaboration with the State Department of Education. Each year the Bureau looks hopefully for more school boards willing to rent classrooms in the 8 out of 21 counties where children are living with their families in migrant camps.

The U.S. Office of Education has declared that the children of migratory farm workers suffer greater disadvantage educationally than any other group. Agreeing with this statement, the migrant labor board, through its subcommittee on education, in 1959 set up a citizens' advisory committee. Representation on this committee came from 19 educational (including the New Jersey State Federation of District Boards of Education), grower, labor, religious, social welfare, civic, and governmental groups. To this committee the national child labor committee, a nonprofit social welfare agency, loaned Curtis Gatlin, one of its staff members, to serve as a consultant. The migrant education demonstration project subsequently set up included four aims: (1) stimulation of public interest and support through State and local citizens' committees; (2) surveys by volunteers in spring and fall of potential and actual enrollment of migrant children in local schools; (3) location and financing of additional summer schools; (4) development of a long-range program. It is hoped that this pilot project, when proved successful in New Jersey, will stimulate other States to similar efforts.

At the request of the Advisory Committee and by action of the Governor and his cabinet, $25,000 spent on the 1960 summer school program (twice the amount spent in 1959) doubled the number of children reached in 14 classrooms divided among schools in Cranbury, Freehold, Fairton, and Woodstown. Because classrooms were available in too few areas it was necessary to use bus transportation for children living as far as 35 miles from their school. Some pupils rode as much as 45 minutes each way.

SUMMER AID

Boards of education were paid $100 for each classroom used in the 5-week session. The Bureau of Migrant Labor also assumed the cost of utilities and guaranteed the repair of any damage to rooms or equipment. Fear on the part of school board members and parents that these summer scholars would deface property and bring dirt and disease into the school were ill founded. In 14 years of the summer program only once has a school failed to invite the Labor Board to use its facilities the next year. Yet in spite of the fact that no other State has matched the efforts of New Jersey, last summer fewer than one child in three got a chance at a small amount of schooling. More summer schools are needed: in Stowe Creek, Greenwich, and Hopewell Townships in Cumberland County; in Logan, East Greenwich, Woolwich, and South Harrison Townships, in Gloucester County; in West Windsor Township in Mercer County; in Upper Penns Neck, Oldsman, Pilesgrove, and Mannington Townships in Salem County.

OVERLAP PROBLEM

Perhaps an even greater problem is trying to meet the needs of those children who arrive in New Jersey in April or May and of those who are still here through November. In the spring of 1959 about 55 school districts were affected by migrant enrollment, with 3 months the longest period any pupil attended. Furthermore, it is practically impossible to anticipate exactly how many children will be in the area in any given year. Hesitancy on the part of school boards to seek out these children, to provide bus transportation, to find space, teachers, and textbooks for limited periods is understandable. But these migrant children who are in the State part of the time while the regular public schools are in session are entitled by law (should be required) to attend school. Actually, schooling for the children is advantageous to the farmer. The better, more stable crews return year after year to areas where their children can go to school, either during the regular sessions or to the special summer schools or both.

If local communities are unable to finance education for children of parents who work in New Jersey only part of the year, funds need to be provided from some other source. Perhaps part of the answer may lie in Federal aid, such as the bill (S. 2864) introduced by Senator HARRISON WILLIAMS, chairman of the Subcommittee on Migratory Labor. Then, perhaps, there wouldn't be a family in New Jersey who had 5 school-age children who didn't go to school for 4 years. Perhaps more than 1 out of 50 children would get to high school.

Instead there would be more cases like the 14-year-old girl in Cranbury who had never been in a classroom before and couldn't read who was taught to write her name and thrilled to learn to read it during the brief summer session. And there might be an adult program for the 25-year-old farmworker at Freehold whose plea to be admitted to summer school to learn to read was rejected because he was too old to sit with the children.

We can't go on permitting children to grow up without even a decent elementary education. In testimony presented at hearings before the Subcommittee on General Education of the House Committee on Education and Labor on May 5, 1960, Eli E. Cohen, Executive Secretary of the National Child Labor Committee, said, "The United States can no longer afford to have large groups of underdeveloped and undereducated citizens. The moment has come when destiny will not permit our civilization to dissipate its human resources and survive."

Kennedy and the Economy—I

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. JONAS. Mr. Speaker, a gifted editorial writer of the Winston-Salem (N.C.) Journal has written three thought-provoking editorials on the subject of President Kennedy and the economy. These editorials are incisive and penetrative and therefore deserve wide circulation. It is for that reason that as a part of my remarks I include the first of the series published on March 6, 1961. The second and third editorials of the series will be inserted later:

KENNEDY AND THE ECONOMY, I—THE BURDEN OF THE UNEMPLOYED

Unemployment, the dollar and growth—those words sum up the basic economic problems of the country that will be with us after the current recession has vanished. President Kennedy has recognized the relationship between the three in his emphasis on the need for economic growth: Unemployment keeps spiraling upward, and the dollar keeps suffering from inflation and weakened international stability, all because the national economy has not been growing fast enough.

That sounds like such a sweeping generalization that it could not possibly be accurate. But even though it fails to cover every force at work in our complicated economy, it is

essentially a correct summary of the fundamentals. President Kennedy's whole economic policy centers around these factors of unemployment, the dollar and growth. All the economic legislation he has proposed so far, or is likely to ask for in the future, deals with one or more of those factors. To get a picture of what he is trying to do, and why, each of the three should be examined.

The unemployment problem which gives real cause for concern is not the thousands of people thrown out of work because of the recession, but the number who will remain unable to find jobs as the recession moves to a close (which it is now showing some signs of doing). All during the 1950's, unemployment kept increasing both in numbers and in percentage of the total civilian work force. This trend could, in fact, be carried back to World War II, when very few people were without work, but conditions then were too abnormal to have much bearing today.

If the trend of the 1950's continues, the number and percentage of the jobless when this recession is over will be as high as at the very bottom of the 1954 slump. We have, therefore, been building up a recession-sized burden of nonproductive manpower for even our most prosperous times. Today perhaps 7 of every 100 workers are out of jobs; if we have the usual sort of recovery, 5 out of 100 will still be unemployed next year at this time. During the boom years of 1952–53, the count went as low as 2½ out of 100.

To a great extent, lack of economic expansion can be blamed for this growing burden, but actually, nonagricultural employment during the 1950's grew just enough to keep pace with the growth of the total labor force. Each increased about 5½ million. But the revolution in agriculture during the decade dumped well over 2 million former farmhands on the labor market. That is the source of the load the economy has not grown swiftly enough to absorb.

The source of the surplus workers suggests that slow economic growth was not the only difficulty. A great mass of these people, coming from rural to urban surroundings, lacked the flexibility of training or experience to qualify for the jobs that have been open. Unemployment is therefore an educational problem, at least in part.

What happened to farm employment through mechanization can now happen to industrial and white-collar employment through automation. Automatic factories and business machines can have a far more drastic influence than they have so far. The resistance of organized labor can only retard this revolution, not stop it. And the big boom in industrial and governmental paperwork, which has helped support white-collar employment despite automatic office equipment, has to reach a limit somewhere. During the coming years, what might be called technological unemployment might thus come in bigger floods from the office and shop while continuing to come from the farm. There is ample reason to expect the jobless uptrend of the 1950's to continue or even sharpen during the Kennedy administration, if no answer is found.

Does Mr. Kennedy have an answer? To say that growth is the answer is being so vague as to beg the question. What, specifically, has the President proposed that would ease the unemployment burden?

The depressed areas bill is part of his answer. Not only would it seek new productive activities for those localities where old industries have faded away, it would tackle the problem of retraining workers for presently useful occupations and would expand Government employment services to help them locate jobs.

Mr. Kennedy has also proposed an income tax break to encourage private industrial expansion, plant improvement and new product development. This would tend to boost growth while keeping it on a sound business basis. It should prove helpful in creating more productive jobs.

There is also the tempting but hazardous recourse of putting a large segment of the unemployed to work for the Government. The President has not committeed himself to any such step, but a number of his advisers like the idea. They accept the thesis of John Kenneth Galbraith that the public sector of our affluent society has lagged far behind the private sector, which they see as a foolishly lavish world characterized by tailfins. So far, the President has shown no more sign that he will follow the advice of this element than that he would go along with those who want the Government to keep its hands completely off business.

The big danger of wholesale Government employment is that it would not be productive in either the short or long run—that is, it would neither produce a salable product nor add substantially to the chances of future production of such products. Up to a point, however, Federal highway projects, rural electrification schemes and recreation area developments actually can enhance future economic growth. The more immediate hazard of increased Government employment, even for projects that would pay off in years to come, is that this might require huge Federal deficits and thus take strength away from the dollar. The problem of the dollar will be dealt with in the next editorial in this series.

Aside from whatever can be done to speed the sound growth of the economy, the best hope of reversing the uptrend of unemployment seems to lie in increased flexibility of the work force. As has been noted, revolutionary changes are taking place in our economy, and the worker who cannot change with the times is apt to wind up a part of our nonproductive burden—either out of work or temporarily sheltered from the revolution in a union-made featherbed.

The Kennedy administration has made some proposals which would aid workers in adapting to new job requirements, but its aims here are modest in comparison to its other economic plans. The depressed areas bill allots only $10 million for retraining and relocation of jobless workers. Perhaps this program should be increased, but the Government alone cannot produce a flexible work force. Much of the task must be undertaken by private business and industry, and must have the cooperation of labor. The urgent necessity for this flexibility must be recognized by all parties concerned.

American Legion Marks 42d Anniversary

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. WILEY. Mr. President, during March 15–17 the American Legion observes its 42d anniversary.

During its lifetime, the Legion has grown to some 17,000 posts, numbering millions of members. United in a common bond of war experience, Legionnaires, through this fine organization, have not only given support for a strong national defense, but also have engaged in splendid efforts to meet the civic and domestic needs of our people.

Recently, the La Crosse Tribune published an excellent editorial relating to the 42d anniversary of the Legion.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICAN LEGION MARKS 42D ANNIVERSARY

The American Legion is observing its 42d anniversary, March 15–17.

The Legion has come a long way since that historic caucus of delegates from the first American Expeditionary Force in 1919 in Paris. Today, the American Legion numbers in the millions its members, all of whom are united in a grim bond forged in the horrors of war and dedicated to the preservation of the American way of life through unhesitant service to community, State, and Nation.

The influence for good on the American scene of the American Legion is immeasurable. It has been an important factor in the defense of our free institutions, in keeping love of country at a high premium, in the great increase in homeownership, in the enlightened streamlining of child welfare concepts, in pioneering in the modern care of the disabled and the physically handicapped, and in the Nation's preparedness against aggression.

Thousands of American communities are better places in which to live today because of the civic responsibilities assumed by some 17,000 American Legion posts.

On this 42d anniversary of the American Legion, we salute the Roy L. Vingers Post No. 52 and the millions of Legionnaires everywhere in their continuing endeavors dedicated to God and country.

Gray Hairs a Liability?

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. SIBAL. Mr. Speaker, in all the talk these days about the situation of our older citizens, too little attention is being paid to those who reach their later years and are forced to retire, although fully able to continue working. In fact, many of these people in their sixties are at the peak of their experience and intellectual capacity and their enforced retirement under arbitrary rules is a great loss to American society.

This point was made very well in an editorial in the Ridgefield Press of Ridgefield, Conn., on March 2. I would like to have this reprinted in the RECORD.

The editorial follows:

GRAY HAIRS A LIABILITY?

"Compulsory retirement of employees at the age of 65 is on the decline," says an editorial in a recent Journal of the American Medical Association.

It cites as one reason for the change in public opinion the fact that more employees are in good health at 65 nowadays, so they may continue to use their experience and skill for the benefit of society.

We certainly agree with this thinking and chorus with former AMA President Louis Orr, "There is no scientific rhyme or reason for selecting 65 as the magic number separating the productive from the nonproductive. * * *"

As a case in point we think of Konrad Adenauer, Chancellor of the West German

Republic, now working on his second decade after 65. We think of Sir Winston Churchill, who retired as Prime Minister of England when he was past 80. We wonder who would be better off if Dr. Albert Schweitzer were forced to retire from his care of South African natives just because he is closer to 90 than 65. Here in Connecticut we think of the late Wilbur L. Cross, who retired as dean of the Yale Graduate School at 68 and then served four terms as Governor of Connecticut, being defeated in his try for a fifth term when he was 76 years old. Ridgefield's beloved cleric, the late William B. Lusk, preached his 20th century sermons until his retirement at age 80.

In another field we have the case of Charles Dillon Stengel, late of Yankee Stadium, now of Glendale, Calif., who lost his job in the autumn of 1960, primarily because his former employers think that 70 is the compulsory retirement age for baseball managers. The fact that Mr. Stengel's teams had won 10 pennants and 7 world's championships in the 12 years he was in New York and that his 1960 team would have added another world's championship to the record if the pitcher had covered first base on a play in the eighth inning of the seventh game, seemed to have little weight in their considerations.

Our feeling is that employers should base their calculations on the way a man is doing his job rather than on the number of years that have gone by since he was born.

Commendation of Movement to Strengthen Sense of Patriotism

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. KEATING. Mr. President, the virtue of patriotism is so often taken for granted that it is well to remind ourselves periodically that true love of country is, by its nature, an active, not a passive condition of mind and heart. Unless patriotism is dynamic and positive, it withers away into a slogan, or it makes itself evident only in specific occasions, like flags that appear on the Fourth of July. In the light of this fact, it is heartening to note that a number of leading Americans have united in the common cause of breathing new life and meaning into the word patriotism. It is, therefore, a pleasure for me to draw attention to a most timely and cogent editorial on this subject, entitled "Restoring Patriotism," published in the Fulton Patriot, Fulton, N.Y., on March 2, 1961. Because of the importance of this message, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RESTORING PATRIOTISM

A number of editors, statesmen, and military leaders are joining in an effort to restore patriotism to its proper place in the American way of life. This newspaper is more than willing to lend a hand in the campaign.

The greatest single piece of evidence showing what has happened in this country, what has happened to the burning patriotism and dedication to the American way of life, came during the Korean conflict. In that war many U.S. soldiers who returned obviously lacked an enthusiasm and an understanding of the government and the country.

Some fell prey to Communist propaganda because they did not know enough about the United States and its history and Government to refute clever Communist arguments. Others simply lacked patriotism and conviction when it came to the United States and the democratic system it represents.

This, many statemen, military leaders, and scholars have concluded, is the result of a period of deterioration in the homes, schools, movies, television, etc., which began in the 1930's, when it became popular to be cynical and to criticize the American system. And, of course, there is room for criticism of the American system. It is not perfect.

But it is possessed of many admirable qualities and features and is the best system of freedom and independence man has yet devised on the democratic level. The system has brought more things, materially, to more people, than any other system on earth, giving the American people the highest standard of living in the world.

The words of Commodore Perry, "Don't give up the ship," should stir a feeling of patriotism in every young heart. John Paul Jones' immortal words: "I have just begun to fight," are of the same vein. This is the spirit we need in the sixties. This is the spirit of devotion and dedication which will assure survival as a nation.

An Important Decision

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I would like to include in the CONGRESIONAL RECORD Appendix the following editorial entitled "An Important Decision," which appeared in Advertising Age of March 6, 1961:

AN IMPORTANT DECISION

The reversal by the U.S. Supreme Court of the judgments against Carl Byoir & Associates and 24 eastern railroads in the Pennsylvania trucking case is of major importance, not only to the public relations segment of business, but to advertising people as well.

The court reached its decision unanimously, and as Advertising Age's reporter said, it wrapped lobbying in a "public interest" cloak of unprecedented grandeur, even though it sharply criticized the ethics of public relations operators on both sides of the railroad-truckers dispute.

The important point for our purposes is that the court advanced in the strongest terms the opinion that representative government can't operate unless citizens can express their views freely, and that the Sherman Antitrust Act cannot be so construed as to act as a brake upon that freedom of expression.

Among other things, the court's decision said:

"The right of the people to inform their representatives in government of their desires with respect to the passage or enforcement of laws cannot properly be made to depend upon their intent in doing so. It is neither unusual nor illegal for people to seek action on laws in the hope that they may bring about an advantage to themselves and a disadvantage to their competitors."

In the light of this and other language of the decision, it would appear difficult for the Internal Revenue Service or others to argue about the legality of advertising devoted to public interest messages, even though the point at issue in the recent advertising cases has not been action under the antitrust laws but in terms of allowances for taxes, determination of utility rates, etc. When the Supreme Court ruled on advertising cases not too long ago, it held that lobbying was not to be encouraged; now it seems to have changed its mind.

It is narrow legalism to argue that lobbying and discussing public issues are essential to the operation of our kind of society, and then, to restrain or hobble such discussion by penalizing it in terms of tax reprisals.

President Kennedy To Address Italian Centennial Celebration, Thursday, March 16

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. ANFUSO. Mr. Speaker, I want to call to the attention of all Members of Congress that President Kennedy will be the guest speaker at the formal observance of the 100th anniversary of the unification of Italy, which is taking place tomorrow, Thursday, March 16, at 10:30 in the morning, in the new auditorium of the Department of State.

Invitations have been sent to all Members of both Houses of Congress, and I hope they will all be able to attend. Among our honored guests will also be the Vice President and the Speaker. We plan to adjourn shortly before noon, in order to give the Members an opportunity to get back to the House for the session.

The centennial celebration is being held under the joint sponsorship of the Italian Embassy and the American Honorary Committee for the Italian Centennial. Senator JOHN O. PASTORE, of Rhode Island, is the honorary chairman of the committee. I have the great honor of being the chairman, and Representative PAUL A. FINO, of New York, is the secretary. Other members of the committee are: Representatives Peter W. Rodino, of New Jersey; George P. Miller of California; Hugh J. Addonizio, of New Jersey; Dante B. Fascell, of Florida; John H. Dent, of Pennsylvania; Roland V. Libonati, of Illinois; Alfred E. Santangelo, of New York; Silvio O. Conte, of Massachusetts; Emilio Q. Daddario, of Connecticut; Dominick V. Daniels, of New Jersey; Robert N. Giaimo, of Connecticut; and Joseph P. Addabbo, of New York; also the Governors of the following four States: John A. Volpe of Massachusetts, John A. Notte of Rhode Island, Michael V. Di Salle of Ohio, and Albert D. Rosellini of Washington.

In addition to our distinguished national leaders and the Members of Congress, invitations have also been extended to the members of the Cabinet, the Supreme Court, the diplomatic corps, leading Government officials, heads of Italian-American societies, and others.

I should like to request all of our colleagues to be in their seats by 10:15. The President is expected to arrive a few minutes later and we shall start the observance promptly at 10:30. The Most Reverend Patrick O'Boyle, archbishop of Washington, will give the invocation. As chairman, I shall then make brief welcoming remarks. The Italian Ambassador Manlio Brosio will read a message from President Giovanni Gronchi of Italy. Prof. Gaetano Martino, head of the Italian delegation to the U.N. Assembly, will deliver an address. President Kennedy will then make his address, which will conclude the formal part of the observance.

A recital of Italian operatic music will then be presented by Metropolitan Opera stars Miss Renata Tebaldi, soprano, and Mr. Franco Corelli, tenor. Prior to the official opening of the observance, the U.S. Marine Band, under the direction of Lt. Col. Albert Schoepper, will present a musical program.

May I also call to the attention of the House the fact that Congress last year passed unanimously a resolution calling for official particiaption by the United States in the Italian centennial celebration in March 1961. This is the event which we had in mind at that time.

On March 8, 1961, President Kennedy issued a proclamation pertaining to this centennial anniversary. I am pleased to insert into the RECORD at this point the text of the President's proclamation, which reads as follows:

CENTENNIAL OF THE UNIFICATION OF ITALY—BY THE PRESIDENT OF THE UNITED STATES OF AMERICA, A PROCLAMATION

Whereas the centennial of the unification of Italy, which occurs in 1961, commemorates a great event in the history of nations; and

Whereas in observance of the centennial there will be many celebrations in Italy, in the United States, and in many other countries as events of a century ago are relived; and

Whereas we in America are confident that the people of Italy, in the celebrations reenacting the events and experiences associated with the struggle for unification a century ago, will find renewed strength to further their vital contributions to the cause of freedom; and

Whereas it is the sense of the Congress, expressed by House Concurrent Resolution 225, agreed to July 2, 1960, that the President extend official greetings from the United States to the people of Italy on the occasion of the centennial of the unification of Italy:

Now, therefore, I, John F. Kennedy, President of the United States of America, do hereby extend greetings and felicitations from the people of the United States to the people of Italy on the occasion of the centennial of the unification of Italy, in recognition of the progress and achievements of the Italian people during the past century and the bonds of friendship between our two nations.

In witness whereof, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

Done at the city of Washington this 8th day of March in the year of our Lord 1961, and of the Independence of the United States of America the 185th.

JOHN F. KENNEDY.

By the President:

DEAN RUSK,
Secretary of State.

North Platte, Nebr., Shrine to Buffalo Bill

EXTENSION OF REMARKS
OF
HON. DAVE MARTIN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. MARTIN of Nebraska. Mr. Speaker, I would like to call to the attention of the House an accomplishment registered by North Platte, Nebr., one of the many fine cities in the Fourth District of Nebraska.

North Platte is the hometown of William F. Cody, better known to millions throughout the world as "Buffalo Bill" Cody. It was at North Platte that he founded his historic Scouts' Rest Ranch, and here chose to live for more than 30 years. Here Buffalo Bill was host to many celebrities ranging from Indian chiefs to European noblemen, entertaining them in the big, ornate house that still stands at the entrance to the ranch.

Here in the huge red barn with gunstock-carved rafters was wintered his famed wild west show, with purebred Arabian stallions sheltered under the same roof that covered Argentine llamas and longhorn steers.

Here on the tree-shaded grounds bisected by Scout Creek camped Sioux and Pawnee Indian warriors who traveled with the wild west show; here sharpshooters Annie Oakley and Frank Butler practiced and developed their skill. Scouts' Rest Ranch at North Platte, Nebr., is truly a historic spot.

Aware of this, the citizens of that community are making the ranch into a State park, which they know will soon become a national shrine to one of our Nation's most colorful showmen. And they are doing this with a local effort which is a fine example to individuals and communities who still feel they can solve their own problems.

I am happy to note today that North Platte, numbering fewer than 18,000 people in west central Nebraska, has passed the halfway mark in its local drive to raise $37,500 toward its share of financing such a State park.

To a huge Federal Government accustomed to spending billions of dollars at the drop of a hat, the sum of $37,000 may sound pitifully small. But to the citizens of North Platte and the State of Nebraska, it is a sizable amount to raise. And it is to their everlasting credit that they have elected to do this on their own initiative, without coming to the Federal Government with outstretched palm, as is popular nowadays.

After the $37,500 goal is reached, the State of Nebraska will match that amount and complete purchase of the ranch, now privately owned by a leading Nebraska beef cattle producer. Thereafter, the State of Nebraska will spend nearly a quarter of a million dollars in renovation, maintenance, and operation during the next 10 years.

Some day, Mr. Speaker, I hope all Members of Congress will visit, as I have visited, this unique and beautiful historic site in Nebraska. I am sure they will feel, as I feel, a sense of satisfaction and pride in the country which has produced such men as William F. Cody and still produces such people as the citizens of North Platte.

And, like me, perhaps they will reflect that here is a perfect example of community effort in our free enterprise system—with the initiative coming from the people on the local level, and with the control resting there.

I congratulate the progressive citizens of North Platte and their surrounding communities—and I have faith that they will continue their drive and bring it to a successful conclusion.

W. D. Harrigan

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a section of a great newspaper down in the First Congressional District of Alabama, the Clarke County Democrat, of Grove Hill, Ala., in the Thursday, March 9, 1961, issue. Grove Hill is the county seat of the great county of Clarke. Mr. Speaker, this is a great story which the editor of the Clarke County Democrat has published about a wonderful man, a fabulous man who has gone to his reward, W. D. Harrigan. He was founder of the great Scotch Lumber Co., one of the great companies of south Alabama. They have been in business for over 65 years and nobody but their own people there who work for them and the merchants know what this has meant to all the people in that county and several other adjoining counties. W. D. Harrigan certainly laid the foundation for a vast timber industry, one of the greatest not only in the South, but in the Nation.

I remember when he and his wonderful wife were there at Fulton, Ala., and I remember when Billy Harrigan—W. D. Harrigan, Jr.—was born. Now he and his sister, Virginia Harrigan, who is now Mrs. Thomas H. O'Melia, are there. What a great group they are. And if we could only get this picture which is on the front page of the Clarke County Democrat of W. D. Harrigan, it would be great. I remember when he put me through the Shrine at Mobile there at the old Abba Temple. Well, he and I were just as close as brothers. I had

places down at McIntosh and Calvert and Malcolm and all through that country, and I remember when he and Mrs. Harrigan used to drive down there to see us long before I was married. We did a lot of courting at Fulton, Ala., in the home of the Harrigans, and I do wish they would put a picture of that wonderful, marvelous, fabulous woman, Mrs. W. D. Harrigan, in with the rest of this great family.

Anyway, Mr. Speaker, this story in the Clarke County Democrat will interest many, many people. How I wish we could not only put the picture of my beloved departed friend, W. D. Harrigan, Sr., where everybody could see him, but the pictures of the great timber he left there—some of the largest timber that we have anywhere in this country. I see this article says that one tree cut 3,600 feet—almost enough to build a house.

Well, not only did W. D. Harrigan, the founder of this great Scotch Lumber Co., do a great job, but his son and his daughter and his son-in-law, have certainly carried on. Now he has a son and a daughter who are coming along and they, too, will do just like their father and their grandfather and their grandmother did, and then, Mr. Speaker, you will remember the daughter of Mr. and Mrs. W. D. Harrigan, Jr., Kay. She was Cherry Blossom Queen here, where, as she drove down Pennsylvania Avenue, there were over a half million people who had the joy and pleasure of seeing this beautiful young lady.

Then there is Mrs. W. D. Harrigan, Jr.—what a great and fine woman she is. They are just all fine. They are good people and they are great people. I wish just all of you knew this great family group there at the Scotch Lumber Co. at Fulton, Ala., down between the Tombigbee and the Alabama Rivers, where they have about 200,000 acres of the finest timber-growing land on earth and where they have some of the finest people, the very finest on earth, there, who have helped and are just the same as partners with the Harrigans and the O'Melias. It is a great organization, and I predict, Mr. Speaker, that it will be going and going good for another 100 years, because Mr. Harrigan, the great W. D. Harrigan, Sr., had it all worked out where the cut would be perpetual and they do selective cutting, and I believe W. D. Harrigan, Jr. has even improved on what his father did, and that's the way it should be.

This is a great story, and I am so glad that this story will get to go to every library in this Nation and will be read in every meeting that there is in this Nation. They will read about a great country, a great company and a great family.

May God bless, help and keep them and give them strength to keep on keeping on.

An Expression of Appreciation to an Old Business Institution

This section of the Democrat, which salutes Scotch Lumber Co. upon its long years of successful operation and recent modernization and expansion, is sponsored and made possible by the business houses of Grove Hill. It is an expression by them of what this big company has meant to them, to their town, and to the county as a whole throughout its long years of operation.

The fact that this mill has been operating in the county since 1896 means that for the past 65 years jobs have been available in considerable numbers to people of this county all of that time. Not only has it afforded work to those directly employed at the mill, but it has made work for those who have cut and sold timber to the company and in many other ways it has helped to boost the economy of the county.

The company has recently completed a modernization and expansion of its plant and it is highly appropriate that at this time the town of Grove Hill should extend an expression of its appreciation for what the company means to her people.

Harrigan Laid Foundation for Vast Timber Industry

The story of W. D. Harrigan, founder and for many years operator of Scotch Lumber Co., is very similar to that of thousands of other successful businessmen. He started at the bottom of the sawmill business, but his ability, his business judgment, and his powers of organization, management, and the other factors necessary to the operation of a big business, speedily carried him forward in his chosen profession.

Although comparatively a young man when he moved to Alabama from Wisconsin, he had already proven his ability as a sawmill man to such an extent that his associates were ready to give him the financial backing he needed to establish a big and going business.

The Scotch Lumber Co. was organized along big lines and it has been constantly expanding and modernizing with the passing years until today it is not only one of the largest, but one of the most modern plants of its kind to be found in the South.

Mr. Harrigan was among the first operators in this section to recognize the wisdom of providing recreation and entertainment for his employees. A motion picture theater—one of the first, if not the first, built in the county—was built by him in Fulton; swimming pools were built near the mill; annual picnics and barbecues were given the employees, and once a year, the school children were carried out into the woods on the log train for a picnic; he built a nine-hole golf course and hired an instructor; and he not only saw that his employees had a place to dance but he also brought up a dancing teacher once a week to instruct them in the art of terpsichore.

When the county first undertook to build good roads, he provided teams and machinery and built several miles at company expense; the company also donated the structural steel which went into the building of the bridge which now spans Bassetts Creek in Fulton; he was the first to inaugurate tree farming and he also conducted a demonstration farm on the tract of land between Fulton and Thomasville known as the Hayes Field. Here he planted a variety of orchard trees, including peach, Japanese persimmon, Satsuma, and other types. Mr. Harrigan was more of a sawmill man than an orchardist, however, and the demonstration farm was abandoned after a few years of operation.

He also brought a number of registered Hereford bulls to the county, thereby demonstrating that he not only was interested in improving the lot of those who worked for him, but of their relatives and other citizens of the county, as well.

Mr. Harrigan died in February, 1919, but so well was the business organized and so thoroughly and efficiently had those been trained who worked with him and under him that the business continued to grow and expand after his death.

Up until the death of Mrs. Harrigan in 1943 it was operated as a family enterprise. Following her death, the business was reorganized with Mr. John Gray, one of the stockholders in the company, disposing of his share of stock. Today the mill is owned and operated by the two living heirs of Mr. Harrigan, W. D. Harrigan, Jr. and Mrs. Virginia Harrigan O'Melia. Mrs. O'Melia is assisted in the operation by her husband, Thomas H. O'Melia.

Scotch Lumber Co. Timber Acreage Sufficient To Insure a Perpetual Cut

Around the turn of the century, or even a decade before this time, northern lumbermen and investors had turned their faces toward the South. The magnificent forests of northern white pine and other timbers had been ravished by the wasteful timbering practices of that day and the timberlands had been laid bare for many years to come. The fast growing regions of the North and East were using large quantities of lumber and the timber areas of that section were no longer able to meet these demands.

Down South, conditions were exactly the reverse. Untold thousands of acres of land here were covered with a magnificent growth of long leaf pine timber, one of the finest grades of timber the world has ever known. There was practically no local demand for this timber, as the South had been ravaged following the War Between the States and no capital was available for starting a redevelopment program.

The best pine timber was found on a type of soil that was unfit for cultivation unless fertilized and the rank and file of farmers and landowners had no money to buy commercial fertilizers nor did they understand the science of using them.

These were the conditions that northern investors found when they invaded this region. Many farmers and landowners had found themselves in possession of land which brought them no returns, was unfit for farming, but on which taxes had to be paid each year. The taxes were not much but neither was there much money with which to pay them, so when the southerners were offered a chance to sell these lands, they were ready to accept any offer made them.

In a setting like this, the Russell Sage interests of New York came in and bought thousands of acres of this country's best timber lands. The most of it was bought for as little as 50 cents per acre.

The Sage interests did not cut any of the timber, but were content to resell the lands at prices that netted them a fortune.

Among the timbermen who were attracted to this region during the above period were W. D. Harrigan of Rhinelander, Wis., and Fred Herrick, of that same region. Harrigan came as the active representative, bringing with him the financial backing of Herrick.

At Fulton they found a small mill being operated by two Scotchmen, Alexander McTaggart and Norman Spencer. They bought the mill, renamed it the Scotch Lumber Co., and thus was born the industry which has endured and prospered to this day. This was in 1896.

One of the first moves of this company was to buy a big block of timber acreage from the Russell Sage interests. To this was added many more thousands of acres, bought from local farmers who had gone broke trying to farm the thin, sandy land. Once ample acreage had been secured, Mr. Harrigan went ahead with his ambitious plans.

In the years immediately following 1896, he enlarged the sawmill of the two Scotchmen until he had a big plant ready to go into production.

Operating a sawmill in those days was a vastly different undertaking to that of today. There were no roads, not even the main highways, that were worthy of the name. Timber had to be moved to the mill by the high-wheeled oxcarts or by timber wagons pulled by horses and mules.

It was but a short time before the Scotch had built log roads, or dummy lines, out into the more distant timber holdings, and this greatly simplified the hauling of logs to the mill. The short hauls from the woods to the dummy line were still made by ox-cart or mule team, but from there on in, the logs were hauled by rail.

The long leaf pine timber produced lumber of the highest quality and the mill was soon converting it into grades of rough and planed products that found ready sale everywhere.

One of the early orders which this company handled, and one which was always a source of much pride to the owners, was for a quantity of rift pine flooring with which the Senate Chamber of the Capitol in Washington was floored.

Wages back in those days were extremely low, judged by today's standards, but jobs then were very scarce and workers were usually glad to get jobs at any rate. In the early 1900's the daily wage paid common labor was $1.50 for an 11-hour day, but there appeared to be an abundance of labor available at all times.

The aristocracy among the laborers then, as always, was found among the more skilled workers—the sawyers, the saw filer, the foreman and subforeman, and those who held the easy jobs, such as work in the commissary and the office. One of the aristocrats of that day was the company doctor, a Dr. Hanks, who drove a matched team of horses to his buggy.

Another employee usually envied by the rank and file of the laborers, was Tom Holloway, engineer on the log train. He was generally regarded as the daredevil. There, of course, were other engineers, but when the average person spoke of the dummy engineer, he had Holloway in mind.

The mill is located on the banks of Bassetts Creek and this creek has proved a blessing throughout most of the 65 years the mill has operated, but on one or two occasions, it grew unruly and spread devastation. In 1928 continued excessive rains along the upper reaches of this creek forced it into the highest flood stage it had attained since the mill had been there. The flood which swept through the channel inflicted losses to homes, lumber yards and other installations that mounted into the thousands of dollars.

At other times the flow of the stream has been so reduced by prolonged droughts that it did not afford the needed water for mill operations. The company has corrected this condition by building a reservoir above the mill which is kept pumped full of water.

In 1929 the sawmill was destroyed by fire but the planer mill and other portions of the plant were saved. The sawmill was not rebuilt until 1940, but as it was rebuilt it was modernized and today is completely electrified.

The electrifying of the sawmill was but one of the moves that have been made in recent years to make the plant more modern and more versatile in its handling of the timber of this area. One other innovation, which has now developed into a big operation, is the installation of a hardwood flooring mill. This mill manufactures the "Heather" brand of flooring. Distributors throughout the United States are now handling this brand and it is becoming nationally known.

The most recent installation, and the pride and joy of the millowners, is its German type sawmill. This mill, which handles the smaller sizes of sawlog, averages from 80 to 100 logs per hour.

Clyde Bradford, who is the night foreman at the mill, stated that one night recently, the mill cut 812 logs during an 8-hour work period and was shut down for 25 minutes of this time.

Logs for this mill, as well as for the other mill, are debarked before being brought to the carriage. The conveyor belt then brings them into the mill, where they pass to two separate sets of saws. The first saw merely cuts slabs off each of two sides. It then goes to the second carriage, where a gang of saws converts it into lumber at one trip.

The slabs go into the chipper and the chips and the sawdust are conveyed by belt to a railroad car on a nearby siding. The bark of the log is the only thing that isn't used. It is consumed in a nearby burner.

In the old days, when the boards left the saw carriage, they were loaded on two-wheeled carts or dollies and pushed by hand to the dry kilns or the lumber yards. Today practically all of these things are done by automation. Power-driven rollers convey the lumber out of the mill. It is then loaded on special type stackers or conveyors, hauled to the lumber yards by these conveyors and deposited there with a minimum of handling.

Policies of the Scotch Co. Help Restore Game

Clarke County's magnificent stock of game—deer, wild turkeys, and the smaller varieties—is largely attributable to the wise policies of conservation which the Scotch Lumber Co. has adopted and enforced over a lengthy period.

Many of their tracts have been opened to public hunting, a nominal permit fee being charged to provide supervision in an effort to assure that the game laws are observed.

A tract of 20,000 acres in the Chilton-Tallahatta Springs area has been set aside as a game preserve under provisions of the Pittman-Robinson Act, and this preserve is now opened for limited periods each season for public hunting. At such times hunters flock into the county from all parts of the State and from other States as well.

The hunts held on this preserve last fall resulted in good kills of both deer and turkeys. Another hunt will be held on the preserve during the gobbling season this spring.

In the Silver Creek region of east Clarke County and in a few other areas, as well, the company has maintained its private preserve, where only those it elects to give permits are allowed to hunt. Even this is a benefit to the hunting in adjoining areas, as wild life is not confined to any one locality and much of that on the Scotch private preserve wanders into adjacent lands.

Scotch Among First To Use Scientific Forestry Program

(By H. T. Reynolds)

The large trees of Clarke County found by the settlers provided them with timbers to build their homes and fuel to heat the home and also to cook their food. In about 1770 Dr. Mohor visited the area for the British Crown and set aside certain tracts containing cedar and oak. In 1815 John Landreth made a survey of oak, cedar, and yellow pine for the U.S. Navy Commissioner for use in the construction of ships. The big trees were cut and hewn into square timber, were rafted and floated down the Alabama or Tombigbee River to Mobile where they were exported to Europe and used in ship construction. After the Civil War the sawmill industry bloomed in the South.

The Scotch Lumber Co., one of the oldest sawmill companies of Clarke County, at Fulton, near the turn of the century set up their mill. Their first operation was by railroad as the main means of transporting the logs to the mill.

Their first operation was with log camps out on the east and west sides of the county with the railroad providing transportation from the camp to the mill. The early industry was welcomed by the people as it provided work for the local people, felling and snaking or hauling the logs to the railroad, and also provided income to the land owners in the way of stumpage.

During this time it was the custom to burn the woods at least once a year. Although most of the leaders of the company were very much against this practice, and spent time and effort trying to prevent the woodburning engines from setting fire, as well as encouraging the general public to help prevent fires, the woods continued to burn.

Then the depression years came on and the old mill burned, but the company would not be defeated; they set up a portable mill. They did away with the big steam skidder and trains and began to log with tractors and trucks, continuing to provide lumber for buyers and jobs for the people of this area. In 1938, one of the largest, if not the largest, pine log ever cut in Clarke County was cut on the Silver Creek area. It squared 26 by 26 inches by 63 feet long.

Then in the late thirties they began construction of a new modern mill at Fulton, Ala., near the old millsite. The company ran day and night along with other mills during the war years to turn out timbers and lumber products needed by the Armed Forces to defend this country.

Due to the heavy drain on our forests during World War II and in view of the expanding population, the company became very concerned about uncontrolled forest fires that destroyed seedlings and saplings and damaged mature trees on thousands of acres each year. They joined forces with the State division of forestry, donating the Sand Hill Tower site; furnished a plane with a pilot during fire weather to detect fires in 1947 and 1948 before there were enough towers in Clarke County to give fair detection.

They were among the large companies that asked for a severence tax to be passed to support the fire control program. They, along with other companies and landowners continue to make regular contributions each year to provide funds needed to purchase and operate forest fire control equipment. In addition they have a fire crew equipped with hand tools, also a truck-tractor-plow unit for use on fires on or near their property, when needed.

The Scotch Lumber Co. was among the first in Clarke County of any company to go all out constructing good wide gravel and clay surfaced roads that were to be used as access roads as well as firebreaks. They were also the first to do timber stand improvement work of controlling undesirable hardwoods and brush, by griding and/or chemical treatment to release the young pine seedlings that had come up under the hardwoods.

They transplanted loblolly pine seedlings in the old fields to bring them into production sooner than if they reseeded naturally. They also planted about 1,500 acres of scrub oak woodland to pine because past burning and cutting practices had left too few pines to reseed the area naturally. They continue to employ a forestry crew that does timber stand improvement work where needed; site preparation for seed catch by natural seeding or where necessary they seed mostly loblolly pine direct to the prepared seedbed area. Much of this work is being done in the area populated by the larger so-called virgin yellow pine near the site where early explorers such as Landreth and others noted the pine in 1815 south of Thomasville.

The company has recently cut timbers that squared 17 by 18 inches by 36 feet long

from trees estimated to be from 300 to 500 years old.

Their forest practices, under the supervision of Mr. R. M. Campbell, chief forester, is geared to produce a continuous crop of timber, encouraging pine on upland pine sites and promoting practices that will keep good hardwoods growing on good bottom lands, to provide raw materials for their modern electric sawmill, planer, and flooring mills; to provide poles, piling, and wood chips that are needed to provide forest products for an ever expanding population.

Just as the fire tower stands as a guardian of our forests against wild wood fires and for the conservation of our forests, the Scotch Lumber Co. stands as a symbol of economic stability in this area where it has worked with the people and has kept pace with progress and provided leadership to produce our only renewable resources, our forests; providing timber and forest products for an expanding population and jobs for our people.

Many large sawmills like Scotch Lumber Co. have gone out of business or merged with some other company in recent years. But we need these concerns to keep a balance in our economy, with the sawmill industry and tree farming to provide the raw materials for them and the pulp and paper industry with some row crops and livestock farming along with the sewing industries we now have we are among the most blessed people of any period in history.

During the next few weeks the weather will be changeable with high variable winds that can cause a spark to kindle into a roaring demon that could destroy thousands of little trees in a few minutes. The forest, with its beauty, game, and wildlife, is our heritage to use and enjoy and to pass on to future generations. Let us be very careful and prevent forest fires.

Feed Grains

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a resolution adopted by the South Dakota Stock Growers Association, opposing the pending feed grain bill. The views of this organization are, I believe, representative of livestock interests throughout the Nation.

The resolution is as follows:

FEED GRAINS

Whereas national legislation is being requested to require producers of feed grains to reduce acreage by 20 percent, and

Whereas corn support level would be increased from $1.06 to $1.20 per bushel, and supports for other feed grains would be raised to keep them in line with corn, and

Whereas such legislation would create a severe price penalty on stocker and feeder animals: Therefore be it

Resolved, That the South Dakota Stock Growers Association, at their quarterly meeting in Philip, S. Dak., March 9, 1961, emphatically oppose such legislation or any other legislation pertaining to the control of feed grains which would disrupt the natural law of supply and demand.

What Makes a Leader Great

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address delivered by the Honorable Arthur B. Van Buskirk, of Pittsburgh, Pa., entitled, "What Makes a Leader Great."

Mr. Van Buskirk is Chairman of the Board of the Federal Reserve Bank of Cleveland.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT MAKES A LEADER GREAT

(Address by Arthur B. Van Buskirk, Western Pennsylvania Engineers Society annual banquet, February 6, 1961)

Gentlemen, I have agreed to talk this evening on one of the most intriguing subjects I know: "What Makes a Leader Great." How and why through the ages have men and women of uncommon mold risen to lead their fellow citizens in hours of crisis? Whence did such people come and what was their secret?

Since this is to be a relatively brief address, time will not permit us to cover the whole gamut of leaders, and hence we must begin by laying aside certain groups which it would be most interesting to talk about. Among these are the God-inspired prophets of old: Moses, Buddha, Mohammed, Confucius, and Christ. Also the great religious leaders: St. Paul, Luther, Loyola, Knox, Wesley, and we might add, Gandhi. We Christians believe that Christ was divine, but let us not forget that to even greater masses of the world's population Buddha, Mohammed, and Confucius also had a divine aura. And whereas the impact of the life of Alexander the Great on the modern world is relatively small, the souls of such men as St. Paul, Martin Luther, and John Wesley go marching on. Although referring only briefly to these prophets and religious leaders in tonight's address, I do want to emphasize one basic trait they all had, which runs through the lives of most great men: the considered habit of periodically withdrawing from the world—onto the mountain top or into the wilderness perhaps—for personal enlightenment, after which they returned to the task of uplifting their fellow men. There is a lesson here for every leader at every level—for our statesmen, our business executives, and all of us who under the pressure of modern life are apt to forget the significance of occasional quiet and solitude.

Another group we must pass by are men preeminent in literature, art, or music. Shakespeare, Michelangelo, Wagner, and Beethoven would be good examples. Here again we see the touch of the Almighty. Otherwise how can we explain their genius: Mozart composing minuets before he was 4 years of age, or Beethoven playing in public at 8, and at 10 writing compositions for publication. It seems safe to say that the impact of the life of Shakespeare or of Wagner upon Western civilization has been far greater than that of Napoleon. The same thing would be true, I suspect, of the genius Thomas Edison.

Sometimes the hand of the Divinity comes like a flash of lightning out of the heavens as in the case of Jeanne d'Arc. Who can match the sheer heroism of this young maid of Orleans—a simple peasant girl hearing a call in the nightwatches and rising to lead the French Forces to victory over England. When she was brought to trial at the instance of the church, she answered her interrogator, "Everything I have done is at God's command." You know the rest of her thrilling story—and how fearlessly she faced death as she was burned at the stake. Her executioner was instructed to reduce her entire body to ashes so that no part should escape, but it is recorded that notwithstanding the charcoal and sulphur which were applied to her heart, it remained unconsumed and was finally thrown into the Seine. Is it any wonder she stands sainted today in church history?

The more meaningful leadership so far as you and I are concerned, and which I want particularly to talk about this evening, is that which arises in Western democracy and on which its survival in the crucial years ahead must depend. We may not assume the America we know will survive. In his famous history, Arnold Toynbee deals with 26 civilizations, of which he identifies 16 as dead, 9 broken down, and only ours in the West remaining vital.

Let us take four of our greatest Americans: Franklin, Jefferson, Lincoln, and Woodrow Wilson. What characteristics did they have in common? Do we find the same traits in the best of our military leaders, such as George Washington and Robert E. Lee?

Good old Ben Franklin—often referred to as the first civilized American, and certainly the wisest man of his age. At any time, in any place, Franklin would have been great. He had a commonsense, an earthiness, as though he sprang from the very soil itself, and in a sense he did, because he came from a long line of English blacksmiths. From penniless obscurity as a boy of 17, a printer's apprentice, he stepped off a packet onto the cobblestones of Philadelphia, with 1 Dutch dollar and a copper shilling in his pocket. As the years passed, he displayed his eminence as printer, educator, inventor, philosopher, and statesman. Being much older than Washington and Jefferson, and greatly revered by them and the other young Revolutionaries, his wise counsel left an indelible mark upon our early history from the Declaration of Independence, through the days of the Continental Congress, and on into the Constitutional Convention. Perhaps the only genius of his age that could rival Franklin was Thomas Jefferson.

An anecdote on Franklin may not be amiss. It's the story of the teacher who had been instructing her class of children in the virtue of brevity and called on a little lad to tell the high points of Franklin's life in a few words. Said the boy, "Benjamin Franklin was born in Boston in 1706, landed in Philadelphia in 1723, walked up the cobblestone street and saw a girl in a doorway, married her and discovered electricity." His life is a matchless example of democratic leadership—he spent 42 years of his life in active business in order that he might be free to spend the last 42 years of his life promoting the welfare of mankind.

Thomas Jefferson was born when Ben Franklin was 37 years of age. These two, with Abraham Lincoln, constitute the great triumvirate of American leadership and the personification of all that is finest in our history. Each of them possessed to a striking degree the most fundamental trait of all great leaders of men; namely, a sympathetic insight into the motives and

aspirations of the people of their times—a knowledge of what is in their hearts and minds—coupled with the ability to articulate these aspirations with clarity and force. This trait, says Woodrow Wilson,[1] distinguishes all the real leaders, the builders, irrespective of the time, the place, and the society that produced them. Thomas Jefferson more than any other man in our history voiced the aspirations of the colonists and their fierce spirit of liberty. Inscribed over the Jefferson Memorial in Washington are his famous words written to Dr. Benjamin Rush, a fellow signer of the Delcaration of Independence: "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man." This was the motivating force of Jefferson's life and of the times in which he lived. The three greatest Americans—Franklin, Jefferson, and Lincoln—also embodied the additional traits which students of leadership in democracies pretty much agree are displayed by the truly great leaders: integrity, courage, determination, good judgment, and a flexibility of mind.[2]

As a byproduct of these dynamic virtues, Franklin, Jefferson, and Lincoln had a tolerance without which the whole history of America would have been different. They were devoted to the things that united rather than those which divided their countrymen. The Constitution could not have been agreed upon without the willingness of Franklin and Jefferson to join in great compromises so that the nation might be formed.

And where in all our history is this attitude of tolerance and devotion to the whole Nation so strikingly shown as in these immortal words of Abraham Lincoln's second inaugural:

"With malice towards none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle, and for his widow and his orphans; to do all which may achieve and cherish a just and a lasting peace among ourselves and with all nations."

No discussion of American leadership would be complete without some mention of Woodrow Wilson, George Washington, and Robert E. Lee. Wilson had the kind of prophetic vision of the people's aspirations to which I have referred. Undoubtedly one of our most eminent presidents, he studied the art of leadership and was our best modern authority in the whole field of political science. In a stimulating commencement address on "Leaders of Men" he wisely observed: "If you would be a leader of men, you must lead your own generation, not the next."[3] Ironically, Wilson proved this in his own life when he could not lead the country to accept the League of Nations. It was a cause born before its time, to which Franklin Roosevelt a generation later was able to win the support of the American people in establishing the United Nations. History will certainly accord F.D.R. a high place in the annals of American leadership.

George Washington and Robert E. Lee likewise displayed the marks of leadership I have mentioned, along with a perfection of character unexcelled in our national history. These two military leaders in their days of trial showed the faith, the devotion, and the personal sacrifice which bring the everlasting remembrance of their fellow men. Each gave his all to the time in which he lived and to the cause in which he believed. Perhaps the most fateful hour in the life of Lee was not his surrender at Appomattox, but the moments that followed as he mounted his faithful horse Traveller and with a broken heart rode back to his campfire amid the tears and demonstrated affection of all his soldiers and officers. Lee, a man so great that both the North and the South wished him for its military leader, and now a century later, like Abraham Lincoln, he belongs to both the North and the South.

Magnetism and eloquence can be powerful traits in democratic leadership. A striking example is Daniel Webster. Or listen to John Bright, who defeated Lord Randolph Churchill for Parliament in England, speaking to his constituents:

"Palaces, baronial castles, great halls, stately mansions do not make a nation. The nation in every country dwells in the cottage; and unless the light of your constitution can shine there, unless the beauty of your legislation and the excellence of your statesmanship are impressed there on the feelings and conditions of the people, rely upon it, you have yet to learn the duties of government."

On the other hand, however right may be his theme, the statesman whose ability is literary rather than forensic may lose his cause. Picture Edmund Burke speaking on conciliation with America in words that might have avoided the Revolution and changed the whole course of British and American history. "Wise beyond precedent in the annals of debate," yet his words emptied the audience in the House of Commons.[4]

Sometimes it is robust enthusiasm rather than eloquence, along with courage and integrity that shapes a leader. Such was Theodore Roosevelt. No doubt many of you were young men when Teddy was President, and perhaps you belonged, as I did, to that vast group of boys who got their first taste of hero worship from Theodore Roosevelt. In many ways he was greater as a leader than he was as a President. In other times he might have been an immortal.

Curiously, history effaces the antagonisms of the moment that often surge about illustrious leaders in their day. Just as Lincoln and Lee belong to the whole Nation, so Jeanne d'Arc and George Washington are admired in England; and we Americans take pride in the noblest leaders of British history. I would like to mention two of them: First, Horatio Viscount Nelson, who in leading the attack of the British fleet against Spain at Santa Cruz de Tenerife had his right elbow shattered by a musket ball. His arm was amputated at the shoulder without an anesthetic, and within a half-hour his flag captain was receiving orders as though nothing had happened. Let me add parenthetically, that if you have not visited Santa Cruz de Tenerife in the Canary Islands, put it on your travel list; it is one of the most majestic spots in the most heavenly climate in all the world. But let's get on with Nelson. During the Napoleonic wars Nelson was given the Mediterranean command. As he led his fleet into battle at Trafalgar, he signaled to each of his ships those memorable words: "England expects that every man will do his duty." During that battle Nelson lost his life because he refused to let the fighting *Téméraire* pass his flagship and take the first shock of the French guns. Little wonder that he was trusted and venerated as much by his seamen as by his officers and that history regards him as the most famous of all seamen and one of the immortals of all time.

My second British immortal is the greatest democratic statesman of this century, whose name will live as long as our way of life shall endure: Winston Churchill, Britain's man of destiny in our time. Hear his words in Parliament after France had fallen and Britain stood alone in 1940:

"The whole fury and might of the enemy must very soon be turned on us. Hitler knows that he will have to break us in this island or lose the war. If we can stand up to him, all Europe may be free and the life of the world may move forward into broad sunlit uplands. But if we fail, then the whole world, including the United States, including all that we have known and cared for, will sink into the abyss of a new Dark Age, made more sinister, and perhaps more protracted, by the lights of perverted science. Let us, therefore, brace ourselves to our duties, and so bear ourselves that, if the British Empire and its Commonwealth last for a thousand years, men will say, 'This was their finest hour.'"

On hearing these words would you not have been proud to be a British subject?

One cannot give even cursory study to the world's greatest leaders without being impressed with another general attribute, not of their characters but of their lives. I refer to the virtue of adversity—the demonstration that for the individual as well as the Nation the road to the heights is built by hard work and sacrifice, and those who travel it are bathed in blood, sweat, and tears. Indeed, Toynbee tells us that it is difficult rather than easy environmental conditions that produce the advance not only of nations but of civilizations. I wonder whether our American society today with its so-called prosperity and it ever easier mode of life, infiltrated by the search for security instead of opportunity, is conducive to the production of great leaders. Our new young President in his inaugural struck the right note when he said, "And so, my fellow Americans, ask not what America can do for you; ask what you can do for your country."

Now the real significance of all that I have said about the qualities of leadership is that today more than ever before America needs to develop her leadership at all levels of government. Part of the problem is that a free society requires more leaders than other kinds of society. With us the heads of state lead; they do not rule. Hence, in each new generation we must develop statesmen, young and old, men of broad vision with an understanding of our Nation's traditions and a sense of her destiny.

Our technological advance in this century has moved with lightning rapidity. Within a single lifespan many of us have seen the development and mass production of the automobile, the piston and later the jet airplane, the radio and television, and now automation, atomic energy and the space age. True, these scientific advances have contributed to our high standard of living, but in spite of such material progress America will have failed in the truest sense unless our advance in the art of government and in the realm of human and spiritual values keeps pace with our physical progress. From the standpoint of wise leadership, it is not enough that you able and imaginative engineers should expand the frontiers of our technical knowledge. You and the scientists who come after you must, either through formal education or private study, expand your horizons and knowledge in the field of the social sciences and acquire a better understanding of the motivations of human beings. The situation is similar in the profession of medicine, where our notable progress has failed to expand adequately in the field of psychiatry to cope with the mental ills of our population. Our admiration of technological and material gains caused Nehru on leaving our shores a few months ago to warn us in these words, "Of all countries, the United States and the Soviet Union are nearer to each other than any two countries in the world—both take their stand on technology and what I call the machine civilization." Is this the kind

of image of America that we are building for the underdeveloped and uncommitted nations to look upon? Or are we going to build something far beyond a machine civilization? The answer will depend upon whether the hero worship of the new generation is directed merely to the development of ever more intricate machines, tools, and gadgets, or whether along with this there goes deep respect for the heritage of America and emulation of the traits of character which our greatest men displayed.

Have no feeling that these qualities of leadership are most likely to be found in our best schools or colleges. The environment of our humblest homes is perhaps better able to nurture them. Alas, many of these potentially great young men and women go through life and never receive the call to lead their fellow countrymen, but their qualities of heart and mind are there nevertheless. These are the people Thomas Gray spoke of in his famous Elegy written in a country graveyard:

"Perhaps, in this neglected spot, is laid,
Some heart, once pregnant with celestial fire;
Hands that the rod of empire might have sway'd,
Or waked to ectasy the living lyre.

Some village Hampden, that, with dauntless breast,
The little tyrant of his fields withstood;
Some mute, inglorious Milton here may rest;
Some Cromwell, guiltless of his country's blood."

Perhaps in your home or in your office there are young men or women in whom you can kindle the spark which will make them aspire to give their lives as leaders in the service of America. It was when Thomas Jefferson, at the age of 22, heard the stirring words of Patrick Henry that he resolved to dedicate himself to the cause of freedom and independence.

Remember, too, that the same qualities which made the great statesmen I have mentioned are what make the leaders of American industry. This is especially true today when a sense of public responsibility becomes a prerequisite to wise leadership in the top echelons of our corporations. First consideration for the public interest must exist, not only at the executive level, but in the councils of labor and all along the firing lines of industry, if our system is to remain strong and we are to avoid the welfare state.

Upon you and me, who spend our lives in the learned professions or in positions of importance in industry, there rests a special responsibility for the development of the right kind of future leaders. We must be sure that as managers of business we do not spend too much of our time on the merry-go-round grabbing for brass rings. Titles and material gains will not bring lasting satisfaction to most of us. Fortunate is the man who learns in younger years with Thomas Jefferson the relative value of life's goals. When Jefferson came to write his epitaph, he never mentioned having been President of the United States. He wished to be remembered as the founder of the University of Virginia and author of the Declaration of Independence.

Our American heritage is very great. The American dream is still a reality. But I wonder as future historians record the progress of our age whether they will find that we have measured up to the challenge we received from our forefathers. When at the sunset of life we pass the torch of freedom to our children, will it burn as brightly as it did or us in our youth? Even though men grow old, the Nation still is young; and in each succeeding generation there must be awakened the intense spirit of liberty that gave our country birth. **America is only beginning to fulfill her larger destiny, and she yearns for leaders to match her greatness. The grave question is, Will these leaders rise? The long sweep of our history answers that such leaders will not arise if we are worshipers of technology and the material, but if on the other hand we as a people follow in the footsteps of our ancestors and walk with our Maker "beside the still waters," finding our inspiration in the noblest leaders we have ever known, then surely a wise Providence will bless us in the future as He has in the past.**

A Move in the Wrong Direction

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "A Move in the Wrong Direction" which appeared on February 17, 1961, in the Monitor, the official Catholic newspaper of the diocese of Trenton, N.J.

A MOVE IN THE WRONG DIRECTION

The House Committee on Un-American Activities has been functioning for the past 20 years. It was created as an agency for the protection of the Nation's security against subversion. Like other congressional committees with broad powers of investigation, it serves the purpose of disclosing conditions that justify legislative action. In the course of its work, which is necessarily along unpleasant lines, it has aroused enmities and opposition. This antagonism again has taken the form of a petition to Congress calling for the abolition of the committee.

This movement has been initiated by citizens of a number of States who have signed a petition which cites five charges against the committee, all presented in general terms and without documentation. The committee, it is charged, has perverted and imperiled the proper and necessary powers of Congress, helped to discourage free study and inquiry in working for peace, harassed Americans who work for racial equality and justice, increased bitterness between racial and religious groups, discouraged social and cultural contacts with neighbors.

Citizens are asked to write to Congress in support of the petition. The appeal is made on the basis of a complaint which is not specific in any instance, which cites no supporting evidence and which makes no pretense at being a presentation of facts. But its most indefensible aspect is its disregard of the affirmative side of the record—the disclosures of disloyalty and subversion which, if they had not been brought into the full light of day, might have been seriously damaging to the Nation's security.

The nature of the task which the House Committee on Un-American Activities has been required to fulfill and the character of many of the people with whom it has to deal have made stern measures a necessity. Many of those involved have been conspirators against the Nation's security, agents of potential enemies. They have employed every available device to protect their secrets and escape involvement. They have been determined to thwart the committee at every turn.

In view of the failure of the sponsors of this movement to support in any tangible way the collection of loose charges directed against the House Committee on Un-American Activities, is not the demand for its abolition presumptuous and arrogant? And is not the failure even to refer to the committee's many constructive accomplishments during the 20 years of its history a reflection of unreasoning prejudice and unfairness?

It is possible that many tender feelings would be spared if the purpose of this movement were accomplished. And it is possible also that a green light would be given Communist agents and their allies and disloyal Americans whose main business is subversion. The committee serves a necessary purpose and the dangers of its abolition should not be risked.

Peace Corps Recruiting

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the recent Executive order creating the nucleus of a Peace Corps has captured the imagination of students, church groups, and everyone else who is concerned about the great numbers of people who still live limited lives in so many nations of the world.

The reaction to the Peace Corps proposal is indicative of the great potential for good in this program. As one New Jersey editorial writer recently expressed it:

President John F. Kennedy's establishment of a Peace Corps may well mark the passing of another milestone on the road to world peace. His program promises * * * a golden opportunity for the people of the United States, through dedicated, interested, and able young people to acquire the intimate understanding of our neighbors which is so essential to our national emergence as a strong, more respected, and better equipped leader of the free nations of the world in their search for world peace, with freedom.

The enthusiasm for the proposal in New Jersey has been expressed in a United Press International story of March 8 and in the following editorials: from the Courier-Post, Camden, N.J., March 13 edition; Jersey Journal, Jersey City, N.J., March 11 edition; the Daily Journal, Elizabeth, N.J., March 7, edition; the Sunday Home News, New Brunswick, N.J., March 5 edition.

I ask unanimous consent to have the above editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

PEACE CORPS AS MISSION ACTIVITY

President Kennedy has created the Peace Corps about which he talked during his campaign and has asked Congress to make it permanent.

The President may have an excellent idea here, but its success will depend on the temperament and training of the volunteers sent abroad and the kind of support they get.

They will go only to countries where "their services and skills are genuinely needed and desired," the President promised. By the

end of the year he hopes to have 500 to 1,000 members around the world, building peace by helping underprivileged nations toward what might be called new horizons of productivity, health, and hope.

The program would appear to complement the program of mission activity in which churches of every denomination are engaging, with people of many special skills sought to promote Christian advancement through technical aid designed for the areas in which it is given.

The wording of Mark 16: 15 is almost identical in either Douay or the King James version of the Bible, and the last seven words are the same: "* * * and preach the Gospel to every creature."

There are many ways to preach the Gospel. Some men preach it with a surgeon's scapel, some with a plow, some with a book, some with a bar of soap.

Whatever the means, they scatter good seed and some of it falls where it can take root.

Many years of religious work in the darkest corners where daring men and women have been permitted to go have built a great body of experience. The Peace Corps volunteers will find much spadework done when they begin their task.

The plan should work as long as it and the people engaged in it stick to the simple principle of teaching men the way to walk in dignity toward their goals and not trying to pick them up and carry them.

It's a slower and harder process than it might appear on the surface.

PEACE CORPS RECRUITING

President Kennedy's Peace Corps plan is stirring the imaginations of the Nation's college students. The initial response is so strong that the pool of prospective corpsmen is even larger than the most optimistic planning originally had supposed.

The enthusiasm should be gratifying to an older generation which at times has wondered just where the Nation's youth is headed. But at the same time, it should caution corps leaders in Washington to give considerable thought to selection processes they may set up.

The good intentions of the thousands who will apply cannot be questioned seriously, although there may be some diplomatic dilettantes included. Maturity and understanding should be considered carefully in each applicant.

Our foreign dealings have been criticized severely in recent years for introducing the ugly American to the world. The sometimes inadequate image we have presented overseas has cost us dearly in prestige and friendships.

As we work to erase the ugly American and his effect, care should be taken to prevent a new caricature from assuming his place. Irresponsibility among members of the Peace Corps could bring about just such a situation.

The same psychological factor would be involved in the plan to expand the Peace Corps functions to include work in depressed areas of this country. Preventing economic depression from spreading to the human heart requires tact and discretion that are not always present in college-age men and women.

If these risks can be eliminated from the program, its potential for America, the deprived areas and nations and participating youth is unlimited. It not only will give the United States a new image and the depressed areas and nations new hope, but it will provide an unparalleled opportunity for growth and learning for the young corpsmen themselves.

FRONTIER FOR YOUTH

There is a promise of adventure in the President's Peace Corps that is catching the fancy of young Americans. It truly contains the allure of New Frontiers—not only the sort promised by Mr. Kennedy during the campaign, but also frontiers such as beckoned pioneers westward during our early history.

The new project will give Americans an opportunity to serve their country abroad in ways intended to promote mutual understanding and benefit. Peace Corps members of both sexes will be teachers, field technicians and the like, trained and eager for their jobs and carefully screened. They will work in education, farming, public health, homecrafts and the English language. They will operate largely under native authorities and at the invitation of host countries.

Recruits will spend 2 to 3 years overseas, according to present State Department plans. They will not have plush living; the Peace Corps worker will get a basic allowance sufficient only to match local living standards and maintain health.

But the program will provide the Peace Corps member, in payment for the sacrifice the assignment entails, his chance to make a tangible contribution to better world understanding and to his country's stature in the community of nations. We were among the first to applaud this idea when it was suggested last summer. We are confident that enthusiasm for the program will endure.

YOUTH SHAPING WORLD FUTURE

President John F. Kennedy's establishment of a Peace Corps may well mark the passing of another milestone on the road to lasting world peace.

His program promises not only direct and invaluable benefits to the countries where Peace Corps members will live and work but also a golden opportunity for the people of the United States, through dedicated, interested and able young people, to acquire the intimate understanding of our neighbors overseas which is so essential to our national emergence as a stronger, more respected and better equipped leader of the free nations of the world in their search for world peace, with freedom.

President Kennedy's Peace Corps appears to be a carefully planned and well thought out program. He seems to have anticipated objections that might be raised to the program, and eliminated the points of conflict.

Peace Corps members will serve without pay, receiving only living allowances. They will be carefully screened by the FBI for security clearance. They will not get draft exemptions. They will be forbidden to engage in religious missionary pursuits. They will not in any way serve the Central Intelligence Agency.

That takes care of most of the objections that might be raised.

What will the Peace Corps do? Its members will be young people specially skilled in teaching, in agriculture, in health. They will have 3 to 6 months' special training here in language, culture and work skills needed in the nations to which they are assigned.

In the foreign field, the Peace Corps members will live and work with the ordinary people of the land they are assigned to. In many cases the work will be arduous in the developing nations and living conditions will be most primitive.

President Kennedy hopes that this new American Peace Corps will find favor not only in the nations which need its services but in the leading free nations which stand shoulder to shoulder with us in the cause of world peace. He says, "Let us hope that other nations will mobilize the spirit and energies and skill of their people in some form of Peace Corps—making our own effort only one step in a major international effort to increase the welfare of all men and improve understanding among nations."

We think the Peace Corps will achieve this aim. And we find ourselves extremely well pleased with this offer to our young people of a chance to help shape the future of the world.

NEW JERSEY COLLEGE STUDENTS RALLY TO PEACE CORPS PROPOSAL

(EDITOR'S NOTE.—President Kennedy's Peace Corps program is winning the backing of college students throughout the country. The following story gives the reactions of New Jersey students.)

(By Walter K. Lindenmann)

New Jersey college students are rallying to President Kennedy's Peace Corps program.

A United Press International survey indicated that many of the State's upperclassmen were interested in the program, and even those who said they couldn't join thought it was a good idea.

Additionally, the proposal to send volunteers overseas as missionaries of peace for the United States has earned the official approval of at least one institute of higher learning—Fairleigh-Dickinson University.

Dr. Peter Sammartino, president of the Rutherford School, announced during the weekend that each student who gives 1 year of service to the program will receive 6 academic credits on the graduate level or 12 on the undergraduate level.

LEADING ENTHUSIASTS

But most of the enthusiasm has come from the students.

Typical of the reaction was the comment of Hugh McDaid, of Harrison, a prelaw student at Fairleigh-Dickinson who found the plane "one of the finest expressions of American foreign policy in years."

Don Emmerson, a 20-year-old Princeton senior, called the plan "a concrete step toward national and personal understanding and development.

"It gives American youths a chance to prove they are not self-satisfied, as they are so often portrayed," he added.

Ted Pontius, 20, another Princeton senior, said he sees in the Peace Corps "a chance to serve my country and at the same time pick up valuable knowledge about people. I don't think it will be fun, but I think it will be challenging and rewarding."

WILL DESTROY CONCEPT

Upsala student John C. Schmeelk, 19, of Dumont, put it this way: "It's a program which is long overdue and one that will get the enthusiastic support of most college students.

"I can see the unlimited possibilities of a Peace Corps in destroying the ugly American concept in underdeveloped nations as well as in improving the living and educational standards of those areas," was the reaction of David Cote, 25, of Willimantic, Conn., an Upsala student.

At Fairleigh-Dickinson, about 250 upperclassmen were said to be leaning toward the corps. At Rutgers University, New Brunswick, both the Targum and the Caelian, undergraduate newspapers of Rutgers and Douglass College, respectively, endorsed the plan.

An official of Rider College, Trenton, said it was too early to evaluate reaction.

Have You Heard About the Hard Times?

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. NELSEN. Mr. Speaker, we so often overlook the fact that we live in a country that maintains the best standard of living in the world. This is a dis-

tinct compliment to our historic free enterprise system as contrasted with the Communist systems which today threaten our very existence.

Recently a very interesting editorial appeared in the editorial column of the Sleepy Eye Herald-Dispatch. The point that is so well put across by the editor I think should be brought to the attention of my colleagues and I ask that it be included with my remarks in the Appendix of the RECORD.

HAVE YOU HEARD ABOUT THE HARD TIMES?

Have you heard about the hard times we're experiencing? About the ill-housed, ill-clothed, ill-fed? About the farmers and small businessmen who are going broke? It's really tough. As a result of the shortage of food on the table, some of us are now only 20 instead of 30 pounds overweight.

Seriously, a small segment of the population is having financial difficulty. Those who have lost jobs are worried and have reason to worry. They comprise from 5 to 7 percent of those who ever had jobs, including part-time workers and those who want only part-time work.

The other 93 to 95 percent is getting along reasonably well. Most of them are living on a scale they would have thought fantastic 30 years ago.

Maybe we should back away from the wailing wall for a while and compare our lot with that of men, women and children in other lands.

A Missouri school superintendent has done this. He says that if the world's population—2,750 million—were compressed into a single town of 1,000 population, the following contrasts would be seen:

Sixty persons would represent the U.S.A., 940 would represent all others, 60 Americans would receive one-half the income of the town, 940 other people would share the other one-half, 36 Americans would be church members, 24 would belong to no church, 300 of the town's population would be Christians, 700 would have other beliefs, 80 of the town's population would be card-carrying Communists, 370 would be under Communist domination, 303 would be white, 697 would be non-white.

The 60 Americans would have a life expectancy of 70.

The expectancy of all others would average under 40.

Of the town's total supply, the average American would have 15½ times as much as the average other person.

The Americans would produce 16½ percent of the town's food supply and would consume 15 percent, storing the 1½ percent. Most of the 940 non-Americans would be hungry most of the time.

The 60 Americans would have: 12 times as much electricity, 22 times as much coal, 21 times as much oil, 50 times as much steel, 50 times as much general equipment—as the 940 remaining in the town.

The lowest income group of Americans would be better off than the average of the other 940.

Corraling Policy Statements

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. FORD. Mr. Speaker, I believe the following editorial from the Christian Science Monitor for March 11, 1961, entitled "Corraling Policy Statements," is worthy of the attention of all Members of the Congress and of the administration:

Within limits there is much to be said for President Kennedy's desire to have his administration speak with one voice. Responsible government can be damaged by careless or confusing policy statements. But obviously the art of shaping a clean-cut impact on public opinion has not yet been perfected.

One clear problem comes in reconciling campaign positions with the responsibilities of office. This was shown in the missile-gap gap. But the latest incidents requiring amplification ("correction" in less diplomatic language) have concerned foreign affairs. Secretary of State Rusk could well be wishing certain roving envoys would rove more and talk less for publication.

The White House had to explain the Mennen Williams remark about "Africa for the Africans." Now Mr. Rusk has had to clear policy from questions raised by Ambassador Harriman's statement in West Germany that policies of the Eisenhower administration would not necessarily bind the new President. This was said in answer to a question whether Mr. Kennedy would continue to regard East Germans controlling West Berlin's communications as agents of the Soviet Union.

The answer evolved doubts about American firmness on Berlin. Mr. Rusk had to say in effect that nothing has changed and many foreign policy positions must necessarily remain the same. He had the difficult chore of trying at the same time to leave himself some freedom for maneuver by linking Berlin with a broad German settlement.

Both at home and abroad the campaign led people to expect greater (or different) changes. This opens even careful statements to misunderstanding. It leaves even less than normal room for careless or conflicting ones.

Dwight David Eisenhower

SPEECH
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mrs. ST. GEORGE. Mr. Speaker, this is a happy occasion when Members on both sides of the aisle join together with the President of the United States in honoring a great former President, a great soldier and a great American unanimously. It is fitting that this tribute should be unanimous because President, and before him General, Eisenhower did more to guide the peoples of the world and the people of the United States than any President we ever had. It is also gratifying that his successor, although he comes from the opposite party, was the first one to see the necessity of giving this honor to former President Eisenhower.

It has been well said that the Presidency is the highest honor in gift of the American people. This is true. But in President Eisenhower's case he has a special place in the hearts of all of our people because it was as a general that he conducted a great and victorious campaign. It was he who was there on the beach at Normandy on D-day and, therefore, he occupies a rather unique position in our entire history. We do want him to carry the title of "General," a five-star General of the Army.

For this reason, today is a great and historic occasion. This honor that is being conferred upon him can only be conferred on a very few. There are only four men in our country today who have it. It is not an honor that can be passed on. It is an honor that has to be earned. No man in our history has earned it more completely or deserves it more absolutely than does Dwight David Eisenhower.

The Disclaimer Affidavit

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. MORSE. Mr. President, Prof. Howard E. Dean, secretary of the American Association of University Professors, University of Oregon Chapter, Eugene, Oreg., has written to me concerning the association's opposition to the disclaimer affidavit requirement of the National Defense Education Act of 1958.

I ask unanimous consent that Professor Dean's letter be printed in the Appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN ASSOCIATION OF
UNIVERSITY PROFESSORS,
UNIVERSITY OF OREGON CHAPTER,
Eugene, Oreg.

Senator WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: I am sure you will be interested in the following letter concerning the disclaimer affidavit requirement of the National Defense Education Act of 1958 which this chapter is sending to American Association of University Professors chapters in State universities and colleges throughout the country:

"On behalf of the University of Oregon Chapter, American Association of University Professors, I enclose for your information copies of official statements expressing vigorous opposition to the disclaimer affidavit requirement of the National Defense Education Act of 1958 which have been made by the Oregon State Board of Higher Education, the faculty of the University of Oregon, and by this chapter.

"More recently, the Pacific Northwest Assembly, a regional meeting of the American Assembly established in 1950 by Dwight D. Eisenhower, while President of Columbia University, has expressed its opposition to this requirement. At its meeting in Cottage Grove, Oreg., December 1–4, 1960, the assembly adopted a recommendation that the National Defense Education Act be amended to remove the requirement of the disclaimer affidavit. Participants in the Pacific Northwest Assembly included community leaders from business, labor, agriculture, Government, and the professions in five Western States.

"We are encouraged by these affirmations of steadfast support for American traditions of free inquiry and fair play. We feel strongly the faculties, governing boards, and AAUP chapters must act now, as the 87th

Congress begins, to make plain their opposition to the unjustly discriminatory disclaimer affidavit requirement and to work for its immediate repeal.

"We believe that our opinions will be more effective if we act in concert, and if we express them at strategic moments when they will be relevant to proposed congressional action. To accomplish this, our faculties ought to have some ready and continuing channel of communication. We believe that the AAUP chapters can serve that role.

"We respectfully request that you keep us informed of the actions taken in this direction by your faculty, governing board, AAUP chapter, and your Representatives in Congress."

Sincerely yours,

HOWARD E. DEAN,
Secretary.

Resid Controls: Is the Game Worth the Candle?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial that appeared in the February 27, 1961, issue of the Oil and Gas Journal entitled "Resid Controls: Is the Game Worth the Candle?" This publication is one of the most objective in the industry, and its views are worthy of profound consideration.

The editorial follows:

RESID CONTROLS: IS THE GAME WORTH THE CANDLE?

Perhaps it would be smart politics for the domestic oil industry to interpose no opposition to current proposals to remove quota controls from imports of residual fuel oil.

At first blush this suggestion may be alarming to those who look on any oil imports as injurious, or who fear that a weakening of controls on resid would be used by the international companies or others as an entering wedge to gut the rest of the imports-control plan.

But study would demonstrate that the overall economic loss to the domestic producing and refining industry would be quite small, while the political gains could be very substantial.

Resid import controls are the subject of a lot of political rhubarb—have been since they were imposed and will be as long as they continue. Domestic oil is an innocent bystander caught in the crossfire between coal producers and New England consumers.

Consumers' spokesmen don't distinguish between industrial fuel oil and other petroleum products. Their squawks against resid controls tend to become attacks on the whole control system.

So if the domestic industry would favor ending Government interference in the resid business it would have much firmer ground to support the much more important—and much more defensible—limitations on imports of crude and of other refined products.

Foreign resid has impact only on the North Atlantic seaboard. Its low price has some, but not a huge, effect on the total product realization of the relatively few gulf and east coast refineries competing with foreign resid. And this reflects back on the market for only an extremely small volume of low-gravity gulf coast crude.

Resid sells for less than the price of U.S. crude oil used to make it, and a price attractive to U.S. refiners would price resid out of the market. Therefore most refiners consider resid an unwanted byproduct and make as little as their equipment permits, regardless of the import volume.

Two years of resid controls have not had appreciable effects on demand, prices, import volume, or domestic output of resid. The only tangible results are an unsolvable administrative headache and an eternal squabble among importers, dealers, consumers, and coal men.

There should be safeguards if controls are lifted. Resid should be imported only for boiler fuel and not for reprocessing as crude. Resid imports should be excluded from the demand base in calculating crude imports, and deducted, at least in part, from crude-import quotas.

In short, resid imports are a very special situation, with little bearing on the rest of the oil business. If the domestic industry would keep aloof from that hassle it might gain support for the rest—the really vital parts—of the import-controls system.

A Proposal for the Dollar Gap

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Constantine Brown as it appeared in the Washington Evening Star of March 9, 1961. Mr. Brown's idea appears to be a very good one:

A PROPOSAL FOR THE DOLLAR GAP: AMERICAN COUNTERPART FUNDS FOR TOURISTS URGED TO EASE OUTFLOW OF GOLD

Why has nobody in the administration considered the use of counterpart funds available to the American Government almost everywhere in the world to offset the outflow of dollars spent by American tourists abroad? This question is being asked by those connected with the highly developed tourist industry here and abroad.

The American people have spent over the last 15 years through their Government upward of $80 billion all over the globe, either in the form of economic assistance under what is generally known as the Marshall plan or through the sale of surplus goods, especially food.

In all these transactions it was provided that the recipient countries would set aside in their own depreciated currencies substantial sums representing interest or repayment for the money and goods received from the United States. According to the existing agreements, the United States is entitled to spend for its own needs in the debtor countries between 15 and 20 percent of the counterpart moneys. The balance is being plowed back into the economy of that country, itself.

It is difficult for outsiders to determine how great an equivalent of dollars is available to the United States. But according to some responsible sources in Washington an "informed guess" is that some $7 billion is at the disposal of the Treasury to be spent within the various foreign countries.

The greatest number of American tourists travel to England, France, Germany, Italy, etc. In all these countries we have substantial counterpart funds. Before the dollar yielded its place of honor in the international money markets to the mark and guilder the administration used a small percentage of these funds to purchase palaces for its embassies, cultural centers, and also to pay for the many and ever-increasing congressional junkets abroad. But these expenditures represented a drop in the bucket.

Until recently Americans were encouraged to travel and spend dollars abroad as a means to strengthen the sick European currencies. The situation has changed now. We are in the midst of a dollar crisis. The outflow of our currency is one of the main causes. In order to meet this difficulty and without interfering with tourism it is being suggested that the U.S. Government use its counterpart funds on a larger scale than heretofore.

A tourist going abroad would buy his francs, pounds, lira or marks from the Treasury Department. He would deposit the amount of dollars he intends to spend abroad with an agency of the Treasury or other department of the Government and would receive in exchange drafts in foreign currency to be drawn at the national banks of the countries he intends to visit. In this manner the outflow of dollars spent by tourists would be halted and at the same time the countries visited by more than 2 million American tourists would lose nothing.

In the past, when there were black markets everywhere in the world, the American tourist might have balked at such an idea, since he would have lost the substantial difference between the official rate of exchange and what was being paid for dollars by the black marketeers. But in the last 18 months this has disappeared and there is only one rate of excharge. As a matter of fact the purchaser of drafts on foreign countries would make a small profit since all banks abroad charge a commission when they purchase American currency or travelers checks.

The foreign governments where we have counterpart funds would welcome such a measure since it would encourage rather than discourage tourism. So long as that money is kept in circulation they don't care any longer whether it represents actual dollars or their own currencies owned by the American Government. Such a step would make it unnecessary for Congress to pass any legislation reducing the value of goods imported by tourists abroad from $500 to $100. The foreign markets would no longer be glutted with dollars when the American traveler is given foreign exchange from counterpart funds, which are lying idle, for dollars which remain at home.

Thus the concern of the British, French, Italian and German Governments over the reduction of sales to the 2 million American tourists would be offset and might strengthen the much-needed feeling of good will from the man in the street toward Americans.

Where's the Money Coming From?

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. FINO. Mr. Speaker, I am pleased to insert in the Appendix of the RECORD an editorial which appeared in the

March 12 issue of the New York Sunday News. Since I believe this editorial makes good sense, I urge its reading to the Members of this Congress:

WHERE'S THE MONEY COMING FROM?

Whatever else you may say of President John F. Kennedy, you have to admit that he isn't one to feel any reluctance about spending the taxpayers' money in ways he thinks it should be spent.

He wants a big, inclusive, and hugely expensive system of medical care for the aged set up in a hurry.

His heart yearns to help schools and colleges with several billions of dollars in the next few years, and to shoot $2.5 billion on urban renewal.

The new Chief Executive has set one of his pet schemes—the Peace Corps—in motion by Executive order, without waiting for Congress to act on it. Nobody seems to know how much this will cost, but it doesn't look cheap from any angle.

Current talk has it that Mr. Kennedy hopes to increase our defense spending by some $2 billion this year over the approximately $40 billion at which ex-President Eisenhower felt it should be pegged.

It looks as if the President has forgotten his inaugural advice to us all to ask, not what our country can do for us, but what we can do for our country.

His main object up to now seems to be to have the Government do more and more for increasing numbers of Americans and foreigners.

WHERE'S THAT SELF-SACRIFICE?

But maybe it's unkind of us to bring that up—and maybe the President feels that Americans' golden opportunity to do something for their country will come when and if Congress passes all his proposed welfare legislation and then has to jack up taxes to pay for it.

We can't say we relish that prospect, what with Federal, State, and local taxes already sky high. And it would not be necessary, anyway, to hear Representative PAUL A. FINO tell it, to finance all of the proposed Kennedy welfare projects by boosting taxes still higher.

In an impressive speech in the House the other day, the Bronx Republican lawmaker reminded his listeners that there are 24 States in this country in which betting on horse races is lawful.

The National Association of State Racing Commissioners, Mr. FINO pointed out, reports that in the year 1960 a total of $3,310,712,316 was bet on horse races in those 24 States. From this $3.3 billion handle, the 24 States took $254,046,278 all told in tax revenues.

New York State alone got $97 million from this source, despite the fact that its up-State bluenoses, spoilsports, and leftover Puritans have thus far kept legal betting confined to the tracks.

FINO used these dramatic statistics as an argument for the national lottery—which he has long tried to persuade Congress to set up.

Such a lottery presumably would be along the line of the Irish Sweepstakes, with tickets sold at low prices through post offices or banks, with prizes numerous and generous, and with the Government taking what was left after payment of awards and overhead expenses.

PAINLESS REVENUES

FINO is convinced that a U.S. national lottery would bring in at least $10 billion a year to the U.S. Treasury. He bases his belief on the estimate of most experts on this subject that the gambling turnover in the United States adds up to about $30 billion—repeat billion—every year.

The $10 billion would go a long way toward financing President Kennedy's welfare legislation; and it would be collected without pain to any taxpayer. People, on the contrary, would enjoy it.

True, Representative FINO is a Republican and President Kennedy is a Democrat. But J.F.K. must know that an occasional Republican can have an occasional good idea.

We're convinced that FINO has a good idea in his advocacy of a national lottery. We further think that the new President would be exceedingly well-advised to look in FINO's idea, satisfy himself as to its practicality, and then do his powerful best to sell it to Congress.

Golden Anniversary of the Indianapolis Motor Speedway

EXTENSION OF REMARKS
OF
HON. DONALD C. BRUCE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. BRUCE. Mr. Speaker, I am proud to present for insertion in the RECORD, a copy of the Indiana State Senate resolution on the golden anniversary of the Indianapolis Motor Speedway. Many friends and supporters of this great racing classic, are hoping that the Postmaster General will honor the "world capital of auto racing" with a special commemorative stamp on its 50th anniversary, May 30, 1961.

The resolution follows:

Whereas it is appropriate for the General Assembly of the State Indiana to take notice of events which are of profound significance to our great State; and

Whereas one of the great events taking place in Indiana during the 20th century has been the founding of the Indianapolis Motor Speedway; and

Whereas this great attraction has brought fame and acclaim to Indianapolis and the State of Indiana from all corners of the globe; and its contributions to the development of the automobile as an aid to better living for all mankind are known the world over; and

Whereas the 50th anniversary of this spectacular event will be celebrated on May 30, 1961;

Whereas the 92d General Assembly of the State of Indiana wishes to congratulate the Indianapolis Motor Speedway, its sponsors, friends, and automobile racing fans everywhere for their inspired interest in the greatest motor classic of the century: Now, therefore, be it

Resolved, That the Senate of the 92d session of the General Assembly of the State of Indiana hereby congratulates the Indianapolis Motor Speedway on its golden anniversary and hereby extends every good wish for a future filled with even greater fame to the claim of "the world capitol of auto racing"; and be it further

Resolved, That the Senate of the 92d General Assembly of the State of Indiana hereby memorializes the Congress of the United States to recognize the golden anniversary of the Indianapolis Motor Speedway by respectfully requesting the Postmaster General of the United States to take the necessary steps to cause to be issued at Indianapolis on May 30, 1961, a stamp commemorating the 50th anniversary of the founding of the Indianapolis Motor Speedway; and be it further

Resolved, That the Postmaster General of the United States be respectfully requested to take any steps necessary to cause to be issued at Indianapolis on May 30, 1961, a stamp commemorating the golden anniversary of the founding of the Indianapolis Motor Speedway claiming the title of "the world capitol of auto racing"; be it further

Resolved, That a copy of this resolution be sent to all Indiana Members of the U.S. House of Representatives and the U.S. Senate, to the Postmaster General of the United States, to Mr. Anton Hulman, president, and to Mr. Joe Quinn, Jr., safety director of the Indianapolis Motor Speedway.

J. RUSSELL TOWNSEND, Jr.,
Senator.

MARTHA Y. BURNETT,
Senator.

Will Appeasement Be Our New Foreign Policy?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. DEROUNIAN. Mr. Speaker, William Henry Chamberlin evinces the false promise of appeasement in his powerful article on the question of the recognition of Red China, which appeared March 14 in the Wall Street Journal. This is especially appropriate on this—Hungarian Freedom Day.

FAR EAST MUNICH?—BRITISH PRESSURE FOR U.S. ACCOMMODATION OF RED CHINA MAY FIND SYMPATHETIC EARS IN NEW ADMINISTRATION

(By William Henry Chamberlin)

It is usually enemy threats and pressure that lead to appeasement. But an ally can also give a push in this direction.

Ever since the election last November there has been mounting pressure from London, partly in the form of public statements of British officials, partly of quite off-the-record hints, in favor of U.S. retreat from its policy of not establishing diplomatic relations with Communist China and opposing the admission of this regime to the United Nations.

This issue may come to a head when Prime Minister Macmillan meets President Kennedy early next month. It is time for American public opinion to give this matter of our far eastern military, political, and diplomatic stance serious considerations. For pressure is usually aimed at a point that looks soft and responsive. No one, it is safe to say, ever tried to convince John Foster Dulles that appeasement and retreat represent a hopeful formula for meeting the Communist threat in Asia, or in Europe. But some of the published statements of men who have been appointed to high positions in the Kennedy administration indicate willingness to consider substantial modifications of U.S. far eastern policy.

For example, before the election the present Under Secretary of State, Mr. Chester Bowles, in the quarterly magazine, Foreign Affairs, urged that the United States "move off dead center in East Asia, beginning with the creation and implementation of imaginative policies based on the realities of two Chinas." These would include "the neutralization of the offshore islands imme-

diately adjacent to the China coast" and increased freedom of travel and trade.

Mr. Adlai Stevenson, writing in Foreign Affairs for January 1960, advocates these American "concessions" as part of a "negotiated" settlement:

"An end to American embargo on China's admission to the United Nations (not to be confused with diplomatic recognition), the evacuation of Quemoy and Matsu and the inclusion of Korea and Japan in the atom-free zone and area of controlled disarmament."

OMINOUS FOR STABILITY

To be sure, these are to be balanced by Communist concessions, including acceptance of international inspection of disarmament, ending the threat of force against Formosa and subversion in Indo-China, a peaceful frontier settlement with India, free elections under U.N. supervision in Korea and, rather curiously, "acceptance of the right of the inhabitants of Formosa to determine their own destiny by plebiscite supervised by the United Nations."

But what is ominous for the stability of our Far Eastern policy is the tendency of both Mr. Bowles and Mr. Stevenson to write as if we had no treaty of alliance with the Chinese Nationalist Government on Formosa. Quemoy and Matsu are not ours to give away; they are under the sovereignty and military occupation of the Chinese Nationalists. And it is bizarre, to say the least, to propose a plebiscite for an area under the control of a government which is a recognized ally. Another figure in the Kennedy Administration, Mr. Thomas Finletter, ambassador to the North Atlantic Treaty Organization, has also been attracted by the idea of a plebiscite and a U.N. trusteeship for Formosa. The problem of what, in such a case, would happen to Chiang Kai-shek's government and army is airly treated as nonexistent.

What are the arguments for a Far Eastern Munich? (This is what the admission of Red China and the expulsion of the Chinese Nationalist Government from the U.N. would be.)

Certainly there has been no visible change of heart in Peiping which would entitle Red China to be considered a "peace-loving state," which is a condition of membership according to the Charter of the U.N. Red China is still technically at war with the U.N. because of its invasion of Korea, which ended in an armistice, not in a peace. It is in occupation of patches of Indian territory along the Himalayas. One of its causes of doctrinal difference with the Soviet Union has been its dogmatic insistence on the inevitability of war with "imperialist," i.e., non-Communist states.

THE BRITISH CASE

The British seem to be basing their case for a drastic change in American policy on a series of most speculative and debatable propositions. That the Soviet Union is ready for meaningful disarmament. That it can be trusted to keep any paper agreement on this subject it may sign. That it has both the power and the will to keep Red China from developing nuclear weapons. That international inspection and control can be effective in the nearly closed society of Russia and the totally closed society of China. Not one of these propositions can be accepted without question, and pretty serious question.

Then there is the hoary chestnut that withholding diplomatic recognition from Red China is equivalent to refusing to admit that Red China exists. Americans, including especially relatives and friends of Korean war casualties and prisoners, know to their sorrow that Red China exists. The point of declining to establish diplomatic relations (and neither Great Britain nor any other country which recognized Red China has derived any tangible benefit from this act) is that a choice is necessary between our allies, the Nationalists, and our enemies, the Communists. A "two Chinas" solution is equally unacceptable to Peiping and to Taipei.

It is a grave miscalculation to contend that there would be no serious unfavorable consequences if the United States should spurn the Nationalists and extend the welcome mat in the U.N. to the Red Chinese, who are so avowedly and violently hostile to this country. The whole balance of power in the Far East would be shaken to its foundations. Such a move would hearten our enemies and discourage our friends, not only in Formosa, but in Japan, Korea, Vietnam, Thailand.

Twice in recent history the experiment has been made of trying to buy off an implacable enemy by sacrificing a weaker ally. Czechoslovakia was the victim at Munich; Poland at Yalta. With the sorry results of these two trials of appeasement in mind, do we want to let ourselves in for a third flier in the same discredited philosophy in the Far East?

Some Information About Feed Grain

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to me about the feed grain program:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 1, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR CONGRESSMAN BECKWORTH: This is in reply to your letter of February 17, asking questions about the emergency feed grain program recommended by the administration.

The administration is recommending this emergency program for two major reasons. These are: (1) the vital importance of the feed-livestock complex to our whole agricultural economy; and (2) the pressing need to bring to a halt the continuing increase in surplus stocks of feed grains which are already at very high levels, and, under existing programs, threaten to continue to increase.

The administration's recommendations constitute an emergency program for 1961. Early action is necessary if the program is to have the desired effect of reducing feed grain production this year. The short length of time available has prevented our giving the serious consideration that we think necessary before we could make a recommendation regarding marketing quotas for feed grains. Marketing quotas for commodities like feed grains where more than half of the production is used on the farm where it is produced present a number of serious problems. We intend to study a number of alternative ideas, including marketing quotas, in developing a longer range program for feed grains to be submitted later.

The number, the quantity, and the dollar amount of loans made on the 1959 crops of corn, grain sorghums, barley, oats, rye, and soybeans are as follows:

Commodity	Number of loans	Unit	Quantity	Amount
Corn	263,042	Bushel	470,377,031	$511,156,415.05
Grain sorghum	49,165	Hundredweight	59,263,436	93,181,912.29
Barley	16,140	Bushel	33,756,600	24,201,013.21
Oats	4,786	do	7,892,478	3,714,630.40
Rye	817	do	913,699	796,146.71
Soybeans	51,473	do	43,390,584	78,629,462.45

The dollar amount of loans made on 1959 crops of feed grains represents the initial outlay on price support for these commodities. Some of these loans were redeemed and the quantity of the commodities acquired by CCC was less than the amounts on which loans were made.

During the fiscal year ending June 30, 1960, the CCC disposed of feed grains and soybeans acquired in previous years price support operations. The realized losses on price support operations and the costs of the commodity export program that were incurred on the feed grains and soybeans disposed of in the fiscal year 1960 were as follows:

[In thousands]

Commodity	Realized loss, price support program, fiscal year 1960	Cost of commodity export program, fiscal year 1960
Corn and cornmeal	$181,982	$8,088
Grain sorghums	17,988	3,773
Barley	20,938	3,742
Oats	10	2,303
Rye	925	1,056
Soybeans	10,344	

In addition to the realized losses on commodities disposed of during fiscal year 1960, the Commodity Credit Corporation still had on hand at that time substantial stocks of several of these commodities. It may well be several years before disposition of these stocks is complete. In the meantime, additional charges such as storage and interest will continue to accumulate. Hence, it is quite likely that there will be additional losses incurred when these stocks are disposed of.

According to preliminary reports of the 1959 Census of Agriculture, 1,989,411 farms reported corn harvested for grain; 223,263 reported soghum harvested for grain; 1,028,847 reported oats harvested; 290,160 reported barley harvested; and 499,143 reported soybeans harvested for beans. Many farms, of course, grow more than one of these commodities, and there is no information available on the extent of the duplication. The information given above on the number of loans made provides the information that is available on the number of farms obtaining price support. Here, again, a farm may obtain price support on more than one commodity, and there is no information available on the extent of the duplication.

We are enclosing a table which will provide you with preliminary information from the 1959 Census of Agriculture on the number of farms producing the various feed grains and soybeans by States. Just as with the U.S. figures, there is a certain amount of duplication here since some farms produce more than one of the commodities in question.

World supplies of high protein meals and vegetable oils are short, and the higher support price for soybeans will encourage increased production that can be used to meet current and future world needs. In addition, the higher support price for soybeans will encourage diversion of part of the feed grain acreage to soybeans.

The support price for cottonseed is required by law to be at a competitive relationship with soybeans. As in the past, price supports on cottonseed will be available to those producers who wish to take advantage of them.

As we stated in the announcement, the price support level for the 1961 crop of Upland cotton was set after long and painstaking study and consultation with all parties concerned. Although the result is not wholly satisfactory to any single group involved, it is, in our judgment, the best decision that could be made in the light of the current legislative and economic conditions and alternatives.

Sincerely yours,

WILLARD W. COCHRANE,
Assistant to the Secretary.

Cleve Bailey: Children's Champion

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following citation given to the Honorable CLEVELAND M. BAILEY when he received the 1960 Parents' Magazine Award for Outstanding Service to Children:

PARENTS' MAGAZINE AWARDS ITS 1960 MEDAL FOR OUTSTANDING SERVICE TO CHILDREN TO CONGRESSMAN CLEVELAND M. BAILEY

Congressman BAILEY (Democrat, West Virginia), a former school principal and school superintendent, has fought valiantly for Federal aid for education legislation during the 12 years he has served on the Education and Labor Committee of the U.S. House of Representatives. He led an unsuccessful battle in the House for the Federal aid to education bill sponsored by the late Senator Robert A. Taft a decade ago. He authored and introduced the aid for federally impacted areas bill which now provides money for school construction and school maintenance in localities that have big military establishments and other large Federal installations. He was the cosponsor of the National Defense Education Act of 1958, which authorized $887 million of Federal funds for student loans and aid to schools to support science, mathematics, and language teaching.

During the 86th Congress, as chairman of the General Education Subcommittee of the House, he made a vigorous bipartisan effort to get a Federal aid for school construction bill enacted. For the first time in American history, a bill for general Federal aid to public elementary and high schools was passed in the spring of 1960 by the House of Representatives. Unfortunately, the House and Senate passed different bills and failed to reach agreement on a single measure. Congressman BAILEY fought courageously for a bill until the adjournment gavel fell. He richly deserves the gratitude of all American parents and children. The West Virginia Representative can be counted on to continue his fight for what he believes—Federal aid for the schools our youngsters need.

Kennedy and the Economy—III

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the third in a series of editorials recently appearing in the Winston-Salem (N.C.) Journal. The following editorial appeared in the issue of March 8, 1961:

KENNEDY AND THE ECONOMY, III—HOW TO ACHIEVE GROWTH

As noted in the first two editorials of this series, President Kennedy's stated economic policy can be boiled down to one central equation: Fast economic growth equals full employment plus a sound dollar. The equation seems correct in what it claims growth would do. The problem is to produce that growth on a solid, sustainable basis.

Consideration of the unemployment and dollar problems has indicated some of the factors that need to be included in the definition of the growth we require. It should be growth in the number of jobs available, and thus in the size of the market for the goods produced. It should be growth in productivity; that is, goods should be made more efficiently, with less expenditure of manhours and paycheck dollars per item. It should not be growth in the price of goods.

The most obvious point to make about these requirements is that they cannot be met by actions of the Federal Government. At the most, the Kennedy administration can only aid and encourage the processes that must take place if such growth is achieved. The brunt of the burden must fall on the private citizen. Given the proper business environment, the proven vitality of our private enterprise system should be equal to the task.

There is also the evident conflict between the requirements for increasing the number of jobs while at the same time producing more goods with less manpower. Resolving this conflict calls for pure creativity in all areas of the national economy. This creativity must improve the quality of products and services to make them worth more. It must conceive and develop entirely new products and services. It must bring the costs of things which only a few people can now afford down to a point where they will have mass markets.

That kind of growth by creativity has been one of this country's traditional strong points. It has come through the medium of individual initiative, and can be expected to flourish best when that initiative is untrammeled. It has never been produced by governmental pump-priming to any effective extent.

The optimum role of the Federal government in assisting this sort of growth process would be different from its role in pulling the country out of a temporary recession. Unemployment relief speedups in the awarding of government contracts, juggling of the dollar supply—all these can be considered pump-priming measures that are effective in speeding a momentarily sluggish economy. But only by sheer chance could they give the economy a new supply of vitality. They are not creative measures. The government simply is not creative in that sense.

What, then, can the Kennedy administration do to provide the right atmosphere for increased economic innovation?

One clear-cut possibly is the President's proposed tax break on private capital improvements—money spent for new plans—and for product research and development. This country's tax laws now treat such expenditures much more harshly than do the laws of most free nations. To name two, Canada and West Germany take far more liberal views of such industrial expenditures.

In a way, the depressed areas measure favored by the President seeks to produce the sort of background needed for long-range growth. Its purpose is to put unused sources of manpower and production facilities back to work. It would do this primarily by extending $300 million in government loans and $75 million in grants to finance the public and private improvements considered necessary to rejuvenate the areas involved. It would authorize $10 million for retraining workers. Out of the whole amount, only the last-mentioned and by far the smallest figure offers real assurance of being well-spent. Retraining of the unemployed on a nonselective scale is beyond the scope of private business and needs Government sponsorship.

Big loan funds, however, are open to logical criticism. Unless it is carefully administered, the Federal loan program is all too likely to waste money on areas where lack of cash is not the problem.

The Johnstown, Pa., area is a prime example. It is a steel town—where the United Steelworkers Union is strong. The decline in the need for workers in basic steel production there has thrown many out of work. Money has been raised locally to finance plants for new industries. At first glance, the town would look ideal for various metal-fabricating operations. The rub is that any such plant would almost certainly be organized quickly by the Steelworkers, at a rigid average pay rate of $2.90 an hour, and collective bargaining to bring that rate down would be a practically hopeless cause. Labor conditions have, in effect, priced Johnstown out of the national economy, so far as its most likely sources of new income are concerned. Federal loans would do nothing to solve the town's problem. Only a saner approach to the community's needs by labor and management can really help.

For depressed areas and the Nation as a whole to increase the rate of creative growth, such debilitating and unjustifiable restrictions as the one which has Johnstown hogtied must be cleared up. All such faults cannot be laid on labor's doorstep, either. Insular industrial leadership or a socially retarded population can put a community in an equally bad economic position. All these things are what prospective builders of new plants lump together under the term, "a bad business climate."

The Kennedy administration can, through legislation and through using its influence with labor and management, do much to give private enterprise the climate and the elbow room it needs for creative growth. Some big Federal spending programs may be helpful, but they are probably not essential to the process. Given a reasonably clear path and a little encouragement, the people surely have the ingenuity and ambition to assure the economy of the growth it needs.

Repeal of Auto Excise Tax

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, the repeal of the auto excise tax constitutes for many people a constructive and continually effective means of stimulating the economy while at the same time correcting an inequity in our tax system that has been allowed to exist far too long. The City Council of the City of Grosse Pointe Farms, Mich., has recently passed a resolution endorsing my bill (H.R. 3647), which, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues as another expression of opinion favoring such tax reform:

CITY OF GROSSE POINTE FARMS,
Grosse Pointe Farms, Mich., March 7, 1961.
The Honorable CHARLES E. CHAMBERLAIN,
The House of Representatives,
Washington, D.C.

DEAR SIR: Please be advised that the Council of the City of Grosse Pointe Farms, at its meeting of February 27, 1961, adopted the following resolution relative to H.R. 3647: 3647:

"Whereas there is presently before the U.S. Congress a bill (H.R. 3647) which would abolish the 10 percent Federal excise tax levied against motor vehicles manufactured in this country, and

"Whereas, it is the opinion of the Council of the City of Grosse Pointe Farms that passage of the bill will spur the local as well as the national economy by supplying the necessary stimulus to increase production: Now, therefore, be it

Resolved, That the Council of the City of Grosse Pointe Farms endorse passage of H.R. 3647.

Very truly yours,
DAWSON F. NACY,
City clerk.

Hotel in the Old West Style

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. MORSE. Mr. President, the Northwest Ruralite, a publication of cooperative and consumer-owned electric utilities in the Pacific Northwest, has in its current issue an interesting article entitled "Hotel in the Old West Style." It describes the Frenchglen Hotel located on the Malheur National wildlife refuge in southeastern Oregon.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOTEL IN THE OLD WEST STYLE—FRENCHGLEN, OREG., INN GOES FOR QUALITY—TAKES DUCK ON QUANTITY

(By Ken Metzler)

This is an open letter to all motorists who might be casting eyes toward the tiny hamlet of Frenchglen, way out in the middle of nowhere, so to speak, in eastern Oregon.

First of all, I have been specifically requested by Mr. Ken Pruitt, operator of the Frenchglen Hotel, to take a realistic approach to travel in the Frenchglen vicinity.

Mosquitoes: Terrible, especially during June and July. They will literally eat you up.

Heat: Terrible in summer, especially in late summer after the mosquitoes have gone away. If the mosquitoes don't get you, the heat surely will.

Dust: Ditto.

Horseflies: They'll drive you crazy.

Roads: Long and tortuous; seldom paved. It's 105 miles to Lakeview, 70 to Denio, 65 to Burns.

Rattlesnakes: No denying they're around.

Accommodations: The Frenchglen Hotel with eight rooms is it. There's a sign in the lobby which says: "You don't have to be crazy to vacation here, but it helps."

Ken Prutt's commentary may be a bit tongue-in-cheek, though one may suspect there is a kernel of truth here, too. A paved road is due in the Frenchglen area soon, and as Eleanor Pruitt, Ken's wife, puts it, "We're just a little bit afraid of it.

"There has never been a key to the front door here; never has been locked up. There never has been any need to lock it. We have accepted every check that's ever been offered to us and in the 9 years we've been here, only one check has come back, and then only a $3-check. I'd say that's a good record and we'd like to keep it that way."

"To put it more bluntly," says Ken, "when the quantity of clientele goes up the quality goes down."

Safely positioned in the backwaters of Oregon's current tourist boom, Frenchglen has changed little and has suffered none of the blight that accompanies the fast-buck type of tourist commercialism. In sequence it remains delightfully quaint. The Frenchglen Hotel is undoubtedly one of the few, if not the only, places, to offer a free cup of coffee—served, incidentally, in a double-sized cup.

It is rumored that when a motorist asked the price of changing a tire in Frenchglen, he was told "50 cents for a lady, $5 for a man," presumably on the theory that any man who couldn't change his own tire deserved to pay $5.

Most of the visitors to Frenchglen are a pretty self-sufficient lot. They include hunters, fishermen (the fishing in the Blitzen River is pretty good, if you can stand the mosquitoes), birdwatchers, photographers, and a few curious souls who seem to have strayed off the main highways and can't find their way back.

"We really don't have a whole lot to offer around here," says Ken Pruitt. "The country isn't big enough for a Cadillac.

Those who now venture as far off the highways as Frenchglen come with fairly serious intent. The Malheur National Wildlife Refuge (which owns the hotel, leasing it to the Pruitts) attracts many eminent ornithologists as well as wildlife photographers and people simply interested in birds. The rugged grandeur of nearby Steens Mountain, best reached from Frenchglen, attracts many others.

"We welcome these people," says Pruitt. "It's the mobs that we fear.

It is obvious that progress in the form of a paved road would not be welcomed in any quarters around Frenchglen. Progress of another type, in a form little more acceptable, arrived but 3 years ago when Harney Electric Cooperative piped electricity into Frenchglen for the first time.

"It was wonderful," says Eleanor Pruitt, recalling the days of the light plant when "if you wanted to wash you had to disconnect the deep freeze."

The history of the Frenchglen hotel goes back to the establishment of the bird refuge in 1908. There was a cabin there then, and the first portion of the present building was built in 1917.

The present operators have been on the job for the past 9 years, coming originally from the Rogue River Valley. It was the hunting and fishing, indeed the "way of life," that attracted them to Frenchglen, Ken says. They hope that the coming of "progress" will not appreciably change that way of life. Otherwise they may have to remove that sign—the one that says it helps to be crazy when you vacation here. The coffee and information are free.

Relationship of Reclamation Crop Production to Agricultural Crop Surpluses

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. ASPINALL. Mr. Speaker, in my opinion the most misunderstood problem we have today in connection with the Federal reclamation program is the relationship of crop production on reclamation projects to the agricultural surplus problem. As I have pointed out to Members of this body on several occasions and to the Appropriations Committee, irrigation farming in the West complements rather than competes with the whole of the Nation's agriculture. It tends to alleviate rather than add to our existing agricultural problems. The placing of water on land being used for nonirrigated grain crops usually results in a shift to more diversified farming. Very little of the Nation's crop surplus is attributable to the irrigated areas of the West.

In addition, we are advised by agricultural authorities that our present crop imbalances are only temporary and that continued efforts are needed in research and the conservation and development of soil and water resources. In my opinion, the continued development of our water supplies for expanding irrigation is entirely consistent with sound, long-term agricultural objectives.

The Bureau of Reclamation has prepared an excellent evaluation of the relationship of reclamation crop production to agricultural surpluses. I believe that this evaluation will give Members of the House a better understanding of this problem, and I am therefore including it as a part of these remarks.

RELATIONSHIP OF RECLAMATION CROP PRODUCTION TO AGRICULTURAL SURPLUSES

Irrigation farming in the West enjoys a complementary rather than a competitive relationship with the whole of the country's agriculture. Little, if any, of the Nation's crop surplus is attributable to irrigated areas of the West. The principal sources of surplus crops are nonirrigated areas where one-crop farming predominates. Reclamation farms produce abundantly of the protective and body-building fruits, vegetables, and meats needed for healthful diets. Sweeping generalization that the development of additional lands under the Reclamation program adds to the crop surplus are misleading. An understanding of the problem requires the thoughtful consideration of: (1) what crops make up the surplus problem; (2) what part of these surplus crops are grown on Reclamation project farms; (3) what do Reclamation farms produce; (4) how is this production used; and (5) the long-term needs for the products of western irrigated agriculture.

For a full understanding of the situation, the term "crop surplus" needs to be explained. The prices of about 20 crops are supported by the Government. However, the majority of these crops sell in the open market at levels equal to or above the support price. Thus, the fact that the price of a commodity is supported does not necessarily mean that the crop is in oversupply. In like manner, the fact that the Commodity Credit Corporation has a quantity of a farm commodity under loan or in its inventory does not of itself mean that the commodity is in surplus supply. In order to meet the distribution demands of the market, it is normal and customary that a carryover of some commodities exists at the beginning of a new marketing year. For example, the 1960 carryover of cotton totaled about 7.5 million bales which is considered normal for present conditions. Of this carryover, approximately 5 million bales of Upland cotton were under loan or held in inventories of the CCC as of September 30, 1960. Indications are that acreage allotments will be increased for 1961. Notwithstanding these conditions, much can be learned of the crop surplus situation from a look at stocks of each commodity in CCC loans and inventories.

Five crops constitute the bulk of farm commodities under loan or in the inventories of the CCC. These and their relationship to the total holdings as of September 30, 1960, were as follows:

Total CCC loans and inventories, $8,964,116,741 (100 percent)

Item	Amount	Value	Percent
Wheat	[1] 1,536,897,409	$3,665,651,179	40.89
Corn	[1] 1,702,205,744	2,688,007,218	29.99
Upland cotton	[2] 5,097,014	891,427,266	9.94
Grain sorghums	[3] 326,896,898	861,464,495	9.61
Tobacco	[4] 631,956,875	394,706,802	4.40
Total		8,501,256,960	94.83

[1] Bushels.
[2] Bales.
[3] Hundredweight.
[4] Pounds.

WHEAT

This grain crop is the No. 1 surplus commodity. The existing overproduction would have been even greater had not the introduction of irrigation in commercial one-crop wheatgrowing areas enabled farmers to shift from wheatgrowing to a diversified cropping and livestock economy. About 2 percent of the total U.S. wheat crop is grown on reclamation farms. If this were placed in the support program in the same proportion as is the total wheat crop of the States in the reclamation West, the supported quantity would equal only two-thirds of 1 percent of the U.S. wheat crop. It is reasonably certain, however, that not even this small amount of irrigated wheat goes into surplus holdings.

For the first few years that formerly dryland farmers commence irrigating, they tend to adhere to old methods and old crops—this most frequently means wheat. As they accumulate know-how and capital, and develop their land, they diversify and adopt other crops. With considerable new land coming into the reclamation program each year, there is always some of this transitory acreage of irrigated wheat.

On the established irrigation farms, other crops are preferred because they offer greater opportunities for profitable use of land and capital. A small amount of wheat is planted for the purpose of a nurse crop—protection for newly seeded alfalfa and clover fields. Wheat grown on these limited acreages is sometimes mixed with other grains and hence will not qualify for price support. The quantity of wheat grown per irrigated farm is small. In some project areas formerly dry farmed it has been demonstrated that the actual production of wheat is reduced about 60 percent. Because reclamation farms are predominantly livestock farms, there is ample outlet for these small quantities of wheat via the farm livestock. Wheat is equal or greater in feed value than corn and, when available, may constitute a significant share of the ration of poultry, hogs, and cattle. It is estimated that most of the reclamation-grown wheat is utilized in this manner.

CORN

Corn constitutes about 30 percent of the total value of commodities held by the Commodity Credit Corporation, but only a negligible proportion is produced on reclamation farms. Corn grown on reclamation farms is utilized for livestock feed, rather than for cash income. But even if reclamation farmers were to put the same proportion of their corn under support as the rest of the farmers (who produced 99 percent of the corn crop) the quantity would amount to less than one-tenth of 1 percent of the total amount of corn produced in the United States.

The production of corn on these irrigated farms, though limited, has a strategic role in the scheme of farm livestock feeding since it is a key or pivotal feed around which rations of other concentrates and forages can be built. Any extensive shipment of corn from the commercial corn areas of the Midwest would be impractical because of the cost of transportation. In the absence of reclamation-grown corn, therefore, little if any greater use of midwestern corn in the westernmost States would be realized. For these reasons, the corn grown on the western irrigated lands is not considered to be in competition with that grown in the commercial corn areas, and does not comprise a significant portion of the Nation's corn surplus.

COTTON

Due to recently improved market conditions, both domestically and abroad, the surplus cotton situation has been markedly improved. Less than 10 percent of the commodity holdings of the Commodity Credit Corporation is represented by upland cotton. This is about one-third less than a year ago. Due to the reduction of cotton stocks to approximately the level of a normal year's carryover, the U.S. Department of Agriculture has stated that an increase in the plantings of cotton will be allowed in 1961. Thus it appears that the necessary adjustments in cotton production have been pretty well realized and that a favorable period lies ahead for U.S. cottongrowers in which our improved technologies will be given opportunity to operate at greatest effectiveness.

Irrigation farming permits cultural efficiencies which, with a favorable climate and one variety plantings, enable western farmers to produce cotton of uniform staple length and higher grade than in much of the dry-farm Cotton Belt and to do it at a lower cost.

Further improvement in the competitive status of this country in the world cotton market, where we have to compete with cheap labor and cheap land, demands more of the sort of advancement in cropping technologies that cottongrowers on western irrigated farms have been able to demonstrate.

Assuming that reclamation farmers put the same proportion of their cotton crop in the price-support program as do other western growers, the quantity they thus committed would amount to only 2½ percent of the total U.S. cotton crop. This is such a relatively small proportion of the total that it can be said to be but a negligible share and consequently, the production of cotton under irrigation on reclamation farms does not significantly affect and is not the root of the surplus problem.

GRAIN SORGHUM

Reclamation farms produce just slightly over 1 percent of the U.S. sorghum crop. The quantity estimated to be placed in the support program by reclamation farmers amounts to one one-hundredth of 1 percent

of the Nation's entire grain sorghum crop. While grain sorghum stocks at this time make up about 10 percent of the total Commodity Credit Corporation inventory, the buildup of these stocks has not stemmed from reclamation farms.

WHAT CROPS THEN DO RECLAMATION FARMS GROW?

For the most part, reclamation farms produce the crops that can't be grown successfully in the West without irrigation. The grain and other feed crops are needed for the livestock that is raised on the farflung rangelands. These feeds are utilized right in the project vicinity. Thus they do not add to the grain which is marketed for cash sale and which, when in oversupply, is the basis for the price-support program.

From the value standpoint, reclamation's biggest contribution is in the category of fruit, vegetable, and other specialty crops, most of which are outside the price-support program. The environment of the irrigated western areas is especially favorable for these crops. For example, 100 percent of the commercial production of apricots, artichokes, honeydew melons, hops, lemons, olives, dates, figs, garlic, nectarines, prunes, English walnuts, almonds, and filberts come from the irrigated Western States. During late fall, winter, and early spring, the warm irrigated valleys of the Far West and Southwest grow most of the Nation's supply of fresh spinach, peas, onions, lettuce, asparagus, broccoli, cantaloups, carrots, cauliflower, and celery. The off-season production of the fresh vegetables and fruits add variety and balance to the Nation's diet.

While imbalances have built up in a few agricultural commodities, so that attention is focused upon these crops, little recognition has been given the subject of nutritional deficiencies. In this country we may be relatively well off when considered in light of the rest of the world, two-thirds of which is said to be undernourished. But the latest survey of dietary levels (USDA Circular ARS 62–6, 1957) shows that more of the protective foods—fresh vegetables, fruits, meats, and dairy products are required to meet adequate diet standards. Ten percent of our families have diets classed as poor. Twenty-nine percent needed greater allowances of calcium, 25 percent needed more vitamin C, from 15 to 20 percent were below recommended levels of vitamin A, thiamine, and riboflavin. Diets of individuals are even less adequate, according to the dietary survey. The foods needed to alleviate these deficiencies are the fresh fruits and vegetables and the meat and livestock products that irrigated farms provide so well. Irrigated farms in the Southwest furnish us large supplies of these body-building winter fruits and vegetables which we would otherwise do without. Expansion in these crops must take place if we are to maintain even the present standard of diet while the population continues to increase.

Efficiency and responsiveness are necessary for success in farming today. Given these, farmers can overcome most of the problems that face agriculture. Through research, through education, through extension of the advantages of irrigation, the factors of success can be built into agriculture, and the necessary adjustments effected. Reclamation has played a large role in facilitating these adjustments and in enhancing the efficiency of the agriculture of the West as a whole. The misapprehension that any extension of irrigation will compound the Nation's agriculture difficulties is not borne out by the facts either past or present, and this false notion should be quickly dispelled.

Broadside analysis of national issues is often misleading. Close scrutiny of the intricacies of the country's agricultural makeup, and of the vital part that irrigation plays in the arid and semiarid western half of our land, will lead to the true conclusions that the whole Nation, as well as the West itself, stands to gain from further reclamation development.

Never was the urgency so intense for seeking ways to modernize, improve, and balance our agricultural economy. Never has the westward tide of population movement been so great. Never will the time be more propitious for wise and timely action in developing the water resources of the West.

A report prepared by the U.S. Department of Agriculture for the Senate Select Committee on National Water Resources discloses that the rapid population growth will soon place this country in a position of farmland shortage unless timely offsetting actions are taken. In this report the Department of Agriculture appraised the food and fiber needs, export and import requirements, and farm production potentials for the United States in 1980 and 2000. Consideration was given to possible crop yield increases and to shifts in land use.

Population growth to 330 million persons, plus a 12-percent increase in per capita consumption, will boost the total requirement for farm products to a level double that of the present. The report concluded that land use shifts in the 1.9-billion-acre land base of the United States can provide a net addition of 63 million acres of cropland by the end of the century. Limited land use capabilities will preclude converting as much land as will be needed, and per-acre crop yield increases of 76 percent will be necessary to meet the expanded food and fiber demands in year 2000.

Breaking out of grassland in the order of 31 million acres and clearing of 74 million acres of timberland will bring vast new areas under the plow. These shifts to cropland use are offset in part by shifts of cropland to other uses. The conversion of timberland to crops represent a loss of one-fourth of our present and future timber-growing capacity. However, the Assistant Secretary of Agricultures states this is not recommended.

Of more immediate concern is the short-range projection cited by the report. By 1980 the present 177 million population will have grown to 244 million, with commensurate requirements for additional agricultural products. To meet these needs, the Department of Agriculture projected crop yields 41 percent above the present, and a net addition of 20 million acres of cropland.

None of the charted conversions and the assumed productivity increases are presumed to be automatic, but all will require well-directed effort and considerable financial support. Research and education will have to be intensified in order to realize the yield increases required.

Supplemental irrigation in the East as well as in the moisture-deficient West is counted on for a share of the increased productivity of the Nation's agricultural plant. The report assumes an increase in irrigation in the Western States from 1954 to 1980 of about 5.4 million acres and from 1980 to 2000 of about 7.5 million acres. During the 58-year history of Reclamation, facilities have been constructed for irrigation service for 8.1 million acres. About one-half of this area is furnished supplemental water. To attain a goal of 5.4 million and 7.5 million additional irrigated acres in the Western States in each of the next 20-year periods will require a sustained strong effort beginning now.

In terms of the short range, the period right now, or for a few years ahead, there is no question but what we have enough food and fiber to accommodate our present population. There are some crops, however, that even now are in short supply. A comparison of production with demand discloses that abundance exists in a number of our basic crops and surplus exists in a relatively few. Most significantly, deficiencies according to our nutritionists still plague us in many of the protective foods. Many of these foods grow best in the irrigated West, and supply our needs during winter months when many other producing areas are blanketed with snow.

We are, however, not considering agricultural research or Federal Reclamation in terms of what they will do to production right now or tomorrow, or even 5 or more years from now. We live better today because of the investment made in agricultural research 10, 15, and even 50 years ago.

Similarly, some of the benefits of agricultural research now being conducted may first become apparent to our grandchildren in some indefinite period ahead. In like manner, the Reclamation projects we are now investigating or building will not reach their full productive potential for many years, and the question we should logically now ask is what should be our position in terms of the long-range point of view. One thing is abundantly sure—we cannot wait until dire need is upon us before we do our research or our planning or our building of these projects from which our Nation has gained so much.

Only People Pay Taxes

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15, 1961

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial that appeared in the March 3 issue of Life Lines entitled "Only People Pay Taxes."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONLY PEOPLE PAY TAXES

There is nobody in the world to pay taxes except people. A heavy income tax is levied against corporate profits and many heavy taxes are levied on all business concerns. Business collects the taxes. But you pay them. You have to pay them. Business—from the giant corporation to the corner grocery store—could not continue to operate long if they had to pay all these taxes themselves. Taxes are a cost of doing business and are taken into account when prices are set.

Approximately one-third of the average American family's income is siphoned off by direct and hidden taxes. The average salaried person or wage earner works for government 1 day in 3.

The alarming truth is that this average American spends more of his working day earning money to pay his taxes than he does to pay for any other major item in the family's budget.

Here is how tax accountants figure this American's working day is divided:

He works 1 hour and 39 minutes to earn money for his family's food; 1 hour and 25 minutes to meet the mortgage payment on his home or to pay the rent; 37 minutes for clothing; 42 minutes for transportation; 24 minutes for medical care; 20 minutes for recreation; 24 minutes to pay for other purchases.

And he works 2 hours and 29 minutes of each day to pay his taxes.

Do you see how directly and how vitally you are affected by excessive governmental spending?

In the months ahead you will be hearing and reading a great deal about the Federal Government's budget. Just remember it is a budget that you, along with all other Americans, have to pay. If Government is wasteful, if Government is extravagant, if Government ships billions of dollars annually to countries all over the world, if Government throws money into activities that do not belong in the proper functions of Government—you, Mr. American; you, Mrs. American, pay the bill.

There are two important points to be made in this connection.

One is that the tax load now being borne by you, the people, is too heavy.

The other point is that nothing is so bad for a government as to give it too much money. There is ample evidence today that our Government is indeed being given too much money. Government has too many people on its payroll. Government has entered too many fields where it has no business being. Government—our U.S. Government—is undertaking too much at home and abroad.

The result is not merely a flattening of our pocketbooks. The result is also a flattening of our individual liberties, a steady erosion of American freedom, a sickening decline in adherence to the principles of common decency and basic morality on the part of government.

There has been a great outpouring of words here of late about something called our national purpose. Some say we have lost it; others counter that this national purpose was never in better shape.

Both sides seem to want to commit the United States to greater centralization of government, to further scattering of our resources all over the globe, and to letting the United Nations handle our foreign affairs.

In this great country of ours, the one national purpose to which we should be committed is that of saving freedom. If we can do that, we shall be able to handle our other problems. After all, it was under a system of freedom that the United States grew big enough for its national purpose to be of concern to all the world.

Twenty-second Anniversary of Slovak Independence

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mrs. DWYER. Mr. Speaker, approximately 2 million Americans of Slovak origin are deeply and rightly interested in the fate of the more than 4 million Slovaks who are presently living under the domination of Communist despots in their native land.

The Congress of the United States, too, is interested in their fate, as in the fate of all other victims of Communist tyranny throughout the world. It is fitting and proper that the House of Representatives, which speaks and acts for all the people of our country, in their diversity of origin and in their unity of spirit and purpose, should take public notice of the 22d anniversary of Slovak independence, today, March 15, 1961.

The history of the Slovak people has been a singularly difficult one for many hundreds of years. Victims of persecution, of big power politics, of Fascist and Communist dictatorship, the people of Slovakia have tenaciously held to their goals of personal freedom and national independence. Their continued devotion to these great ideals should inspire us and freedom-loving people everywhere to renewed efforts to help bring closer the day when freedom and justice and peace will reign throughout the world.

The Peace Corps Takes Shape

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I should like to include in the Appendix of the CONGRESSIONAL RECORD the following editorial of the WDSU Broadcasting Corp., of New Orleans, La., entitled, "The Peace Corps Takes Shape."

The editorial follows:

THE PEACE CORPS TAKES SHAPE

(The following editorial was broadcast on WDSU–TV and WDSU–Radio on March 10, 1961.)

Reports from Washington indicate that there's one office in the Nation's Capital that's feverishly busy these days, telephones ringing constantly and telegrams and letters arriving by the basketful. That's the office where something brand new called the Peace Corps is beginning to take shape.

President Kennedy, by Executive order, has established the Peace Corps on a small scale, temporary basis. He has asked Congress to follow up by making it permanent.

The President has described it as a pool of trained American men and women, volunteers working without pay, who will go overseas to help work on development projects of foreign countries.

He expects them to serve in such fields as teaching, malaria eradication, public health and sanitation projects, school construction, and improvement of agricultural techniques. They will be paid only enough to live on. They will work and live inconspicuously among the people of the countries they go to—if necessary, in thatched huts.

There already have been some legitimate criticisms and questions directed at this idea. What's to prevent it from being filled up by young people more interested in a free trip abroad than in doing a job of hard work? Suppose the peace corpsmen decide after they get overseas that they don't like the work and don't like the country they're in. Would that lose friends for this country?

The people putting together the Peace Corps say they're emphasizing sacrifice and hard work. That all applicants will be screened carefully and trained for 6 months in this country. That the Peace Corps will begin on a small, experimental basis in order to iron out the kinks.

In the view of this station, nobody knows whether the Peace Corps will work. It could go wrong in many ways.

But we believe it deserves a chance to show what it can do. Maybe American idealism channeled into down-to-earth projects can help other countries and make friends for us. Here is a chance to take the initiative in selling America, not with American dollars but with unselfish American men and women. A chance to identify the United States with the goals of peace and progress. This station says, Let's try it.

Legislative Program of the Independent Retail Grocers Association

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. MORSE. Mr. President, the February 1961, issue of the Oregon Independent Grocer carries the statement and recommendation of the Oregon Independent Grocers Association on the proposed food stamp plan.

I ask unanimous consent that the article appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASSOCIATION LEGISLATIVE COMMITTEE OUTLINES PROGRAM

PORTLAND, February 15.—Many measures of importance to the retail grocery industry were reported on and discussed at the special meeting of the legislative committee of the Oregon Independent Retail Grocers Association held in Portland today.

One of the most important matters under consideration was the report on the proposed distribution of surplus foods in Oregon to welfare recipients. The Oregon State Welfare Commission and local county welfare agencies have been urged to establish their own warehouses for distribution of surplus foods. However, the U.S. Department of Agriculture has been considering the establishment of a food stamp distribution program whereby food stamps would be distributed to welfare recipients which would be redeemable for designated surplus foods at retail food markets. This same manner of distribution of surplus foods was carried on throughout the country by the U.S. Department of Agriculture and welfare agencies in 1939, 1940, and 1941.

"Retail food markets, both chain and independents, can render a more efficient and economical distribution service of surplus foods than can any governmental agency," stated Harvey Curry, association director.

More than $15 million a year in surplus foods would be distributed in Oregon based on the present allotment allocated for this purpose. This would represent average sales of $15,000 per year for 1,000 food markets in Oregon.

FOOD STAMP DISTRIBUTION SYSTEM OF SURPLUS FOODS RECOMMENDED

It was also emphasized that the many food markets in Oregon with adequate personnel, are equipped to distribute surplus foods without the necessity of requiring investments for refrigeration, and warehouse facilities by county or State welfare agencies.

A resolution endorsing and recommending the immediate establishment of a Federal surplus distribution program with the use of a food stamp plan was adopted at the grocers' meeting. Copies of the resolution were ordered sent to the members of the Oregon congressional delegation and to the Oregon State Welfare Commission.

The Veterans' Direct Loan Housing Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. MULTER. Mr. Speaker, on January 3, 1961, I introduced H.R. 797, to provide for direct housing loans to veterans.

The House Veterans' Affairs Committee is presently conducting hearings on the subject and the following is my testimony in support of H.R. 797:

STATEMENT OF ABRAHAM J. MULTER, DEMOCRAT OF NEW YORK, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, THE VETERANS' DIRECT LOAN HOUSING PROGRAM, H.R. 797, MARCH 14, 1961

Mr. Chairman, I am most appreciative of the opportunity to appear before this committee today in behalf of my bill, H.R. 797.

I agree with the President's statement made in his special message to the Congress on housing and community development—that we must make more funds available to the American veteran who is seeking to own his home. I believe the Congress will agree that the cost of these loans should not be prohibitive.

There are many thousands of veterans now on the waiting list for both direct loans and for loans of private capital at the 5¼ interest rate. The program of direct loans has never been as large as needed to meet the needs of veterans who are otherwise unable to secure credit. In view of the need to stimulate the activities of the housing industry and out of consideration for the many veterans' families who are not living in the comfortable, standard housing which is their due, we must try to:

1. Encourage the private capital market to make mortgage funds available at the 5¼ interest rate;

2. Liberalize veterans' mortgage terms to allow as many veterans as possible to benefit from the housing loan program, including those in metropolitan areas as well as those in the smaller communities, and

3. Provide a sufficient amount of direct loan funds to meet the urgent needs of veterans to whom normal credit channels are not open.

There is no legitimate reason why the cost of housing loans to veterans must be raised; to do so is to penalize the veterans and to increase the income of the lenders. Let us hope that we will be able, generally, to lower the cost of money to the many American families who are seeking to better themselves.

Building costs have been steadily climbing in recent years, so much so that in most areas you cannot think in terms of a $12,000 or $13,000 house. In fact, in many areas you cannot find a house for less than $17,000 to $20,000. Therefore, I believe that it is necessary and right that the loan entitlement of veterans be raised to meet the higher cost of housing.

My bill, H.R. 797, is concerned with the direct loan program under section 512 of the Servicemen's Readjustment Act of 1944, as amended. By it, I seek to make available more direct loan funds. I also propose to increase the amounts of loans to create broader eligibility.

Over the years I have consistently sought to have these proposals written into the law. This year I feel particularly confident that this goal may be achieved. There is a pressing need to put the country's more than 5 million unemployed back on the payrolls. A portion of this need could be met if more veterans were placed in a position to buy their own homes.

You are all fully familiar with the basic importance of the activities of the construction industry to the Nation's economy. However, I do want to emphasize these facts: The more homes we can build and sell, the more furniture we can make and sell; the more electric appliances, other consumer durables, lumber, bricks, mortar, building hardware and numerous other products will be demanded, thereby creating employment opportunities for almost every segment of industry.

I disagree with those who say that the building industry cannot serve as a stimulant to the economy as it has in the past. The major reason advanced by those who take this pessimistic view is that housing demand has been substantially achieved. Higher priced housing demand has been largely met, but there is a tremendous market for homes for the moderate income families and individuals.

The cooperative efforts of builders, lenders, and the Federal Government can assist in meeting the needs of veterans and other moderate income groups, and the building industry can again assist in buoying up the economy. Still another worthwhile purpose could be served—the elimination of substandard living quarters for many thousands of families.

The record of payment by veterans who have secured loans, under the direct loan program as well as the loan guarantee program, has been an excellent one—few losses have been recorded. The entire GI housing loan program has been successful, and it has not been costly.

I hope that this committee will find it possible to include my proposals in the bill it sends to the floor this session. To do so will be to help the families of many deserving men and women who have served this country well. At the same time, some impetus will be given to the lagging housing industry, and thereby to the economy as a whole.

It is essential that the GI home loan program be extended and expanded. Again, I want to thank you for permitting me to appear before this committee to state my views on this important piece of legislation.

Resolutions Memorializing Congress on the Questions of Federal Quotas on Imports of Residual Fuel Oil and End-Use Control of the Various Fuels Serving the Commonwealth

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolution of the General Court of Massachusetts:

RESOLUTIONS MEMORIALIZING CONGRESS ON THE QUESTION OF FEDERAL QUOTAS ON IMPORTS OF RESIDUAL FUEL OIL AND END-USE CONTROL OF THE VARIOUS FUELS SERVING THE COMMONWEALTH

Whereas the current Federal quotas on the imports of residual fuel oil discriminate greatly against the New England area, including the Commonwealth; and

Whereas such restriction on fuel oil imports poses an economic hardship on both the consumers of fuel oil in the Commonwealth and on the industrial community, already being responsible for higher fuel oil costs in the New England area; and

Whereas a continuation of the current trend to limit fuel oil imports further augurs even higher fuel oil prices; and

Whereas any study of the various fuels used in Massachusetts markets which has as its objective the promotion of the end-use control of such fuels would be contrary to the basic economic law of supply and demand and not in consonance with the operation of a free competitive economy, thereby causing higher prices to consumers of such fuels: Therefore be it

Resolved, That the General Court of Massachusetts hereby requests the Members of the U.S. Congress from the Commonwealth to use their prestige and influence to terminate said quotas on the imports of residual fuel oil; and be it further

Resolved, That the General Court of Massachusetts hereby requests the Massachusetts congressional delegation to make its voice heard against any attempt to promote the end-use control of the various fuels used in the Commonwealth; and be it further

Resolved, That copies of these resolutions be forwarded by the Secretary of the Commonwealth to each Member of the U.S. Congress serving from Massachusetts.

Senate, adopted, February 28, 1961.
IRVING N. HAYDEN,
Clerk.

House of representatives, adopted in concurrence, March 3, 1961.
LAWRENCE R. GROVE,
Clerk.

The Future of the Private College

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. NELSEN. Mr. Speaker, on Thursday, March 2, 1961, I boarded the crowded plane in Washington and a gentleman approached me asking if the companion seat was taken, which was not. Soon we were engaged in a very pleasant visit dealing with many of the domestic issues of the day.

I found my companion very well versed on what was going on in Washington, with very sensible, sound ideas on the issues of the day.

Gradually the conversation shifted to the topic of Federal aid to education. My companion expressed some concern as to the proposals that were being considered and I commented that I had introduced a bill that would provide a tax deduction for a parent that sent a son or a daughter on to an institution of higher learning. My premise was that rather than tax the parent to send the money to Washington to be returned in part, the parent could use his own dollar sending his child to the school of his choice. My observation drew a quick enthusiastic response from my companion. I later learned that I had been privileged to visit with one of the Nation's leading educators, the Reverend Virgil C. Blum, S.J., and it was my privilege also to read an article prepared by Father Blum.

I believe this article merits attention in the Congress of the United States and it is along the lines of the bill that I have introduced with about 40 Members of Congress and I, therefore, wish to insert the article with my remarks in the CONGRESSIONAL RECORD. The article is appended in full, as follows:

THE FUTURE OF THE PRIVATE COLLEGE—IN THIS TIME OF CRISIS NEW METHODS OF FINANCING MUST BE DEVELOPED

(By Virgil C. Blum, S.J.)

You may be planning to send your son or daughter to a private college or university. There are strong indications, however, that you may not have the opportunity. In the years ahead many private institutions of higher education are likely to collapse financially; others will, as experts predict, boost their tuition by more than 100 percent and thus price themselves beyond your financial reach.

But the demise of our private college is not inevitable. Nor is a tuition level beyond your reach inevitable. Private institutions can be saved. But it is a task to which every citizen who believes in diversity in education, academic freedom in the pursuit of truth, free enterprise in education, and the best interests of the taxpayer must take a personal interest. In this time of crisis for education, new methods of financing private education must be found.

The rapid increase in the cost of classroom buildings, laboratories, and operations is at the heart of the problem of financing private education. The problem cannot be solved simply by raising tuition. Such an approach might well aggravate the problem.

The private college, however, cannot fix the price of the product it is selling—education—on the basis of production costs. It does not operate in a free market. It operates in the context of a State-subsidized educational system. Under present conditions of high-cost education, the high public institutional discount rate of 80 to 90 percent on the full cost of education spells destruction for most private institutions.

This fact was underscored by Dr. Lawrence A. Kimpton, former chancellor of the University of Chicago, when he spoke of this destructive situation. "To put it in the crassest terms possible," he said, "it is hard to market a product at a fair price when down the street someone is giving it away."

Private colleges are like private grocery stores which, even while selling their products at a substantial loss, would be forced out of business by State-owned and operated supermarkets that sell their products at an 80- to 80-percent discount.

In such a competitive situation the private college cannot raise its tuition to meet necessary costs. If it does, it simply prices itself out of the education market. Some students, to be sure, will continue to attend private schools, even if they must borrow money to pay tuition.

But the typical student (and his parents) will not incur large debts to pay tuition when he can get a college education at the taxpayer's expense. The typical student will not borrow $1,000 or $1,500 a year to pay tuition when he can get an education free.

The impact of the growing gap between tuition in public and private institutions is clearly demonstrated by the rapid shift of students from private to public institutions. As recently as 1950 more than 50 percent of our college students attended private institutions. Today it is less than 40 percent.

Experts predict that, if present trends continue, 80 percent of our students will be in tax-supported colleges and universities by 1970. The tuition-imbalance is one big reason why there are thousands of vacancies in private colleges while tax-supported institutions are asking for hundreds of millions of dollars to expand facilities.

It costs a minimum of $3,600 to supply classroom facilities for a student. Hence, it is in the taxpayer's interest that existing private school facilities be used to the fullest extent possible. This is not being done. A year ago there were 709 private colleges with fewer than 500 students each. Their average enrollment was only 226. It is a fair estimate that these colleges have available many hundreds of millions of dollars of unused facilities. In Wisconsin alone the private colleges have $17 million worth of unused space.

Why do students bypass small private colleges for large State institutions? Dean Martin Quanbeck, of Minnesota's Augsburg College, says that this preference "can be explained largely in terms of differences in quality, prestige, and tuition costs." Relatively high tuition costs are a deterrent to attendance at private colleges. Yet, it is precisely because tuition cannot begin to cover the full cost of quality education that many of our small colleges are short on quality and prestige.

Under present conditions the facilities of most private colleges are terribly underpaid and overworked. "What all this amounts to," said Dr. Barnaby Keeney, president of Brown University, "is that every student at almost every private college in the country is on a scholarship from the faculty, whether he needs one or not, indeed whether he wants one or not. This scholarship is paid by the faculty of the institution, out of their hides."

But it is true, nevertheless, that most parents cannot afford to pay a tuition that covers a greater portion of the full cost of education. For one thing, taxes are too high. And the larger the proportion of students in tax-supported institutions, the higher the taxes.

How then can private colleges and universities be saved and enabled to render a valuable service to American society? A number of proposals are now receiving serious consideration.

Direct Federal matching grants to public and private institutions for classroom buildings and laboratories are being proposed. Such direct grants would, however, be of little help to the vast majority of the Nation's 1,300 private institutions. Since additional students increase the operating deficit, private schools are reluctant to spend meager resources to match Federal funds to expand their facilities.

Some way must be found to increase the income of private schools for operating purposes. "Otherwise," predicts Dr. Louis T. Benezet, president of Colorado College, "we may expect to see the monumental construction of State university metropolises on the one hand and on the other the disappearance of most of the private colleges."

A Federal tax credit against tuition or fees deserves serious consideration. It would enable parents to pay a greater portion of the full cost of education, thus making higher tuition feasible. A 40-percent tax credit on a tuition of $1,000 would enable the taxpayer, parent or other, to claim a credit of $400 against his Federal income tax. If his income tax is $900, he pays only $500. If a parent sends his son to a State university where tuition is $200, he could claim a credit of $80.

There is nothing revolutionary about the tax credit. The Federal Government makes innumerable tax concessions to business and the professions to promote some particular aspects of the public interest.

If the tax credit would induce student attendance at private schools, it would result in substantial savings for the taxpayers. Since it costs the taxpayers from $1,600 to $2,000 a year per student in a State university (less in a State college), a tax credit of $400 to a parent who sends his son or daughter to a private institution would constitute a large saving in tax dollars.

It is sometimes objected that a tax credit would not greatly aid low-income families. This is true. But it must be emphasized that with or without a tax credit these families cannot send their children to private colleges. They need scholarship help. The adoption of the tax credit plan would enable private colleges to give more scholarships to needy students. This would aid low-income families. Moreover, an increasing number of States are adopting extensive scholarship programs, and the U.S. Office of Education has proposed an extensive Federal scholarship program.

In early December representatives of the major educational associations, meeting in Washington, adopted a package recommendation in support of Federal scholarships, Federal matching grants for classroom buildings and laboratories, and a tax credit plan. There was a feeling, however, that support of the tax credit plan would be controversial.

Although the major educational associations have repeatedly adopted resolutions supporting the tax credit plan, State universities and land-grant colleges have in recent years publicly opposed the plan. The reason is not difficult to discover. Since all their instate students enjoy a hidden tax-provided scholarship that covers most of the cost of their education, tuition is nominal. Hence, the dollar value of a 40-percent tax credit to these students is not high. Consequently, public institutions, if they desired to absorb the tax credit benefit by raising tuition by 40 percent, would receive less in increased tuition income than private institutions.

Public institutions want direct Federal matching grants for capital construction, rather than tax credit. It seems to me, however, that the best interest of America, as well as the best interest of both public and private higher education, would be served by the adoption of both the matching grant proposal and the tax credit proposal, together with a scholarship program with grants weighted in favor of the low-income group.

Academic freedom, the need for diversity in education, equity, and economy strongly urge the adoption of the 40-percent tax credit plan. Such a Federal program would enable parents to pay a greater portion of the full cost of education. This would enable private schools to raise their tuition substantially without pricing themselves out of business.

Whether Congress will adopt the tax credit plan during the present session depends largely on you, the citizen. You will decide whether the private college will survive in America. Because of open opposition to the plan, private education will need your support before Congress. If you have an interest in the preservation of private higher education (and every American should have), write to your elected representatives in Washington.

Extending Loan Guarantee Authority of the Interstate Commerce Commission

SPEECH

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 1163) to amend section 510 of the Interstate Commerce Act so as to extend for 1 year the loan guarantee authority of the Interstate Commerce Commission.

Mr. AVERY. Mr. Chairman, the discussion on the floor this afternoon, in my opinion, reaffirms my belief in the good judgment of the chairman of the Committee on Rules of the House. When I observed that we had a rule providing for 2 hours of debate on this bill, I could not conceive how we could possibly consume 2 hours discussing a noncontroversial bill or at least what I presumed was a noncontroversial bill. But here we have consumed half of the time already, and we have not even yet directed our remarks to the bill before us.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. AVERY. I yield to the gentleman from Arkansas.

Mr. HARRIS. Reluctantly, I must make this comment. Referring to the second point the gentleman just made, I did take some 15 minutes discussing the bill itself and I thought I had quite thoroughly explained it and I did try to analyze it. In the second place, and I suppose that modesty would keep me, not necessarily from wanting to say this, but without trying to take anything away from the chairman of the great Committee on Rules, I would like the gentleman to know that as chairman of the Committee on Interstate and Foreign Commerce, I asked him for 2 hours.

Mr. AVERY. Well, of course, I presume I should have included the gentleman from Arkansas in my observation in support of the prevailing usual wisdom of the gentleman from Virginia, the chairman of the Committee on Rules.

Mr. Chairman, I would like to consume 30 more seconds in respect to the matter we have been discussing in the last 30 minutes, and that is whether or not there was any intention on the part of the executive to exercise any influence over the agencies that we normally allude to as the independent regulatory agencies. I am convinced there will be less influence anyhow in view of the discussion that has taken place here on the floor this afternoon, and the further concern that will undoubtedly be expressed by the sequel to the legislative oversight committee. I do not believe that particular subcommittee has been officially named as yet, but I am sure its presence and its worth will be well known and will become very familiar to the Members of the House in the weeks to follow.

Mr. Chairman, I rise in support of H.R. 1163, a bill to extend the loan guaranty authority authorized in the Transportation Act of 1958. I do not view this proposal as special legislation to benefit any one individual railroad. If I thought it was special legislation in that context, I would not have supported it when it originally passed Congress in 1958 nor would I support the extension of the same program today.

The benefits of this program fall in two general categories. In the first instance, the benefits obviously accrue to the particular railroads that have already secured loans under this program. I will list those carriers in an extension of my remarks. The second category is perhaps more far reaching and more important than the first. The very knowledge and availability of this program makes credit available at a reasonable rate to other carriers that are not identified in the hearings or in the reports of the Interstate Commerce Commission. It is in somewhat the same context as mortgage credit for home building. Because there is a guaranteed loan program available to potential homebuilders, there also becomes available certain commercial credit. I firmly believe that the benefits falling into these separate categories clearly establishes that an extension of this program is in the public interest.

Most of the criticism of this program during the hearings was directed at loans made to the New Haven Railroad. There is probably not another railroad in the United States that has less to do with the transportation problems of Kansas than does the New Haven. Nevertheless, I feel that there is a public need served by this railroad and at the moment the Federal Government appears to be the only entity that is capable of providing the necessary emergency assistance to the New Haven Railroad for it to continue in operation. It is somewhat out of character for me to walk down the aisle in support of Federal assistance to a facility that is regional in nature. I would not be in support of further possible assistance to this particular carrier if the metropolitan areas directly benefiting from its service had not indicated an increasing sense of financial responsibility to this carrier.

When the president of the New Haven Railroad, Mr. George Alpert, testified before our committee in response to a question he stated for the record that the New Jersey Legislature has provided $6 million to railroads that serve metropolitan areas in that State. In New York the legislature, he stated, at the request of Governor Rockefeller in 1958, passed a law which tied the railroad taxes to net income rather than to assessment.

In addition to these specific actions the four States served by this line, Massachusetts, Rhode Island, Connecticut, and New York, joined to establish an interstate committee appointed by the respective Governors. This interstate committee was to recommend back to the several State legislatures a program that they considered would reflect the individual State responsibility to preserve the service and operation of this particular carrier. In brief this recommendation suggests a possible $13 million annual subsidy program, half of which would be the modification or elimination of local and State taxes. I wanted the record to be abundantly clear that Congress is not creating a loan fund that is to be available for loans to insolvent carriers merely to permit them to continue paying inequitable and disproportionately high local and State ad valorem taxes.

At this point I think it is desirable to make the record clear in respect to a loan approved by the Commission for another carrier. In his statement to the Interstate and Foreign Commerce Committee, Commission Chairman Everett Hutchinson stated that the proceeds of one of these loans was used primarily to pay overdue State taxes. Taken out of context this loan might appear to be beyond the loan authority contained in the original act. When read in context, however, and in connection with a subsequent explanation of this loan in the hearings, it is abundantly clear that this loan was approved by the Commission in keeping with the authority in the original act. The act provides that loans may be made for financing or refinancing (1) of additions and betterments or other capital expenditures made after January 1, 1957, or to reimburse the carrier for expenditures made from its own funds for such additions and betterments or other capital expenditures. The proceeds of this particular loan were used to restore operating capital to the carrier that it had committed to the purchase of certain needed equipment after January 1, 1957.

I think the Committee should know that the Interstate and Foreign Commerce Committee did not liberalize the act in keeping with several requests that were presented during the course of the hearings. Mr. William P. Johnson, president of the Railway Express Agency presented a very persuasive statement requesting that that enterprise also be made eligible for a loan under the program the same as the railroad. There were other suggestions as to what should be considered as acceptable collateral by the Commission in approving a loan. Our Committee did not see fit to make any changes in the program as it was originally authorized in 1958 and the bill before you today merely provides for a simple 15 month extension of the act.

Wilderness Bill

EXTENSION OF REMARKS
OF
HON. ARNOLD OLSEN
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. OLSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Robert C. Sykes, president of the Montana Wildlife Federation.

He made that statement before the Senate Interior and Insular Affairs Committee in testifying in support of the wilderness bill, S. 174.

As Mr. Sykes says, he speaks for the Montana Wildlife Federation, and I think that his position is a moderate one; that is, in supporting the creation of wilderness recreation areas, he leaves room for other people to make a living at their pursuits in the several industries that are dependent upon our natural resources, such as mining, lumbering, ranching, and farming.

I have not resolved exactly what position I will take with respect to the several parts of the wilderness bill, but I thought it well to publish this statement of the president of the wildlife

federation and to circulate it so that I might stimulate interest in my district and, finally, stir my constituents into writing me and expressing their opinions.

Mr. Speaker, after I have heard from my constituents concerning the bill, I will resolve my decision.

The statement follows:

STATEMENT OF ROBERT C. SYKES, PRESIDENT OF THE MONTANA WILDLIFE FEDERATION SUPPORTING WILDERNESS BILL

My name is Robert C. Sykes. I am an attorney by profession, living in Kalispell, Mont., a small town that is in the middle of a green valley surrounded by mountains. Within a 60-mile radius of Kalispell, there are more than 500 lakes. I appear here today on behalf of the Montana Wildlife Federation, of which I am the president. I wish to thank this committee for the privilege of making this appearance in support of the wilderness bill, and giving me this opportunity to state the view of the members of my organization.

I think it might be interesting to consider that the four largest industries of the State of Montana are mining, agriculture, logging and tourist trade. These are the same industries that are here today expressing their opinions on the wilderness bill. As a small-town attorney, my livelihood is dependent upon the economy of Kalispell; and my clients, naturally, are my neighbors and friends who are the loggers, mill operators, the ranchers, and farmers, as well as those who serve the many tourists that visit our beautiful country each year. These are the same people who make up the membership of the Montana Wildlife Federation throughout the State of Montana. Now it would be extremely unwise for me, from a selfish standpoint, as well as from an economical standpoint, to jeopardize the existing economy of those who make up the membership of the Federation. In other words, I ship of the Federation. In other words, I would not be here before you today, if I thought that this wilderness bill would adversely affect Montana's economy or any segment of that economy.

I would not purport to be an expert on the uses of natural resources. However, I am a user of those natural resources, and I live with and represent people who make other uses of those natural resources. My hobby is horses and amateur style pack trips. Because I have had the actual privilege of enjoying and using these resources, and because I live with and work for other different users of these natural resources, I believe I understand the meaning of multiple use of national forests.

As I understand it, multiple use means that use or management of the forest lands which achieves the maximum benefits for all the various users of such lands. I further understand and assume that such management for multiple use requires application of this principle to the national forests as a whole rather than attempting to apply multiple use to each and every foot of ground that exists. If this is a reasonable definition of multiple use, then by all means, the wilderness bill is necessary so that wilderness use can have value or recognition, whatsoever, in the multiple use of national forests.

I have been quite impressed with the viewpoint expressed by Senator ANDERSON when he compares a wilderness area to a museum. He quotes Dr. Luna B. Leopold, Chief of the Water Resource Division of the U.S. Geological Survey, who said "We take for granted that there is some social gain in the erection and maintenance of a museum of fine arts, a museum of natural history, or even a historical museum. Sooner or later, we ought to be mature enough to extend this concept to another kind of museum, one which you might call the museum of land types, consisting of samples as uninfluenced as possible by man." I think we must take for granted that he also includes the fish and wildlife that inhabit such a living museum.

The wilderness areas of Montana are a vital segment of our tourist trade. Should Montana ever lose its wilderness areas, the adverse effects to Montana, economically, would be disastrous.

I sincerely believe the opponents of the wilderness bill are opposed to wilderness use of public lands. They profess stanch support for the multiple use of public lands; however, I earnestly submit that the only multiple use they will ever support on public lands are to those lands which do not in any way contribute to the type of resource which their industry is dependent on. I further submit that they probably are speaking for a segment of the industry they represent, but that segment is either misinformed or does not know the purpose of the wording of Senator ANDERSON's bill. I do know this that the opponents who have appeared here today do not speak for many of the members they claim they represent. Without qualification, I know that I speak for every conservationist, not only in the State of Montana but everywhere else, when I ask that this Committee support Senator ANDERSON's bill.

In considering Senator ANDERSON's bill, I fail to see how it will, in any way, adversely effect the economy of any of the members of my federation, regardless of what vocation, business, or industry their livelihood is dependent on. For instance, this bill does not in any affect the present establishment of the working circle or the annual sustained yield cut, as established by the National Forest Service for logging. The reason for this is that wilderness areas have never been used in establishing such working circles or sustained yield cuts. The provisions in the bill itself under section 6, paragraph (c) and more particularly the subparagraphs (1) through (7), thereof, clearly permits existing users to continue to do so, and goes further than that, and permits the President to authorize prospecting, including exploration for oil and gas, as well as the establishment and maintenance of reservoirs and other facilities needed in the public interest. Also, the Secretary may permit grazing of livestock, where this has been done prior to the passage of Senator ANDERSON's bill. I do not know what more could be expected in giving reasonable protection to grazing and mining interests than this.

I request favorable consideration of Senator ANDERSON's bill for the following reasons:

1. To protect and preserve the last reservoir of natural resources for the use of future generations.

2. To establish and protect the economy derived through wilderness recreation and education.

3. To afford greater opportunity to those living adjacent to wilderness, in having the right to speak relative to any boundary changes of such wilderness area.

4. To prevent exploitation of what few wildernesses remain.

I believe that if we look back to the hearings on the establishment of the national forests and the national parks that the same opponents of the wilderness bill made the same objections then that they are making now, and they must concede that they were wrong then; and in the future they will concede they are wrong now.

In closing, I would like to invite the committee's attention to the fact that once a wilderness area has been invaded and exploited and as a result destroyed, it is gone forever. A wilderness area is as fragile as the most priceless piece of porcelain or china. Should that porcelain or china be broken, it can never be replaced nor restored to its original condition. The same thing applies to a wilderness area. Restoration of a destroyed area would be impossible because of the tremendous cost it would entail.

The Kennedy Plan

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I enclose a splendid editorial entitled "The Kennedy Plan" appearing in the New York Times of March 15, 1961. The comparison of the Kennedy plan with the Marshall plan of the latter 1940's is logical and sound. Legislation to carry out the President's recommendations should be enacted into law as quickly as possible after legislation to effectuate the Kennedy plan is introduced in Congress.

The editorial follows:

THE KENNEDY PLAN

Ever since 1948 Latin Americans have been reproaching the United States because they received no benefit from the Marshall plan. Now they have a Kennedy plan, as broad in scope, as important and potentially costly in what it seeks to do, and like the Marshall plan it is a response to a desperate need whose satisfaction will benefit the United States as well as the recipients and partners. Another striking parallel is that just as the Marshall plan was the U.S. answer to Joseph Stalin, so the Kennedy plan is the U.S. answer to Fidel Castro.

The address by President Kennedy to the Latin American diplomatic corps on Monday and the message to Congress yesterday will be historic documents of the first order. They are the result of long and expert study; they cover a great deal of ground and dig deeply into the needs and aspirations of the 20 countries of Latin America. There probably have never been in hemispheric history two American documents in which so many vital and hitherto ignored truths have been set forth.

Here is one, from the speech to Congress, that goes to the very heart of Latin America's problem: "Economic growth without social progress lets the great majority of the people remain in poverty, while a privileged few reap the benefits of rising abundance." It has taken us many years, a frightening revolution in Cuba, and the entrance of the cold war into the Western Hemisphere to accept that basic truth of modern times.

Obviously, one can only barely touch on the significant points of the new American policy in a first comment. It is new in its emphasis on social change and progress, its acceptance of the need for a long-range program of towering dimensions, and its recognition of the importance of helping to stabilize commodity prices.

The special stress put upon the necessity for the Latin American ruling classes to improve their own institutions, make land reforms, and give up some of their wealth and privileges might also be considered new. Our policies for 150 years have been with these ruling classes and not for the people of Latin America. However, the pressures

we apply must be made with understanding and patience, or the United States plan will fail.

The challenge that we North Americans face—and it is one of the gravest and most significant in our history—was best summed up in this sentence from Mr. Kennedy's speech to the diplomats: "Our unfulfilled task is to demonstrate to the entire world that man's unsatisfied aspiration for economic progress and social justice can best be achieved by freemen working within a framework of democratic institutions."

As Mr. Kennedy implies, we have not yet demonstrated this. His challenge, whatever we call it—the Kennedy plan, "Alliance for Progress," or, perhaps best of all, "Operation Pan America"—is the challenge of our times. We can lose the cold war in Latin America, but we will not lose it if the policies put forward by President Kennedy yesterday and Monday are carried out.

Kennedy and the Economy—II

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the second in a series of editorials recently appearing in the Winston-Salem (N.C.) Journal. The following editorial appeared in the issue of March 7, 1961:

KENNEDY AND THE ECONOMY, II—DEALING WITH THE DOLLAR

If the United States had no dollar problem, the chances are we would also have no big unemployment problem. Such goals as increased economic growth could be achieved far more easily if the dollar were gaining in strength and prestige rather than losing.

Moreover, if the dollar's difficulties get worse, our other economic problems will become proportionately harder to solve. President Kennedy, in his various references to the national economy, has shown some recognition of the need for a strong dollar.

In a nutshell, the dollar problem is that the United States, taken as a unit, has not been making ends meet. It has been spending and giving away more than it has been taking in. We have been losing several billions annually in dollars and gold to foreign businesses and governments. This leaves us a poorer country financially, and that lessens faith in our financial soundness and the soundness of our dollar. So far, the dollar has kept its international buying power. But if the country keeps going in the hole, we cannot expect faith in our currency to continue indefinitely. If it falls, that is, if it is devalued, the least calamities that might result would be (1) loss of ability to buy and import the raw materials we need, and (2) lack of financial power to carry on our oversea spending programs which have political and military significance. Such results would be disastrous for the United States in more ways than one.

Like mounting unemployment, which was discussed here yesterday, the dollar loss has become a well-developed trend that has causes more lasting than the current recession. As long as the causative conditions remain, the outflow of our national wealth cannot be permanently halted by stopgaps, such as those ordered by Presidents Eisenhower and Kennedy.

What are those causes?

One is the rapid development of oversea industrialization. In itself, this is not bad. However, the countries that have made rapid industrial strides have not raised their popular standards of living accordingly. In none of them does the average worker's income even approach what we have. While this disparity exists, the United States will have tough competition indeed. So far, we have managed to stay in the black in our export-import balance—we are selling goods of more value than we buy. The drain on our wealth has come from sources other than our spending for imports.

But even though this international trade is not the cause of the dollar problem, it may be the most promising place to look for a cure, because trade will respond favorably to improvements in our national economy over which we have ample control. Oversea military and aid spending, on the other hand, must depend largely on international circumstances over which U.S. control is most limited.

How can the needed economic improvements be made?

The answer to that is a bitter pill to many. It requires the reversal of those causitive trends which have weakened the U.S. dollar position, and there are large vested interests behind the preservation of those trends.

Briefly, the wage-price spiral must be halted, and the Government must follow noninflationary economic policies. There seems no other dependable way for the United States to make the drastic improvement it needs in world trade to balance the costs of its nontrade operations overseas.

Industrial management must, through plant modernization and other means of improving efficiency, increase our productivity, so that U.S. goods can be sold abroad at more competitive prices. In those areas of employment where standards of living are now acceptable, labor must be content with its earnings, or at the most with wage increases that are less than the gains in productivity.

The Government must recognize that, so far as the country as a whole is concerned, it has a lot to do with the total cost in man-hours of the goods produced. Manufacturers, after all, must count the expense of running the Government as part of their cost of doing business. When that overhead goes up, particularly when it does so by increasing the Federal debt, the cost of goods must go up, too. That is inflation.

The Kennedy administration is in the fortunate position of being on good terms, thus far, with both labor and management. It may be able to win their cooperation in checking the wage-price spiral.

However, the administration's own plans are definitely inflationary. They call for a sizable expansion of the Federal Government's activities and expenditures, and budget deficits in the billions are already counted upon for the next 3 years. The hope that growth would pay for the New Frontiers' program seems to be in the more distant future.

Which should have the priority—the President's spending plans or the restoration of a strong dollar?

Much of his program is for Government services that would, in the final analysis, help to improve the public's standard of living—less unemployment, more old-age security, more heavily financed education and so on. Parts of this program, for humanitarian reasons alone, are thoroughly justified. Other parts may be needed to retain our position in the world. But a basic cause of our dollar problem is that the average American standard of living is already high in comparison with that of the world as a whole. The danger is that it is insupportably high.

Under the circumstances, black rather than red Federal budgets are preferable, and if the Government must go deeper in debt it should be by the smallest reasonable amount.

In the long run, of course, income must grow along with the growth in production—otherwise there would be no market for our goods. But the Government and private enterprise alike should make more production, not more cost, their immediate target.

Is Nation's Capital Safe From Enemy Air Attack?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. THURMOND. Mr. President, the March 25, 1961, issue of the Army-Navy-Air Force Register and Defense Times contains an article which should be of interest to all Members of the Congress. It is entitled "Is Nation's Capital Safe From Enemy Air Attack?" and was written by Mr. Robert E. Schweitz. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS NATION'S CAPITAL SAFE FROM ENEMY AIR ATTACK?

Any enemy air attack on Washington will be met by a nuclear one-two punch that will turn the aggressor to dust.

The Nation's Capital is defended by an interservice force, armed with a variety of nuclear warheads, on 24-hour duty and a 2- to 5-minute reaction time.

Since a ground attack on the continental United States is unlikely, main attention, fiscal and strategic, has been turned toward defending the seat of Government from air and space attacks.

We can destroy any known aircraft or air-breathing missile coming our way. If the enemy launches ballistic missiles at us all we can do is fire ours at them and duck. But if Nike-Zeus tests are successful we may be able to defend the Capital from ICBM's by 1965.

If a bomber attack comes, the first atomic explosion most Americans will see will be that of our own weapons killing the attackers.

Genie missiles: The main carriers for our nuclear air defense weapons in the Washington area are the ugly MB-1 Genie missiles (fired from planes) and ground-fired Bomarc and Nike-Hercules interceptor missiles.

The central battle station for the defense of the Washington area is a four-story windowless concrete SAGE building surrounded by a high chain link fence at Fort Lee near Petersburg, Va. This is the headquarters of the Washington Air Defense Sector of the North American Air Defense Command's 26th Region.

Commander of the sector is Brig. Gen. Earnest H. Beverly whose trigger finger could save millions of American lives.

In a red alert the general sits at the rim of a C-shaped desk with his key operational officers.

Ships: To them, from picket ships at sea, early warning aircraft aloft and radar sites all over their sector, comes information about aircraft flying their way. In a month's time more than 4,000 planes were sighted and tracked. Each plane is identified within 2 minutes.

The general's order to go could put into action the tremendous air defense force which guards Washington.

Included are 24 Nike fire units, 3 fighter-interceptor squadrons, and a Bomarc squadron. Navy and Marine Corps planes and antiaircraft missiles can be alerted too.

The fighter-interceptor squadrons are the 95th at Andrews AFB which has the F–106 planes (single place Mach 2 craft made by Convair); the 48th Squadron at Langley AFB, also with 106's, and the 98th Fighter-Interceptor Squadron at Dover AFB. The Dover outfit uses the two-place F–101–B. The McDonnell F–101–B Voodoo can clip along at better than 1,200 miles an hour.

Nuclear tipped: The Bomarc squadron, the 22d Air Defense Missile Squadron, is also near Langley. Under its nearly two score steel sheds are nuclear-tipped Bomarc missiles which can be raised and fired through the automatically opened shed roofs in 2 minutes. The Bomarcs are the shorter range A models. The newer model will be able to kill attackers more than 400 miles away at ranges above 60,000 feet. The new Bomarcs will be operational in about a year and the first copies will go to the Washington Air Defense Sector.

The Bomarcs can be controlled directly from the SAGE building. Also from this operational headquarters General Beverly can order the interceptors into the air.

If an unidentified plane enters the sector and remains unidentified for longer than 2 minutes. Beverly's people flash a signal to the fighter-interceptor squadron which can make the earliest intercept.

Some pilots are on an alert status, fully dressed and waiting for the signal in the alert hangar at all times.

When they get the signal they race to their planes which are next to the end of the runway. They roar into action within 2 minutes after receiving a red alert.

Let us suppose an unidentified plane is tracked heading for Washington. The F–106 Delta Darts, at speeds over 1,400 miles an hour, streak for the possibly hostile aircraft.

UNKNOWN

They reach the unknown just minutes later. Generally, the Dart pilots travel in pairs. Upon sighting the craft, one of the interceptor pilots will approach the unknown from behind. The other pilot hangs back.

The first pilot comes up beside the unidentified plane to read its markings. If it's a commercial, private or military aircraft which has strayed from its flight path that information is sent back to headquarters and contact is made with the wayward one to set him on the right path.

If the unknown turns out to be a hostile plane, it is quite likely he will try to destroy the first Dart. If he does the pilot of the other plane will knock him down.

The U.S. defense philosophy is to let the enemy take the first hostile action. What creates a hostile action is in a gray and highly classified area. But certainly the launching of an air to surface missile, the opening of a bomb bay door or an attack on a U.S. plane are hostile.

In an actual war situation there are likely to be quite a few bombers heading this way. As their intent becomes clear it would be up to General Beverly to contact the North American Air Defense Command in Colorado Springs. NORAD, in wartime, controls all of Canada's and the United States' air defense forces.

RETALIATE

The Joint Chiefs, the President and all the higher echelons take part in the decisions to retaliate and defend.

All the air defense forces would be immediately put on alert, all the radar scopes manned, all the intercept pilots would be aloft and the Bomarcs and Nikes would lock on their targets.

The area and far out defensive first line would be manned by the Air Force units assigned.

If any of the raiders get through they will be met by the mighty striking force of the Army's 35th Artillery Brigade whose Nike units ring the Capital.

Of the 24 Nike firing units in the Washington area, 9 are manned by National Guardsmen. The rest are Regular Army. The Guard sites are now all Ajax (nonnuclear 25-mile range).

The Regular Army mans seven Nike-Hercules sites. The rest are Ajax. These Hercules rockets all are nuclear-tipped weapons that can hit targets more than 80 miles away.

KNOCKED OUT

Commander of the 35th at Fort Meade, Md., is Col. Howard E. Michelet. The brigade is in the second region of the U.S. Army Air Defense Command headed by Brig. Gen. George S. Eckhardt. Eckhardt would be in complete charge of the sector if for some reason the Fort Lee operation were knocked out.

The entire air defense system depends on a network of radar installations which range from the Navy picket ships which roam the seas in the sector searching the skies for approaching aircraft to the simple height-approaching aircraft to the simple height finding radars at the Nike sites.

Texas Tower No. 4, which toppled January 15 killing 28 men aboard her, was part of the system.

The surveillance mission has been partially filled by the picket ship.

INTRUDERS

In addition to the picket ship the Air Force has radar-equipped aircraft in the air at all times attempting to detect intruders.

There are huge radar towers in other spots around Washington. One of these, the Manassas site, is actually on the Quantico Marine Corps installation. It has a new high-powered rig atop its five-story tower.

The most seaward site is at Cape Charles. It is getting high-powered equipment too.

There's a site at Roanoke Rapids in North Carolina. This setup will not get the newer equipment for 2 more years.

Four thousand feet up, at a Blue Ridge Mountain peak, 26 miles from Bedford, is another radar search unit.

All the information gathered by these radars is fed into the air defense sector headquarters at Fort Lee.

The data goes into a 275-ton computer which occupies a space at Lee large enough to accommodate 24 average-size ranch-style homes.

This 1,000-mile mass of wires and 50,000 vacuum tubes accepts and stores the information.

PUSH BUTTONS

Air Force and Army men studying 100 radar scopes at steel consoles push buttons and flash ray guns at the scopes which signal the computer to bring up the data needed instantly.

The path of each airplane seen on the scope appears as a small maggot wiggling its way across a black field punctuated with flashing yellow lights.

As the little worm moves across the screen, the interceptors blip can be seen speeding toward it. The computer even flashes to the radar operator the exact point in the vast airspace where the intercept will be made.

This is the kind of information General Beverly can see on his scope at his battle station. From his chair he can watch hundreds of miles of sky; he can see the raiders getting closer and closer to Washington and he can see our forces flash into the sky to kill them.

Like the British who watched the air battle of Britain over the hills of England 20 years ago, the men in the blue lighted room at Fort Lee can watch the battle for Washington, if it ever comes. But unlike the Britons, the Air Force, Army and Navy men sitting at the radar consoles can do something about it.

Frederick C. McKee, Outstanding Citizen

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. FULTON. Mr. Speaker, Fred McKee of Pittsburgh has been a fine example of civic-minded and patriotic citizenship. He was selfless in his patriotic devotion to our good country and the American people. He was an ardent leader, working for freedom and justice everywhere.

I have received a thoughtful letter from my good friends Louis and Florence Reizenstein, close friends and coworkers with Fred McKee in many good causes. The letter of March 14, 1961, summarizes for inclusion in the CONGRESSIONAL RECORD, the excellent career and public service of Fred McKee, which should be here recorded for future generations to know of his spirit and patriotism.

MARCH 14, 1961.

Hon. JAMES G. FULTON,
House Office Building,
Washington, D.C.

DEAR MR. FULTON: You know of the death of our good friend Frederick C. McKee. Pittsburgh and the Nation has lost a great and good man.

Until the year 1937 when Japan invaded China, Fred McKee led the life of a business executive. As president of West Penn Cement Co., president of Winfield Railroad Co., treasurer and later president of the National Casket Co., he made his contribution to the business life of the Nation and the civic life of our community of Pittsburgh. The act of aggression by Japan moved him so deeply that his life from then until his illness was one constant battle against the authoritarian dictator wherever he might be—in Nazi Germany, Fascist Italy, Communist Russia, or Communist China.

He was a man moved to action by his deep convictions. In 1938 he became national director of the Committee for Boycott Against Japanese Aggression. When Hitler began his conquest of Europe, he understood the great need to sustain Great Britain and as an organizer and national treasurer of the Committee To Defend America by Aiding the Allies, traveled throughout the country helping Americans understand how our freedom and safety were being protected by Britain's stand against the Nazi onslaught.

Long before Pearl Harbor, Frederick C. McKee personally financed the first foreign language broadcasts from WRUL Boston to France, Italy, Yugoslavia, and Arabic countries.

He understood the great need for the United States assuming positive world leadership. Before the war, he was interested in the National Committee To Study the Organization of Peace which made a significant contribution to the United Nations Charter. And all during the war he spent his time and resources in a nationwide educational effort to assure public approval of the United States joining a world organization for the preservation of the peace. He became national chairman of Citizens for Victory which had headquarters in Pittsburgh and other large cities and mobilized public opinion in favor of the United States' participation in the United Nations. This group later became the American Association for the United Nations and Fred McKee its national treasurer.

He was one of the first Americans to understand the danger of Russian expansion in Eastern Europe. He believed deeply in our country's responsibility for strengthening the free world and gave support to the Truman doctrine, the Marshall plan, formation of NATO and aid to underdeveloped countries. He was chairman of the Committee to Defend America by Aiding Anti-Communist China and was Pittsburgh chairman of American Relief for Korea.

Fred McKee became known throughout the country as an expert on foreign affairs. Ex-Governor of Vermont, Ernest Gibson remarked: "I am glad to be in Pittsburgh because it is the home of Fred McKee. If he's not well known in Pittsburgh, you can believe me his name rings through the halls of Washington and Downing Street." Great Britain recognized his great assistance in the war effort and awarded him the King's Medal of Britain.

Frederick McKee's great concern for his country and its position in the world made him conscious of the need to correct here at home the iniquities, the undemocratic practices toward our own minorities. He was a stanch advocate of equality of opportunity for all our citizens. When the Pittsburgh Fair Employment Practice Commission was established in 1953, Mr. McKee became its chairman and when this commission later became the Commission on Human Relations and was empowered to administer all of Pennsylvania's equal rights laws, he was elected one of its cochairmen. His rich background in national and international affairs, his sensitivity to man's deepest needs and his modest unassuming manner made Frederick C. McKee one of America's great human beings.

Very sincerely yours,
LOUIS J. AND FLORENCE REIZENSTEIN.

Veterans of Massachusetts and the Medical Assistance to the Aged Program

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement submitted to me by John T. Connor, chairman, Committee for Massachusetts Veterans' Services Association:

STATEMENT IN SUPPORT OF MAKING AVAILABLE TO THE OFFICE OF THE COMMISSIONER OF VETERANS' SERVICES, COMMONWEALTH OF MASSACHUSETTS, CERTAIN FUNDS UNDER THE PROGRAM OF MEDICAL ASSISTANCE FOR THE AGED

Massachusetts enjoys a unique position among the 50 States in that its concern for its veteran population prompted it, just 100 years ago, to enact special legislation providing for a separate program of assistance for these special people. In doing so Massachusetts patterned its treatment of veterans after the Federal Government, which for a longer period has maintained an agency to deal exclusively with the problems of the disabled, sick, and needy veterans. In Massachusetts the Commonwealth and each city and town maintain a department for the administration of veterans' benefits that is entirely separate from that administering public welfare. This is similar to the Federal Government maintaining the Veterans' Administration as a separate and distinct agency from the Department of Health, Education, and Welfare even though the aims of both relative to the alleviation of financial hardship consequent on old age and illness are similar.

The last session of Congress enacted, under its amendments to the Social Security Act, a program of medical assistance for the aged to provide funds to the several States and through them to the cities and towns thereof, for the purpose of shouldering, to a great degree, the burden of the cost of frequent illness among the elderly, both as it affects the cost of other relief programs and the financial drain on the individual beneficiaries themselves. As of the date of preparation of this memorandum, 5 of the 50 States have accepted some version of the medical assistance for the aged program. One of the States so accepting is Massachusetts. Chapter 781 of the "Acts of the General Court of 1960," which incorporates within it several sections taken from a model act supplied by the Department of Health, Education, and Welfare establishes the Department of Public Welfare within the Commonwealth of Massachusetts as the administering agency for medical assistance for the aged. Under the provisions of the program as adopted by the Commonwealth of Massachusetts, the Federal Government pays half of the cost of eligible cases, the Commonwealth two-thirds of the balance and the local community the remaining one-third of the balance. Under the Massachusetts program of veterans' benefits there is no Federal participation and the Commonwealth and the local community share equally the cost of each eligible case. Assuming a $300 per month chronic hospital case the following comparison is illustrative:

	Medical assistance for the aged	Massachusetts veterans' benefits
Total cost	$300	$300
Federal share	150	None
State share	100	150
Local share	50	150

It will be observed that in cases equally eligible, each costing in care the amount of the illustration, the State would save $50 per month and the local community $100 per month under medical assistance for the aged. The present Massachusetts laws provide that persons equally eligible for several categories of assistance may exercise free choice as to which they will accept. It is not difficult to envision, however, that with such substantial reimbursement available to the Commonwealth and the local community under medical assistance for the aged, pressure will shortly be brought to bear to force the transfer of many veterans' benefits cases to medical assistance for the aged or for the repeal of the statute permitting free choice.

It is not suggested that Congress intended, by its act of last year, to cripple a Massachusetts program which parallels in so many ways the treatment accorded by the Federal Government itself to veterans. It is felt rather that the designation of the department of public welfare as the State administering agency was the result of a too diligent effort to achieve uniformity within the Department of Health, Education, and Welfare.

It is hoped that by bringing this matter to the attention of the Massachusetts congressional delegates and to the Secretary for Health, Education and Welfare, steps can be taken to make available Federal funds provided in medical assistance for the aged, to the Commissioner of Veterans' Services, Commonwealth of Massachusetts, with the result that our historic consideration of veterans as a special class may be continued and the Commonwealth and its communities may receive the benefits of this additional Federal aid.

Extending Loan Guarantee Authority of the Interstate Commerce Commission

SPEECH
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 1163) to amend section 510 of the Interstate Commerce Act so as to extend for 1 year the loan guarantee authority of the Interstate Commerce Commission.

Mr. HARRIS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, the Committee on Interstate and Foreign Commerce brings to the House of Representatives today the bill H.R. 1163 and urges its adoption. The committee held hearings on the legislation at which time interested parties were given the opportunity to appear, and a number of witnesses did appear and testified on the legislation. I believe, without execption, every witness who appeared before the committee recommended the extension of this authority.

The purpose of the bill is to extend for 15 months the authority of the Interstate Commerce Commission to guarantee loans to railroads which was provided for in the passage of the Transportation Act of 1958 which, unless extended, would terminate March 31. In the 1958 act the Congress added a new part V to the Interstate Commerce Act which provided that the Interstate Commerce Commission could guarantee loans to railroads made by public and private institutions for the purpose of capital and maintenance expenditures. Under the economic conditions which existed in 1958 we were informed that some railroads had been forced by reason of their cash position to defer certain construction and maintenance programs and that with provision for this guarantee they would be able to secure loans enabling them to reinstate such programs, employing labor and purchasing materials and supplies.

It seemed to us that such programs were certainly desirable and apparently the Congress felt they were desirable, and the matter was approved. Under the guaranty loan authority the Com-

mission has granted some 14 applications totaling a little more than $85 million.

I wish to emphasize that this is not a loan by the Government. It is a guarantee of a loan obtained from the regular market. A substantial portion of this amount was authorized in capital improvements and in the purchase of equipment. Unfortunately the economic conditions today in the railroad industry are similar to those which existed 3 years ago. Our committee has been informed that it is extremely desirable that this guarantee loan authority be continued. There is pending before the Commission at this time an application for $15 million, the proceeds of which are to be used for capital improvements involving among other things the construction of a new electronic freight yard, which will take half of the amount. It is the belief of the committee that it is desirable to extend part V until next year so that projects such as this may immediately go forward.

It is not alone in the number or amount of the applications which have been approved by the Commission that this authority has been effective in providing for railroad construction, maintenance, and purchases. Testimony before the committee has been to the effect that it is unmistakable that the mere existence of this authority has enabled the carriers to secure financing through regular money markets even though they do not have to avail themselves of this guarantee.

It is our belief that the tests and limitations provided for by part V give as full protection to the Government as is reasonable under all of the circumstances. As stated in section 504, the Commission must find that the carrier cannot elsewhere procure funds on reasonable terms, that the rate of interest must not be too high, and that the prospective earning power of the carrier, together with the character and value of the security pledged, furnish reasonable assurance of the carrier's ability to repay the loan. You will observe further explanation of the statute in the report to which I direct your attention.

In the bill as reported from the committee almost unanimously you will observe there are additional views on the report filed by certain members of our committee. I direct your attention to the views of our colleagues at the hearing, at which time these matters were thoroughly discussed and searching questions were addressed by members of the committee particularly to the Interstate Commerce Commission. There were some questions raised with reference to some of the problems of administration and some of the policies, but nevertheless the members who filed these views state that in their view they recommend that the authority be extended. Therefore, I think you will find that in the course of the debate on this legislation the committee was practically unanimous in its recommendation that this authority be extended, but there will be some debate, and appropriately so, as to the administration of the law by the Interstate Commerce Commission, and questions raised thereon.

I think you will find that this is a reasonable request. It is needed. For many years we have had a transportation policy that we thought was a sound one. It is imperative that we do provide the American people with a sound transportation system under which all modes of transportation may be able to serve the American people. We feel that this is a step in that direction, and it is needed. Therefore, we urge the approval of this extension in this legislation.

Mr. MONAGAN. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Connecticut.

Mr. MONAGAN. Do I understand correctly that this is simply a guaranty and not an appropriation of funds?

Mr. HARRIS. There is no appropriation of funds. There is no Government loan. Application is made to the Interstate Commerce Commission, and under the act passed in 1958, there are certain criteria required. The Interstate Commerce Commission considers whether or not the application meets the criteria, that is, these requirements, and if so, through the Interstate Commerce Commission, the Government guarantees the loan or the repayment of the loan, and the loan is obtained through the regular, established money market.

Mr. MONAGAN. I understood one of the previous speakers to say that in spite of the authority, which was extended, there had been appropriations of only $80 million.

Mr. HARRIS. No, there have been no appropriations whatsoever. There has been a guaranty of loans to the extent of a little more than $85 million in some 14 applications, I believe.

Mr. MONAGAN. So that the appropriation would come only if the guaranteed obligation was not finally met at maturity?

Mr. HARRIS. In that case, the Government would be called upon to carry out this obligation and, obviously, there would have to be made appropriations for that purpose.

Mr. SPRINGER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Illinois.

Mr. SPRINGER. I might say in connection with the inquiry of the distinguished gentleman from Connecticut that one of the criteria for an application for a loan under this provision is that the borrower cannot get the money in the open market. In other words, if an application is made and the commission feels that the borrower can get the loan through some private source without the necessity of a guarantee, the commission will refuse to give such a loan. Not everybody who comes to the commission gets a loan automatically. The borrower must comply with the criteria set up by this law, and the commission itself.

Mr. HARRIS. As a matter of fact, one loan was turned down completely, in toto.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from California.

Mr. YOUNGER. It is also true, is it not, that a fee is charged in connection with the guarantee?

Mr. HARRIS. The gentleman is correct.

Mr. YOUNGER. That point was not mentioned so far in the discussion.

Mr. HARRIS. Yes, the gentleman is correct.

Mr. ROBERTS. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Alabama.

Mr. ROBERTS. I ask the distinguished gentleman if it is not true that the existence of this loan authority makes it somewhat easier for the railroads to obtain funds from other sources.

Mr. HARRIS. Yes, it makes it easier for the industry to go to the regular money market and obtain funds through the regular channels. That is true, as I tried to explain in my statement.

Mr. ROBERTS. I might further ask the gentleman, if it is not true that at the time we were considering this bill, there was quite a bit of pressure put on by various railroads about the matter of freight car shortages, and that since the approval of this legislation, we have not had any demands that we enact any legislation to relieve that situation.

Mr. HARRIS. We have had remarkable progress in that particular field.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Kansas.

Mr. AVERY. I would be most reluctant to let the comment of the gentleman from Alabama stand without some modification anyhow because, certainly, for the railroads that serve the Middle West, there is a considerable demand for adjustment in the per diem fee charged on freight cars. So there is a continuing request, part of a segment of the industry, to improve the freight car situation.

Mr. HARRIS. Of course that is for the purpose of keeping the cars rolling; utilizing them and not having them stand idle.

Mr. ROBERTS. My reference was to the fact that some of these laws have been for the purpose of building freight cars.

Mr. HARRIS. Maintenance, construction, employment—all of those things were part of the consideration of this program in 1958.

Mr. SPRINGER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Illinois.

Mr. SPRINGER. I think one point ought to be made which has not been made thus far. At one time the railroads appeared before our subcommittee on Transportation and Civil Aeronautics, and wanted the Federal Government to form a corporation with a valuation of around $500 million, from which they could borrow. It was the feeling of the subcommittee, and I am sure the feeling of the full committee, that such action was not justified. We felt it was not wise to enter into that kind of arrangement, but we felt that a Federal guarantee program was much more in

line with the kind of program which we had begun back in the thirties extending on down to 1959.

Mr. HARRIS. The gentleman is correct.

Now I should like to comment briefly on the statement made by my distinguished colleague from Kansas [Mr. AVERY] and the gentleman from Illinois [Mr. SPRINGER], members of the committee.

First I should like to make it clear, and I will say to my distinguished colleagues that my views have not changed at all as to whether or not the Congress intended the major regulatory agencies to be independent in character and an arm of the Congress. I have the same interest in this problem now as I had last year and the year before and the years prior to that. It is my intention to continue that interest in the future.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARRIS. Mr. Chairman, I yield myself 5 additional minutes.

Just as it has been in the past, we should endeavor to find out if there are inadequacies in the laws, and if so, what; also whether or not under the responsibility of our committee, the laws are being properly administered accordingly.

Now, I come to the Landis report. I had some feeling or reaction to the report when I was advised of it, and after I had read the suggestions, I thought it stated the problem exceptionally well. It was actually in three major divisions; the first part points up the problem as fine as I have ever seen it anywhere. As to the second part of the report, the critical analysis, I had some questions about some of it. The third part of the report contained recommendations. I have some grave concern about some of them and some aversion to some of the recommendations. I did not hesitate to state my concern. But since then I have gained a great deal of insight in discussions with Dean Landis and with the President as to what actually was intended. I think it will be clarified.

The report the gentleman gave from the article in the Wall Street Journal was called to my attention just a few minutes ago. In my judgment I do not believe the President has any intention of attempting to gain unprecedented powers as the Chief Executive over these independent agencies of the Government. I hope I am right in this statement.

The President has stated that he was concerned about some of the things that our committee was concerned with and which many other people of the country are concerned about, and that is interminable delays, delays, delays. The American people are entitled to their business being expedited insofar as possible before these agencies.

The Constitution charges the President with seeing that the laws are faithfully executed and I am sure this was what the President had in mind in connection with his expressed intention in that field.

After my conversation with him, as you well know of from published reports, I came away with the feeling he was not concerned with anything except the administration of the acts establishing the agencies and laws connected therewith and wanted to cooperate with the Congress to that end.

Something was said about the memorandum. I learned of this memorandum, I might say to my distinguished colleagues and this did not come as a surprise to me. I learned about it, I assume, in just a few days after it had been sent to the Chairman of each Commission. I was concerned about it at first and I took it upon myself to make an inquiry. In doing so I obtained a copy of the memorandum which went from the White House to these agencies, and when we get back in the House I will ask consent to include it at this point in the RECORD for the benefit of the Members.

It is as follows:

MEMORANDUM TO CHAIRMAN, INTERSTATE COMMERCE COMMISSION—FEBRUARY 7, 1961

The President will appreciate receiving for informational purposes on the third Tuesday of each month, a brief, informal, written summary from the chief officer of the agency on its principal activities during the preceding month and pending for the period immediately ahead.

The President is most interested in being kept closely informed on important policy and administrative action taken or proposed, and of concern to him as Chief Executive or in his other constitutional responsibilities. He is particularly interested in having major problems of the agency flagged for his attention.

The reports should be kept as specific, incisive, and brief as possible—preferably but not necessarily under two pages. Matters highlighted in these summaries and of particular interest to the President can later be more extensively developed at his request. Decisions pending before independent boards or commissions should not be included; nor should these reports be only generalized progress reports, statistical compilations, or personnel lists. If nothing of significant note for the President's personal attention has occurred, please merely report that fact. These reports will supplement, not in any way displace, existing means of communication and consultation with the President. The reports will be used only by this office.

Please send duplicate copies of the monthly report to the President, attention: the undersigned.

FREDERICK G. DUTTON,
Special Assistant to the President.

I also have a copy of some of the reports, and I will include one in order that you may have the benefit of it and to help clarify any question anyone might have, as I did at the time. Also to show the nature of the report as typical of what is desired.

It is as follows:

INTERSTATE COMMERCE COMMISSION—SUMMARY STATEMENT OF PRINCIPAL ACTIVITIES, JANUARY 20–FEBRUARY 20, 1961

Several major reorganization steps were taken in an effort to speed disposition of cases, improve quality of decisions in major cases, and generally develop greater efficiency in the agency's operations. Further steps were planned.

The position of Chairman was strengthened, a Vice Chairman (Commissioner Rupert L. Murphy) was named to oversee the major regulatory functions beginning March 1, 1961, additional delegations of work were made to staff employees, and the right of appeal to the entire Commission was limited thereby freeing the commissioners for action upon cases of general transportation importance.

Rulemaking proceedings were instituted to curb certain practices of household goods movers, particularly the one complained of most: low and misleading estimates.

A guarantee was approved for an additional loan of $3,500,000 to the New York, New Haven & Hartford Railroad, for a total to date of $21,659,400, on a showing that officials of the four States concerned will make new efforts to help the railroad over its serious financial troubles.

The Great Northern, Northern Pacific, and Burlington railroads filed application to merge. The combined mileage would be about 24,700, largest railroad system in the country.

The Comission set in motion a broad investigation of grade crossing accidents involving trains and tank trucks.

The agency's 74th annual report to Congress, transmitted February 8, 1961, contained 14 legislative recommendations.

It is made very clear that no information concerning investigational processes is requested. Under the law these agencies of the Government are to issue annual reports. After looking over the report I came to the conclusion that this was merely a request to see if such report could not be provided, not necessarily on a confidential basis to the White House, but as a public report that we might get the benefit of it. I think it is a pretty good thing to have a status report on a general basis each month. The President did not ask any information, and neither did he in this memorandum indicate to any of the agencies that he wanted any information on any particular case. That is the difference in this memorandum from the cases referred to by my distinguished colleagues who are equally interested in this problem.

Mr. Chairman, I am participating in a panel discussion tonight with the District Bar Association on the subject of who should oversee these regulatory agencies. I have very carefully worked up what I believe to be a pretty good statement, certainly of my own views on this, and I shall ask to have the statement included in the RECORD at this point, as follows:

OPENING REMARKS OF HON. OREN HARRIS ON PANEL PROGRAM, ADMINISTRATIVE LAW SECTION, BAR ASSOCIATION OF THE DISTRICT OF COLUMBIA, MAYFLOWER HOTEL, WASHINGTON, D.C., MARCH 14, 1961

It is always a pleasure to participate in the activities of the administrative law section of the Bar Association of the District of Columbia. It is particularly rewarding to me to be asked to join the chairmen of the major independent regulatory commissions in discussing the age-old, but always topical, subject before us tonight. Mr. von Baur has asked me to present congressional view of our topic, "Who Should Regulate the Regulators: Congress or the White House?" While, of course, I can speak only for myself, I think it is fair to say that the views I will advance are widely held among Members of Congress.

I want to compliment your administrative law section for sponsoring this program tonight to consider a topic of such pressing importance and wide concern.

I might say at the outset that I suspect the statement of our topic is a bit loaded. Taken literally, it seems to force us to side wholly with one branch or the other, a position that is a little too "pat" in so complex a system as ours. Even the slightest

acquaintance with the problems of these agencies teaches us that here is no place for the doctrinaire or the fanatic, for the man who would have one branch of our Government lord it over all the others. We might also acknowledge that the courts have had something to say about the course of administration. With those qualifications in mind, I shall try to outline briefly my views.

Let us first put this question in its true perspective.

We might as well begin with the Constitution, the foundation of our Government. Article I of the Constitution vests all legislative powers in the Congress and charges that body "to regulate commerce with foreign nations, and among the several States."

Article II, dealing with the executive branch, enjoins the President to "take care that the laws be faithfully executed."

These regulatory agencies were established by Congress pursuant to its constitutional mandate to regulate commerce. Of necessity, Congress has chosen to delegate to the agencies the detailed, technical, day-to-day work of regulation.

They are the administrative agents of specified legislative policies. They are in a very real sense trustees of these congressional powers, and their primary accountability is accordingly to the Congress. This is what we mean when we say that the independent agency is an "arm" of Congress.

The President is charged by the Constitution with taking care that the laws be faithfully executed. How, we hear it asked, can the President fulfill that responsibility if he is prevented from exerting control over powerful agencies of Government dealing with vital segments of the economy? I think the answer is that he is not constitutionally to be held responsible for the exercise of any authority beyond limits imposed by Congress pursuant to its own constitutional responsibilities. No one has put the point better than Mr. Justice Holmes, who said that "the duty of the President to see that the laws be executed is a duty that does not go beyond the laws or require him to achieve more than Congress sees fit to leave within his power."

The President is granted by Congress the power to appoint and in some instances to remove members of independent agencies. Congress provided that he may appoint the chairman of most of them. Likewise, it provided that the advice and consent of the Senate be required for confirmation of agency members.

But the power to appoint is in the case of each commission limited by a requirement that no more than a simple majority may be of the same political party. The power to remove, where it exists at all, may be exercised only on grounds of inefficiency, neglect of duty, or malfeasance in office. Typicall, the terms for which commissioners are appointed are staggered and overlap the administration of any given Executive. Thus the commission members are in and of the commission; they are not in and of the administration of any particular President.

Congress fully recognizes the Presidential duty to see to the faithful execution of the laws. In addition to the powers of appointment and removal, the executive branch has been granted by the Congress considerable power over agency budgets. Not only does the Bureau of the Budget have vast powers over the preparation and presentation to Congress of commission budget requests, it also screens all their proposals for legislation. These powers have been lodged in the Budget Bureau in recognition of the fact that centralized budgetary control is necessary for the efficient management of our huge Federal Government. Even so, as I'm sure you are aware, many Members of Congress feel we have vested too much control over independent agencies in the Budget Bureau. Some attention is being given to this problem now.

What all of this adds up to, I think, is this: Congress, for a number of reasons, one of which is the wisdom of having a spirit of comity among the major branches of Government, has conferred on the executive branch specific but limited powers with respect to the independent agencies. It has occasionally conferred extraordinary powers where special circumstances warranted. An example is the President's unreviewable authority to override the CAB's assignment of international commercial air routes.

But while Congress recognizes that the job of "regulating the regulators" is one that requires teamwork with the Executive, it has necessarily reserved to itself the basic responsibility for oversight of agency operations. In the Legislative Reorganization Act of 1946, Congress expressly entrusted each standing committee of both Houses with exercising "continuous watchfulness of the execution by the administrative agencies concerned of any laws, the subject matter of which is within the jurisdiction of such committee."

This statutory provision simply recognizes that congressional responsibility does not end with the enactment of legislation and the establishment of the regulatory commissions. Congress must keep itself advised of inadequacies in the substantive and procedural laws as they may appear in the course of administration by the agencies. It must also ascertain whether the laws are being administered in accordance with the intent of Congress. These basic responsibilities could not, in any event, be abdicated by the Congress, and it would appear only practical that in this connection Congress should concern itself with the interrelated problems of delay, agency organization, standards of conduct, and so forth. Division of these responsibilities would result in considerable duplication of effort by the executive and the Congress, dissension, and a number of thoroughly harassed commissions.

In addition, I doubt the wisdom of lodging both the appointment power and the oversight power in the Executive. It is axiomatic that for persons in positions of public trust the appearance of improper conduct can be as destructive to effective government as the disclosure of actual impropriety. It would not be in the public interest for the Executive to be placed in a position of vulnerability in this respect.

Before closing, I should like to invoke the authority of President Woodrow Wilson, who earlier recognized that congressional responsibility was not solely that of enacting legislation. He stated that he considered vigilant oversight by Congress of administration of the laws quite as important as the legislative function, and stated further that "even more important than legislation is the instruction and guidance in political affairs which the people might receive from a body which kept all national concerns suffused in a broad daylight of discussion."

I don't think anyone—in the agencies, in the executive, or in the Congress—wants to see the agencies become a battleground where the other branches are engaged in a struggle for control. The only beneficiaries of such a struggle would be those persons with a short-run interest in trying to evade effective regulation by keeping government demoralized. Surely the public interest would be the loser.

And while I would be the last to pretend that Congress may not share some of the responsibility for many agency deficiencies, I see no reason for challenging the soundness of the basic framework for agency oversight that I have just outlined.

I want it made indelibly clear to everyone what my views are with respect to these agencies. They are an arm of the Congress, they have only such authority as the Congress has given them, and it is going to be my purpose to see that that situation is maintained. It is going to be my purpose in working with our committee to assist to the best of my ability these agencies and everyone else interested, members of the bar, the practitioners, the agencies of the Government, the Chief Executive, everybody, in order to see that the efficient administration of the laws of these agencies may be carried out as fully as possible.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Kansas.

Mr. AVERY. I want to make the record abundantly clear that not for 1 minute do I feel the gentleman from Arkansas is going to recede from his position of responsibility he has taken. As chairman of the Committee on Interstate and Foreign Commerce, of course, that automatically makes him an ex-officio member of the Oversight Subcommittee. I am fully aware he will pursue those things in the same fairminded way he always has. Obviously I do not agree with some of the gentleman's conclusions, but I have never questioned his motives.

Mr. HARRIS. I thank the gentleman.

Mr. AVERY. The gentleman made one statement I want to have underscored here this afternoon. Did I understand the gentleman to say that he was going to exert all the influence within his power to make these so-called monthly reports back to the White House a public document, or will he be content for them to remain purely confidential memoranda to the Chief Executive?

Mr. HARRIS. Let me say to the gentleman in the first place that I do not claim to exert any influence at all. As a matter of fact, that is what we are talking about now in reference to these agencies. I do not want to indicate that I am going to try to influence anyone. In my judgment we can, and I am sure our committee will, get a copy of these monthly reports as they come out in order that we may have the information.

Mr. AVERY. I think that is an extremely important statement.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. SPRINGER. Mr. Chairman, I yield the chairman 2 additional minutes.

Mr. HARRIS. Mr. Chairman, this statement about the agencies comes up, of course, as a part of the problem we have here, because this is a bill in which the administration feature is going to be discussed, as I have discussed it here briefly. Secondly, I think the discussion of our colleagues in the minority views on this problem is important. So far as I am concerned I believe we are all working together with what the President has in mind, our committee and everyone, so that we can see better administration of these laws by the major agencies.

I want to take this opportunity now to say that when extension of the authority for the submission of reorganization programs of the Government comes before this House I for one am going to raise the question as to the appropriate time that we will have to carefully review any kind of a reorganization plan that affects the regulatory agencies and the action of these major regulatory agencies. We have to give proper consideration to any such reorganization plans that might be submitted affecting these agencies, and I for one am going to be watching that very closely.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

A Trade Union Approach to Foreign Trade

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Solomon Barkin, director of research, Textile Workers Union of America, AFL–CIO:

A TRADE UNION APPROACH TO FOREIGN TRADE

(By Solomon Barkin)

A trade unionist's view on foreign trade originates from the same fount of values as those which govern his determination of policies on national domestic issues and collective bargaining. There is a consistent core of values which guide him, for these are the very rationale of the movement itself.

BASIC APPROACH

As for his approach to foreign trade, he is neither a free trader nor a protectionist. Having rejected the belief in the benevolence of the price system in the domestic free market, he can hardly be expected deliberately to accept it as the basis for sound international trade policy. Nor can he possibly look with favor on steps designed to protect domestic producers to enrich themselves by price protection. His international position, like that developed for domestic issues, seeks essentially to protect union members and the people at large from special property interests and from injury in the course of technological and economic change, and to assure constant improvement in the lot of the common man as well as equitable treatment and democratic participation in the conduct of the economy. Whatever his momentary formulations may be, he will tend to return to the basic value system on which his whole philosophical outlook is founded.

At the domestic level, the trade unionist has long realized that the price system operates impersonally and inexorably, and often inhumanely, inequitably and uneconomically. Guided basically by the profit goals of the entrepreneur, the system itself does not discriminate as to the methods used. Good and foul means may be employed to affect the price, to the extent that the law or the business code permits. Monopolies or quasi-monopolies may be formed and political power used to gain these ends.

The worker as an individual has felt helpless before this concentrated aggressive power, and has formed unions. By means of collective bargaining and legislation he has sought to provide countervailing power to right the balance. The objective has been to eliminate economic exploitation, improve working conditions, secure an equitable distribution of income, share in the benefits of productivity, protect workers from the ravages of business and economic change, and from arbitrary management rule, and promote management and government policies favorable to an expanding and full employment economy.

SOCIAL COSTS OF PRODUCTION

Most important for the present discussion, the American trade unionist endeavors to shift the personal and social costs of production on to the enterprise itself. The price of goods and services should include the costs of unemployment, sickness, retirement, conservation of natural resources, and the economic and social redevelopment of people and regions. The decisions based on comparative costs and gains would therefore be made in the light of the full range of benefits and sacrifices involved, and more reasonable decisions would therefore be made. This correction of the price mechanism is being gradually fully realized in economically advanced nations.

The liberal trader in the trade union ranks has to date not perceived the precise manner by which to integrate the above value system into his thinking on foreign trade. As a result many have merely adopted the logic and argumentation of the free trade movement with which the trade unionist will have to part company as the domestic impact of foreign trade becomes more and more evident.

COMPLACENCY SHAKEN

Until very recently the liberal trader among unionists has been protected from this step by two considerations. First, the number and importance of the industries in the United States affected by imports had been limited and did not include strongly unionized sectors. But as significant union groups are affected, racial changes in attitudes have occurred even temporarily catapulting individual unionists into the protectionists ranks. Second, many are so overwhelmed by the primary American responsibility for aiding developing nations and strengthening the non-Communist alliance that they are disposed to overlook the personal and national costs of foreign trade. This acceptance of sacrifice on behalf of international strength appeared quite tolerable while national unemployment was low and a feeling of economic optimism pervaded the Nation. In the face of current economic reverses, however, this complacency is being converted into real concern, demands for action and finally a reevaluation of the very propriety of yielding so generously to international obligations.

SOME FREE TRADE FLAWS

Until now the liberal trade position has been defended with arguments which are inconsistent with the basic trade union value system. As a result this outlook on international trade is not likely to survive for long and is in fact currently undergoing radical change. First these unionists have tended to discount the effect of imports upon domestic employment. They have borrowed the free trade argument that more people are dependent upon export than import trade, forgetting that the issue is primarily what will be the employment effects of new measures of liberalization of international trade. In connection with the evaluation of the latter issue, they have used outdated estimates derived from 1951 calculations on the effect of lower rates on imports and domestic employment. Actual imports now exceed the volume projected by the aforementioned estimates despite the maintenance of substantially the same structure and level of import duties. The analysis is likely to neglect the problems of employee economic adjustment and the finding of new employment. In face of the nigh national and local rates of unemployment, the chronic distress in many affected areas, the specialized skills and experience of the displaced, and the absence of provisions for retraining, income maintenance and redevelopment, the plight of the displaced in the United States has been most discouraging.

No trade unionist directly concerned with a particular group of industries or occupations can stand by idly and play down his concern for his own members or for employees generally in the present period of high unemployment. In the face of the current difficulties of finding new jobs and adjusting workers to them, even the national trade union organization, however much it is disposed to a liberal trade position, is under compulsion to insist on controls of trade which limit the growth of imports so as not seriously to injure domestic industries.

Second, the acceptance of the price system as being a beneficent arbiter of the flow of international trade flies in the face of the unionist's rejection on the domestic level of this system as the sole basis for economic determination. As a minimum to gain such acceptance, total domestic costs and effects of international trade must be taken account of in the determination of comparative advantage. And as the present price system does not allow for them, they must be added through direct imposition upon the producers or at least as calculations for the determination of real advantage and cost in the formulation of policy and attitude. A program of international trade which lays waste a region in the United States, which is itself underdeveloped, and where unemployment and underdevelopment are widespread (as would result from wholesale imports of textiles and apparel at the present time) would not square with a rational trade unionist estimate of national interest.

FACING REALITIES

Third, no trade unionist can dismiss the problem posed by competition from low labor rates and labor costs from abroad. Even though the use of this argument by employers in specific contract negotiations as in the case of steel, is for the most part specious, the accuracy of the argument in other instances cannot be dismissed. The rebuilding of industry in Europe and Japan has resulted in the construction of modern factories with advanced equipment managed by people thoroughly acquainted with and tutored in American management arts and skills. Benefiting from a lower hourly labor cost, they have become formidable international competitors in many industrial lines and are able to hurdle existing American tariff walls to capture substantial American markets. The reality cannot be dismissed.

There is, however, an appropriate debate on how best to meet the issue. Certainly, a crash program of research, modernization and new product development would be most constructive to meet this new competition. Such activities have already helped several domestic industries such as automobiles. But the issue is what other course should be taken pending these developments, particularly in the field of international trade regulation.

AN OUTDATED ARGUMENT

Fourth, the defense of liberal trade as a means of providing foreign markets for American exports is, of course, somewhat dated. The present concern is with the means of stopping the outflow of gold which is challenging our monetary liquidity. A decline in imports and an expansion of exports would contribute toward this end. One approach, as indicated above, would be to improve the competitive position of American products through improvements in quality, lower cost effected through greater efficiency, better merchandizing and marketing pro-

cedures and credit facilities. Sacrificing American industry as the means of providing dollars abroad for purchasing American exports is therfore no longer economically wise, if it was ever reasonable and justified.

Fifth, the trade unionist disposed to liberal trade has been further embarrassed by the impressive volume of imports originating from American subsidiaries abroad. Inclined to accept the full liberal trade position including the free flow of capital and even labor, he has tolerated this situation. The recent rise in American investments in advanced European nations with their lower hourly labor costs, however, has caused many brows to knit. Union members have resented this new form of "foreign competition." Already, the American trade union movement has begun to object to further tax concessions to American investments in developed countries. There is a definite inclination to eliminate all differential benefits to these investments in order immediately to tap the profits earned abroad to finance the American Government and, incidentally also to reduce the attractiveness of such investments.

A similar problem is being experienced with the immigration of farm labor. These workers have been brought in to overcome labor shortages. But with the growth of national and local unemployment, these temporary immigrants have challenged Americans for jobs, hampered the rise of wages for this type of labor and impeded union organizing campaigns. There is a growing union demand to abolish the statutory authority for such immigration. The position supporting the liberal flow of the factors of production is being weakened by recent economic events.

TRADE OR AID?

Sixth, the enthusiasm for helping foreign countries has inclined some trade unionists to overstress the importance of trade. Aid has been vital in the growth of many developing countries. Trade is not always a proper substitute, for it may mean great local sacrifice and encourage the growth of industries whose long term survival is not certain. Therefore, the relation and proportion of trade and aid must be carefully evaluated for the advancing countries.

The inconsistencies outlined above in the position of liberal trade unionists are of course matched by the unionist who has taken a strong protectionist position. His thinking is quite apparent. His following is being hurt by imports. Recognizing no immediate alternative possibility of any growth of job opportunities in the industry, he is impelled to insulate existing employment from outside competition. Many such industries are already contracting. Moreover many have a high labor content so that the capital employed per operative is low and new jobs are likely to require two or three or even more times this sum. The possibilities for new employment for the displaced are further minimized by their specialized skills and limited training, and their location. To this unionist the only ready defense is a higher tariff wall, as neither the Government nor the community provides other solutions.

PROTECTIONIST INCONSISTENCIES

However, in taking this position, the unionist has often failed to examine the roots of the difficulty. If administered high prices, or conservatism in management, backwardness in research or lags in product and technical innovation are the real troubles, he cannot unconditionally endorse management's demands for protection. He must balance his appeal for aid with a concurrent demand for action by management. Otherwise he would be betraying his responsibility to the trade union movement as a whole which is looking for overall economic growth and improvements in living standards for the American people.

In like manner, the trade unionist in such industries has to reconcile himself to the high priority which the United States must assign to its international obligations. This country and the national trade union movement cannot be, and has not been, oblivious to these requirements. The realities will therefore demand that the protestations against imports should be balanced with proposals for aiding in the adjustment of individuals, since some diminution of American industry will occur. His responsibility is to help the public and the union movement as a whole evaluate the soundness of a particular tariff decision in meeting the objectives of international trade policy.

In seeking to apply the basic trade union system of values to the field of international trade, one common bond among all trade unionists is their belief in adequate labor standards. In the United States, most unionists accept the principle of prescribing such standards to insure fair competition. The experience with the Federal Fair Labor Standards Act reinforces this position. The issue is how to implement this objective.

It is assumed that the technique of international conventions provided by the International Labor Office will continue to press to reduce hours, raise minimum wages, and otherwise bring international pressure to bear toward humanizing working conditions and relations and promoting free trade unions. But some more immediate leverage is being sought to correct the low labor standard of workers producing wares or services entering into foreign trade.

ACTION THROUGH GATT

The contracting parties of the GATT have, under the prompting of countries such as the United States, established permanent machinery for examining cases of market disruption so as to moderate the effect of a sudden rush of imports into a country. One basic cause of such disruption is the growth of exports from the low wage and low labor cost areas. Common ground has been found in that products made under working conditions and wages which are below the national standard of the exporting country for that industry should be barred from trade. A second area of consensus is that labor standards should be formulated in setting prices under international commodity agreements. Competition between workers enjoying high standards in factories and home workers is considered unfair. Similarly, there is considerable agreement that products made at lower rates than are prescribed, or would be prescribed, by a national minimum standard, are also causing unfair competition.

SOME DIFFICULTIES

Unions are now seeking a formula for effecting improvements in labor standards in exporting countries operating advanced technical production systems with low total costs, and hourly labor costs in line with or better than existing national standards but well below those of other world competitors. Illustrations of this may be found in the clothing, chemical, metal and textile industries. The difficulties in finding an answer to this problem is both substantive and administrative. Ordinarily lower labor costs are considered one of the comparative advantages which both developed and developing nations may employ to earn foreign currencies. It is particularly important if the nation enjoys few other advantages. Lower labor standards are often deliberately used for the purposes of building up the nation's capital. Unions in some countries have cooperated at different periods with management and government in policies of wage restraint to achieve these ends. On the other hand, the international trade union movement is aware that the rising expectations of peoples must be satisfied to maintain their allegiance to the free world. Moreover, these low wage and benefit policies can create real difficulties for other countries.

Little agreement exists on how and when to effect wage increases and higher living standards in countries in which productivity has been rising and where objective circumstances might possibly permit such boosts. As indicated, in some instances the various parties concerned are in agreement to withhold improvements pending the accumulation of capital at much higher levels. In other instances, the Government or the economic power of employers enforce such policies. These countries tend often to minimize the stimulating effect which wage advances could have on productivity itself. Illustrations are available where wage adjustments have been voluntarily agreed upon as part of trade treaties, as in the case of the Netherlands at the time of the effective application of the Benelux agreement. But newer procedures have to be designed for this purpose.

Unionists are therefore hoping that the discussion of individual cases of market disruption will provide a means of impressing on all nations the need for higher labor standards. Another suggestion is that the requirement of annual reports from governments on advances being made in labor standards could exercise the same moral suasion. There is also a proposal to associate capital grants or loans with understandings on labor standards. New procedures will have to be devised in this area to achieve these goals of improving labor standards.

A POLICY FOR CLOTHING AND TEXTILES

In view of the limited developments which may be expected in the near future in the field of labor standards, each nation and the unions within it must consider the likely impact which foreign competition may have. One industry group which will be seriously affected is clothing and textiles. Its peculiarity is that the technology is enjoyed almost universally, since advanced machinery and management methods are shared throughout the world. Moreover, at least each large nation and community of nations produces textiles for some or all of its needs and many of its items are indigenous to its way of life.

As for the textile industry, the large national major producers have in the past generally been exporters. With the growth of industries in newer countries, not only have they lost major parts of their foreign markets, but these newer producers have further aggravated national problems of adjustment by increasing or threatening to increase their exports to the former countries. In many of these countries the textile industry, and in the United States also the clothing industry, constitutes a significant base for the national or at least regional economies. The threat of their disruption presents a truly serious issue to the nation.

PROBLEMS OF ADJUSTMENT

The affected national trade union centers must therefore really face up to the formidable problems of adjustment and evolve policies which seek to reconcile the diverse national and international interests. Considering particularly the United States, higher textile imports at present will have distressing effects. National unemployment is high. The rates of unemployment in the textile regions and communities tend to be even higher. Several such communities have suffered from chronic distress for several years. The southern textile region is underdeveloped, with large labor surpluses and widespread underemployment. Further closings of mills and elimination of jobs would aggravate the already distressingly serious plight of the people in the area. The economic redevelopment of New England, and the textile areas of New York and Pennsylvania and the South, has not yet been mapped nor taken hold. The personal and social costs of displacement and redevelopment are so high that if included in the calculations of comparative costs they would

definitely make such imports disadvantageous to the national economy.

SEARCH FOR A FORMULA

In view of the above considerations, but yet recognizing that the United States does have international obligations to allow a moderate level of imports to enter, the major issue for trade unionists in these areas is to find a method of control which would reconcile union, domestic, and international commitments. The program which has been offered as most adequately achieving this end is one which starts with a definition of a safeguarded level of national production. In calculating this level, a historical period such as 1954–57 or 1957–59 has often been chosen. This absolute domestic level of production would be safeguarded for American manufacturers. Others have proposed that the historical level of the per capita volume of production should be safeguarded from foreign competition to allow for expansion of population. A much wider consensus supports the first formula. Domestic consumption beyond this level would be more freely shared in open competition with foreign goods imported into this country. Of course, tariff duties would be much lower for these imports than those promulgated to safeguard the level of national production. One qualification added to this proposal is that no domestic industry should be granted this benefit if the prices for its products have consistently risen at a relatively higher rate than the rise in the general level of prices of products in the same group.

The development of the above formula would help maintain the American clothing and textile industries and would allow for the continued stimulation coming from competition from other industries and clothing and textile imports, minimize the processes of adjustment and allow for the introduction of wholesale plans of economic redevelopment. The formal adoption of this program would mean an open policy commitment by all concerned that private enterprise within the industry must be more innovating in its products and methods of operation and merchandising. The national commitments would involve no guarantees of monopolistic rights and privileges and would help minimize the human, social, and economic costs. At the same time this policy would allow the world to benefit from a progressive American clothing and textile industry. The economic growth of the United States itself would allow for an expanding area of direct competition in the American market by foreign producers.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Recreational Development a Big Business

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. KERR. Mr. President, on March 11 in Tulsa, Okla., my assistant, Mr. Don McBride, made a very important and enlightened speech on "Recreational Development a Big Business." I ask unanimous consent that it may be printed in the the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RECREATIONAL DEVELOPMENT A BIG BUSINESS

(By Don McBride, assistant to Senator ROBERT S. KERR, of Oklahoma, at the annual meeting of the Arkansas Basin Development Association, Tulsa, Okla., March 11, 1961)

Regular readers of Life magazine recently ran across a new word—or maybe a new way of life—in a feature article called "Aqua-Maniac." Now most of us have been on speaking terms with the word "aqua" for a long time. We know that it's just a high-falutin term for water. Likewise, we know what a "maniac" is. So we come up with a definition that means a "water fool," but Life used a bit more finesse. They said it meant "one who had an excessive urge for water based recreation." That is the general theme of my remarks today, with a slight leaning toward the dollar and sense aspect.

I have had some conversations recently with fishermen who would vow that "water fool" was the appropriate term to apply to some of the hoards of individuals who have taken up water skiing and skin diving as a recreational pursuit, and declare emphatically that these guys should not be allowed on the same lake with those who have succumbed to the lure of angling.

It just goes to show that you can get an argument about water-based recreation.

Some of the most cherished boyhood recollections are the old swimming hole—or a can of worms and a cane pole. How we pity those who missed such experience.

Then in the process of maturing, I recall when I had a deep conviction that wildlife and recreation were inseparable—not necessarily water recreation—you understand.

But now I've reached a point where I can think of recreational development as a serious business and one that should demand hardheaded thinking—lest we err and fall short of the mark.

Your presence here today is a testimony of your belief in the comprehensive development of our river basins. Each of us is aware of what conservation and development have already done for this great Arkansas Valley. We have faith to believe that greater things are in store for us by 1970. We believe we have found the secret that unlocks the future.

This great project has for its major purposes navigation and flood control, but who would discount its potential for sound recreational development? It must be an integral part of the whole.

We, in the Arkansas Basin, have been sobered by the census announcements. The national growth in population from 1950 to 1960 was 18½ percent—but Kansas gained only 14$^{3}/_{10}$ percent, Oklahoma only 4⅓ percent, and Arkansas lost by 6½ percent. These three States will lose three Congressmen and we narrowly escaped losing four. What do you suppose the loss would have been without the water resource projects we already have? How important was recreation in preventing further population loss?

While we lost ground populationwise, we were gaining in another area. The U.S. per capita income gain was 45$^{3}/_{10}$ percent in the 10-year period. Arkansas per capita income increased 64⅓ percent, Oklahoma 57⅗ percent, and Kansas 45$^{1}/_{10}$ percent. Can anyone deny that our resource development program has been at least partially responsible? How much more will water development pay off for us in the future?

What part will recreational benefits incidental to our water project development play in our future growth and economy? How much can we depend on recreation as a business?

The national economy on the whole is rapidly shifting from an overwhelmingly productive-based structure to one where service aspects are increasingly important. This reflects many complex and interwoven happenings which we need not concern ourselves with, but it does indicate two patterns. They are most important to the people of the Arkansas River Basin. No. 1, the standard of living is high enough that people have more money to devote to what once were the nonessentials of life. No. 2, the people have more leisure time to enjoy these nonessentials or intangibles of life.

A smaller percentage of the family budget is rigidly earmarked for the necessities and more for enjoyment, education, and better medical care. Did you know that from 5 to 8 percent of the family budget is now spent for recreation?

I am convinced that the chief beneficiaries of the relaxation revolution are those areas rich in scenic splendor and recreational facilities, where people can get back to nature. For example, the U.S. population rate of increase from 1948 to 1958 was 18.7 percent, while the sales of fishing licenses rose 43.3 percent during the same period and hunting license sales rose 29.6 percent. In 1955, the $3 billion spent by the anglers and nimrods equaled the total electric bill for all households of the United States. The automobile miles traveled by these sportsmen equaled 120,000 trips around the world. These same fellows spent 567 million play days in the woods and on the water. This is no small group of people engaging in these two sports. One in five persons over 12 hunted or fished in 1955, and one family out of three numbered either a hunter or fisherman in its ranks. These tension-easing sports are just a facet of our recreation economy which accounted for an expenditure of $40 billion and 8 percent of the gross national product in 1959. The cost of boats for sports and pleasure in 1959 was $2.5 billion, as compared to $905 million in 1947. Meanwhile the number of boats on the water increased 300 percent during the same period. Right here in Oklahoma there are over 80,000 outboard motors in use. This means that 1 of each 30 Oklahomans owns an outboard motor. In the Tulsa area, which by the way is one of the leading marketplaces for outboard motors, there are 25,000 outboard motors in use. By 1970, there will be 8 million boats in use and the industry will gross $4 billion. As you can see, water-based recreation is big business, if we merely look at the equipment purchased, used, and repaired each year alone. It is a field that is not limited to the rich. Sixty-five percent of the boats purchased during the recent years have gone to people in the semi and skilled labor and white collar groups—the middle income brackets.

In Oklahoma, a half million fishing licenses are sold each year, and 20 percent of these go to nonresidents. They must travel across our State, and probably your State, to get to our lakes and rivers. Incidentally, Oklahoma ranks fifth in the number of nonresident licenses sold in 1960.

These visitors to our borders spend freely. When you add their expenditures to the $40 million per year spent by our fishermen and the thousands by our sportsmen, you begin to see how vital recreation is to the State's economy. There were 14 million tourists in Arkansas in 1959, and in Kansas your fishing license sales have risen over 100,000 during the last decade.

We have just started to reap the harvest from our neighbors who come to enjoy the scenic beauties within our borders and to hunt and fish in our reservoir areas. Senator KERR's Select Committee on National Water Resources, which has just published its completed study, estimates that there will be over 70 million hunters and fishermen in 1980, and almost 100 million by the year 2000. They are expected to spend about $8 billion in 1980, as compared to the $2¾ billion they spent in 1954.

The Corps of Engineers reservoirs, the Bureau of Reclamation projects and the soil conservation structures of our area are tremendous drawing cards to the recreation-hungry of this basin. For example, visitor days at our eight Oklahoma corps reservoirs rose 280 percent from 1951 to 1960. For the future, it is estimated that visitor activity at corps projects will increase 400 percent by 1980 to 34 million visitor days. The W. C. Austin reclamation project at Altus, Okla., registers more than 200,000 visitor days each year. These visitors and their expenditures provide a tremendous boost to the local and State economy. The average Kansas tourist spent $4 per day in 1952, and today probably spends $6. An average hunter spends $6 per day, and a fisherman $8. An unofficial 1959 study revealed that the average benefit to the Lake Tenkiller area was $4.58 per fisherman day.

Some of you probably are thinking that all this is fine, but since we are building so many lakes and parks, won't we soon reach the saturation point? Won't we soon begin to lose rather than gain? Just the opposite is true. If you will permit me to quote from a letter Senator KERR received from the Tulsa district engineer on January 20, 1961, I think you will see my point:

"There does not yet seem to be a point of saturation in the Oklahoma area (and I

would assume the same to be true of your area) of the Arkansas and Red River Basins. The existing reservoirs complement each other rather than being competitive in the sense of penalizing the use of another reservoir. The additions of major water areas to the region have had the effect of extending the zone of influence. More people desire to travel a greater distance to enjoy the varied opportunity of several lakes whereas they would not do this to visit one project.

"Keystone, Eufaula, and Oologah are expected to materially strengthen eastern Oklahoma as a recreational area for Oklahoma and adjoining States. It is expected that these projects with those of the Arkansas River will establish a tourist and recreational area comparable to that of the TVA or the Kentucky River Basin."

In spite of this barrage of statistics that I have thrown at you, I have not, and shall not, advocate construction of reservoirs by the Federal Government for recreation alone. Such a proposal could in some instances be fully justifiable. The corps should continue to concentrate on flood control and navigation work, the Bureau on reclamation, the S.C.S. on flood prevention and soil conservation. But these branches of the Federal Government must not be blind to the economic impact of recreational benefits, nor should the present beneficiaries be charged with costs that more properly belong to recreation.

As we attend this very meeting, dedicated to the promotion of sane and fiscally sound water resources development, Government employees charged by law with evaluation of project benefits are out working with blinders on, compelled to be legally oblivious to the great benefits that recreation brings to our Nation. I am not advocating the justification of a massive project building plan where values are puffed up to justify the spending of our tax dollars, but who can deny that the creation of adequate recreational facilities is in the national interest?

Those who oppose making the evaluation of recreational benefits an integral part of project planning do so on the cotton candy argument that no accurate measure of such work is available. The present evaluable benefits for flood control, hydropower, and navigation are not sacred nor divinely ordained, and themselves were only inserted in some cases after long and bitter legislative struggles. In the case of reclamation benefits, the pitched battle lasted over 20 years until in 1902 a farsighted President, who had come to the West to regain his health, persuaded a reluctant Congress to pass the Reclamation Act of 1902—the basic law under which all Federal reclamation projects are constructed. I feel that action to require inclusion of recreational benefits is equally justified by the available information which has been compiled in survey after survey and published in one report after another. Even rabid opponents of such inclusion have been forced to alter their position in light of the facts. Testimony taken before Senator KERR's Public Works Subcommittee on Rivers, Harbors and Flood Control has revealed that failure to properly evaluate the recreational potentials of reservoir projects has led to dangerous overcrowding of recreational facilities in many cases as early as the first year of normal operation. It has also shown that many projects which have been rejected on the basis of presently evaluated benefits might easily have been justified if only reasonable dollar allowance had been made in the benefit-cost computations for potential recreational use.

Legislation which Senator KERR introduced during the last three Congresses has provided for value per visitor day use at rates which are very conservative, and with a 15-percent limit on project costs to be allocated to recreational benefits.

During this session of Congress, we hope to realize the end of a long and tiring legislative battle to amend basic water project legislation. We want it to reflect the great value to the Nation that recreational benefits, incident to multipurpose project development, bring. We are grateful to those of you who expressed your support for S. 159 of the 86th Congress, which passed the Senate as a part of the rivers and harbors bill, but was rejected by the House conferees. We appreciate the actions of those of you who steadfastly supported Senator KERR's S. 1164 of the 85th Congress, which was reported out of committee but died on the floor when the Congress adjourned. As I have said before, new statistics pour in each day to strengthen our case. We have a new administration determined to push rather than impede a realistic evaluation of all water project benefits.

Encouraged by these factors, Senator KERR has reintroduced the recreation bill this session, and its number is S. 121. It is essentially the same as the earlier bills which I have mentioned. It simply provides for the inclusion of recreational benefits in project planning as long as the recreational program does not conflict with the major purposes of the project, such as flood control or irrigation. The general result would be to speed authorization and construction of projects with recreational opportunities and to improve such facilities at projects already in operation. For example, two sorely needed projects in Oklahoma could meet authorization requirements if S. 121 were to become law—the Optima project on the Canadian near Guymon, Okla., and the Kaw project on the Arkansas near Ponca City.

This would be accomplished by improving the benefit-cost ratio by counting potential recreational benefits up to 15 percent of the total cost of the project. This portion would not have to be repaid to the Federal Government by the users. Such benefits would be computed on the basis of 50 cents per person on the estimated number of visitors annually. This figure is a very conservative one for experience has shown that a much greater sum is fed into the local and national economy by a booming tourist industry.

We are hopeful that S. 121 will become law, and your expressions of support for it to members of your congressional delegation would be most helpful.

Today the question of providing recreation at federally constructed projects is not one of fiction, but one of fact. Coupled with the population explosion, increasing leisure time, and a rising standard of living, the problem of providing adequate recreational facilities on the lakes and rivers of the United States will be of mounting concern—and we must be prepared for it. The inclusion of recreational benefits in project planning will be a sound and forward step in meeting a problem that is with us today, and one that will become truly critical in just a few short years.

I think it is cheaper and better to recreationalize our population than "to tranquilize or institutionalize them." What we do, we must do adequately to meet the needs of tomorrow. Development should be on the basis of forecasts of use for an ever-expanding population.

In developing recreational facilities at our reservoirs, we should be aware that we could wreck-create if our plans are too small and our vision too short.

Now is the time to exploit our potential. Now is the time to call attention to the advantages of our area over the teeming population centers where a parking place is dear and a fishing hole nonexistent. Industry, too, likes to locate in places where employees will be happy and relaxed, and in places where their children can enjoy the great outdoors at its finest. Our region, with the help of men and women like you, has the leadership and enterprise to match its resources. Opportunity is knocking here—opportunity for everyone who has a hand in the planning, design, and construction of our projects; projects which enable us to do our share to make up for the destruction of much of our most beautiful and productive fish and wildlife and recreation habitats since 1492. But most important, we have an opportunity to build for a greater Arkansas River Basin area and a truly more prosperous, beautiful, and enjoyable America.

The Good Will With Which Election Results Are Accepted

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. HRUSKA. Mr. President, one of the noteworthy characteristics of our American political system is the good will with which election results are accepted. Even when the results are as close as they were in last year's Presidential race, when there was less than 112,000 difference in the number of votes cast for the two major candidates out of a total popular vote of 68 million, the winner takes office with the best wishes of the entire Nation, including the losing party and its defeated candidate.

A number of newspaper editorials have come to my attention bringing out this important point. One fine example, which only recently came to my attention, was published in the Newburgh-Beacon (N.Y.) News. I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[Newburgh-Beacon (N.Y.) News, Jan. 13, 1961]

A GOOD LOSER

Even those who campaigned most vigorously against Richard M. Nixon's bid for the Presidency would agree that in defeat he has been impeccably gracious and dignified.

The irony of proclaiming the election of his opponent, John F. Kennedy, fell to the Vice President. He not only lifted the routine of certifying the electoral college vote from a dull ceremony to a historic event; he did so with good humor and without rancor. He was, in a sense, presiding over his political demise.

The Vice President, in an unprecedented act, said that it was the first time in 100 years that a candidate for President thus had announced the victory of his opponent.

"There is no more striking and eloquent example of the stability of our constitutional system and of the proud tradition of the American people of developing, respecting, and honoring institutions of self-government," Nixon pointed out.

In the spirit of a good loser the Vice President extended best wishes to his successor as he "works in a cause that is bigger than any man's ambition, greater than any party."

As Senator KENNETH B. KEATING said at a dinner this week honoring the retiring Vice President: "He revealed to us an example of the kind of man whose heart and mind and spirit form a timeless, precious, indispensable part of the national grandeur."

For what he believed in, Nixon fought with bulldog determination and lost like a thoroughbred.

Most important of all, when party leaders advised him of voting irregularities in Illinois and Texas which, if verified, might disprove the election of Senator Kennedy and put Nixon in office, the Vice President refused to make any protest or to challenge the outcome.

He is reported to have said that, even if he were to prove his case, the result would be to hurt the United States and the election of candidates by popular will in the eyes of the rest of the world. It would tend to show that, even here, election frauds had been proved.

In essence, what Mr. Nixon did was to show he would rather see his country right than be President himself.

Legislation To Give Foremen a Voice and a Vote in Affairs Affecting Their Welfare

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. DULSKI. Mr. Speaker, because I feel that the foremen in American industry are presently captives in the "no man's land" of collective bargaining in American industry due to definitions and restrictions contained in the Taft-Hartley Act, I am today introducing legislation which is designed to once more restore to the foremen class of people the status of first-class citizens, or an equal status, with all the rights and privileges of the rank and file worker, with all the protection of the laws of the land, and will be able to take their rightful place at the bargaining table, and have a voice and a vote in affairs affecting their welfare.

In modern industry today, we have strong representation for management at the top level—at the bottom level we have strong representation for the rank and file worker. In the middle, we find a vast number of people called foremen with no representation whatsoever operating in a vacuum as a buffer, and sometimes a whipping boy, between management and union in the economic struggle for survival.

I contend that these people, the foremen of America, have a natural right of association which should not and cannot be taken away from them by administrative definition and interpretation of legal verbiage. I contend that the foremen of America have a natural right to band together to process grievances, protect their job security, safeguard their working conditions, and be human beings—the same as any other group of workers. At the present time, neither the law nor company policy provides proper protection for the foremen class of people, although a foreman in American industry speaks for and acts for management. At the same time, in his personal capacity, he is an employee subject to terms and conditions of employment imposed upon him from above—a matter over which he has no control or no voice.

I find no basis for the argument that foremen, through enjoyment of the benefits and fruits of the collective bargaining process, would impair the effective performance of their duties in behalf of management.

On the claim of divided loyalties, we cannot assume that self-organization for collective bargaining would prove incompatible with the foreman's faithful performance of his duties. Such an assumption has never been proved.

Many foremen groups throughout the Nation have been organized, but not recognized, without detriment to their loyalty or efficiency to management goals. Management's disciplinary powers are adequate to insure faithful and efficient job performance by all of its employees, regardless of title.

The basic argument of the foremen concerns the denial by their employers of the right to participate in the decisions which affect their welfare as employees.

A foreman does not lose his right to serve himself in matters fixing his own wages, hours, seniority rights, or working conditions because he serves his master in others. The foreman is caught in the squeeze between a gigantic mechanized system that can turn the human element, including foremen, into robots—unless the fundamental and basic human principles, one of which is the right of association, are completely respected and tolerated.

My bill proposes to free the shackles that bind the foremen of America in managerial bondage and restore to them their natural rights and privileges to which they are entitled as a matter of plain, simple, common justice.

At this point I wish to include one of many letters that I have received concerning the foremen's situation:

Realizing your interest in the welfare of the working people of your district and being aware of your previous attempts to assist us through legislative channels, we are again bringing our case to your attention.

We are an organization of foremen, employed by a local industry, nameless for our protection, unable to bargain collectively with our firm's management because of the Taft-Hartley Act. We are hourly paid foremen, not salaried, and are raised in pay only when the rank and file local union negotiates a pay increase, for their members, through collective bargaining. A percentage differential separates us from the top represented employee. Yet management insists that we are supervisors and a part of management.

The following quotes from our company's supervisory training and development manual are illuminating:

"The timing of pay adjustments for supervisory employees has been a subject of discussion by management in our company for many years and there are many different opinions and practices in the industry. Fundamentally, pay increases for supervisory personnel are considered as merit increases, whereas pay increases for represented personnel are negotiated in the light of any and all other benefits that are granted. In order to disassociate the two, it has been the policy at * * * to grant pay adjustments at different times during the year. This should not be construed as meaning that the increases for represented people are not deserved or merited but rather that the cost to the company of other benefits that are granted, must be considered in determining the amount of any general wage increase for the organized force. It should be understood that wage adjustments for the two groups are unrelated and are not dependent on one another."

Clearly management has drawn a sharp line between the hourly represented employees and the salaried supervisors. No mention has been made of the foremen, who are in between the two groups herein discussed, being a part of neither one.

The Taft-Hartley Act bars foremen from collective bargaining, but our employers have put us in the van with the represented or rank and file union worker as far as wage increases and other benefits are concerned. On the other hand they refuse to allow us to bargain collectively, claiming that we are supervisors and thus a part of management.

Therefore, our only hope of ever attaining collective bargaining lies in amending the Taft-Hartley Act to permit the first line of supervision to organize and bargain collectively. We are firmly convinced that our best interest will be served by a separate and distinct organization of foremen, not connected to, or a part of any rank-and-file union.

I trust that early action will be taken on this legislation.

Bernard G. Segal, Esq., Reports on Work of American Bar Association Federal Judiciary Committee

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. KEATING. Mr. President, Bernard G. Segal, Esq., the chairman of the American Bar Association's Standing Committee on Federal Judiciary, has done an outstanding job in screening proposed nominees for Federal judicial office. He has performed a public service of the highest order for which all Americans owe him their gratitude.

Mr. Segal recently reported to the American Bar Association's house of delegates on the work of his committee. In his remarks he reviewed the history of cooperation which his committee has enjoyed from the Department of Justice in the past and expressed his expectation that such cooperation would continue.

Mr. Segal's excellent statement on the problems of judicial selection should be of interest to many Senators, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TRANSCRIPT OF ORAL REPORT BY BERNARD G. SEGAL, OF PHILADELPHIA, PA., CHAIRMAN OF THE AMERICAN BAR ASSOCIATION'S STANDING COMMITTEE ON FEDERAL JUDICIARY FOR THE ABA HOUSE OF DELEGATES IN CHICAGO ON FEBRUARY 20, 1961

Mr. Chairman, Members of the House, the beginning of the year 1961 may well be regarded, in the future, as the start of a new era in the history of the Federal judiciary. For certain events, occurring simultaneously, have created an unprecedented situation—one full of hope for the progress of our Federal court system.

In the first place, the method of consultation with your committee before an appointment is made, with a view to assuring that no unqualified person shall be appointed a judge, has, after 9 years under two Presidents of the United States and three Attorneys General, been developed to a point of efficient processes, mutual respect and trust, and constant cooperation.

At the end of the last administration, it could be said with complete assurance that no person would be given consideration by the President for judicial nomination without first a preliminary screening, later a formal report to the Attorney General, by this committee; that the President would not nominate to any Federal court, including the Supreme Court, any person whom your committee, for valid reasons stated to the Attorney General, reported as unqualified; and that two out of every three appointees to the U.S. courts during the preceding 2 years had been rated by your committee not merely as qualified, but as well qualified or as exceptionally well qualified.

In the second place, for the first time in 40 years, the judges sitting in the Federal courts throughout the Nation are just about evenly divided as to their preappointment political party affiliation, half of them Democratic, half Republican.

In the third place, there are likely to be a greater number of appointments of new judges to the U.S. courts this year than ever before in the history of the country.

It appears almost certain that in recognition of the desperate and mounting need for additional judgeships in certain of the U.S. courts and the critical conditions of congestion which exist in these courts, and under the urging of the President and the Attorney General, the Congress will very shortly effectuate the recommendations of the Judicial Conference of the United States, endorsed by this House this morning, calling for the immediate creation of 59 new judgeships in the Federal courts, 9 in the courts of appeals, and 50 in the district courts. Almost certainly, the Judicial Conference, at its meeting next month, will recommend even more judges in courts where they are greatly needed. In addition, there are 13 vacancies in existing judgeships—4 in the courts of appeals and 9 in the district courts. Three recess appointments await action. So that, with the normal number of vacancies, created by retirements and other causes, the number of new appointments to be made by President Kennedy during the coming year is likely to reach the staggering and completely unprecedented total of more than 100 judges.

All the emphasis which our association has given in recent years to the goal that appointments of only the most qualified lawyers and judges shall be made to the Federal bench, without regard to political party, seems to be bearing some fruit. Thus, within the past 2 months, editorials and articles by columnists have been appearing in newspapers throughout the country, spotlighting the issue and in numerous cases urging that the time has come for a "new look"—adopting the President's words, some have said, a "New Frontier"—in the matter of appointment of judges in the U.S. courts.

Against the background of this unique combination of events, a new national administration has come to Washington.

The very first week after the Kennedy administration took office, President Seymour and I visited Attorney General Kennedy and Deputy Attorney General White to discuss the subject of Federal judicial appointments, to offer the services of the American Bar Association, through this committee, and to urge upon them the resolution passed by this House last August urging the incoming President, whoever he might be, to nominate as judges only the best qualified persons available, without regard to their political affiliation. The discussion was most cordial.

I am happy to report to this House that both Attorney General Kennedy and Deputy Attorney General White stated then, and since that date the Attorney General has reiterated to the Senate Judiciary Committee, that the Kennedy administration plans to continue the policy of submitting to your committee both for preliminary screening and for later formal report, names of individuals under consideration for Federal judicial appointment, and of appointing only individuals who are clearly qualified.

Two weeks ago, when in San Francisco, I received a telephone call from Deputy Attorney General White making his first request for a preliminary screening—an informal opinion—on the qualifications of an individual under consideration for judicial appointment. So that the system is continuing without interruption.

Finally, I refer to the statement by Senator Kennedy in his letter of August 30, 1960, to our then President John Randall, which was adverted to in the Board of Governors' resolution passed by the House this morning. You will recall that after expressing his full agreement with the concept of a qualified and independent judiciary as promulgated by this association, Senator Kennedy said:

"I would hope that the paramount consideration in the appointment of a judge would not be his political party, but his qualifications for the office."

We have every confidence that as President, Mr. Kennedy will carry out this lofty pledge.

The importance of this sequence of events to the courts and to the Nation cannot be overstated. This combination of circumstances holds bright promise for the years ahead.

We have gone far toward the establishment and maintenance of a qualified judiciary. The undoubted ideal, long a major objective of this association and of the organized bar of the country, is the nonpartisan selection of judges on the basis of merit alone. Bipartisanship in appointments would not achieve this goal. But if nonpartisanship is not yet attainable, then bipartisanship would certainly create a wholesome atmosphere around the whole issue of judicial appointments and would be a long step in the direction of establishing what a former great official of the Department of Justice who did much in the cause of a qualified judiciary, called "the difference between a Federal judgeship and Federal patronage." President Kennedy has the best opportunity of any President of this century to break important new ground by introducing real bipartisanship into judicial appointments.

Mr. Chairman and Members of the House, our committee should like to convey to you our high hopes for the future. In view of the notable statement of purpose of President Kennedy, and the unequivocal assurances of Attorney General Kennedy and Deputy Attorney General White, against the background of the significant factors I have outlined, this should be a year of great accomplishment and progress in the critical field of judicial appointments. With the continued help and guidance of the Members of this House, your committee will exert its efforts toward the achievement of this goal.

Now, Mr. Chairman, I have a pleasant assignment. One of the major reasons for the optimism of your committee rests in the person of the new Deputy Attorney General. He attended the meeting of our committee which lasted all of yesterday afternoon, during which he asked us searching questions and made sage observations. It was apparent to all of us that Deputy Attorney General White is completely dedicated to the goal of having only highly qualified lawyers and judges appointed to the U.S. courts.

Our committee believes that its relationship with Mr. White will be fully as cordial and as effective as it was with his predecessor, Judge Walsh, when it reached its all-time high.

Hungarian Independence Day

SPEECH
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, we are commemorating a sad and important occasion today—the 153d anniversary of Hungarian Independence Day. Today when many formerly backward nations are gaining their independence it is a great tragedy that a nation with a history of a thousand years of freedom is now under a brutal domination which practices such violations of basic human rights as foreign troops, secret trials, and collectivization of agriculture. To most persons the successful effort of the Hungarians to gain freedom on March 15, 1848, is not nearly as well known as their heartbreaking attempt to throw off the iron hand of communism in 1956.

Thinking of the history of Hungary and its battles to hold freedom and to regain it, we realize that the new nations gaining freedom for the first time do not face an easy road. In fact, there seems to be no easy road for anyone or any nation in the world today. With the wicked power of modern weapons and the diametrical split between political systems based on personal freedom and those based on complete domination of the individual, the chances of utter chaos are considerable.

We feel that the key to peace lies in ideas rather than weapons. Somehow we must give to those caught up in powerful ideologies the knowledge of what freedom is—what it really means. Perhaps this is the role which the Hungarians and other captive nations are to play, because they have known the world of freedom and now live under the stultifying ideology behind the Iron Curtain. Perhaps, through Hungary, and other captive nations, we—a nation with nearly 200 years of freedom—can reach the millions who have no real knowledge or concept of freedom.

Voice of Democracy Contest

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. KUCHEL. Mr. President, the Voice of Democracy essay contest, which has just been concluded for the 14th time, and which has the endorsement of the U.S. Office of Education, is a most commendable means of stimulating the youth of America to investigate and appraise the American form of government and to realize the values of our form of life.

A few weeks ago I had the honor of meeting the winners from the 50 States of the American Union in the Voice of America contest. I was particularly interested in speaking to a young lady from my own State, who appeared as the representative of California.

The wide participation of students in high schools throughout the Nation will pay substantial dividends in the way of better-informed citizens. Doubtless, the leaders in community affairs, and possibly those in State and National governmental activity, in future years will include award winners whose appreciation of the meaning of democracy stems from the study and the thought required for preparation of essays for this competition.

The California winner in this year's contest was Miss Kathleen Bodeen, of San Anselmo. Her essay is a moving expression which I believe will inspire Americans in all walks of life. I believe many will be reassured about the mental attitudes of our youth by reading Miss Bodeen's essay. Therefore, I request that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

VOICE OF DEMOCRACY

I speak for Democracy. I move my heart, my lips, and my tongue in utterance of an ideal which is the highest that humanity ever developed. An ideal which enables the man of mediocrity to share in the pipedreams of justice, freedom, and human dignity. To resound a cry of equality which states either "I'm just as good as you are—and a darned sight better" or, "We hold these truths to be self-evident, that all men are created equal."

For, in the words of Montescuieu: "The love of democracy is that of equality." It's an ideal which finds its roots in the fertile soil of belief that if men are equal in any respect, they are equal in all respects. It is an American aspiration which personifies itself in the poignant story of a 6-year-old Alabama lad who had been given permission by his mother to bring home to dinner both a white and a colored schoolmate. The next day, the boy shot through the door, both his friends in tow. Then, he drew his mother over to a corner, stood on tiptoe, and whispered, with an air of beautiful childlike simplicity, "In case you're wondering, Mom, the one with the checkered shirt on is the colored boy."

It is this central concept of democracy, equality, for which I speak—that which gives it its energy, its overwhelming vitality—a concept which cries democracy. A concept holding aloft the banner emblazoned with the eternal phrase "It is the person as a person who counts." Not the individual as a landowner, not as a member of a white- or blue-collar working class, not as a child of advantageous wealth or prestige, not as belonging to this or that religion, race or creed—but the person as an individual * * * a being of human dignity who can lift his voice with mine in saying, "I speak for democracy."

I speak for kids and ticker-tape parades and freedom of education; for the timeclock, the sweat of the workingman's brow—for life, for liberty, for the pursuit of happiness. I speak in behalf of Jews, Catholics, Protestants. The Swedish, the Irish, the Spanish, the Hungarian.

I speak for those who have realized that democracy is the feeling of privacy in the voting booth—a feeling of communion in one's place of worship. It's the score at the bottom of the ninth. It's a small hand placed over the heart and the utterance of the words "I pledge allegiance * * *."

It is a form of government. It's a way of life. It's the ground upon which we walk. It's the air we breathe. It is this for which I speak. I speak for democracy.

Increased Appropriation for Forest Service Research

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. MOELLER. Mr. Speaker, several official and unofficial statements have recently been made on the subject of this Nation's vital natural resources. These statements—The Final Report of the Kennedy-Johnson Natural Resources Advisory Committee, the President's Special Message to Congress on Natural Resources and the President's Message to Congress on the American Economy, among others—have all acknowledged the urgency of revitalizing our national forestry programs.

I agree wholeheartedly with these statements. To emphasize the necessity for prompt action in this field, I would like to insert in the RECORD a statement I made before the Appropriations Subcommittee this past Monday in support of additional appropriations for Forest Service Research.

My statement follows:

INCREASED APPROPRIATION FOR FOREST SERVICE RESEARCH

Mr. Chairman and members of the subcommittee, I am WALTER MOELLER, of Ohio's 10th District. More than three-fourths of my district lies in the hilly southeastern part of Ohio. My appearance here is to discuss briefly my interest in Senator STENNIS' statement before the Senate on January 31, 1961, regarding the "Program for National Forests," as approved by Congress 2 years ago. According to my information, and to Senator STENNIS, some $8 million will be needed to bring the research part of the program up to the goal set for next fiscal year. This extra financing certainly is needed nationwide to place the management of our forest resources on a sounder basis through application of research results.

The situation in my district well illustrates the need for a really adequate national forestry research program. Many of the leading citizens of my district and I have a special interest in the development of our forests because they are the chief renewable resource in some 20 counties of southeastern Ohio's sharply rolling country. Forest improvement is moving ahead as a result of increasing protection against destructive agents and application of cultural practices developed by Forest Service Research. But a depressed economy exists and needs immediate attention. I believe that an investment in a research program designed to increase the output of timber and other forest resources, in perpetuity, is one of the best assurances against a recurrence of present economic conditions.

Early settlers found southeastern Ohio fully covered with some of the finest hardwoods. Now only some 50 to 60 percent of the land remains in forest cover; mostly it is of generally low quality. Much of the land cleared for farm crops has deteriorated and no longer has such value. Progress in the forestation of idle land with pines has been rapid; but the problem of successfully planting deteriorated soils to a valuable hardwood such as walnut is still troublesome.

Other major problems, in the rebuilding of the forests, involve both the establishment of timber stands and the management of them for increased volume and quality. For example, we must have better knowledge of soil characteristics and their relation to the occurrence and growth of our best tree species. This is the very heart of maximum forest use of land, as it is for the best use of farm cropland. When relations between soils and the distribution and growth of different kinds of our best native trees are determined, guidelines will have been established for planting trees in the proper places and managing forests to assure maximum yield and regeneration of new stands.

A further immediate problem is related to production of pulpwood. The hardwood pulp industry is rapidly expanding in the Midwest and increasing its drain on timber stands. There are 19 woodpulp plants in the Midwest; 6 of them are in Ohio. This drain is mostly on good quality trees that are too small for sawtimber. If continued without the guidance that can come from research, pulpwood cutting can be a hazard to our future sawtimber stands. Research is needed to determine suitable methods of managing our forests for production of pulpwood alone, as a special product, and for production of both pulpwood and sawtimber in the same stand. And we need to find the costs and returns available from growing hardwoods for pulp and sawtimber.

The Forest Service is conducting research in my district and in other parts of southeastern Ohio. This work has already made many fine contributions, such as improved forest management methods, better ways to plant trees on old fields, and tree planting methods for coal stripped land. But the program is entirely too small. It ought to be enlarged immediately just as this work should be strengthened in many other parts of our Nation.

I appreciate the time you have given me to review forestry research needs in my district as an example of national needs. Funds appropriated for forestry research are investments that will help, in a constructive way, the economy of depressed areas

and assure a more abundant supply of forest resources for the Nation's people and economy. Finally, I want to approve the statements of Senator STENNIS and recommend that we in the House equal his leadership by appropriating an $8 million increase for Forest Service research in fiscal year 1962.

Why U.S. Farmers Are Tops

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. HILL. Mr. President, since 1914 when the Smith-Level Act became law cooperative extension work has been a vital part of the Department of Agriculture activities and through the years the farmers of America have been the beneficiaries of the results of research conducted by the Department of Agriculture and our land-grant colleges who have worked in concert with the Federal Extension Service in an effort to give our farmers and their families the opportunity for a greater share of the benefits and blessings of American prosperity.

Basic to the success of the general educational programs of the Extension Service is the county extension agent. It is through his dedicated efforts that our farmers, farm homemakers, and rural youth are apprised firsthand and almost immediately of the latest agricultural research findings of the Department of Agriculture and our land-grant institutions. Certainly the structure of American agriculture does not have a more important or vital link than the work of the county extension agent.

In the December 1960 issue of Better Farming Methods a most deserving tribute was paid the joint Federal-State program of the Extension Service and our land-grant colleges in an editorial entitled "Why U.S. Farmers Are Tops." I strongly commend the editorial and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

WHY U.S. FARMERS ARE TOPS

(By Frank Waddle)

Every once in a while a person is fortunate enough to have an experience which helps him to see what is fundamental and what isn't.

Recently I have had such an experience. It has given me such a new appreciation of the fundamental role of our land-grant college system and our agricultural extension system that I would like to share it with you.

Between October 20 and November 3 it was my good fortune to visit five South American countries with Secretary of Agriculture Ezra T. Benson and a group of other farm newsmen. During the 2 weeks, we visited Brazil, Uruguay, Argentina, Chile, and Peru.

We visited with farmers (wealthy and poor), presidents, ministers of agriculture, educators, business people, the agricultural staff members of our own Embassies, and many others.

All of this does not make one an expert on Latin America or its agriculture. It does enable one, however, to make certain observations and reach a few conclusions.

My most important conclusion is that everyone in the United States—and especially anyone related in any way to agriculture—ought to thank God every day of his life for the wisdom of our forbears which led to the establishment of our land-grant college system and our Federal-State extension service.

These Latin American countries (as well as others throughout the world) have a tremendous potential for the production of food and fiber.

They are handicapped by a shortage of capital, but that is not the greatest handicap.

By far the most important shortage is in technical knowledge—simple know-how. Why?

My conclusion was that the difference is due primarily to our research and educational institutions.

Our land-grant colleges have sought earnestly to determine the best methods of using the many types of soils which we have. They have worked hard on the development of better varieies of seeds and improving our livestock and poultry. This research was not done privately for the selfish advantage of a few but was done for the welfare and use of all who would apply it.

Our Extension Service was established to bring this information to the individual farm. (Of course, I would in no way belittle the other communications media which also have helped to spread the information available.)

It is easy to say, "Why don't the farmers in these countries adopt our methods?" To help illustrate why this is difficult, let us imagine for a moment that all of the agricultural research in the United States had been done at Cornell University for the farmers of New York State. How generally could this have been applied by the farmers of Iowa, or Georgia, or New Mexico, or California?

It is even less practical to simply send our information to these other lands, helpful as that may be.

There are agricultural schools in South America, but very little research as we know it. There is no extension system or method of disseminating the information. Half of the people who should have this information cannot read or write.

This is not said to belittle the people or the potentials of these countries. They have great potential and in the years to come will be tremendously productive lands. Furthermore, they will develop much faster than we have.

This is being said simply that we might appreciate the background of research and education which has enabled approximately 10 percent of our workers in the United States to produce all the food and fiber that we need—and then some.

While we are giving credit, perhaps we ought to go back still further. We can be thankful that the pioneers who settled our land built homes, churches, schools, and colleges almost at the same time. They believed in the dignity and value of the individual. They believed that each individual should have an opportunity for the best education which he was capable of achieving. They believed that only when people were eductaed could they progress fully and live together democratically. Thus, from the beginning we developed a middle class of people rather than the great extremes of wealth and poverty which exists in many other parts of the world.

I believe that it was that attitude which, when applied to agriculture, resulted in our land-grant colleges and in our extension system and our agricultural education.

Our agricultural economy today is undergoing considerable stress and strain. We are prone to criticize our researchers and educators and our extenison leaders for not having answers to our problems.

But for now, I would like to suggest that we do not overlook their fundamental values and that we do not cease to be grateful for them. They are the envy of the rest of the world.

A Journey to Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. FLOOD. Mr. Speaker, tomorrow being St. Patrick's Day. I think it a most appropriate time to submit for the RECORD another in a series of articles, which I have found to be most informative and often highly amusing, on Ireland, written by Mr. Thomas Heffernan, editor, Sunday Independent, Wilkes-Barre, Pa., which appeared in that newspaper on March 12, 1961. Mr. Heffernan wrote this series of articles for his newspaper following an extended trip through Ireland last fall.

The article follows:

A JOURNEY TO IRELAND—IRISH NAMES WITH SCARTEEN HUNT—A VARIETY OF OBSTACLES TO JUMP

(By Tom Heffernan)

The other hunt with which we rode in the region about Adare in County Limerick was that of the Scarteen Black and Tans—with the name coming from the markings on the fine big pack of hounds and which pack we were told had been in the Ryan family for generations.

One contrast here was that while the nucleus of the County Limerick Hunt were people from England come over for a season of hunting, there seemed more Irish—at least Irish names—among the followers of the Scarteens.

Thaddeus (Thaddy) Ryan, tall and handsome, was master and the dashing young Pat Hogan was field master, acting as master in the field since the master served as his own huntsman.

There were also the O'Briens, Raffertys, and others while on two of the days we were with the Scarteens we met Catholic priests riding in the field.

FATHER FOLEY FALLS

One was Father Denis (one N) Foley, a young man Paddy O'Toole informed us "was just after being ordained."

The other was Father Kennedy and when we asked his first name he smiled as he said, "John."

Father Foley was riding a young and green hunter which give him both difficulties and spills.

"I fell into and over everything," he said.

That was understandable, because the country hunted by the Scarteens seemed to us to have nothing but double banks and jumps over walls that took you down into precipitous slopes.

They seemed that way, anyway.

And with the hunt one day was a young man who had lost one leg from about the middle of the shin, and he wore a straight wooden peg leg.

This he fitted into a black leather boot which replaced the stirrup.

Later that day we were just behind this young man and somewhat apart from the rest.

FOLLOWED WRONG MAN

We were in a narrow country road bordered by a stone wall which led into a field which sloped steeply down, when the hounds chasing a fox, came suddenly into view way down in the field below.

Without hestitation he put his horse, from a standstill, right over that wall into the field below and took off at full speed down that steep incline.

With considerable hesitation we followed him and when asked later about it said we felt that if a one-legged man could get over we thought it safe to follow.

"That one-legged man," we were told, "is Ferguson Sutherland, one of England's finest horsemen and a trainer of hunters, jumpers and steeplechasers at Newmarket"— which is famed for just that.

With the Scarteens we met an Englishman named John Shedden.

Quite by accident, in a restaurant we met him again later in Dublin.

At that time we found out that he had been in Harrisburg on business last summer.

CHURCH COLLECTION TAKEN AT ENTRANCE

The collection for the church at Adare was not taken up by passing the plate.

Instead, two men from the congregation stood at either side of the main entrance, holding the collection plates into which those attending dropped their offerings on their way into the church.

In Dublin, the big city ways reverted to what we know, with the plate passed through the congregation.

WHO CAN JOIN IN THE HUNT

Members of a hunt pay a yearly subscription to help defray the costs.

Visitors pay a daily fee called the cap—coming from the same root, as per capita.

Residents of the area pay a smaller and nominal fee.

Farmers and members of their families are welcome at all times and often there are a couple farm boys or perhaps a girl and they usually make no effort to wear hunting clothes, but often are well mounted.

At other times they are quite young and bouncing right along on ponies.

And we still can see one chap, in his thirties, wearing rubber boots, an old army overcoat and ancient cloth cap—his long haired little horse trying hard—flying at his best for a while.

Hunting they love.

FEW FLY FENCES BUT QUITE A VARIETY

Hunting in Ireland you don't get to jump many straight up and down obstacles like wooden fences, similar gates or even, in the part where we hunted, stone walls, all of which are like the obstacles seen in horse shows.

By hunting people these are called fly fences because you can fly at them and over them.

When going into ditches, banks, and other overgrown affairs you don't fly—you go in slowly because the horse must have a chance to see where he is jumping and it is well for both of you to get a view of what is on the other side, where you hope to land.

With good luck finding us well mounted every day, we had a good chance to find out why Irish hunters are so famous and so highly prized. They are wonderful and some of the affairs we got over leave us still wondering how it was done.

OVER HUGE STONE WALL

Keeping in mind that it was approached slowly and not cleared but taken a bit at a time, with the horse jumping first up on top and then jumping off, we met quite an example the first day.

Later, John Gouriet told us, in case we were interested, that the big stone wall we had negotiated was 6 feet high, 9 feet wide, and with a drop on the far side.

Then, on the last day, we were taken over another that still baffles us as to how it was negotiated by the horse—and let us stress there was no danger whatever involved.

However, it was an ancient brick or stone affair, between 5 and 6 feet high, perhaps only 18 inches wide. It separated us from the field we were in from the road we had to get to and we approached it at a walk.

Somehow, that big horse got his front feet on top and scrambled up one side and down the other almost in one motion—and practically in slow motion.

GETTING PHEASANTS THE HARDEST WAY

Talk about doing it the hard way.

They still tell the story of a Mr. Toomer, an English sportsman of the 18th century.

He is said to have ridden a trained bull to shoot pheasants while using a pointing pig to find his game for him.

The 1961 Resolution in Opposition to the Federal Income Tax

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1961

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "1961 Resolution Opposing Federal Income Tax 48 Years Too Late," which appeared in the Mandan Daily News of Mandan, N. Dak., in the March 7, 1961, issue.

This is one of the most factual and documented editorials that has come to my attention on this subject. I am sure the Members of the Senate, as well as others greatly interested in this proposal will appreciate reading this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MARCH 7, 1961 RESOLUTION OPPOSING FEDERAL INCOME TAX 48 YEARS TOO LATE

The proposal, during the last week of the legislature, to pass a resolution abolishing all Federal income taxes served one purpose only, and that was to call the attention of the voters to just how much money is being used, and the number of agencies that are now apparently fully dependent on the Federal income tax.

Another purpose, too, that prognosticators could visualize was that it gave Fay Brown an opportunity to get into the State, as well as national limelight, thus laying the groundwork for any future political ambitions he might have. To eliminate the Federal income tax at this time would create chaos throughout the Nation. It should have been stopped before it became law in 1913. Certainly many changes could, and should be made in the law, particularly the confiscatory rates, and the varied and many degrees of interpretations of the law. Each year the forms are said to have been simplified but as we make out our taxes we find this is not so and the only safe way to make out the tax is turn it over to a specialist. Even he is apt to be confused.

Going back to the North Dakota resolution. It all started apparently at the instigation of a certain Willis Stone of California, called the Mystery Man by the North Dakota Union Farmer. Mr. Stone claims to be chairman of the "National Committee for Economic Freedom" claiming the far-to-the-right politicians as supporters.

We can and do agree with numerous points in Mr. Stone's program, but we resent an out-of-State man moving in and using our State legislature as a sounding board, even though we may agree with many of his aims.

This takes us back to the early days of the Nonpartisan League. When the farmers revolted about 1915, they had many supporters among the businessmen of the towns and cities, but they allowed a gang of out-of-State socialistically inclined ideologists to take over the leadership and North Dakota was soon headed down the road to State socialism, with which many of the farm revolt supporters could not agree. In time these agitators left the State, but the results of their bitter antibusiness campaign hung on for years. Today there is little of the farm versus city "feller" resentment left.

No matter what the cause, when they have a family quarrel, most States resent outside interference, even from Uncle Sam. Witness the segregation troubles down South. Many southerners agree with integration but they don't like to be pushed around by outsiders and thus negate a program that probably could have been adopted much sooner if they had been let alone.

Certainly we would like to be rid of the Federal income tax but in order to do so we must first eliminate about 700 Government functions, millions of jobholders, and numerous little and big bureaucrats. And what sort of tax could be used to raise money for the absolutely necessary Government functions.

Here is where the Federal tax money now comes from: individual income tax, 55 cents; corporation income tax, 25 cents; excise tax, 12 cents; and other receipts, 8 cents.

Here is where the tax dollar goes: major national security, military, and stockpiling, 57 cents; interest, 11 cents; agriculture, 6 cents; veterans, 6 cents; debt retirement, 2 cents; other, 18 cents.

We cannot eliminate the Federal income tax, but the rates certainly can be better equalized and adjusted to give business and earners more incentive to expand and advance.

The Finnish Journey

EXTENSION OF REMARKS

OF

HON. STANLEY R. TUPPER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. TUPPER. Mr. Speaker, at a recent meeting in Geneva, Switzerland, Finland was granted associate membership in the European Free Trade Association. This was a significant step in the direction of strengthening Western relationships and a heartening one to all of us who believe in expanded world trade, when such trade does not act as a detriment to our domestic industries.

In this connection, I noted a most informative article, entitled "The Finnish Journey," that appeared in Fortune magazine during the congressional recess. It provides an interesting explanation of current commercial and political

realtionships between Finland and the Soviet Union. It also outlines the significant strides that Finland has been making in an increasing orientation of her trade with the West.

Under previous permission, I include this excellent article in the CONGRESSIONAL RECORD:

THE FINNISH STORY

This month Finland's President, Urho Kekkonen, will travel the 550 miles that separate Helsinki from Moscow on a crucial and unusual mission. His aim is to discover what terms the Soviet Union will require before giving its blessing to Finnish membership in the Western-oriented Outer Seven, the European Free Trade Association. Kekkonen's task, a grave one, symbolizes the perilous position in which his country finds itself. Tied by tradition and trade to the West, its entry into EFTA should be a matter of course. Yet this tiny nation of 4,400,000 must always take into consideration its huge Soviet neighbor.

In practice, Finland usually plays its role of rabbit in the bear's den with considerable spunk and independence. This fall, for example, President Kekkonen, who is not as ready as most Finns to stand up to Russia, told Khruschev face to face: "I am convinced that even if the whole of the rest of Europe becomes Communist, Finland will remain a traditional Scandinavian democracy." To the chagrin of Finnish Communists who were at the meeting, Khrushchev agreed.

Yet the U.S.S.R. obviously can have considerable influence over the tiny neighbor with which it shares an 800-mile border. This Soviet leverage on the Finns goes back to the Finnish military defeats in 1940 and 1944. Under the terms of the Finno-Russian peace treaty, the arctic port of Petsamo, along with its nickel mines and the Karelian Isthmus and its forest industry, were surrendered to the Soviets. The government was forced to resettle some 400,000 people, mostly refugees from Karelia, on small tracts of land. And Finland had to agree to pay the U.S.S.R. a war indemnity in goods that eventually cost about $570 million. Further while forest products constituted practically the entire base for the prewar economy, some 72 percent of the reparations had to be supplied by the country's metal industry.

To meet Russian demands, Finland had to create new industries dependent on imports for equipment, raw materials, and fuel (the country has no coal or oil). But by 1952 the last of the reparations were delivered. The country was then left with inflation (the cost of living rose 400 percent from 1944 to 1952), debts, and a metal industry that had to import its raw materials and export its output. In 1955, partly to keep this industry alive. Finland extended its 1948 Treaty of Friendship with the Soviets for 20 years and negotiated a long-term trade agreement.

As a result of this and subsequent trade agreements, the U.S.S.R., which accounted for less than 1 percent of Finnish trade in 1938, has continued to be an important factor in the economic wealth of the country. Finland still relies on the Soviet Union for much of its iron, cotton, and grain, and has gradually given ground to Soviet requests to supply the bulk of their crude oil. At the same time, Finnish shipbuilders and machinery manufacturers have had to continue to rely on the Soviet Union for much of their trade. At the present time, for example, Finland is, among other things, building 11 cargo vessels, 15 tankers, a woodpulp plant, and a cardboard plant for the U.S.S.R.

Despite all this, trade with the Soviets remains surprisingly low. Last year Finnish sales to the U.S.S.R. were valued at $140 million, about 13 percent of Finland's total exports, while imports from Russia totaled $147,300,000, about 16 percent of the total. This year Russian imports and exports will represent an even smaller portion of Finnish trade.

HAIL BRITANNICA

The chief reason for this decreasing dependence on the U.S.S.R. is the fact that Finland has been able to capture Western market for 95 percent of its wood and paper, which in turn account for 78 percent of its exports. Especially since the 1957 devaluation of the Finnish mark, the nation's textile and machinery industries have also begun to find Western customers.

As a result, Britain, not Russia, is the country's principal trading partner. Last year Finland exported $188,600,000 worth of goods (mostly pulp, paper, and wood) to the United Kingdom, imported $111 million worth of such items as automobiles, machinery, and raw materials. West Germany is also a major customer and supplier. In 1959 it accounted for $91,200,000 in Finnish exports and sold Finland $149,900,000 worth of goods. In fact, in the first half of 1960, total trade between Finland and West Germany exceeded total Finno-Soviet trade.

The United States remains a minor factor in Finnish trade and last year accounted for only 5 percent of the total. This is slowly increasing; U.S. exports to the country will amount to about $60 million this year as compared with $43 million in 1959. Meanwhile, the Finnish forest-products industry is beginning to recover part of its prewar U.S. market. In 1959 the United States, which bought 163,000 tons of Finnish paper and 112,000 tons of newsprint, was Finland's most important paper customer.

SESSION IN SAUNA

By increasing exports (and keeping the Soviet Union at arm's length), Finland has slowly begun to recover internally. It is by no means so prosperous as neighboring Sweden (per capita incomes: around $650 versus $1,150), but is far better off than most of Eastern Europe. This year alone, the gross national product is expected to rise 7 to 9 percent and industrial production will probably increase by 14 percent. However, to maintain the growth in trade on which it depends, Finland must become part of EFTA, whose members absorb about 30 percent of Finnish exports. Already, tariff reductions between EFTA members have forced Finnish exporters of cardboard and paper to reduce their prices in order to stay competitive with Sweden in the British market. EFTA members have indicated they would be pleased to accept Finland. And Finnish industrialists have backed such a move.

Yet until this September the Kekkonen government has feared U.S.S.R. reprisals. Then Nikita Khrushchev arrived in Helsinki uninvited and ostensibly to bring greetings to Kekkonen on this 60th birthday. After a session in Kekkonen's sauna (steam bath) that lasted until early morning, the two men announced that they had agreed to open negotiations that would permit Finland to "remain competitive in Western markets."

At the present time there is considerable speculation in Finland as to just what terms the Russians will require. Obviously the Russian negotiators know the importance of EFTA as well as the Finns. It would thus seem that all the bargaining power lies in the East and that the Soviets will insist on such conditions as an increase in Finno-Soviet trade to 25 percent of the Finnish total.

Despite this, many Finnish businessmen are convinced that few concessions will be required. These men point out that Finland's position is not necessarily so weak as it seems. If Finland refuses to meet harsh Russian demands and stands up to economic sanctions, the U.S.S.R. would probably still hesitate to use force of any sort if only because Sweden might become alarmed and modify its present neutrality. For the time being, the Russians obviously prefer a Scandinavian buffer zone to NATO troops on Swedish soil.

So the probability is that Finland will gets its EFTA membership and will continue to build and strengthen its ties with the West, the segment of the world in which a great many Finns are passionately convinced they belong. Recently in Tampere, Finland's leading industrial city, a young, Stanford-educated Finnish textile executive expressed this widely held Finnish conviction. While showing a line of sweaters and knit goods with which his firm hoped to break into the U.S. markets, he suddenly interrupted his description of design and price, turned to a group of U.S. visitors, and passionately stated: "We are of the West. This is where we are. We belong here. And we intend to stay here."

Legend of St. Patrick

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on St. Patrick that was featured in the Pittston (Pa.) Sunday Dispatch of March 12, 1961, which I found very interesting and historically informative. Today being the eve of St. Patrick's Day, I take this occasion to wish all my friends and associates a happy and enjoyable St. Patrick's Day on the morrow.

The article from the Dispatch follows:

INTERESTING LEGEND OF ST. PATRICK AND THE CHASING OF SNAKES FROM IRELAND

This year marks the 1500th anniversary of the death of St. Patrick—historical authorities have set A.D. 461 as the year of his death.

Through the centuries, many legends and controversies have arisen surrounding the life of St. Patrick.

Almost as many countries claim the honor of having been the natal soil of St. Patrick, for example, as made a similar claim with respect to Homer. Scotland, England, France, and Wales have each furnished their respective pretentions.

Whatever doubts may obscure his birthplace, however, he came from a patrician family, as his name implies.

When St. Patrick was 16 years old, he was carried off by pirates, who later sold him into slavery in Ireland. His master worked him as a swineherd on the well-known mountain of Sleamish, in the county of Antrim. Here St. Patrick lived for 7 years, acquiring a knowledge of the Irish language, as well as their manners, habits and customs.

St. Patrick eventually escaped from captivity and after many adventures reached the Continent, where he was successfully ordained deacon, priest and bishop. With the authority of Pope Celestine, St. Patrick, once more returned to Ireland, to preach the gospel to its then heathen inhabitants.

The history of St. Patrick's Day is mostly legendary history. Probably the most famous feat associated with St. Patrick was his driving the snakes out of Ireland.

However, a little known but cute legend is associated with this event.

It is said, that when banishing the snakes and toads from Ireland, in the Gaultie Mountains situated between the counties of

Cork and Tipperary, St. Patrick chained a monster serpent in a lake called Lough Dilueen, telling him that he would remain there until Monday. However, St. Patrick never returned to free the serpent and on every Monday morning, it is said, the serpent calls out in Irish: "It is a long Monday, Patrick!"

That St. Patrick chained the serpent and that the serpent calls out to him every Monday morning, is still firmly believed by those who live in the neighborhood of the lough.

One of the better known of all the legends dealing with St. Patrick, is how he was responsible for the shamrock becoming the familiar Irish emblem.

The legend, which has been recounted in the famous Rust Craft "legend series" of greeting cards, reads: "Long ago, when Ireland was the land of the Druids, there was a great bishop, Patrick, by name, who came to teach the word of God throughout the country.

"This saint, for he was indeed a saint, was well-loved everywhere he went. One day, however, a group of his followers came to him and admitted that it was difficult for them to believe in the doctrine of the Holy Trinity.

"St. Patrick reflected a moment and then stooping down he plucked a leaf from the Shamrock and held it before them, bidding them to behold the living example of this 'three in one.'

"The simple beauty of this explanation convinced these skeptics and from that day the shamrock has been revered throughout Ireland."

Today, on the 17th of March, wherever true sons of Erin gather, the shamrock is proudly worn as a symbol of the faith that is Ireland.

The McMahon Frontier

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. BUSH. Mr. President, I was elected to the Senate in November 1952, to fill the unexpired term of former Senator Brien McMahon, of Connecticut. Senator McMahon was one of the most widely respected politicians and statesmen in the State of Connecticut.

A very interesting and eloquent tribute was paid to former Senator McMahon in the Bridgeport Post on Monday, March 13, under the title "The McMahon Frontier," and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MCMAHON FRONTIER

In the field of international relations, the late Senator Brien McMahon was generally recognized as one who was well ahead of his time. The highly esteemed Norwalker approached world problems with a zeal that transcended political advantage. Even today, 7 years after his death, one associates his name with efforts to strengthen the bonds of brotherhood the world over.

Evidence of the Senator's prophetic views recently was uncovered in a speech he delivered in February 1952, a few months before he died. In this address, he anticipated the need for a Peace Corps of the type which has evoked so much enthusiasm in the process of organization under President Kennedy.

Speaking before the National Conference of Christians and Jews, Senator McMahon proposed a point 5 program of "compassion, understanding and brotherhood" to fight communism in backward areas. He recognized then the Kremlin's concerted effort to win over the peoples of underdeveloped lands. The Russians, he warned, had "enlisted tens of thousands who are working full time at advancing the cause of tyranny."

It is interesting to note that Senator McMahon even used the word "frontier," in urging a new kind of army to combat disease and poverty abroad. "Here," he declared, "is the great answer to those who lament the passing of the American frontier. Here is the challenge to those who declare that life has grown soft and flabby."

"We of the West," he said, "must now enlist tens of thousands who will become full time missionaries for decency. In place of 2,000 technicians now engaged in point 4 we need 50 times this number for services on the lonely lands of Tunisia, the endless stretches of the Arabian desert, the steaming jungles of Africa who will journey and show the downtrodden of the world their fate is not a matter of indifference to us."

He reached the New Frontier ahead of us.

Hungarian Freedom Day

SPEECH
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. OSTERTAG. Mr. Speaker, today, March 15, commemorates the 113th anniversary of the Hungarian revolution, a day which will be celebrated by Hungarians all over the world as a national holiday, commemorating their freedom fight against the autocratic rule of the Austrian monarchs which they suffered for many years. On this day in 1848, the Hungarian people, after more than 200 years of enduring hardships and sufferings under an alien yoke, revolted. Hungarian patriots, taking full advantage of this situation, staged demonstrations against the existing government. They presented a list of their just grievances and demanded freedom. On March 1 the Hungarians were granted the concessions and freedom they demanded. This should be a day of glad rejoicing rather than a day of sad recollection as it has been made to be by the action of the Soviets in 1956.

Today, as we commemorate an earlier era of Hungarian freedom, we honor all Hungarians for their gallant and tenacious longing for liberty and we pray that the day soon will come when the light of freedom and independence again will be burning brightly in their beloved homeland.

In closing, I quote that great statesman, Dwight D. Eisenhower, in saying that, "Budapest is no longer merely the name of a city: henceforth it is a new and shining symbol of man's yearning to be free."

The Urban Problem

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. WILLIAMS of New Jersey. Mr. President, within recent years, we have developed a new vocabulary to describe growing problems caused by urban population increases and extensive suburban development. We have heard about "urban sprawl," "high-density and low-density development," the "steadily worsening commuter crisis," and "a Marshall plan for cities."

The gradual acceptance and understanding of these terms indicate, I believe, that we in highly urbanized areas realize that the chips are down. Either we make our cities and suburbs livable now, or we can look forward only to deterioration, confusion and much greater expense later on to correct mistakes that could have been prevented.

Newspaper editors, in particular, have an important role to fulfill if we are to educate ourselves about specific metropolitan area problems. If they understand the problems facing their communities and regions, their readers will, too. If they can show that the urban problem has direct impact on each homeowner and each apartment dweller, they perform a valuable service for their readers.

I am particularly pleased, therefore, that many newspapers in New Jersey—the most urbanized State in the Union—are effectively featuring news and comment about the many problems that all go under the one general heading. In a relatively small State divided into almost 600 individual communities, these reporters and editorial writers are often able to detect and describe joint problems that call for joint action.

Mr. President, I would like to give a sampling of some of the recent commentary from New Jersey papers. I ask unanimous consent to have the following editorials and article printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Elizabeth (N.J.) Daily Journal, Mar. 9, 1961]

STRUGGLE AGAINST BLIGHT AND DECAY

President Kennedy's estimate that in the world's richest country as many as 14 million people live in slums or in substandard housing adds a note of urgency to his housing program given to the Congress yesterday.

The President makes another telling point which his prediction that by 1970 two million more housing units will be needed just to keep pace with the expanding national population. This is over and above any replacement of current substandard dwelling units.

America seems to be headed for a crisis in housing, both in deterioration of the old and in a scarcity of the new. This is part of the general picture of decline in urban areas. The White House program would extend remedial operations in all directions, with the emphasis or reviving cities.

Needed assistance in individual rehabilitation projects would be given, as well as added help in renewing whole city neighborhoods. At the same time, the President's recommendations would make it easier for middle income families—who feel the pinch the most—to obtain new housing.

Veterans, most of whom have family responsibilities, and the elderly, most of whom have financial limitations, are singled out for aid in the Kennedy housing proposals. These are among the immediate measures; there are others of long-range importance.

The most vital is the recommendation for creation of a cabinet post dealing with urban affairs and housing. U.S. Senator HARRISON A. WILLIAMS, JR., of Westfield was among the originators of this idea, which the President discussed often during his election campaign.

This proposal gives depth to the housing program, suggesting that there would be permanence in the Government's concern. The strength of America rests largely in its cities, according to economists, historians and sociologists. The decline of these population centers that has marked recent years must be stopped, they say.

Brightening up, cleaning up and refurbishing cities will eradicate crime-breeding and disease-laden slums, revive community pride and restore the home to its place as the center of family life.

Included in the plans to put cities back on their feet is a grant program underwriting the purchase of green acreage for recreation and conservation purposes.

This seems to symbolize the aims of all the housing recommendations which are to provide healthful, attractive and comfortable surroundings in which all Americans can live and raise their families. It is a challenging goal.

[From the Camden (N.J.) Courier-Post, Mar. 2, 1961]

GREATER CAMDEN MOVEMENT HAILED

An optimistic movement to assist in the redevelopment, rehabilitation and growth programs for Camden and surrounding municipalities has been boosted off the ground with formation of the Greater Camden movement (GCM).

Talked about for many years and more sorely needed as time went on, this new nonprofit organization was brought into being by leading industrialists, professional and businessmen in the area to work in complete cooperation with governmental agencies.

Supplanting many widely diversified little study committees, which sometimes appeared not to know what either they or their counterparts were doing, the GCM should prove to be a great coordinating effort.

Patterned after similar organizations which have been successful elsewhere, GCM could indeed put all interests on the right track toward real progress and serve as a timely catalyst.

For a number of years, various groups like the Camden County Chamber of Commerce have been discussing the physical deterioration of Camden and how they could help in the rehabilitation or redevelopment which is required.

Emerging from these discussions and many others, the GCM plans first to tackle the redevelopment problems in the city and subsequently the greater Camden area, hence the name.

Already hailing the formation of the organization are Mayor Pierce and other city and county officials who have pledged full cooperation with GCM's policies and goals.

The mayor sees the organization as destined to be successful because "it has the right product." And it is his conviction that "in order to create a healthy urban atmosphere you must have a willingness for change of attitude on the part of the people."

Setting forth its purposes for development and community planning for the entire area, the GCM prefaces its goals with such words as to encourage, to stimulate, to facilitate, to promote and to help. In summary, it wants to do "all and everything necessary, suitable, convenient or proper" for accomplishment and attainment of this very worthwhile project.

The movement is fortunate, too, in having as its executive vice president someone who is familiar with this area and has gone through a similar sort of group activity in Trenton. Appointment of Hal H. Holker to that post, which he also held with the Greater Trenton Council, brings to Camden a director with an excellent reputation, and gives the launching of the Camden movement a fine sendoff.

Holker, who before joining the Trenton group was assistant regional director for the Urban Renewal Administration offices in Philadelphia, is a man of wide professional experience in planning, housing and urban renewal fields.

The Courier-Post, with its editor among the many incorporators representative of area interests, enthusiastically pledges its support to the movement and warmly welcomes the creation of the organization. This newspaper, too, urges all citizens of the Greater Camden area, whether in public or private life, to join in this effort to encourage the development of greater economic opportunity, cultural advancement and recreational facilities.

[From the New Brunswick (N.J.) Sunday Home News, Feb. 26, 1961]

URBAN AFFAIRS IN THE CABINET

President Kennedy is moving rapidly to fulfill the Democratic platform pledge to establish a Department of Housing and Urban Affairs as the 11th agency in the Federal Government with cabinet rank.

This is a sound move in many ways. First, platform pledges should be kept. Second, the cities of the Nation are confronted today with so many problems that, to survive and flourish, they need all the help they can get. Third, Kennedy's slim margin of victory in November was found in the city precincts, and establishing the new department is very good politics indeed.

The new Department would be a large and busy one. At the outset it would take over all programs of existing housing and home finance agencies of the Federal Government. They include the Federal Housing Administration, the Urban Renewal Administration, the Federal National Mortgage Association, the Public Housing Administration and the Communities Facilities Administration. Other urban programs administered by other Departments and Agencies would move into the new Cabinet rank department as the need became apparent.

Who would run the new Department and enter the Cabinet as its representative? The presumptive new Secretary is Robert C. Weaver who has been confirmed as administrator of the Housing and Home Finance Agency. Weaver is a Negro, able, energetic, widely respected, and he now holds the highest executive position ever attained in our Government by a member of his race. He would be the first Cabinet member of his race.

Two other names prominently mentioned for the position are men of urban political experience. They are Gov. David Lawrence, of Pennsylvania and Mayor Richardson Dilworth, of Philadelphia.

It has been clear that the Federal Government's increasing activity at the urban level has been in so many hands that red tape has multipled, leading to both delay and inefficiency.

A new Department of Urban Affairs would place ultimate responsibility for myriad Federal functions in urban affairs in one agency. And, perhaps as important as administrative functions, is the planning function. Here, again, a central agency can do the job more quickly, more efficiency, more economically.

We are confident that a new Department of Urban Affairs will become a mighty factor in clearing out slums, in hastening redevelopment, in making housing available, in preserving and improving today's cities to meet the growing challenge of tomorrow.

[From the Elizabeth (N.J.) Daily Journal, Feb. 14, 1961]

CONSERVATION AND INDUSTRY

The several plans advocated to increase New Jersey's green acres have more than aesthetic value, says State Conservation Commissioner Salvatore A. Bontempo.

Beautification of the State's landscape and expansion of its recreational facilities can mean economic growth, according to Mr. Bontempo, who also is commissioner for economic development in the State.

Reports from the Federal Labor Department indicate that development could use some stimulation. The Department has added three of the State's industrial complexes—Newark with Union County included—to its growing list of areas in which unemployment is above the national average.

Just how much of the spreading joblessness in New Jersey arises from a scarcity of nearby picnic grounds or swimming holes is hard to say. But incongruous as it seems, there may be a connection.

The concept of New Jersey as a smoke-begrimed tract of factories between New York City and Philadelphia is all too common outside the Garden State. And it may be just enough to persuade a prospective industrial settler to look elsewhere if he has the morale of his executives and workmen in mind.

Conservation has more practical arguments in its favor. There is the issue of water supply. All the green acres plans advanced thus far advocate broadening of the State's water resources and storage facilities for recreational as well as industrial reasons. Most plants must have adequate drainage to operate and if New Jersey can't supply it, it will lose more prospective settlers.

In advocating development of open land and natural resources to attract industry, however, we must be careful to avoid the latent paradox: If the large remaining tracts of land in the State are to be preserved, where will the new industry be located?

There must be coordination of effort in Mr. Bontempo's dual office so that conservation and economic development proceed hand in hand and not head over heels.

[From the Passaic (N.J.) Herald News, Feb. 18, 1961]

THE CHANGE THREATENING THE SUBURBS

U.S. Senator WILLIAMS, of New Jersey, is trying to arouse interest in the Congress and country in his open space proposals. They are an effort to avoid the fate which planners predict is in store for us by 1975. Every available bit of land in suburban areas, they say, will have a home or other building on it, and the suburbs will become cities.

The subject has already attracted the attention of certain groups, such as our New Jersey farmers. They are being squeezed out of one community after another by home developments. They and agricultural experts fret because, they say, some of the Nation's best agricultural land is being taken for building. The Rutgers farm policy forum, held recently, was devoted to this problem.

Architects are tackling it from another direction. One proposal, which Senator WILLIAMS has mentioned favorably, is a

modern version of the old row housing. Instead of placing homes on individual plots, the homes would be clustered. The balance of the land which would be required if they were built in the conventional manner would be used to provide open space around them. One such row housing development already in existence concentrates 74 homes on 8 percent of the land, leaving the rest of the land as woodland and meadows for the families to share. Substantial saving in cost is another advantage claimed by the proponents.

The discussion and new ideas are welcome. Senator WILLIAMS is to be commended for looking ahead. The subjects of home and the preservation of the suburbs are of great importance to a great many Americans.

[From the Newark Star-Ledger, Feb. 17, 1961]

ROOM FOR BOTH

Senator WILLIAMS has introduced a bill to help preserve park, recreation, conservation and scenic areas and he points out that this bill would encourage proper development of the Jersey meadowlands.

The meadowlands, however, do not need preservation. They have been preserved too long. Instead they need development.

The geography of the meadowlands makes them potentially some of the most valuable property in the metropolitan area. They are not likely to be reclaimed, however, until there is a definite plan for their usage.

From an engineering standpoint, there is nothing standing in the way of developing the meadowlands. The stumbling block is the development of a sound financial plan and a firm decision on what to do with the area.

The Williams bill, if it is passed, will be added pressure toward the area's development for recreation purposes. And that prospect may spur to greater effort those interested in its development for industrial uses.

In the meadowlands, happily, there is room for both types of development.

[From the Jersey Journal, Jan. 16, 1961]

HUDSON TUBES ARE A VITAL FACTOR

The ferry strike is turning out to be a boon to the Hudson & Manhattan Railroad because of the extra customers forced to use tubes. While commuters may complain about the packed cars, the fact is that there have been almost no delays and all those who usually ride the ferries are getting into New York.

Thirty extra trains a day are carrying about 25,000 of the 30,000 commuters whom the ferry strike has stranded. It means several thousand extra dollars in the tube's tills but that is not the important point. This is a good demonstration, abeit a forced one, that the Hudson & Manhattan Railroad can handle many more commuters and therefore should be a central factor in any plan for turning the States present rail routes into a rapid transit system.

This is a point that Mr. Stichman, the tube's referee in bankruptcy, has made repeatedly but which seems to have made little impression. The latest slight handed him was by the Port of New York Authority, which wanted to take over the railroad for the value of its real estate in Manhattan, paying nothing for the railroad itself. The tube's proved ability to handle all the commuters tossed its way indicates that it is a vital transportation link that should not be dismissed as of little value.

In connection with this is the bill that U.S. Senator WILLIAMS has introduced, calling for various loans and planning aids at a cost of $100 million to "improve essential mass transportation services." He says that "what we really need is a new outlook, a concern with how best to meet our total urban transportation needs in the most economical manner possible."

This is an important concept and one which seems to have eluded transportation studies so far made in New Jersey. People get to work, shop and visit by means of private autos, buses and trains. What is needed is a total solution to the problem rather than piecemeal props to support lagging elements of first one and then another transportation element. Senator WILLIAMS' bill may prove to be the stimulus to taking a new look at New Jersey's transportation problem.

[From the Record, Jan. 23, 1961]

SIMEON STYLITES: COLLISION WITH A WALL OF IGNORANCE

(By William A. Caldwell)

If a man empty his purse into his head, said Franklin, then no one can pilfer his wealth, and so much for research. "An investment in knowledge," the old gentleman added, "always pays the best interest." Look around you. Coal gave up on research. It's dead. Oil plows into research hundreds of millions. One hesitates to press Franklin's 302d law so far as to force any conclusions about the electronic media's gusto for research and the newspaper industry's lordly distastes, but Senator WILLIAMS, Democrat, of New Jersey, was talking the other day about the railroads.

They've come down with a bad attack of death wish, and nowhere does this show so clearly, even in their eager acquiescence to the harbor strikers, as it does in their numb incuriosity about themselves and the future.

Highway people, airplane people, chemistry and drug and electricity people talk about what they'll be doing 10 years from now, atomic energy people about 50 years from now, space people about 100 years from now.

It's a rash and radical young railroad man whose thinking ranges farther than the end of the week.

KNOW-HOW GOES ELSEWHERE

That's the U.S. railroad man. The French have evolved a railroad train that'll do 205 miles an hour over conventional standard-gauge track. They run a train, the Mistral, at a top speed of 100 miles an hour and an average of 80 over the 318 miles between Paris and Lyon. Their research has developed a method of electrifying rail lines at a fraction of the old cost and feeding them off the public utility power grid. In Portugal, Soviet Russia, Turkey, Japan, Communist China railroad research is speeding trains and lowering expenses. Brussels and Madrid have brought their railroads even with the century by wiping out their clutter of stub-end terminals and connecting their rails in cross-city networks. And Americans know what's going on; for these data we are indebted to an American, Stanley Berge, professor of transportation at the Northwestern University School of Business, writing in the May 1960 Harper's. We know research could save the railroads, at least the commuter railroads; but the railroads don't want to be saved.

It was in recognition of this pathetic fact that Senator WILLIAMS introduced his bill to set up a $75 million program of Federal grants for big research in metropolitan transportation.

"The truly unfortunate fact," he said, "is that we have no clear idea what should be done."

It is one thing for Professor Berge to recall the attention of the Port of New York Authority to its ancient vows:

"The New Jersey railroads, with the exception of the Pennsylvania, all terminate in stub-end stations west of the Hudson River. * * * Why should the Long Island Railroad continue to struggle with the obvious inefficiency of dead end terminal movements in the heart of Manhattan when its service could be made much better and less costly by swinging its trains under the Hudson and terminating their runs at various points on New Jersey railroads? Consider also the advantages that would be gained by extending the Grand Central tracks of the New York Central and the New Haven through a tunnel connection with through rail operations between Long Island and New Jersey. Such a terminal-unification project would finally consummate one of the major unrealized objectives of the Port of New York Authority's comprehensive plan of 1921."

IN DEFAULT OF ENTERPRISE

But, as a Washington transportation consultant named William B. Saunders told the Senate Commerce Committee January 18, in the absence of an industrywide research program the question is whether any existing agency is capable of phrasing the first question for researchers to tackle.

"Thus even the farflung port authority is not equipped to solve all the New York area's problems—even if it wanted to," said Mr. Saunders. Things have changed since 1921. The port authority could take over the railroads' passenger operations and finance them out of bridge and tunnel receipts, but to what end unless it could tell the States where and why to build highways and feeder roads? How could it keep people in cars out of the central city? How could it induce them to drive only as far as the railroad station parking lot? How could it apportion costs fairly among the big and little beneficiaries of reducing congestion?

Mr. WILLIAMS is right. Someone has a lot of thinking to do. In default of free enterprise, here in his white smock is your old friend Sam.

[From the Paterson (N.J.) News, Jan. 13, 1961]

SENATOR WILLIAMS TAKES A GOOD BITE AT TRANSPORTATION PROBLEM

Recognizing the urgency of the mass transportation crisis which, in spite of many solicitous intercessions, continues to deteriorate, New Jersey's junior Senator HARRISON A. WILLIAMS has introduced new legislation which could be the catalyst to bring the problem into proper focus.

The Senate last year passed Senator WILLIAMS' measure to provide $100 million for mass transportation loans. His latest bill is a supplement to the other, providing for low-cost, long-term loans up to $100 million the first year and up to $150 million in subsequent years.

We are always suspicious of the these governmental money-spending operations because they inevitably result in waste, if not corruptive spending. In the distribution of the largesse involved in such an extensive operation, substantial sums do a disappearing act while the sore remains only partially healed and continues painful.

Senator WILLIAMS, however, is thinking in terms of mass transportation and a thorough study. He won't be satisfied, he says, with providing funds for a sick railroad which will feel it has served its purpose if it adds a few pretty coaches to a train and then feels the problem has been solved.

The Williams thinking, and we like it, is to tie transportation into urban-suburban planning which is a No. 1 problem facing all growing areas, New Jersey especially.

It could be, Senator WILLIAMS feels, that railroads aren't the only medium that need attention,—it could be buses, it could be highways. Exploration and study could determine the truth.

Certainly the transportation problem is an A–1 headache. The railroads don't help themselves—they maintain disordered equipment, their relations with the traveling public are at bottom, no effort is made

to sell the benefits of rail travel in competition with, for instance, the aviation industry which spends fortunes for equipment and in dressing up its sales presence.

Nonetheless, railroads are essential to the transportation life of the country. They have their rights-of-way, their preservation as freight carriers is vital, they do not add to the congestion on the highway, and increased use of the rails might lead to easing of the burden on the roads.

Senator WILLIAMS' bill is aimed at finding a solution. If its enactment and execution could be achieved without it developing into a pork barrel in which, for support of it, millions are diverted to wayside stations, it could be a boon to the country.

Address by Vice Adm. Elton W. Grenfell, U.S. Navy, Commander, Submarine Force, U.S. Atlantic Fleet, at the Commissioning of the Submarine, U.S.S. "Abraham Lincoln" (SSB(N)602), at U.S. Naval Shipyard, Portsmouth, N.H., on Saturday, March 11, 1961

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. SCHWENGEL. Mr. Speaker, on Saturday, March 11, I had the privilege of participating in the commissioning of the nuclear submarine, U.S.S. *Abraham Lincoln*, at the U.S. Naval Shipyard at Portsmouth, N.H.

It was an impressive event and I took renewed pride in the security which is on our side each time one of these great arms of our defense is put into service.

Naturally, I am pleased that one of these superior craft now carries the name of the most American American, Abraham Lincoln. The officers and men can take just pride in serving on the first major Navy ship ever to bear his name. I know that this craft will take its place in history, too.

At the commissioning, I listened to the address by Vice Adm. Elton W. Grenfell, and was impressed by his sincere and inspiring remarks. I think they deserve the attention of this body, so under leave to extend my remarks, I include Vice Admiral Grenfell's address in the Appendix of the RECORD:

ADDRESS BY VICE ADM. ELTON W. GRENFELL, U.S. NAVY, COMMANDER, SUBMARINE FORCE, U.S. ATLANTIC FLEET, AT THE COMMISSIONING OF U.S.S. "ABRAHAM LINCOLN" (SSB(N)602) AT U.S. NAVAL SHIPYARD, PORTSMOUTH, N.H., ON MARCH 11, 1961

One hundred years and seven days ago today, the man for whom this mighty ship is named stood on a temporary platform on the east front of the Capitol in Washington, and faced a Nation in crisis. The people who stood before him were anxious, because loosed within our land at that time were the elements of war which soon would test the strength of America to maintain herself, when confronted by forces which sought to tear her asunder. They were anxious to hear this man, this Abraham Lincoln, who had been chosen by them in this period of uncertainty and need; anxious to hear what he would say on that March day in 1861, to furnish them hope and guidance for the dark days which surely lay ahead.

Abraham Lincoln faced squarely the challenge of our anxious Nation, and the challenge of the awesome responsibilities which he was about to assume. He spoke, not in favor of one cause or another which would divide the Union; he spoke rather of the perfect identity of interests among the States which originally brought these States together. He cautioned calmness and courage, he asked for reason and patience, and in closing he professed the friendship and strength inherent in this Union of States, and held aloft to them the hope, that at the end of the troublesome days ahead America would prove to the world her right to harbor freemen. He closed this, his first inaugural address, with these words:

"We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic cords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone, all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature."

It was thus that this 16th President of our country embarked on his great challenge, which would decide our country's ability to maintain a form of government which it had proved could be established and administered.

Today, this ship of peace which bears his name, the first major Navy ship ever to bear it, embarks on a challenge which seeks to perpetuate the heritage passed on to her by this great man.

As was his, hers is a quiet power. As did he reserve his immense strength and powerful conviction for those moments when it had to be used, so will she reserve her awesome strength forever; unless some unwise and miscalculating aggressor decides for her that she must do otherwise in order to preserve the ideals willed to her by this great man.

t would be presumptuous of me to try and capture for you today the poignant relationships which exist between this man, and this ship which bears his name.

They are many; and they differ only in that the knowledge of their existence is the stronger today as we commission the ship, *Abraham Lincoln*, because they have been expressed and imbedded into our culture so clearly by the man, Abraham Lincoln.

They both seek peace through power.

They both accept the challenge of troubled times unflinchingly.

They both demand the greatest exertion of talent and effort available in their respective times.

They both understand the sacrifices required sometimes if freemen are to remain free.

They both depend on people, expert people, to put into operation and to make work the principles which they inspire.

This man; this Abraham Lincoln was a man of the people. He understood them, and he derived his power from them. He felt it necessary to explain to them why things must be done; and he was not afraid to use words, and use ideas which coming from many men might sound emotional and even trite.

He lost no opportunity to talk, informally, to groups of soldiers passing through Washington, explaining to them the cause on which they were embarked, and the reason they must endure.

He said to the 166th Ohio Regiment in 1864, as it passed through Washington, that he wanted to impress on them the importance of success in this contest in which they were engaged; and he used these words:

"It is not merely for today but for all time to come, that we should perpetuate for our children's children, that great and free Government which we have enjoyed all our lives. I beg you to remember this, not merely for my sake, but for yours. I happen, temporarily, to occupy this White House. I am a living witness that any one of your children may look to come here as my father's child has. It is in order that each of you may have, through this free Government which we have enjoyed, an open field and a fair chance for your industry, enterprise, and intelligence; that you all may have equal privileges in the race of life, with all its desirable human aspirations. It is for this the struggle should be maintained, that we may not lose our berthright."

Yes, Abraham Lincoln was a man of the people; and this ship named for him understands its people too.

Working together in organizations dedicated to the same principle are the blue and gold crews which will man this ship on alternate patrols, as she carries out her duties for peace.

Welded together in a closely knit organization; sure of their knowledge, proud of their heritage, aware of their purpose, and fierce in their determination to uphold their part of this challenge for freedom passed onto them, these people who will comprise the blue and gold crews are indeed fortunate, that in the life of the man for whom their ship is named they find so many examples of the purpose for which their ship was built.

For those of you here at this fine naval shipyard who had a hand in bringing to fruition this moment when *Abraham Lincoln* joins the fleet; for those in the industrial and scientific pursuits of our country who are responsible for the concept and design which results in this fine ship; for Miss Mary Lincoln Beckworth, her sponsor and great-granddaughter of the immortal man whose name she bears, and for you Captain Erb and Captain Miller, your officers and men; your heritage is of the quiet, humble strength of a mighty American, and you are fortunate that this is so.

Often in the days ahead I am certain that you will draw on this inexhaustible source of enduring power, and like the invisible energy which forms the heart of the reliable system which moves you beneath the seas, it will never fail you.

Your ship is well named and your mission well defined; and in the words of him whose name and honor she bears, it remains only, for us here today, rather to be dedicated to the unfinished work which he, thus far, has so nobly advanced.

Captain Erb, Captain Miller, your officers and men, I congratulate you and I welcome you into the fleet. God bless you.

It Is the Eye Which Makes the Horizon

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I am pleased to include the keynote address of Dr. Lewis H. Rohrbaugh, Boston University's vice president for academic affairs, delivered during founders' day ceremonies on March 13 at Boston University:

IT IS THE EYE WHICH MAKES THE HORIZON

(Founders' day convocation, Boston University, Mar. 13, 1961, by Lewis H. Rohrbaugh)

It was Emerson who said, "It is the eye which makes the horizon." I have chosen this phrase on which to base my thesis today because these founders' day comments are addressed to Boston University's future, and I am convinced that Boston University's eye will make its horizon. In other words, Boston University will become what we are agreed and determined it shall become.

With my statement of goals and of further steps toward them, not all will agree. This is to the good. On the one hand, agreement too often can spell lethargy and complacence. Disagreement, or even controversy, on the other hand, at the least means a dynamic situation, and at the most, when fairminded and objective persons are involved, can result in dynamic, constructive action.

Before looking to the future, it is fitting, this founders' day, to judge how well our present position meets the ideals of a great university as the founders envisioned them.

For this how useful it would be had we an educational long focal-length, wide-angle camera such as that used for other purposes by the unfortunate U–2 airplane. That U–2 camera, incidentally, initially was developed under a postwar Boston University optical research program under contract with the Air Force. The aim was to produce an aerial camera large enough to have a wide field, yet avoid the defect of all such cameras whose photos were in clear focus only in the center of the film.

Lacking a device of comparable breadth and depth, my assessment of how far and how well we in 1961 are warranted in feeling that we have implemented our founders' mandates, can be achieved, in this brief time, only by selected educational flashbacks.

I find it inspiring to know that these ideas, willed to us almost a hundred years ago today, have either been realized or are now guiding our thinking about the future of Boston University.

First, on institutional structure, our forebears wrote that "Boston University ought neither to generalize education merely, nor to specialize it merely, but do both at one and the same time." Their plan of organization was to have colleges which would prepare students for the "higher industries and arts of civilization and for the study of the professions"; professional schools which would qualify students theoretically and practically for professional life; and a graduate school, in those early days called a school of all sciences, which would focus on the universal or nonprofessional aspects of postgraduate studies.

From the beginning, this structural pattern was carried out faithfully. In 1878 Boston University was the only U.S. university to offer to theology, law, and medical students graded uniform courses covering 3 scholastic years and requiring for graduation 3 full years of study. Even the adequacy of this worried the founders, and the following year they added another year's study to the period required for a medical degree. Their insistence on separating into distinct schools but in the same university, their stressing the need to carry the general education of each pupil as high as possible before giving him the special, and this institutional pattern, by and large came to be that followed in most American universities.

The second objective of the founders was that Boston University should become an institution of many schools and colleges, and of many students. That objective has been reached: 14 schools and colleges, and numerous other institutes and bureaus and centers, 11,000 full-time and over 20,000 part-time students, and an annual budget above $20 million; surely these prove this. May I say parenthetically: it is no secret that the president and I, particularly at budgetmaking time, not infrequently are afflicted with an old-lady-in-the-shoe feeling. And remember, please, that one of every three New England school teachers has studied at Boston University, that similar large proportions of this region's doctors and nurses and lawyers and business chiefs have sat in one of these classrooms. This university's contribution? About its dimensions there is no question.

The founders laid great stress on standards of excellence. Let's consider their ideas about admissions requirements. I reckon that few entering freshmen at Boston University today could have qualified in those early years. I know that the vice president for academic affairs would have been denied admission.

Their admission requirements must seem ludicrous, or frightening, to us. What did they, and what do we, ask a student to show that he is ready for college work? Admission requirements then included sight translation of Caesar's first four Gallic War books, Cicero's Orations; from the Greek the first three books of Homer's "Iliad" and four books of Xenophon's "Anabasis," and translations from English into Latin. I am not sure that we in higher education today, relying increasingly on the intellectual thermometer of test scores, know any more of potential than in those earlier days. I do not mean to denigrate testing. I do object to overreliance on quantification, on numerical comparisons and competitions, and on the resultant tendency, whether in grades, athletic contests, bathtubs, or sputniks, to overstress on quantity and the "more-than" factor.

The fourth principle of the founders was that of proposing the impartial advantage of every class, nationality, and sex. From the outset they made clear their conviction, a lonely one then, that women could and should be educated. And they acted on this conviction. Boston University was the first institution in the world to open the entire circle of postgraduate schools to women, and, I believe, the first to award the doctorate degree to a woman, Helen Magill who in 1877 received the Ph. D. degree in classics and whose dissertation was "The Greek Drama."

The general principle of nondiscrimination has been followed zealously by Boston University. For example, today's 900 students from 80 foreign countries. Witness the President's visit last year to Africa where in every country to which his itinerary took him he found Boston University graduates in strategic educational and developmental posts. We all know how broadly our student body is representative of all faiths. To me, the best current illustration of how Boston University carries forward the flag first raised by the founders is the spontaneous faculty and student movement last year to bring to Boston University qualified Negro students who, because of participation in the sit-in demonstrations in the South, were expelled from their colleges.

Another early Boston University injunction was that the University shall not hesitate to experiment, to explore new and promising ventures in education. And our institution has never hesitated to explore, to pioneer, to extend and sometimes even to overextend. The record on the whole has been distinguished, and certainly lively. In those early days it was characterized by agreements with the universities of Athens and Rome under which our graduate students could take course work in those institutions and then, after examination, apply the work for Boston University degrees. The tide of pioneering still runs strong today. Mere reference to our internationally-known African Studies Center, to our pioneering 2-year-old Law-Medicine Research Institute, and to our new and nationally known 6-year liberal arts-medical education program which begins next fall, only illustrate this fact that we are still pioneering.

The last flashback and current assessment I should like you to consider has to do with liberal education. Today, of course, liberal arts education is a stock in trade for most colleges. But liberal education has had a cyclical history, and in many a college its emphasis today has a Johnny-come-lately look. It is the more remarkable then, that in those early days our founders were so convinced of the need of liberal education. Let me read from the first annual report of the university: "All persons proposing to study law (and other programs) are earnestly recommended to first complete a course of liberal studies in some college." Here, the record has been consistently a distinguished one, and today for that emphasis Boston University has no peer among the larger American universities.

All in all, we may feel fairly well satisfied with the extent to which the principles set forth by the founders have been carried out. But enough of the past. Let us address ourselves to the future.

The problems of higher education rapidly are taking on dimensions and intensities unthinkable even a generation ago. That we as a people have the resources and the abilities to solve these problems effectively there can be no slightest doubt.

Though by nature an optimist, I should be less than candid were I to view the future mission of the private, independent institution in general, and of Boston University in particular, with other than deep concern.

It is not the goals of higher education that concern me, for here there really is little controversy. We all want to help develop in the individual, creativity which is at once questioning and responsible. My concerns can be put more specifically. To a degree they represent the case history and prognosis of any privately supported independent university with inadequate endowment. But many aspects are unique to Boston University. As in looking at the past and present, in commenting on our future mission I shall select specific issues and highlights which appear to me to have great portent.

Our major need is to place in agreed and always clear focus the overall concept of the institution we are determined Boston University shall be. To my mind this concept is abundantly clear and wholly in keeping with the founders' objectives. Boston University must continue to be an urban institution, in an urban setting. An institution with always increasing standards of excellence, oriented particularly to the educational needs of the New England region, whence 76 percent of our undergraduates now come, with an extensive residential student body but a larger complement of commuting students. And with the strongest emphasis on meeting the educational needs and problems of those whose families are at neither end of the economic scale and who themselves, in potentiality, and, by and large, fall into the center part of the bell curve into which too many of us mentally cast all students.

This means many things. It means a pride in the label "streetcar" university. It means we hold as peculiarly applicable to our institution Henry Heald's definition of a city university as "one of the new immovable islands in a sea of urban change." We need to accept and rejoice in urbanization, to exploit to the fullest the advantages and unique offerings of a city setting, of this city of Boston. Accept that assumption, and what may we infer?

First, we must banish any lingering thoughts that a campus demands pfeitzer junipers and water fountains and rolling greensward. It means we must resist what

Henry Steele Commanger calls the inclination to fix the pastoral image of the American college, as versus its European antecedents and contemporaries, as a place where young men and women saunter over sweeping lawns or study in pennant-arranged rooms. This is is a persuasive stereotype. I can well remember when year by year the debate raged at my own University of Pennsylvania on the pros and cons of a move to Valley Forge.

Boston University cannot return to the institutional pattern of 19th century America. And if it tried to, it would be opposing all the trends of present-day America, with urbanization the order of the day. Boston University is, and will be, and should be, an urban university. The fundamental decision Boston University took on capital plant in the fall of 1959, to have a high-rise campus, to go up instead of out, has basic implications which we must now follow through, in all directions.

We believe that education is learning how to use knowledge. We realize that learning does not stop at the classroom door but encompasses the whole campus experience. And if we want to have younger people under the influence of a family of scholars, we must direct attention to conditions which produce and nurture such a family. To this end we must avoid, as someone has put it, turning a community of scholars into a collection of commuting scholars. For a substantial proportion of our faculty, we need to provide adequate housing on or near the campus.

Faculty concerns have many other facets. None is more important than salary. Despite significant improvements in the past 5 years, Boston University, and most other institutions, must make more progress. For college teachers and staff not only are underpaid in contrast to many other occupations, they have lost ground in terms of real income as prices have continued to spiral. This problem affects urban institutions perhaps more than others. One of the alternatives to which some teachers have had to turn, "academic moonlighting," can be lessened only as higher salaries are provided.

Faculties are at once the greatest resource and the most sensitive factors in university development. They are the university. The universities, Boston University, must attract and retain able men and women to meet the students of tomorrow, and—let's face it—only adequate salaries will achieve this.

Boston University needs to do much more, with other institutions and agencies, in the regeneration of the city and the region—pointed not only to the workshop role the city serves but to improving a cultural and intellectual center in which an academic community can flourish. We must avoid academic insulation and isolation. There is no question that Boston University, both on the Charles River and Medical campuses, could do much more, in company with other institutions and agencies, on urban renewal and general urban regeneration.

As an urban center of leadership, the university needs to rise above local prejudices and political fragmentations. To fulfill its role, it needs to set standards, to be a constructive critic, to speak out boldly on matters of principle. We need to make more contributions such as that of Professor Levin's publication on the alienated voter. We need to get our roots down further and our branches out. We are part of the city and region and not just by happenstance housed here.

Another question looking for an answer: How many students should Boston University have? We must turn even before that to know how many we could have, and how many we can effectively accommodate. And well ahead of either of these we must place the absolute imperative that before any major increase we must use more effectively, and where it counts, the resources we have, give better support to and strengthen our present programs.

A study made last winter, a study which concerned only the six New England States, indicates that, if the ratio of college-age young people coming to Boston University were to continue at the same rate, our full-time student body would by 1965 increase 30 percent from today's 11,000 to some 14,000. And by 1970 it would increase by 50 percent to some 16,000.

Should Boston University accommodate these additional students? I think our only answer must be an unqualified yes. But to make it, we must assume that we have the facilities, the physical plant, and the operating funds to do the job.

Another study made in December 1960 asked this question: How many students could the university, given adequate faculty and operating funds, accommodate in its present or firmly planned facilities; i.e., including the first of the new high-rise buildings, and the biological and physical science facilities being made ready across Commonwealth Avenue? The study gave us this answer: That on these bases we could accommodate, altogether, only 1,500 to 3,000 additional students; and with this important qualification: that where we can accommodate them, in our present organizational pattern, may not correspond to the schools where they would enroll.

If we assume that as part of our social responsibility we should attempt to accommodate larger numbers, provided we secure adequate resources first to strengthen properly our present program and then to meet expanding needs, we face the Scylla and Charybdis which confronts most other institutions, particularly those not publicly supported. Someone has said this means there is a ditch on both sides of the road. How to keep out of the ditches and yet move forward successfully requires that Boston University take stock of its resources, estimate closely what will be needed to arrive at its objectives, realize what gaps exist, and then fill the gaps. Here is an apt quotation from Alfred North Whitehead: "Where attainable knowledge could have changed the issue, ignorance has the guilt of vice."

Let's take a quick look at the comparable higher education picture nationally. It is generally reckoned that the 3.6 million students in higher education today will have doubled by 1970, and that the $3 billion spent annually today on higher education will have to be expanded three or four times by 1970 to an annual $11 billion. Taking publicly and privately supported institutions together, this would mean that for the Nation to meet an $11 billion bill, 22 percent (2.4) of income would need to come from tuition, 14 percent (1.6) from endowment and gifts and contracts and grants, and 8 percent (.9) from auxiliaries (dorms, food service, etc.), leaving an unmet gap of 52 percent ($6.1 billion).

How does this compare to Boston University's income pattern today? Though the correlation is not necessarily close, since the estimates I cited cover both private and public schools, the major difference is the part tuition plays. In the national picture, with an unmet gap of 52 percent, tuition income is reckoned at 22 percent. Last year tuition at Boston University already represented 60.2 percent of income while nationally tuition income constituted about 33 percent of the income of private institutions. The gap to come, between prospective dollar resources and costs, is a warning loud and clear.

What implications has this prognosis for Boston University. It means for us, as for every private and for that matter every public institution, that we must first examine and strengthen our own institutional resources. We need to test the adequacy of our institutional framework. In other words, and this cannot be said too often, we must make sure that we are using present resources where they are needed most and count the most. Having examined critically our needs and resources, both human and physical (and I am happy to say that vigorous work on this is currently going on), we need, I repeat, to mark our gaps and plan how to meet them.

When this is all done and toted up, I am reluctantly sure that we shall have to conclude that between income and outgo we have a gap which from presently foreseeable resources we cannot fill.

Higher tuition? Yes, tuition at Boston University will certainly go higher. But how much higher? And do we want the change in Boston University personality which "Too far up" could bring? An example of this change is seen in medical education. The abnormally high costs of a medical education, according to our medical dean, have lessened the number of applicants, decreased the ability of those applying, and in the end have meant that 40 percent of them come from the 3 percent of the Nation's families that earn above $10,000 per year. Do we want that to happen to the Boston University personality generally?

The prospect is a gloomy one. Indeed, in looking in the same vein at many a private college, one can only marvel at how year by year they have recently been able fiscally to defy the law of gravity. Many private colleges certainly will not be able to defy fiscal gravity much longer.

The only answer, and I would remind you that this is in addition to the university's having examined critically and where appropriate acted on the need for optimum use of its present resources, the only answer is to look to the American people to come to the conclusion that having used pennies where dollars are needed, we can afford to and will spend more on higher education, all higher education. The 1 percent of gross national product now spent on higher education is mute testimony. It may come to deciding whether to spend on higher education, the medium for our survival, or on other things.

Even if we can expand our current income sources, tuition, alumni and graduate aid, the gifts of philanthropic foundations and of business and industry, we will still have to be supported more by public funds. And this is not our problem only: realize that out sister institution across the Charles, one of the most heavily endowed, and having but last year successfully completed a campaign for 82.5 million, has already reached this same conclusion about its own future.

If substantial support were to go to privately supported institutions, why not convert all so-called private universities to public institutions? Because the strength of American higher education stems from the coexistence of strong public and strong private institutions. Privately supported colleges and universities enroll about 45 percent of the students. They will continue to provide the education and the educational flexibility which have marked their history.

Would public support not introduce a new element into privately supported institutions? Not at all, if the forms of support were wisely wrought. There is now no publicly supported institution which does not get aid from private sources. And there is no privately supported university which gets no public support, both direct and indirect. No institution is strictly private, none is strictly public.

Then privately controlled institutions are in the public interest? Decidedly so. Would this answer shock our Boston Uni-

versity forebears? Listen to these words of our first president, William Fairfield Warren: "For the (university) property belongs not to private citizens but to representatives of the State. It once belonged to private individuals but in their unselfish public spirit they have expropriated it and set it apart forever to public uses, approved by the State and honored by the State. The State by incorporating appropriate bodies of managers for it and prescribing laws for its administration, have ratified the donors' action and have accepted the custody and perpetual defense of the gift."

To sum up, every university, public and private, will find that between its present and foreseeable resources and the need society expects it to meet, there will be a gap of monumental dimensions. With Boston University as our case in point, the dilemmas we face are grave. The steps to meet the chosen solutions are absolute imperatives.

Some of the steps open to us are internal, and under our direct control. They include first the need to retrench, reasonably, criticially to assess every present activity of the university and discontinue or reduce those activities not constituting a significant part of the educational program or of its support and servicing. They include the need to examine and where possible improve the use of faculty and staff and present space and time arrangements.

But even with optimum progress toward improved use of these internal resources in closing the gap, these internal steps will be insufficient. Our commitment to capital plant now and to come, and our rising operating costs, will make of these efforts only a shoring-up process.

We must look for substantial aid elsewhere. We must reinforce and redouble our efforts to make clear the case for more alumni support. We have a right to expect that business and industrial support will rise far above the 1 percent of income before taxes it now approximates, particularly with the broad tax provisions on this score. And we have a right to expect that the tax-exempt foundations, whose grants to universities have meant so much, will swing gradually to a rhythm of general institutional support to be expended in ways judged best by the institutions, and away from grants for projects which the foundations prefer to have explored and implemented.

But most of all we need to look to public sources for massive help in meeting the gap between income and outgo. In the public domain there are three logical sources, the city, the State, and the Federal Government. There are many logical and compelling reasons why the city of Boston should contribute. They range all the way from the interest of society to the services we render to the city, such as the vast medical services provided in the South End by the home care program of our School of Medicine. Nonetheless, realistically I cannot envision in the years immediately ahead when we will need it most, any prospect of direct financial support from the city.

State aid, however, is quite a different matter. We have a right, all of us as taxpayers, to expect the Commonwealth of Massachusetts and the other five New England States first to make the higher education dollar stretch as far as possible and at the same time to be multiplied. This means many things. It means, for example, that jointly through our New England Board of Higher Education, a more searching look ought to be taken at what we do now, what we might do differently through our public institutions. In the most heavily and increasingly industrialized and urbanized region in the Nation, do we still need six agricultural colleges, for example?

And beyond the optimum use of present State institutions and dollars, it is no new thing to conceive of the State as contributing to the support of private institutions functioning clearly in the public interest. Since 1785 my own alma mater, the University of Pennsylvania, has received aid annually from the Commonwealth, with no trace ever of interference with university policy. There is another less direct form of State support which, accepting the premise of a private institution in the public service, to my mind is logical. It is that of tuition aid, paid directly by the State to students admitted to college and with the student entering the college of his own choice. This would not be an innovation. And it would be on the basis of the well-being of society both in terms of helping to provide the personnel needs of our modern society and of the fact that the added tax return to the State from these young people would more than meet the added costs of their education.

But most of all it is to our Federal Government we must look for help to close the gap. First of all, the Federal Government can help by correcting the freeloading in which it now indulges at the expense of the universities. Examples are numerous. ROTC programs conducted in cooperation with the Armed Forces for years have represented another plate at the table for which the costs exceed the board bill. And this year's laudable trend to substitute university-taught for ROTC-taught courses lightens further the Government load and transfers it to the universities. So, too, with many programs in which, to strengthen secondary education rather than higher education, universities including our own participate under the National Defense Education Act. A third well-known example is the Federal contracts and grants research representing in so many instances services purchased for which the Government should bear the total costs.

Over and above these situations needing adjustment is the urgent need for massive aid to higher education on the simple but fundamental ground that higher education is in the national interest, is indeed the main medium for the survival of our American and Western civilization. The variety of forms of assistance are many. I am highly in favor of the recent higher education proposals of the Federal administration, modest and overcautious and conservative as they are. Especially significant for institutions such as ours are the programs of long-term, low-interest loans for the construction or renovation of academic facilities, and the extension and supplementation, with operating grants to the institutions, of Federal scholarship programs. And essential, of course, is the discontinuance of the inappropriate and unnecessary disclaimer affidavit.

On the matter of separation and distinction between public and private institutions, the effective British and Canadian programs of public support to both are evidence of what can be done. It is likely that the Federal Government will serve as the chief source of the public costs of higher education. There is every reason why State and local governments should bear significant fiscal responsibilities also. For it is the whole community which has a basic concern for and benefits from higher education.

These founders' day thought have had many implications for the future of Boston University. The options are here. "Babylon had its opportunity and built the Tower of Babel. The University of Paris had its opportunity and in many ways set the thinking of the Middle Ages. American higher education has its opportunity at a most critical time in the history of civilization." And Boston University has its share of this opportunity and challenge. For over 90 years Boston University has met challenges thoughtfully and successfully. The years immediately ahead hold crossroads more significant than any the university has faced. It is our eye which will make our horizon.

Tribute to New York State Commissioner of Commerce: Keith McHugh

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1961

Mr. KEATING. Mr. President, it can well be said that the dynamism of our economy derives from the dynamism of our people. It is the mind of man, his imagination, his energy which are the prime movers in lifting our individual communities, our States, our Nation to higher levels of economic growth and achievement. In this vital role of the individual citizen in promoting the advancement of progress, Mr. Keith McHugh, New York State Commissioner of Commerce represents an excellent example of what one able and dedicated public servant can accomplish.

Since his appointment to his present post by Governor Nelson A. Rockefeller in 1959, Keith McHugh has committed his great vigor and distinguished talents to such a degree that the State of New York has experienced a tremendous forward thrust in its economic development. In tribute to the success of Mr. McHugh's work as New York State Commissioner of Commerce, the General Electric Schenectady News of March 3, 1961, published an article entitled "McHugh's Job (and Yours): Building State's Economy." In view of the pertinence of this article in terms of the current national emphasis on economic growth, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MCHUGH'S JOB (AND YOURS): BUILDING STATE ECONOMY

(By Bob Dixson)

Ask New York State's commissioner of commerce what the average citizen can do to help spur the State's economic growth and he'll say—"That's easy. Become a booster, not a knocker."

Although Keith McHugh says it with a smile he means it with sincerity. He feels quite strongly about this point. In fact, he believes that citizens and government officials being "boosters" rather than "knockers" was one of the main factors in some other States—such as California—attracting so much new business in the past few years.

DEEP CONCERN

McHugh, who gave up the presidency of the New York Telephone Co. to become commissioner of commerce at probably a fraction of his former pay, loves his job. Seated at his desk in a downtown Albany office building, he'll talk for hours on a subject of deep concern to New Yorkers in recent years—the State's economic growth.

McHugh is a Coloradoan by birth, a New Yorker by adoption, and an "incurable optimist" by admission. Despite New York's age and trends in population in recent years toward the south and west, he believes the State can—and will—continue its economic growth and maintain its position as America's leading industrial State.

EVERYBODY'S RESPONSIBILITY

However, Commissioner McHugh believes that economic growth is not something to be done solely by the Department of Com-

'merce. It is something a State, a community, business and labor groups and every individual can—and should—take a part in.

What can individuals do? Well, first of all, "they should make sure they are doing their own job the best they know how," says McHugh. Then, they can take a good look at their own community to make certain it has the right type of environment to promote economic growth. After this, they can become boosters and not knockers.

McHugh also believes that individuals, including businessmen, can make important contributions toward improving their State and community and promoting economic growth by becoming more aware of what government is doing and by taking an active interest in governmental affairs.

TAKE POSITIVE APPROACH

The commissioner will admit that there are still problems to be overcome in order to maintain New York's position of industrial leadership. However, as an "incurable optimist" he prefers to take a positive approach rather than a negative one.

McHugh believes New York has taken significant steps in recent years to become more attractive to new and expanding industries. But, he also believes that continuing efforts are necessary, both on the State and local level. For example, he likes to see communities taking a good hard look at their assets and liabilities for attracting industries and then taking steps to correct the liabilities.

NEED FOR DEVELOPMENT GROUPS

McHugh is a strong believer in industrial development groups, such as the Schenectady Industrial Development Council. New York now has 65 such groups which, in many cases, the Department of Commerce has helped form, but, "we ought to have probably 250 or 300 such corporations instead of just 65."

Why did McHugh accept a considerable personal sacrifice? "Well, because Governor Rockefeller said to me, 'Mr. McHugh, I believe two things about our free enterprise system quite strongly. First of all, I believe the reason our country is the greatest nation in the world is that we believe not only in the freedom of the individual, but the freedom of businesses to grow with a minimum of interference from outside sources. And secondly, I believe that Russia won't attack us with arms until they beat us at our own economic game, using their controlled economy rather than our free enterprise system. I want to do everything I can to show the Russians they can't beat us.' "

It didn't take McHugh long to decide that "by golly, I want to help." He has yet to regret his decision.

Commissioner McHugh has several personal objectives for New York State. He wants: The highest possible income for our people, the highest standard of living possible, as stable as possible an economy, and maximum employment consistent with a high level of economic activity.

He believes that hand in hand with these objectives will be the maintenance "of the highest standards of education and culture."

WHAT HAS BEEN DONE?

What has Commissioner McHugh done in the last 2 years to promote these objectives?

"Well, the first thing I thought important to do was to find out the facts about our business climate." Representatives of the commerce department made over 1,400 depth interviews with various businessmen and groups. It invited their gripes, not their comments on the good things in New York.

His chief caution in forming such groups is that communities in the same general area should not get involved in competing with each other for industry. The problem can be solved in many instances by an area-wide industrial group, rather than a strictly local one.

Who should be a part of these organizations? Representatives of every segment of the community, according to McHugh. And this includes labor because "labor, in the long run, has the biggest stake of anybody" in economic growth.

McHugh had only a speaking acquaintance with Governor Rockefeller when the State's new chief executive invited him to lunch one day in the spring of 1959 and asked him to accept the job as commissioner of commerce.

Surveyors found that businessmen interested in expanding their businesses were first of all concerned with the administration of certain State services, "particularly unemployment insurance and workmen's compensation." They also had some general complaints on tax levels and, to McHugh's surprise, a number of complaints that dealt with local government problems rather than State government.

The department then went to work to correct some of these deficiencies and to let local communities know what businessmen were saying.

The results?

McHugh points out that in the past 2 years business has invested more than $4 billion for new plants and equipment and research establishments in the State.

TWENTY NEW PLANTS

In 1960, the department of commerce, in cooperation with local groups, brought 20 major plants into New York. These plants will have an initial employment of 2,300 and an expected employment of about 4,500 "within a reasonable length of time."

Additionally, McHugh says the department, acting in a "trouble shooting" role, "saved" for New York State communities "scores of firms that threatened for local or other reasons, to leave the State." One was a firm with more than 5,000 employees which McHugh personally had a leading part in saving.

TWENTY-SEVEN RESEARCH INSTITUTIONS

In the last 18 months, 27 new research and development institutions have been announced in New York, including General Electric's materials and processes and manufacturing laboratories in Schenectady and the company's new electronics laboratory at Syracuse.

The Commerce Department has been giving a great deal of attention to encouraging new research and development institutions, McHugh says, because they not only develop the new products which in turn result in jobs, but also provide a significant attraction to new industries.

NEW YORK LEADS

He points out that a recent survey has shown that New York is now the leading State in research and development with more than 1,000 laboratories.

Governor Rockefeller last year appointed an Advisory Council for the Advancement of Industrial Research and Development that includes, among others, General Electric vice presidents George L. Haller, of Syracuse and C. Guy Suits of the research laboratory in Schenectady, and B. H. Caldwell, general manager of KAPL.

McHugh believes that research and development facilities along with an atmosphere of "boosting California" have been the chief ingredients in that State's ability to land so much of the missile business in recent years.

KEEP PLANTS HERE

Although attracting new industry is usually considered to be the most important part of the commerce department's activities, McHugh believes that maintaining the industries the State already has is equally important. Thus, he points to the decisions of the Remington-Rand typewriter plant to remain at Elmira and Endicott-Johnson at Endicott. The latter, he adds, is an example of what local groups can accomplish.

Commissioner McHugh won't necessarily subscribe to the theory that there has been a "lag" in economic growth in New York in the past few years, but he would be the first to agree that changes and innovations are constantly needed in order to promote growth.

New York's Temporary Commission on Economic Expansion recently submitted to Governor Rockefeller what Commissioner McHugh terms "an exceedingly fine" report containing 27 recommendations for promoting economic growth. And McHugh believes the report will be "useful to all persons interested in the State's development and improvement."

PROMOTES NEW YORK

As for the recommendations that pertain to his own department, they are either already in effect or well on the road to being in effect. He points specifically to increased efforts to promote New York State as a good place for expanding businesses. The department recently opened new offices in Chicago and Los Angeles to aid these efforts, Mr. McHugh says.

BELIEVER IN DIPLOMACY

Commissioner McHugh could perhaps be described as a believer in personal diplomacy. He maintains offices and residences both in Albany and New York City. He shuttles between the two each week in a small airplane.

He also uses the plane to travel around the State as much as possible, discussing the State's economic problems with various groups and attending dedication ceremonies for new expansion projects. The plane allows him to make a speaking engagement that night.

His hobbies include fishing, shooting, and golf in that order, but his chief hobby is work, as his associates will testify. And he particularly likes his work in aiding New York's economic growth.

New Frontier for American Indians

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. EDMONDSON. Mr. Speaker, a substantial number of Members of Congress cheered Tuesday night as the Honorable W. W. Keeler, chairman of a task force studying American Indian problems, outlined plans for the most intensive survey of Indian problems in a generation.

Speaking to the executive council of the National Congress of American Indians and their congressional guests, Mr. Keeler outlined plans of the task force group named by Interior Secretary Stewart Udall, and emphasized his belief that the final answer to Indian problems must be found among the Indian people themselves.

Earlier Tuesday, Mr. Keeler and Acting Indian Commissioner John Crow, had told members of the Oklahoma congressional delegation of their intention to visit and hold meetings with Indian groups all over the country, beginning on

March 20, in order to receive grassroots recommendations and suggestions for ways to bring an imaginative, New Frontier approach to the field of Indian problems.

Leaders of the task force have emphasized their conviction that no Indian program will work effectively without the understanding and approval of the Indian people, and this represents a decisive step forward in this field.

At Tuesday's meeting, the Honorable Earl Boyd Pierce, of Muskogee, Okla., presented to Mr. Keeler a letter representing views of the executive meeting of the National Congress of American Indians, and Mr. Keeler also received a letter expressing appreciation of the group for the designation of NCAI President Clarence Wesley as a consultant to the task force.

The letter read to the NCAI's meeting by Mr. Pierce highlights some of the important American Indian viewpoints which must be considered and dealt with by the task force, and these viewpoints are worthy of study by everyone interested in the American Indian.

The text of the NCAI letter to Mr. Keeler follows:

MARCH 14, 1961.

Hon. W. W. KEELER,
Chairman, Indian Study Task Force,
Department of the Interior,
Washington, D.C.

DEAR MR. KEELER: As you know, the executive council of the National Congress of American Indians has been in regular, convened session in Washington, D.C., for the past 2 days. It is the belief of the council that your task force will welcome a brief expression of the views of the members of the council concerning the mission of the task force before it visits the different reservations and Indian communities in our Nation.

We trust that your task force, in its work which lies immediately ahead, will give earnest consideration to the deep concern of Indians everywhere, that your investigation in the field will touch the crux of every problem that has vexed the Indian leaders and other sympathetic, interested groups in this Nation in the areas of bureau administration, health, education, welfare, the restoration, consolidation, and conservation of land resources, heirship difficulties, suppression of Indian freedom of expression, Indian credit, depressed areas, relocation, termination, unemployment, housing and other serious problems, to the end that both the American Indian and the American taxpayer can be satisfied that at last a serious effort is being made to solve perplexing American Indian problems.

It is our hope and our belief that your honorable body has entered upon an undertaking willed by a sympathetic administration of our Nation's affairs and that the American people, including our Indian citizens, will expect a report from your hands that will speedily bring to fruition the fondest hopes and aspirations of our Indian people. It is our firm belief that the constituted authorities of the several Indian tribes of this Nation will gladly give to your task force the highest degree of cooperation and that Indian tribal leaders are anxious for the opportunity to assist your body at any time or place.

For a fuller expression of our views we most respectfully submit to you and your associates a copy of the resolutions of the National Congress of American Indians adopted in convention in Denver, Colo., on November 14 through 18, 1960. We earnestly solicit your thoughtful consideration of Resolutions 1, 2, 24, and 25 thereof, in particular.

We are most grateful to President Kennedy and to Secretary Udall for their wisdom in launching the investigation which your task force is now undertaking.

We are, sir,

Most respectfully yours,

NATIONAL CONGRESS OF AMERICAN INDIANS,
CLARENCE WESLEY, *President.*

The Constructive Opposition

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. HRUSKA. Mr. President, there has been much discussion in recent weeks of the role of Republican Members of Congress as the "loyal opposition." I believe a more descriptive phrase is "constructive opposition." All of us, I am sure, feel a strong responsibility as minority Members of the National Legislature to find the most effective means of presenting the views of the constituents who elected us to office. We seek to present those views in a positive manner, in the best interest of our constitutents, and the country as a whole. Despite charges to the contrary, this represents no form of obstructionism but rather is a presentation of what we believe to be the convictions of the majority of the people of our part of the country in the way of Federal programs.

The February issue of the Kiwanis magazine, the publication of Kiwanis International and one of the finest of all service organization periodicals, contains an editorial setting forth this point in thought-provoking and forthright language. It is written by the distinguished Senator from South Dakota [KARL MUNDT]. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CONGRESS WILL RESPOND

(By Hon. KARL E. MUNDT, U.S. Senator from South Dakota, past governor, Minnesota-Dakotas District of Kiwanis International)

The 87th Congress is the first in many years to begin operations with a so-called undivided Government. It finds the Democratic Party enjoying control over both legislative Houses and the White House. This fact brings to mind a number of significant questions, not the least of which are: Will this bring about more responsible government? Will it reduce the role of the Republican Party to that of a negative, nagging, antagonistic opposition, and thereby subvert the direction of our national purpose to petty squabbles along party lines?

In attempting to answer these questions, one must, it seems to me, appeal to history. In our own history, the history of America, we find that both systems of government—divided and undivided—have been made to work effectively. Then, too, there have been instances where each has failed. In my own experience of 22 years in the U.S. Congress, I have found that successful government has been attained because of—and not in spite of—sound, responsible party politics.

There can be no doubt that both parties want a better America, a prosperous America, one that continues to move ahead. The differences between the two parties do not really concern goals, but how best to attain these goals; it is a difference not of ends but of means. And, more often than not, much of our National legislation is the result of working out these differences through debate and compromise to achieve good government and a productive, free America.

The key to disagreement in majority-and-minority government is responsibility. When accepted and practiced, responsibility brings to the Nation united effort working for the national good. And responsibility in Government has a peculiar way of making itself felt. It is for this reason that, as the 87th Congress opens with a new President in the White House, I am not seriously alarmed at the prospect of congressional divisiveness along party lines. For when the chips are down on issues of major significance, responsibility will, as it always has in the past, emerge. And it is my conviction that, as usual, it will cross party lines.

This is not to say that there will be no major differences over the role Government is to play in the future. But, at the same time, these differences do not stand in the way of progressive programs, for responsibility rests with the President as well as with Congress. A President cannot afford to launch programs that are not, so to speak, "in tune with the times." This has, of course, happened, and it has usually been accompanied with a resultant change in the White House. It has also happened in Congress. But here, too, the American voter asserted his responsibility—when the politician has not asserted his—by stepping into the polling booth and removing from public office those officials who trifled with the national interest by playing politics in the legislature.

And here is the main reason why I expect the 87th Congress to be a typical Congress, a Congress that will be responsible. I refer to the voter. Responsibility begins and ends with the voter. It is still the greatest system devised for successful and productive government. For in our renowned check system of government, the voter is the final check. If responsibility is not exercised where laws are made, then it will surely be exercised by private citizens on the homefront where lawmakers are made.

Hungarian Freedom Day

SPEECH
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. SANTANGELO. Mr. Speaker, all peoples throughout history have aspired and struggled for their freedom, but no people have fought for so long in modern times and have staked so much for their freedom as have the people of Central and Eastern Europe. And nowhere has national freedom been in such constant jeopardy as in that part of the world. This is true in the case of many peoples there, and certainly it characterizes the modern history of the Hungarian people.

For centuries these sturdy peasants of Hungary maintained their national independence, fighting their enemies on the east and in the southwest. Early in modern times a part of Hungary was overrun by the Turks, but they still maintained their independence until late in the 17th century when they were brought under the Austrian monarchy. Then for about 200 years they lived as unruly subjects of the government in Vienna, and strove to regain their freedom. In this they were not successful until 1848. In that year the European revolution offered them the chance to free themselves. Disturbances and uprisings in many parts of the Austrian empire weakened the government in Vienna, and the Hungarian patriots in Budapest were ready to take advantage of the situation. Early in March they petitioned the government and demand freedom. On the 15th they were granted freedom and autonomy, and that day of victory and jubilation became a Hungarian national holiday, their Freedom Day. Though the freedom thus regained was lost in the following year, to this day the Hungarian people celebrate the anniversary of March 15, the date that marked their freedom 113 years ago.

Statement on Supreme Court Decisions

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the American Civil Liberties Union Board of Directors on the Supreme Court decisions in the Wilkinson and Braden cases, and the House Un-American Activities Committee:

STATEMENT BY ACLU BOARD OF DIRECTORS ON SUPREME COURT DECISIONS IN WILKINSON AND BRADEN CASES, AND THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE

The February 27 decisions of the U.S. Supreme Court affirming by a 5-to-4 vote the contempt of Congress conviction of Frank Wilkinson and Carl Braden for refusing to answer the questions of the House Un-American Activities Committee are a deep disappointment to the American Civil Liberties Union.

While the narrow vote and the penetrating dissenting opinions make clear that the first amendment has its strong defenders, this does not greatly lessen our dejection that in the area of legislative investigatory committees the Court once again has assigned the constitutional rights of the individual to a secondary position.

The first breach of the vital first amendment principle that citizens are free of government compulsion to bare their political beliefs and associations came in the 1959 Barenblatt case, for which the ACLU provided legal defense. The Court held then that the compelling need for national security outweighed first amendment guarantees, and that Congressional investigating committees in this area have wide and pervasive power. We disagreed with that decision because of our belief that the HUAC's mandate, to investigate "un-American propaganda," directly violated the first amendment. However, we were somewhat encouraged that the Court recognized the danger to our free society of incursions on the first amendment by its statement that it would examine carefully other cases in this area brought before it so that the decision could not be used as a blanket to smother unpopular expression.

Evidently this caution has been discarded, for in the Wilkinson case, for which the ACLU also assumed legal defense, the majority, after once more upholding the HUAC's authority, flatly says that critics of the HUAC are not immune from investigation merely because they are "opposed to the existence of the Un-American Activities Committee." This point was not argued in the Wilkinson case but the practical effect of the majority's statement is to silence all critics not prepared to testify about their motivations.

Thus the wheel turns full circle, from validating the authority of a congressional committee to investigate "un-American propaganda" to compelling political disclosure by persons who dare use their first amendment guarantee of free speech to criticize such investigation. This gross attack on the first amendment is sharply illustrated by the fact that Wilkinson was not subpenaed until after the HUAC had learned he had arrived in Atlanta to "develop a hostile sentiment to the Committee for the purpose of undertaking to bring pressure upon the United States Congress to preclude these particular hearings."

The impact of such governmental pressure on individual opinion was incisively and eloquently stated in the minority opinions of Justices Black and Douglas, which the ACLU heartily endorses and commends to all for reading:

Justice Black said: "In my view, the majority by its decision today places the stamp of constitutional approval upon a practice as clearly inconsistent with the Constitution, and indeed with every ideal of individual freedom for which this country has long stood, as any that has ever come before this Court. I think it is clear that this case involves nothing more or less than an attempt by the Un-American Activities Committee to use the contempt power of the House of Representatives as a weapon against those who dare to criticize it. The majority does not and, in reason, could not deny this for the conclusion is all but inescapable for anyone who will take the time to read the record. They say instead that it makes no difference whether the committee was harassing the petitioner solely by reason of his opposition to it or not because it is not for us to speculate as to the motivations that may have prompted the decision of individual members of the subcommittee to summon the petitioner. The clear thrust of this sweeping abdication of judicial power is that the committee may continue to harass its opponents with absolute impunity so long as the 'protections' of Barenblatt are observed."

Justice Douglas said: "Criticism of government finds sanctuary in several portions of the first amendment. It is part of the right of free speech. It embraces freedom of the press. Can editors be summoned before the committee and be made to account for their editorials denouncing the committee, its tactics, its practices, its policies? If petitioner can be questioned concerning his opposition to the committee, then I see no reason why editors are immune. The list of editors will be long as evident from the editorial protests against the committee's activities, including its recent film 'Operation Abolition'."

To state that the Wilkinson decision (and the decision in the companion Braden case) is a serious defeat for free speech in our country is to state the obvious. Unless new legal challenges can be developed, and we certainly will explore this possibility, it seems, as Justice Black says, "The only real limitation upon the committee's power to harass its opponents is the committee's own self-restraint," but, as he gloomily adds, this is a "characteristic which probably has not been predominant in the committee's work over the past 5 years." Justice Black's doubts unhappily seem true as witness the remarks of the present committee chairman in attacking the HUAC's major critic, Representative JAMES ROOSEVELT, that the latter did not believe that communism was evil and un-American.

But there is one other approach: For the people themselves, and their representatives in Congress, to recognize their responsibilities to maintain the freedoms of the Bill of Rights. It is true that the HUAC has just received an overwhelming endorsement by approval of its $331,000 budget—the largest in its history (and we salute the gallant handful of Congressmen who recorded their opposition, Representatives ASHLEY, GREEN, KASTENMEIR, O'HARA, ROOSEVELT, and RYAN). But the ACLU does not believe the campaign is ended; only one battle has been lost.

We sense a new vitality in many parts of the country, a deep conviction that the HUAC's depredations must be ended. People, organizations, newspapers and magazines, who are not Communists or Communist dupes and fully understand the evil of all totalitarianism, are simply concerned that freedom prevail in our country, especially at this time of history when our principles are being tested in the fires of international conflict. They are utilizing their first amendment right to express opposition to the HUAC. We urge them, and others, to join with the AGLU—despite the setback in the Wilkinson and Braden cases—to press our effort even harder. We ask them to renew their hope and courage through these words of Justice Black's:

"This country was not built by men who were afraid and it cannot be preserved by such men. Our Constitution, in unequivocal terms, gives the right to each of us to say what we think without fear of the power of Government. That principle has served us so well for so long that I cannot believe it is necessary to allow any governmental group to reject it in order to preserve its own existence. Least of all do I believe that such a privilege should be accorded the House Un-American Activities Committee. For I believe that true Americanism is to be protected, not by committee that persecute unorthodox minorities, but by strict adherence to basic principles of freedom that are responsible for this Nation's greatness."

H.R. 5637 Would Protect the General Public and the Transportation Companies in the Event of Accidents Resulting From the Transportation of Nuclear or Other Unusually Hazardous Products and Materials

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. VAN ZANDT. Mr. Speaker, on March 15 I introduced a bill (H.R. 5637) that would authorize the Department of

Defense to extend protection to the public by indemnifying transportation companies against public liability arising from the risks involved in the transportation of nuclear or other unusually hazardous products and materials and to limit the liability of transportation companies so indemnified. Before commenting on the provisions of my bill, it seems to me that it is worthwile to address myself to some prior legislation dealing with the general subject of indemnification with respect to unusually hazardous risks. Such indemnification is in some instances already provided by law with respect to some governmental agencies and in others has been suggested for governmental agencies.

In an act of July 16, 1952 (66 Stat. 726), a bill was enacted to facilitate the performance of research and development work by and on behalf of the Army, the Navy, and the Air Force. One section of that statute provided that contractors who entered into agreements for research, development or test facilities could be indemnified, first, against liability on account of claims by third persons, including employees of the contractor, for death, bodily injury, or loss of or damage to property arising as the result of a risk defined in the contract to be unusually hazardous or, second, for loss of or damage to property of the contractor arising as the result of a risk defined in the contract to be unusually hazardous. The act of July 16, 1953, was slightly amended by an act of August 10, 1956 (70A Stat. 134), but the general principles contained in the 1952 act are still applicable.

By an act of September 2, 1957 (71 Stat. 576), the Atomic Energy Act of 1954, was amended to provide protection to the public by providing that the Atomic Energy Commission could indemnify its contractors and licensees to the extent of $500 million in order to indemnify such licensees and contractors against public liability arising out of a nuclear incident. A nuclear incident was defined in the statute as meaning any occurrence within the United States causing bodily injury, sickness, disease or death, loss of or damage to property or for loss of use of property arising out of or resulting from the radioactive, toxic, explosive or other hazardous properties of source, special nuclear or byproduct materials. The persons indemnified under the amendment to the Atomic Energy Act were to be those with whom an indemnification agreement had been executed and any other person who might be liable for public liability.

In the last Congress the Secretary of Defense submitted to the Speaker of the House of Representatives a bill which would broaden the scope of the indemnification authority contained in the 1952 act to which I have already referred. In submitting that bill to the Speaker, the Secretary of Defense accompanied it with a memorandum in which he stated that the items and materials which in 1952 were in a research or developmental status have now advanced beyond that status. He added that nevertheless the unusually hazardous risks remain, and the Department of Defense would be unable to enter into many supply or construction contracts involving atomic energy systems or weapons, missiles, special propellants and other projects involving unusually hazardous risks unless it could provide indemnification to its contractors where such unusually hazardous risks were involved. He said that contractors in extra hazardous fields were hesitant about contracting with the Government because of the risk that unexpected accidents in this type of activity might cause them enormous liability and loss and only by assumption of this extra risk, that is, indemnification of such contractors, could Government assure itself of a continuing willingness of defense contractors to participate in such projects. The bill submitted to the Speaker was introduced and carried the number H.R. 4103. It provided that the Secretary of Defense and the secretaries of the military departments would be authorized to enter into agreements of indemnification with contractors and subcontractors of the Department of Defense up to an aggregate obligation of $500 million with respect to any one accident. Indemnification could be provided against liability to third persons including employees of the contractor for death, bodily harm or loss of or damage to property and loss of or damage to property of the contractor arising from risks which the agreement defines as nuclear or other unusually hazardous risks. Congress took no action with respect to H.R. 4103 and the Defense Department has this year again asked for favorable consideration of such a bill.

I, of course, do not know whether Congress will see fit to pass a bill such as has been suggested by the Department of Defense but I do know that there is at least one area in which prompt action should be taken by Congress. Congress should see to it that the general public and the transportation companies are protected in the event of an accident arising out of the transportation by such carriers of nuclear and other materials which can result in unusually hazardous risks. Obviously, a contractor manufacturing nuclear and other unusually hazardous materials will be doing such manufacturing at a fixed site. That contractor will have full knowledge of the materials he is manufacturing but a transportation company that carries similar materials will, in the normal course of events, have no specific information as to what it is carrying. Further, a manufacturing process carried on at a fixed site obviously permits, to an extent not possible in the area of transportation, establishment of safety practices and precautions designed to reduce the degree of hazard and the possibility of accident. In addition, it is obvious that the general public will be less exposed to an accident involving nuclear or other unusually hazardous materials if those materials are at a fixed site rather than being transported by a carrier. What I mean by that is this: a contractor manufacturing hazardous materials is at one location and the only portion of the public that could possibly be injured or damaged by an accident involving those materials is that group of people immediately adjacent to the manufacturing plant. On the other hand, when carriers, whether they be trucks, railroads, water carriers, or airlines, transport such hazardous materials, they may carry them for thousands of miles and through many communities, towns, and cities thereby making a much larger portion of the general public exposed to an accident involving such materials. These are the reasons I have introduced a bill that would protect the general public and the transportation companies in the event of accidents resulting from the transportation of such hazardous materials.

I am sure it is well known that transportation companies are now and will in the future be expected to carry nuclear and other materials which involve unusually hazardous risks. It seems clear to me that in order to protect the public and to permit the orderly development, production and deployment of defense weapons in the interest of the general welfare and the common defense and security the Department of Defense should be given the authority to idemnify the transportation companies in order to limit their liability and to make funds available for the damages suffered by the public as the result of any accident arising out of the dangerous properties of nuclear or other unusually hazardous products or materials. That is precisely what my bill would do. It would define the term "public incident" as meaning any occurrence causing bodily injury, sickness, disease, or death, or loss or damage of property or for loss of use of property arising out of or resulting from the radioactive, toxic, explosive, or other dangerous properties of nuclear or other unusually hazardous products or materials. The Secretary of Defense would define and designate the meaning of the term "nuclear or other unusually hazardous products or materials." The bill would give the Secretary the authority to enter into agreements of indemnification with transportation companies, such indemnification protecting those companies against public liability arising out of or resulting from the occurrence of a "public incident" during the transportation of nuclear or other hazardous materials for the Department of Defense or contractor thereof. The limit of the Government's liability would be in the amount of $500 million for each public incident.

As I have said, the transportation companies of this country are going to transport for the Department of Defense nuclear and other dangerous materials. We are all aware of the so-called Minuteman mobile missile program. It is my firm view that in the event of an accident the public should be protected and the transportation company should be indemnified by the United States. It is my hope that the Committee on Armed Services, to which my bill is being referred, will consider the measure at an early date and take favorable action with respect to it.

Church and State

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. MOELLER. Mr. Speaker, there is an ever-present danger of intermingling the spheres of legitimate concern of church and state. This danger often results from zealous efforts to meet the social responsibilities shared by both.

Thus, I believe it important and very timely for a proper appreciation of our time-honored acceptance of strict separation of church and state, that the National Lutheran Council of 50 Madison Avenue, New York 10, N.Y., has recently issued two very enlightening statements. One deals with religious faith as a factor in American elections and the other with church hospitals and the use of Hill-Burton Act funds.

Since these two areas of mutual church-state interest and responsibility are among the most sensitive and difficult of judicious resolution, I would like to insert in the RECORD and submit for the serious consideration of my colleagues, these two excellent resolutions of the National Lutheran Council as examples of the sound guidelines we must use in this dangerous area.

The resolutions are as follows:

RELIGIOUS FAITH AS A FACTOR IN AMERICAN ELECTIONS

Whereas during the recent presidential election the so-called religious issue received a great deal of attention despite the avowed intention of the political parties and candidates to say as little as possible on the subject; and

Whereas responsible political analysts have affirmed that the religious affiliation of candidates and of voters was among a number of major factors in the election; and

Whereas following the presidential election much confusion and sharp difference of opinion regarding the religious issue exist within the Christian community; and

Whereas the religious affiliation of candidates will continue to be a factor affecting the voting of many citizens in future elections in the United States: Now, therefore, be it

Resolved, That the following statement on "Religious Faith as a Factor in American Elections" be made available to members of the participating church bodies of the National Lutheran Council and to other interested persons as worthy of serious study and deliberate discussion:

"The religious affiliation of a candidate for political office is a valid concern of the voter, but in a democratic order a candidate ought not be opposed merely on the grounds of his religious affiliation without regard to his record or to his other qualifications.

"Unless we are prepared to grant that religion, and in particular, the Christian faith, is irrelevant to public life in the United States—a proposition which would hardly stand the test of objective examination—it will have to be admitted that the religious faith of any person will influence his private and public conduct to some extent. It is regrettable that the effort is sometimes made to disclaim completely all relevancy of religious convictions to political life. Such disclaimers are a danger sign since they reveal that the "image" of the Church in the American mind is such as to make religion essentially irrelevant in those areas where the important decisions of our time are made.

"The conduct of public affairs is subject to a multitude of pressures. Since even private conduct, where these pressures are far less complex, is rarely determined exclusively by a person's loyalty to a religious denomination, it is naive to assume that a public officer's conduct of his public office would be exclusively determined by such religious loyalties. Obviously people of varying religious loyalties are constantly required to compromise these loyalties in order to avoid a breakdown in our pluralistic society. There is a great deal of difference between the theoretical claims of absolute loyalty which a religious community may be prepared to make and the actual loyalty which it can command. This appears to be true of all religious groups though in varying degrees.

"The fitness of a candidate for public office depends upon many qualifications. Such personal qualities as integrity, courage, wisdom, and understanding are essential for a candidate to deserve the support of church people. The past record of the candidate is a legitimate basis for evaluating his future performance. Although a basic change may not be impossible, it would be unwise to anticipate a fundamental reversal of an established pattern as a result of an election. The record of a candidate's party and the avowed policies of his supporters also must be taken into account. Among all these considerations the candidate's religious affiliation is one factor.

"It is regrettable that some church people begin to show concern about the qualifications of candidates only when high Federal office is involved, neglecting State and local elections and primaries which often are just as important as national elections in deciding policies and leadership in our representative form of government.

"To reiterate: the religious affiliation of a candidate for any office is a valid concern of the voter. But it has to be balanced against all the qualifications of this candidate and other candidates, and should not be taken out of the context of the total political situation in which the voter has to make his decision."

CHURCH HOSPITALS AND THE HILL-BURTON ACT

The Holy Scriptures teach that church and state alike have been instituted by God and are subject to His will. Each has its specific functions and scope of activity in serving as an instrument of God in society. They are to be separate and yet allied in making their contribution toward the fulfillment of His purposes in the world.

The church, corporately and through its individual members, bears witness to the redemptive activity of God in Christ and to the centrality of this fact in the Christian life and in history. It fulfills its divinely ordained mission to the whole of man and of society through its ministry in which preaching, teaching and serving are fundamental and primary.

Under God's law and subject to His authority, the state's necessary and appropriate role is to support good and curb evil. To this end, it establishes and maintains structures to achieve justice and order and to promote the general welfare.

Since both church and state are involved with human welfare, they find many common concerns in areas of public life, even though their basic responsibilities and motivations are different. This fact must not lead to conflict or antagonism but rather should serve to emphasize the necessity for wholesome and intelligent cooperation or coordination. In such situations the church is not the agent of the state, nor vice versa; each must retain freedom of action and proceed in a way consistent with its divinely designated nature. However, great care must be taken lest, deliberately or unwittingly, the one step out of character to hamper or control the other in its distinctive sphere of responsibility.

In some instances of overlapping interests, the best solution may be that of coordination; in others wisdom may require cooperation. Both patterns are legitimate, and properly planned and conducted need not compromise either party. However this assertion should not be used to conceal the fact that, because of the differing motivations, the lines of demarcation and "proper" procedures in particular situations may be far from clear.

The Hill-Burton Act, enacted by the U.S. Congress in 1946, deals with an area of service in which the concerns of church and state have much in common and thereby provides an example of the church-state cooperation which under the principle as stated above is permissible. At a period in U.S. history when Government is becoming more active in the field of public welfare, this development of Federal encouragement of community hospital construction merits careful examination by the church in order to ascertain from its standpoint the extent to which the provisions of the Hill-Burton Act meet criteria regarded as necessary to maintain proper church-state relationships in our pluralistic society. The state also should proceed with care. Reference to church-state relationships in the U.S. Constitution is made in quite general terms; applicable criteria for guidance in specific cases have not as yet been defined for general acceptance.

As a contribution toward further examination of the implications of the Hill-Burton Act for proper church-state relations, the following propositions are posed for consideration:

1. There is a place in society for private, voluntary, and public hospital programs. The allocation of public tax funds for voluntary hospitals under special conditions does not commit either church or state to a policy giving such joint projects a first priority in its approach to this field. Each normally should act in the context of its proper functions: the church using its resources sacrificially and in love to witness to the compassion of Christ; the state providing hospital facilities in support of the public welfare whenever the need clearly exists, as the Hill-Burton Act stipulates.

2. Where voluntary hospital facilities do not exist or are inadequate, and local authorities with community concurrence judge it impractical or impossible to establish a hospital under public auspices, it is proper that supplementary public tax funds be granted to qualified voluntary groups, including churches, for the provision of such facilities (private hospitals operated for profit do not qualify). The purpose of the state in making such capital grants from public tax funds should be solely that of meeting a clearly recognized public need not otherwise served. Where churches are party to the transaction, sectarian objectives which are inevitably furthered thereby must be of incidental consideration. No facilities planned for sectarian objectives may be subsidized by means of these capital grants under the current legislation; this provision must be honored in letter and in spirit.

3. In accepting a grant of public tax funds, a church hospital must weigh carefully the implications of such acceptance, namely that some flexibility in services in order to respect the convictions and practices of patients coming from other religious traditions will be called for to a degree beyond that required if only denomination funds were used. To some degree, the use of public funds makes it a quasi-public institution. There may at times be a conflict between the convictions of a patient or member of the medical staff and the doctrines of a church operating a hospital. In such cases

the fact that the church has accepted public tax funds for the construction of hospital facilities should prohibit it legally and morally from imposing sectarian policies or any form of sectarian pressure upon persons of another faith. (The practice of conducting sectarian religious programs throughout a hospital via a public address system should be reviewed in this connection.) Cooperation between church and state in this instance would necessitate a procedural pattern often followed today whereby local pastors, priests, or rabbis, etc., are encouraged to meet patients' needs in harmony with their faith under a church's administrative "umbrella" without thereby compromising that church's objectives, ethical standards, or spiritual ideals. Where such a workable pattern is not found, a church hospital should not accept public tax funds.

4. The acceptance of capital grants from public tax funds should not be construed in any way as excluding the religious testimony which churches make by means of the health and welfare institutions involved. However, when conducting direct evangelistic activities the churches should be especially sensitive to the ambiguities of the situation. They should not take advantage of extensive facilities made possible only by supplementary tax grants, to imply a witness of their faith beyond that which their own gifts and services justify. Not only would an abuse of this nature violate the U.S. Constitution by using public tax funds to advance the interests of a particular church, but also it would compromise the character and integrity of that church itself.

The extent of the cooperation received through capital grants from public tax funds should be acknowledged as a matter of candor and appreciation by permanent records conspicuously placed in public view.

5. The requirement that voluntary hospitals receiving capital grants from public tax funds shall offer services to the entire community, without discrimination as to race, creed, or color must be strictly enforced.

In view of the complexity of this problem which contains greater pitfalls for the church than for the state, religious groups would do well to observe the following procedures: (a) Make every effort to finance their hospitals completely with their own resources and other voluntary contributions; (b) accept public tax funds for their hospitals only when the possibility of providing much-needed facilities under community auspices has been thoroughly explored and found not feasible; (c) if public tax funds are accepted, be scrupulous at all times in acknowledging the use of such resources in the construction of the buildings and in observing the ethical requirement of this fact with respect to the manner and extent of furthering religious objectives in a welfare institution thus financed.

The success of a church-state relationship so delicate and complex will stand or fall upon the alertness and integrity of the citizens and churches concerned.

The Problem of Open Spaces in Urban Development

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1961

Mr. WILLIAMS of New Jersey. Mr. President, it is difficult for a person who has never lived on a budget to start living up to one. The freehanded way of life lingers with us until we take stern, self-disciplinary action to overcome it.

As far as land is concerned, this Nation has never really relied on a budget. We have used up our acres as we needed them, and we have moved on when we had to. We have missed many opportunities for well-planned, intensive development; we have been profligate and heedless, particularly in our metropolitan areas, where unplanned development eats up our precious open land near big cities and within those cities. Each year we must move farther from downtown; we find our life more complicated by new distances to travel, new expenses to maintain our suburbs.

A bill I introduced recently would establish Federal responsibility to participate in a general effort to commit communities to continuous, comprehensive areawide planning. Open spaces would be preserved or developed; entire regions could chart intelligent development. This bill, I believe, could do much if it is applied vigorously, but it will not really be effective unless we have growing public understanding of the metropolitan area crisis.

I was particularly pleased, therefore, to read about a new proposal in Bergen County, N.J. There, the Home Builders Association of Northern New Jersey has proposed a broad-based campaign to pool the knowledge and interest of many persons and groups concerned about the effects of countrywide population boom.

As a State planning official said at the first meeting of the new group:

> We should remember on the other hand that we are wasting the most important commodity we have—something not even found in a bank—land.

Mr. President, I believe that the Bergen experiment is worthy of close study by others faced with similar problems. I ask unanimous consent to have printed in the RECORD an editorial from the Record, Hackensak, N.J., of March 1 and an article by Real Estate Editor Dillon Karsian of the same newspaper on March 8. The article and the editorial clearly indicate the extent of the problem and the imaginative response already underway in Bergen. I might add, too, that the Record has, over the years, performed a valuable service to its readers and to the communities it serves by consistently warning about the serious growth problems in such a highly populated county. I also ask unanimous consent to have printed an earlier editorial that deals specifically with the open spaces bill.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

HOME BUILDERS' PLEDGE TO HELP TOWNS ACCEPTED

(By Dillon Karsian, real estate editor)

Officials of 59 of Bergen's 70 municipalities accepted with veiled optimism the pledge last night of the Home Builders Association of Northern New Jersey to cooperate in helping solve the myriad local problems produced by the county's population boom.

Bergen County's municipalities now have, in effect, a powerful new force to call on in seeking common solutions to mutual problems facing the architects of good community development—the home-building industry and local governments.

But, as it was acknowledged by the experts last night, successful community development is a continuing effort and only time can measure the real results of such a cooperative undertaking.

The meeting at the Casa Mana in Teaneck, the first of its type in county history, drew nearly 300 persons, including approximately 125 Bergen mayors, planning and zoning board members, and building inspectors.

Renewed endorsement of the builders' program came from the Bergen County Chamber of Commerce, the Bergen County Building Trades Council, the Architects League of Northern New Jersey, the American Institute of Planners, the New Jersey Society of Professional Engineers, and the New Jersey Association of Real Estate Boards.

Herbert A. Chary, head of the association's special committee on municipal affairs, explained the necessity of industry-government cooperation in order to derive the greatest benefits of building codes, planning, and zoning actions for Bergen's towns and their present and future residents.

This can be accomplished successfully, Chary said, if both builders and local officials recognize each other's problems and seek solutions producing mutual benefits in an atmosphere of cooperation, rather than antagonism.

The association, Chary said, will work with local officials to help prevent the placing of unnecessary burdens upon builders and at the same time uphold the town's safeguards to protect its residents. These burdens, he said, ultimately result in higher home costs and maintenance charges for the towns themselves.

State planner Alvin E. Gershen, introduced by builder president Paul Losick, gave his emphatic endorsement to the builders' program.

"It's about time," he said, "that people interested in community development sat down to discuss community development."

The action has been long overdue, and only the marriage of industry and government can solve New Jersey's population woes, he said, pointing out that while the State grew 24.7 percent in the past decade, Bergen's population gained by 44 percent.

"Don't we know that large-acre zoning really solves nothing?" Gershen asked. "I don't say that we shouldn't have large lots, but we should remember on the other hand that we are wasting the most important commodity we have—something not even found in a bank—land."

He asked the builders and local officials to explore the advantages of density zoning in order to preserve open space.

Density zoning permits a builder to develop on smaller plots a certain portion of a subdivision, leaving the remainder of the land as open space or as a park area.

Gershen is chief of technical operations of the division of planning and development of the State department of conservation and economic development. He also heads the Meadowlands Regional Development Agency.

THE REGIONALIZATION OF A COMMON CAUSE

When the Home Builders Association of Northern New Jersey meets with officials of Bergen County's 70 towns next week, the occasion may inaugurate a new and welcome relationship. If the major barrier which has traditionally separated these two groups, mutual distrust, can be whittled away even slightly (and there's no reason why it shouldn't be), the ultimate beneficiaries will be Bergen County residents present and future, by hundreds of thousands.

What the homebuilders propose through their new committee on municipal affairs is simply to inculcate in builders and municipal officials alike a livelier appreciation and understanding of each other's problems. The good will and cooperation that would flow out of such understanding would supplant the current ritualistic clashes which

so often produce costly litigation and bitterness.

It is hoped the time will come when towns preparing legislation will call on experienced homebuilders to present their views on technical points—not to subvert the town's intent but to avoid creating unnecessary and often costly obstacles for the builder. These costs ultimately are borne by the home buyer and the town.

The venture has the endorsement of the Bergen County Chamber of Commerce, the Bergen County Building Trades Council, the Architects League of Northern New Jersey, the American Institute of Planners, the New Jersey Society of Professional Engineers, and the New Jersey Association of Real Estate Boards.

It is abundantly clear to these groups that government and industry must work together to derive the greatest benefits from construction codes and zoning and planning decisions. No program of this kind has been even attempted elsewhere, but there's no better place to begin than here in one of the fastest growing areas in the Nation. The effort has yielded a limited success in at least three Bergen County towns. There's no reason to let it stop there.

CAN YOU PROPOSE BETTER SOLUTIONS?

New Jersey's experience with Federal aid is far from heartening. The State pays out almost $2.50 for every $1 in Federal aid it gets back. And there is something like $7 billion of Federal aid in the 1961 budget. Senator WILLIAMS, Democrat of New Jersey, wants to add $100 million more, for open area. Reluctant as many Jerseymen are to espouse more Federal aid for a State that has to come out on the small end, some of the points Senator WILLIAMS makes are all but unanswerable.

Consider, for instance, this excerpt from his latest "Report Home," the Senator's semi-monthly newsletter.

"We are now urbanizing at the rate of more than a billion acres a year. In the last 15 years we have put almost two-thirds as much new land to urban uses as we did in all the previous years in the history of our country. We all want this growth to continue. But there is a difference between growth and sprawl. The question is whether we wish to continue with our haphazard, wasteful, and often deeply unsatisfying pattern of development or whether we wish to create something of lasting value to marshal our resources and revitalize our entire urban environment, both at the fringes and at the center."

If this is not all microscopically germane to Bergen County's growth pattern, what Senator WILLIAMS has to say next certainly is:

"Out in the sprawling suburbs, for instance, communities find themselves building five small schoolhouses to serve the same number of children that attend one larger school in the higher-density centers, because there is just so far that children can travel to school. Since there is hardly a one-family house that yields sufficient tax revenue to pay the costs of educating a child living in it, little wonder that homeowners are feeling the pinch on their property taxes and the communities and the States are looking to the Federal Government to share the burden."

Yet, with all this talk about open area and the scarcity and cost of land, we continue to employ conventional methods of development which methods are perhaps the most inefficient and wasteful we could design. Mr. WILLIAMS has an idea there too:

"To cite just one of the many ways in which open space can be related to urban development, the architect Victor Gruen proposed that the 516-acre Whitney estate in Old Westbury be developed as a cluster development (of the kind) which was first made famous in Radburn. If one were to build 247 houses on conventional 2-acre plots, the entire tract would be covered. Instead Gruen proposed that 96 percent of the land to be kept open for golf courses, tennis courts, and wooded areas and that the same 247 dwellings be clustered in the remaining 4 percent of the land in attractive town-house style."

Mr. Gruen is sometimes regarded as fanciful. Mr. WILLIAMS has proposed a big Federal grant. And perhaps New Jersey is not ready fully to accept either.

But if we are to avoid the sprawl that Mr. WILLIAMS mentions; if we are to keep open areas; if we are to provide education and still not have confiscatory real-property taxation, then we shall have to do a good many things we do not relish and have not done before. We shall have to update our thinking. There are hopeful signs. The proposal by Mr. WILLIAMS is one. Governor Meyner's Green Acres plan is another. But until people demonstrate that this or something like it is what they want, government is not likely to make them take it.

Taxation Eye-Opener

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shelbyville News of March 13, 1961:

TAXATION EYE-OPENER

In a column some time back from Washington, Lyle Wilson of United Press International, made this observation.

"Tax withholding by the employer so dulls the tax bite as to foster the belief among citizens that they are getting something for nothing in the way of services and benefits when the Federal Government pays the bill.

"This state of public mind is well known to politicians. The politicians take advantage of it when confronted with a crisis of almost any kind almost anywhere."

Truer words were never spoken.

And perhaps no one has realized these facts more poignantly through the years than Publisher Don R. Peterson of the Truman (Minn.) Tribune, whose experiment in fostering employee awareness of Federal surgery on his earnings we have previously applauded. This, as you may recall, consisted of leaving the full pay in the envelope for 3 successive paydays, and then taking the full withholding out of the 4th week's remuneration. Thus, the single man who got $100 a week for 3 weeks found only $14 in his envelope the 4th week. With one dependent, the 4th week pay of $23.60 would still seem pretty skimpy.

We would now like to quote from a letter from Publisher Peterson to Editor Bob Taylor of Washington Exclusive, and passed on to us. He says:

"Said (brain) child is now 2 months old, and our employees are still with us. Our shop foreman, Les Wiborg, has not let up in his earthy descriptions of the Federal tax program. 'Tis music to my ears to hear someone else describe the never-to-be-sufficiently-damned Federal tax bite, as my voice is weary and my typewriter a worn-out piece of junk as a result of fruitless efforts in that direction during the past 16 years.

"For the first time, our employees comprehend when I tell them they are working 3 months on up for the Federal Government each year."

We are happy to pass along this report, especially since we said earlier this year that this would jolt a few people, at least, into awareness of some of the fiscal facts of life. We also said, and we would like to repeat it now, that wide adoption of the "Peterson Plan for Eye-Opening" would bring effective tax reform—and quickly.

In fact, as Bob Taylor says, it is likely that such needed tax reform could be accomplished by a similar demonstration by a single large national manufacturer.

Hungarian Freedom Day

SPEECH
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. ADDONIZIO. Mr. Speaker, it is a privilege to join in paying tribute to the heroic Hungarian people on the 113th anniversary of the Hungarian revolution of 1848. This memorable occasion is celebrated by Hungarians throughout the world as a national holiday.

The revolution of 1848 in Europe constituted a landmark in the history of many nationalities there, for it was that stirring mid-century event which roused and revived the idea of nationalism and the desire of subject peoples to free themselves from the oppressive yoke of alien rulers. This was true in many parts of Europe, but particularly so in the Austrian Empire. The autocratic government in Vienna was successful in holding down a number of nationalities through the ruthlessly efficient despotism in Vienna headed by that sworn enemy of liberalism, Count Metternich.

For more than 200 years Hungarians had been living under Austrian rule, subject to an alien regime in their homeland. Their past attempts to free themselves had not been successful, but the revolutionary events weakened the government in Vienna, and thus assured the Hungarians certain success in 1848. In March of that year they drew up a list of their grievances, presented it to the Austrian authorities in Budapest and demanded freedom. On March 15 the government granted these demands, thus allowing freedom and autonomy to the Hungarian people. That date became a turning point in their struggle for freedom, and to this day it remains as their national holiday, their Freedom Day.

On the 113th anniversary celebration of that event we recall also the Hungarian revolution of October 1956 and its ruthless suppression by the Reds. But neither the loss of Hungarian freedom in 1849, nor their subsequent sacrifices in the October revolution of 1956, have dimmed the Hungarian spirit for freedom and independence. In that spirit

they and their friends celebrate their Freedom Day.

It is fitting that on this glorious date in Hungarian history Americans express their sympathy and concern for the brave Hungarian people.

Basin Work Sped on the Arkansas

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. KERR. Mr. President, on Monday, March 13, 1961, a very timely and informative article describing the Arkansas River navigation and development program appeared in the New York Times. I ask unanimous consent that this article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BASIN WORK SPED ON THE ARKANSAS—DEVELOPMENT GROUP IS TOLD OF ADVANCES IN OPENING RIVER TO BARGE TRAFFIC

(By Donald Janson)

TULSA, Okla., March 11—An imagination that could sail a fleet of barges into landlocked Oklahoma was a prerequisite for a 2-day meeting of the Arkansas Basin Development Association here this weekend.

What is more, there was little doubt among the 400 engineers, industrialists and planners at the annual gathering that the dream would come true.

Nor was there much doubt that even such unlikely places as nearby Catoosa, a town of 500 persons on the shallow Verdigris River, would become thriving ports in the wake of the introduction of barge traffic to Oklahoma.

Catoosa, 450 miles from the Mississippi, is the western terminus for a $1,200 million Federal project to open the meandering Arkansas River and the Verdigris, a tributary, to navigation.

A SLUGGISH STREAM

Just a look at the silty, listless Arkansas is enough to convince the layman that the sluggish stream is no seaway for a prairie fleet of towboats and barges. Most of the time it displays far more dry bed than water.

But Lieut. Gen. E. C. Itschner, Chief of the Army Engineers, and a battery of subordinates were on hand to assure the association that the project not only was no pipe dream but would also be finished well ahead of its 1975 completion date.

With the completion of a nine-foot channel to Catoosa, Senator Robert S. Kerr of Oklahoma said at the meeting, "there will be an industrial run into this valley just like the run for land into the Cherokee Strip in 1889."

The Arkansas will be the last of the major Mississippi River tributaries to be made navigable. The plan calls for 19 locks and dams between Catoosa and the Mississippi. This engineering feat will turn the lower Arkansas and Verdigris into a slack-water channel similar to the upper Mississippi.

Four of the dams, already under construction, will be large ones, creating reservoirs and producing power. Seven more upstream reservoirs on the main stem and tributaries in eastern Oklahoma will store water for use in the navigation channel when it gets low, to prevent flooding and to generate power. Some of these have been completed.

Dikes will restrict and further control the channel and dredging will help keep it deep.

Besides navigation, flood control and power, the Arkansas Basin development plan will create recreation possibilities in Oklahoma, which has no natural lakes.

Industry is already moving in, Senator KERR said, in anticipation of cheap water transportation, hydroelectric power, and a plentiful labor supply.

Rogers and Fort Smith, Ark., and Muskogee, Okla., have acquired new plants. Other big concerns are surveying the possibilities.

PLAN PORT AUTHORITIES

Oklahoma and Arkansas have passed laws permitting cities to set up port authorities. Little Rock and Pine Bluff, Ark., recently organized authorities. Tulsa and Muskogee are planning them.

Industrial diversification is widely desired in the valley, whose oil-and-agriculture economy has sagged significantly.

"This plan will provide a cradle in which an industrial complex equal to that of the Ohio Valley can be born and reared," Senator KERR said. "With low-cost water transportation, the Arkansas Valley can give birth to a petro-chemical industry equal to that on the Gulf of Mexico."

Gov. J. Howard Edmondson of Oklahoma agreed. Gov. Orval E. Faubus of Arkansas said that the navigation channel presaged great gains for his hard-pressed State. Gov. John Anderson, Jr. of Kansas, noted that since the 1,400-mile-long river crosses his State, too, any future extension could benefit Kansans.

Senator KERR was a prime mover in developing the multipurpose plan when he was Governor of Oklahoma in World War II. The project was authorized by Congress in 1946 but little was done for a decade. Now the pace of construction is being stepped up in an effort to make navigation to Catoosa a reality by 1970, the weekend meeting was told.

The speedup fits in with President Kennedy's call for action in developing river basins throughout the country.

In his message on natural resources 2 weeks ago, the President called on Congress to authorize the establishment of study commissions for all major basins that lack adequate development plans. Representatives of three basins already have begun investigating the comprehensive Arkansas Valley plan as a possible model.

A big benefit of the slackwater system to Oklahoma and Arkansas will be savings in water transportation rates over present rail rates. Heavy traffic is also expected to open the valley to exploitation of hitherto largely untapped reserves of natural resources, including coal and bauxite. Natural gas and crude oil are also plentiful for petrochemical operations or low-cost fuel.

Exercising Our Freedoms

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. CAHILL. Mr. Speaker, I am very happy to insert in the CONGRESSIONAL RECORD an outstanding essay written by Miss Anna St. Petry, a student at Paulsboro High School, Gloucester County, N.J. This essay was adjudged the winner in a "Voice of Democracy" contest sponsored by the Veterans of Foreign Wars of Gloucester County.

I have read the essay with a great deal of interest and satisfaction because it once again demonstrates not only the insight into the meaning of democracy but the deep appreciation that the youth of our Nation have for the privileges they enjoy under our system of government.

I commend the Veterans of Foreign Wars for sponsoring such a project and personally congratulate Miss St. Petry on her winning entry. The principal and teaching staff of Paulsboro High School can well be proud of this outstanding young lady.

I am happy to insert Miss St. Petry's essay in its entirety:

EXERCISING OUR FREEDOMS

Democracy is an important part of our lives, every day and every year. It is the very basis of our way of living.

Have you ever paused to realize how fortunate we are to have a voice in our Government? How we are free to voice our opinions, favorable or unfavorable, about our country?

Democracy, as we know it, is many things—but most of all, it is the freedoms we have—the freedoms of choice, religion, press, and speech.

We realize and recognize these privileges all too seldom, but in an election year such as this, they are brought to our minds as matters of great importance.

We saw two men chosen as presidential candidates by representatives of the people. These men were chosen by the people, not by a superior authority and forced upon the people.

Each candidate had the liberty to campaign in his own behalf—trying to win the majority of the public to support the ideals and principles which he had set forth. To accomplish this goal, he and his supporters took full advantage of their freedoms.

Freedom of the press was recognized at that time probably more than at any other. The newspapers and magazines printed what they felt were the true facts about each candidate, regardless of how many copies would be sold. They felt that the public should have the opportunity to be well informed if they chose to take advantage of it. Many, many people did, and therefore, they were able to cast a more intelligent vote.

Perhaps, more now than ever before, our Nation can fully realize the vast importance of freedom of religion. For the first time in the history of our country we will have a President of the Catholic faith. He was chosen, not because of his religion, but because the individuals of our Nation felt he could best fulfill the duties of the Executive Office and best safeguard our heritage of democracy and freedom.

Each party was given as much time on the air as they felt necessary to sway public opinion. Individuals could exercise their rights for the benefit of their favorite candidate. Although we exercise this right every day, we don't realize how important it can be until an election year. Other governments of the world have candidates just as we do, but they can't voice their criticisms as we do.

After listening to and reading the pros and cons of each candidate, the Nation went to the polls to exercise perhaps its most important privilege—voting. Each voter chose for himself the candidate he felt best suited for leading our country for the next 4 years. This choice was made freely and according to each individual's own way of thinking.

Only here, in our country, which is more often than not referred to as the melting pot of nations, can we find what we might call a melting pot of freedoms—a place where not one or two, but all may enjoy many freedoms.

Here in the United States we truly enjoy all freedoms and only here can we freely enjoy liberty to its full extent.

Here, when we attend the church of our choice, vote for the candidate of our choice, read the newspaper we choose to read, and speak freely at any time to anyone we choose—then we are saying, loudly enough for all nations to hear, we speak for democracy.

Housing, Long-Term

EXTENSION OF REMARKS
OF

HON. WILLIAM HENRY HARRISON

OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. HARRISON of Wyoming. Mr. Speaker, notwithstanding the much-publicized and stirring challenge that the people of the country "ask not what the Government can do for them," this body has received from the author of that challenge a message on housing which contained far-reaching provisions designed to provide something for all segments of our population.

Under leave to extend my remarks in the RECORD, I include the following editorial from one of Wyoming's leading daily newspapers, the Casper Tribune-Herald, under date of March 12, 1961, which offers some considerations Members will find pertinent in their deliberations on the housing program:

HOUSING, LONG-TERM

The President has sent to Congress a housing program carrying a price tag estimated at $3.25 billion. He referred to it in terms of urgency as an antirecession measure, noting that the housing industry—one of the largest employers of labor—"has been depressed and housing output has lagged," with one out of every six construction workers jobless by the end of 1960.

The beetfields and fruit orchards offered little opportunity for productive effort at that time, either.

And if housing output has lagged, it could easily be that construction has pretty well caught up with demand. Even so, there were 1.26 million starts in 1960, which is not far below the peak construction year. Officialdom rarely notes that lags are lags from peak and that production remains at a very high level.

But Mr. Kennedy's program is oriented in another direction. Of the $3.25 billion total, $2.5 billion is earmarked for grants and loans for the elimination of urban blight. Most of the housing items are designed to finance more housing in the lower price ranges to meet the unfulfilled demands of moderate income families, along with those of still lower incomes who must rely on low-rent public housing.

For the latter, perhaps the most controversial of all housing items, the President asked authorization of 100,000 additional units.

He told Congress the Nation has both the responsibility and the opportunity to "remold our cities, to improve our patterns of community development, and to provide for the housing needs of all segments of our population."

Which is pretty easy acceptance of a misplaced responsibility.

Still, Congress is apt to go along with much of the program. Of the voiced criticism, one complained that more was not asked for communtiy facilities, another that so little attention was paid to veterans' housing.

As if to underscore his purpose, Mr. Kennedy proposed that the housing agency be raised to Cabinet status, which would put a stamp of permanency on the whole program, with stress on urban affairs.

So far as that goes, it is seriously argued that if farmers are represented by a governmental department, so should urban dwellers be represented.

There is about as much need for a new department at Cabinet level as there is for a hole in the head. In that way does Government constantly grow, and federalization expand. Urban assistance, it might be noted, is not limited to blight; it is spoken also in terms of transportation, even with the suggestion that this might be made a Federal responsibility.

In such things, the first step taken, there is no end.

We might hopt that in considering the housing program, Congress will look beyond the humanitarian values which are given such great stress, and probe the long-term political implications.

Address by Hon. A. S. Herlong, Jr., of Florida, at the 16th Annual Convention of the National Limestone Institute, Washington, D.C., January 18, 1961

EXTENSION OF REMARKS
OF

HON. HOWARD H. BAKER

OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by my colleague, Congressman A. S. HERLONG, JR., of Florida, at the 16th annual convention of the National Limestone Institute, Inc., January 18, 1961, Washington D.C.:

As a member of the Ways and Means Committee of the House of Representatives it is our responsibility to provide the revenue to meet the spending needs of the U.S. Government. Not only must we do this, but we must do it in such a manner as will be as fair as possible to the greatest number of taxpayers, and without following tax policies that will stifle incentive or hold back economic growth.

Too frequently in the past when the need for money arose, Congress simply took the easy way and raised tax rates.

Because of the fact that there are fewer people in the upper brackets it has been the natural tendency of the man in politics to shift the burden to these few because in so doing there is less fear of political reprisal from great numbers of the people.

It has been pointed out by the chairman of our committee that of all the money presently raised in taxes by the Federal Government, only $4½ billion is raised by surtaxes—that is, personal income taxes on taxable income over $2,000 for a single person and $4,000 for a married couple. Yet the present rates are so steeply progressive that the tax rate on taxable income in the $16,000 to $18,000 bracket is 50 percent and it climbs rapidly from there to 91 percent.

Our country is in the midst of a tremendous population growth. It is estimated that by 1975 the population will be in excess of 225 milion. This means that there will necessarily have to be some 20 million additional jobs provided for these new people. It is further estimated that it costs between $14,000 and $17,000 of investment capital to provide one job. If we are to provide jobs for these new people, we must make more capital available for investment.

The avenue of bond issues and extensive borrowing, or the issuing of stock, is open to the very large business in order that that business might expand. Unfortunately, these same avenues are not open to the small- and medium-size businessman who would like, and who is entitled to, the privilege of expanding his enterprise. There is no justifiable reason why a person whose business is relatively small should be prevented from getting larger.

In my judgment, the only sound and fair way we can provide this capital for people and businesses all up and down the income tax scale is to permit them to retain a larger portion of their earnings. To do this, it would necessarily mean a reduction in our income tax rates from top to bottom.

Your natural question in this regard is: How can we who are so concerned about our national budget being balanced afford to reduce taxes when we have before us an $80-plus-billion spending budget?

Of course, the first answer to this question is that our spending budget doesn't have to be $80-billion-plus. I earnestly hope we will be able to hold it below that figure. In this connection I don't need to remind you that the revenue demands of the U.S. Government are gaged by the amount of money we in the Congress spend. How much we spend is triggered by the demands of you, the people, for Government services, and of course by the requirements of the national defense establishment. Until these demands and needs are appreciably reduced, it would be unrealistic to say that we were not going to have to continue to take large sums from our people in taxes.

The answer to the question, then, as to how we can afford to reduce tax rates when we are confronted with this situation is, in my judgment, that the expansion of our economy which would be brought about by the making of additional capital available for investment and creation of more jobs would more than make up the difference in net revenue to the Government. The point I mean to make is that we have reached the point of diminishing returns taxwise. It is an historical fact that in the past when tax rates have been reduced, net income to the Federal Government in succeeding years increased, rather than decreased. It's the old story of the merchant who needs to raise cash. He doesn't raise his prices. He has a sale and lowers them and takes in more money—and, of course, in the process, more net profit. He has created incentive for people to want to buy. The Government can likewise create an incentive for people to want to invest, and can also through reduction in tax rates help provide them with the money to invest.

If this incentive for expansion and the growth which it generates isn't enough to "take up the slack," there is also this fact: Our gross national product normally increases about 3 percent a year. It has been shown that every percentage point increase in our gross national product brings in about a billion dollars in internal revenue. We could, therefore, feel safe in reducing tax rates to a point which would equal $3 billion a year and still, because of our natural growth, not have a deficit. This single factor, however, is contingent, and the contingency is a pretty big if. We would not have a deficit with such a tax cut if Congress held down expenditures. We cannot

continue to spend in the same lavish way we have been spending—increasing our spending budget each year even more than the increase in our revenue—and expect to have a balanced budget. It is important that Congress exercise some restraint. For Congress to exercise this restraint, it will be necessary to the people back home, to lower their demands of the Federal Government.

The next question that arises is—is there a comprehensive plan for the accomplishment of this reduction in income tax rates which will result in a rebirth of incentive to invest and expand, and which will promote the growth of our economy without inflation? The answer is in a bill which Representative HOWARD H. BAKER, of Tennessee, and I introduced the other day. I understand we have since that time been joined by a number of other Members of Congress who have also introduced identical legislation.

The basic principle involved in this legislation is a gradual reduction in tax rates over a period of 5 years. Individual income tax rates would be brought down, by the end of the 5th year, from a top rate of 91 percent to 47 percent. The first bracket would be reduced from 20 percent to 15 percent, and there would be a corresponding reduction in all the rates in between.

The top corporate of 52 percent would be reduced from 52 percent to 47 percent by an annual reduction of 1 percent over the 5 years. Almost 85 percent of our total business population, as you well know, is composed of unincorporated firms, and surely they should not be taxed at higher rates than corporations.

There are predictions that by tax rate reform we can raise the annual average family income of the American people from $6,500 annually to $11,500 annually in the next decade and without inflation.

It is my conviction that these steps can be taken without creating deficit spending or a net loss in revenue, even if we are to be saddled with Federal spending at the current level—but no higher—in the foreseeable future. But we must, as I have said, hold down our spending.

I am convinced that we need not continue to spend what we are spending; but even if circumstances compel us to do so, the proposed legislation has a built-in safety valve to protect us against deficit spending, which is so highly inflationary, by the simple formula of postponing rate reductions in any year when an unbalanced budget is threatened. This could stretch out the 5-year reduction period by not more than 4 additional years.

The revenue effect of the Herlong-Baker bill would average less than 3½ billion annually, or the equivalent of a 3.5 percent rate of economic growth.

With new funds for investment and job creating, in this country, we can foresee as much as 5 percent average rate of growth over the next 5 years, with a revenue increase rather than decrease of more than $1 billion annually, above the direct effect of the scheduled reductions and reforms in our legislation.

I believe also that our bill has a built-in virtue that will help convince the American people that tax reform is essential to their future.

Many of you undoubtedly participate in incentive and profit-sharing plans in your plants. Some of you may use a bonus system in creating stable labor forces and loyal workers. I hope that you have found that such plans also reduce waste and costs, for this is one of the pillars on which our tax reform legislation is based.

By promising our 60 million income taxpayers a forward-scheduled tax reduction—where they have a clear choice between a tax reduction or no tax cuts because of increased Federal spending—we will enlist them as individual participants in the war against excess spending and waste.

We offer them a partnership in economy and saving on a national level. If they exercise their right of petition and insist on Federal spending only for those services which are essential at the moment, they will profit during the 5 years in which we propose to establish tax reform. If not, an annual tax saving will not accrue.

This will, as a byproduct, in my judgment have a salutary effect on appropriations, for it will take a brave man in the legislative branch to deny a tax reduction to an anticipating constituency by a last-minute, budget-upsetting spending spree.

We must not lose sight of the fact that tax reduction proposals short of thorough tax rate reform will fail to provide the competitive forces we need in the Nation today to put the brakes on Federal spending.

There is a critical urgency about this business of tax reform. Capital-destroying tax rates are a luxury we can no longer afford. Our excesses in spending and in taxing are producing wrinkles in our economy, just as the excesses of individuals produce their telltale signs on those individuals.

Moderation is good for all of us. It is good in the field of tax reform, which provides for both individual and corporate tax relief.

Our potential for growth is nurtured by the spirit which created our freedom in the first place.

Our pioneer with his wooden plow ventured into the unknown forests and left his monument to courage.

We have improved the tools of our progress vastly since then. The means to build them still better, for the future of the land, must not be denied the bold and adventurous today.

Our failure to free the means whereby any one of you can build on your dream of a better missile, a bigger steamshovel, a more tamed atom, could well be catastrophic.

Let us not make that mistake, or allow our Government to make it for us, as we march together toward a new realism in America and the highly competitive world in which we live.

Foreign Invasion of U.S. Sheet Glass Market

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the principal points of a statement by Robinson F. Barker, vice president, glass division, Pittsburgh Plate Glass Co., before the U.S. Tariff Commission on March 14, 1961.

Mr. Barker has made a distinguished presentation of a problem that is acute not only in the glass industry of Pennsylvania, but is a matter of diminishing returns if not complete oblivion to many segments of our economy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ROBINSON F. BARKER, VICE PRESIDENT, GLASS DIVISION, PITTSBURGH PLATE GLASS CO., AT THE U.S. TARIFF COMMISSION HEARING ON SHEET GLASS, MARCH 14, 1961

My name is Robinson F. Barker. I am vice president and general manager of the glass division of Pittsburgh Plate Glass Co. and have been in the glass business for over 25 years.

My company—Pittsburgh Plate Glass—manufactures glass, paints, chemicals, fiber glass, plastics, brushes, and other products. The principal glass products we manufacture include sheet glass, plate glass, laminated glass, tempered glass, structural glass, and optical glass. We believe that Pittsburgh Plate Glass Co. produces about one-third of the sheet glass manufactured in this country. It is my understanding that sheet glass is the only product involved in this hearing.

I appreciate the opportunity to appear here today to present facts concerning the serious injury our sheet glass business has suffered as a result of the foreign invasion of the U.S. sheet glass market. The injury—already severe—threatens to assume even greater proportions in the years immediately ahead.

The extent of the injury already suffered and whether the domestic industry can continue to survive the ever-increasing onslaught of foreign imports, it seems to me, are the very serious questions which are now before this commission in the pending investigation.

Before addressing myself to these and other questions, I invite your attention to the fact that prior to the August 1960 hearings my company filed with you a detailed memorandum in opposition to further reductions in the existing tariff rates applicable to sheet glass. That memorandum was supplemented by my appearance before you on August 17, 1960. Other representatives of the domestic industry, labor and members of Congress also appeared on that occasion.

Subsequently, on November 17, 1960, the Commission issued notice of this investigation under the escape clause provisions of the tariff act. Thereafter we were visited by members of the Commission staff and have received various requests from them for additional information, all of which we have supplied to the best of our ability. Of course, we have also answered and filed the detailed questionnaire we received from the Commission in connection with this investigation.

You now have the Pittsburgh Plate Glass sheet glass story in detail. However, in the event you have need for any further information, we shall be pleased to be of whatever assistance we can in that regard.

With your permission, I plan today to give you facts concerning the competitive problems confronting us in our sheet glass operations and also to speak candidly to certain questions which you may have in mind.

First, I would like to dispel two notions about the company-owned distribution branches which are operated by Pittsburgh Plate Glass merchandising division. On the one hand, those unfamiliar with our company sometimes contend that our merchandising division branches utilize most of the glass produced by our factories. That is not the fact. During the 1955–60 period, the amount of sheet glass shipped to our company-owned outlets ranged from 19.8 to 24.8 percent of our total domestic sheet glass shipments. From this it is obvious that Pittsburgh Plate Glass is much more dependent on the sheet glass business it obtains from its nonowned customers than it is from its own branches.

The other notion which conceivably might arise from Pittsburgh Plate Glass ownership of company-owned branches would stem

from the fact that these branches actively compete with independent distributors whom our factories are endeavoring to sell.

Since the late 1930's our merchandising division has opened a number of new branches in order to give better service to our customers. That fact has been alluded to in some quarters as an act which is inimical to the best interests of our factories' independent distributor customers. Such a contention would assume that whenever Pittsburgh Plate Glass opens additional branches, the activities of these branches will so dilute the business of competing glass dealers that the dealers' volume will be reduced. In such a case presumably the business of their distributor suppliers would be similarly affected. Were this the fact, it would seem to follow that with its additional company outlets Pittsburgh Plate Glass would distribute more of its own sheet glass through them than it formerly did. Such is not the case. Thus, in 1950, 26.7 percent of our total domestic shipments of sheet glass were made to 171 company-owned branches. In 1960, shipments to 294 company-owned branches represented 23.4 percent of our total domestic shipments—a reduction of 3.3 percentage points. In terms of the quantity shipped to company-owned outlets in those 2 years, it should be noted that the 1960 shipments represented 450,000 actual boxes less than the quantity shipped in 1950. Also relevant to this notion, it seems to me, is the fact that in 1950 Pittsburgh Plate Glass shipped sheet glass to 466 independently owned factory customer establishments. In 1960, this number had increased to 612—an increase of 31.3 percent.

To summarize this point, in 1960 we shipped 23.4 percent of our total domestic shipments of sheet glass to our 294 company-owned branches. In the same year we shipped 76.6 percent of our total domestic sheet glass shipments to wholly independent companies.

The fact that the U.S. sheet glass industry is losing the domestic market is readily apparent from the statistics your staff has developed during this investigation. As you know, the ratio of imports to total domestic shipments in 1955 was 15.4 percent. Three years later—1958—this figure had increased to 27.2 percent and last year reached an all-time high of 32.5 percent.

During the same period U.S. exports of sheet glass declined substantially and now amount to less than 1 percent of total domestic shipments.

In my appearance before you on August 17, 1960, I discussed in some detail the reasons which have contributed to the loss of a substantial part of our domestic market to the foreigners. It is not my purpose today to repeat what I said on that occasion. However, I do believe it would serve a worthwhile purpose if I were to summarize those reasons and as to those where there have been additional developments I shall endeavor to bring you up to date.

The principal reasons which have contributed to the successful penetration of our market by the foreign producers are as follows:

1. There is equality of technology, labor skills and productivity among foreign and domestic producers of sheet glass.

2. Ocean freight rates constitute no barrier to imports into the United States.

3. The foreigners have an overwhelming cost advantage over the domestic producers. This is true not only with respect to labor costs but also with respect to raw materials cost. In addition, replacement and repair costs and research and development expenses are appreciably lower abroad, primarily because of the lower labor costs they enjoy.

4. Our tariffs have been completely ineffectual in equalizing or offsetting the overwhelming cost advantage held by the foreign producers. The tariff on sheet glass in recent years has declined sharply—from an equivalent ad valorem of 60 percent in 1939 to an equivalent ad valorem of 14.8 percent in 1959. The cumulative effect of the series of tariff reductions made over the years necessarily has assisted the foreign producers in capturing a substantial share of our market. The latest in that series of reductions took place in 1958, the year in which the ratio of imports to total domestic shipments jumped dramatically to 27.2 percent from 17.1 percent in 1957.

5. With their tremendous cost advantage, the foreign producers can and do undersell us consistently in this market.

The summer and fall of 1960 witnessed a number of price gyrations. Although the amounts of the differentials between the prices of the foreign producers and Pittsburgh Plate Glass varied from time to time during that period, the cold, hard fact of the matter is that foreign sheet glass continues to be sold at considerable price differentials below our domestic prices. Thus, today the amounts of those differentials range from 8.1 percent to 12.2 percent in the case of the prices of western European producers and from 13.3 percent to 18.9 percent in the case of Japanese producers.

There was considerable testimony before the Commission yesterday regarding the impact of the 18-ounce and 24-ounce products in the American market. There was also considerable discussion whether the indicated discounts at which such glass was sold below the prices for the standard 19-ounce single strength and standard 26-ounce double strength products were justified. From time to time Pittsburgh Plate Glass has given study to the possibility of producing glass in these thicknesses in the United States.

Our decision up to this time has been that it would not be economical for us to do so. Simply stated, our reasons are that the standard thicknesses which have prevailed in this country for many years have been the 19-ounce glass, or so-called single strength product, and 26-ounce, or the so-called double strength product. As indicated this is traceable, at least in part, to Government specifications. You have already been informed that the total market represented by sales under Government-prescribed specifications is quite small. The expression was even used, I believe on yesterday, why did we American manufacturers allow a so-called tail—representing this small percentage of the market based on 19-ounce and 26-ounce specifications—to wag the dog of a very much larger market which could apparently be adequately and satisfactorily filled by 18-ounce and 24-ounce products?

So far as Pittsburgh Plate Glass is concerned, we have felt a real obligation to continue to supply glass responding to the precise specification DD–G–451a established by our Government. Our studies have also established to our satisfaction that consistent with this sense of obligation, if we were to attempt to undertake manufacture at the same time of 18-ounce and 24-ounce products, the possible savings in cost which have been suggested would be largely illusionary, if they exist at all. Specifically, we feel that to attempt to produce the small quantities of 19-ounce and 26-ounce single and double strength specification glass and at the same time and in our same plants and with the same equipment also attempt to produce 18-ounce and 24-ounce glass to supply the very much greater nonspecification market would involve so many additional production scheduling and inventory problems as to wholly defeat the possibility of effecting cost savings on the mix of thicknesses involved in such a program.

On the contrary, based upon our studies, it is our belief that our costs on such an undertaking would be increased for all four thicknesses. It is entirely possible that we may be driven to the abandonment of the 19-ounce and 26-ounce standard products conforming to Government specifications and to confine our production to the 18-ounce and 24-ounce products exclusively.

However, the prospect of the voluntary abandonment of any segment of our domestic market, which has already been riddled by low cost, foreign competition is repugnant to us. Even if we should take this drastic action, the heavy losses which we have suffered as a consequence of low-cost, low-price foreign glass in our markets in recent years have afforded convincing proof that any lower level of prices we might thereby hope to establish would be wholly insufficient to meet the demonstrated ability of foreign competitors to reduce their prices to whatever extent necessary to take the business.

The essential thing which I desire to impress upon the Commission in connection with this whole situation is that foreign manufacturers—at least in the case of those competitors located in Western Europe—supply to the American market these four types of glass; namely, 18 ounce and 19 ounce in single strength category, and 24 ounce and 26 ounce in double strength category, and that the prices they quote on 18- and 24-ounce glass are even lower than the already low prices they quote on 19- and 26-ounce glass. The Japanese, on the other hand, do not even publish quotations in the United States on 19- and 26-ounce glass; they quote only 18 ounce and 26 ounce for single and double strength.

We say to you simply this: That with the exception of the very small portion of the American market which is controlled by the Government specifications requiring 19-ounce and 26-ounce products, the Western European producers are offering and supplying throughout the United States single strength glass in both 18-ounce and 19-ounce thicknesses, and double strength glass in both 24-ounce and 26-ounce thicknesses. Concerning the single strength product in 18- and 19-ounce thicknesses, the products are commercially interchangeable; the physical differences are hardly discernible, and can be determined only by precise testing; the products are bought and sold, and applied for the same uses and purposes, and are in every sense directly competitive. The same conclusions are equally applicable to the 24-ounce and 26-ounce products.

We would also invite the Commission's attention to the fact that thicknesses tolerances for 18-ounce glass, which are contained in the specifications of the foreign producers, permit the foreigners to sell as 18-ounce glass a product which is slightly thicker than our minimum tolerances for 19-ounce glass and the minimum tolerances set forth in the Federal specifications for single strength thickness. The same situation applies in the case of the foreign producers' thickness tolerances for 24-ounce sheet glass as compared with our 26-ounce double strength glass and the Federal specifications applicable to that thickness.

Although we know of no governmental statistics which disclose the relative proportions of 18-ounce and 19-ounce for single strength glass or 24-ounce and 26-ounce for double strength sheet glass imported in these categories into the United States from Europe, we believe that on the basis of all the trade information received by us that a very high percentage of the so-called single strength and double strength sheet glass imported into this country is in 18-ounce and 24-ounce glass respectively. For your information, single and double strength

sheet glass represent the largest volume items in our sheet glass line.

Turning now to questions which might be raised by those who would attempt to minimize the injury which has been sustained by us as a result of the successful foreign penetration of this market, the first question might involve the assertion that the impetus for the high volume of foreign imports was provided by the fact that in some past periods of time the domestic producers had inadequate capacity to serve the U.S. demand. It is true that during 1955 and 1956 sheet glass was often in short supply. This phenomenon, of course, was not confined to the sheet glass industry. Rather, it also occurred in many of the major industries in this country, e.g., steel, aluminum, cement, heavy chemicals, to name a few. The reason why this occurred in many American industries is explained by the fact that the economy was literally bursting at the seams in those years and also operating at its alltime highest levels.

Interestingly, many of the industries which experienced temporary shortages of supply during those years were industries having heavy capital requirements. I will have more to say about this latter point further in my statement. I would point out here, however, that during most of 1954 the domestic sheet glass industry operated at levels far below its capacity. Thus, when the economic boom of 1955 suddenly emerged, our domestic industry, like the others I have mentioned, was not fully prepared for it. The fact remains, however, that even if we had decided in 1954 to add additional capacity at a time when business was off, it would have taken a minimum of two years' time to design, engineer and construct the new capacity needed to meet the boom which, by the end of 1956 at least, so far as sheet glass is concerned, had already run its course.

The last shortage of sheet glass in this country ended in 1956. Ever since then we have had substantial unused, idle capacity, more than sufficient to take care of any increased demand. I will emphasize here that increased demand has accrued since 1956, but we have gotten little benefit out of it because most of the benefit has gone abroad.

It so happens that prior to 1955 our company had been giving consideration to the question of whether we should build another Sheet Glass plant which necessarily would have the effect of increasing our capacity. I actively worked on that project over a period of many months. On September 30, 1955, we publicly disclosed our plans for the construction of a multimillion dollar sheet glass plant in the vicinity of Decatur, Ill. The construction contract was awarded in the early fall of 1957 and the plant went on stream in April 1959.

The decision to carry through the building of our Mount Zion, Illinois plant—Mount Zion is located near Decatur—at a time when we were operating well below the level of the 1955 and 1956 period, took courage. I say that because of the heavy fixed capital requirements needed to produce sheet glass. Implicit in our decision to build that new plant was a recognition of the absolute necessity that the plant contain the most modern technology to obtain high quality at low cost. Nearly 2 years' operating experience with that plant shows that those needs were met—high quality, low cost. I wish to emphasize here the fact that the Mount Zion plant required a very heavy investment in fixed assets on the part of our company. It goes without saying that an investment of this magnitude, with the attendant risks of obsolescence from technological changes and intense competition, can only attract the necessary capital if the profits derived from the investment are commensurate with the risks.

The decision to build our Mount Zion plant did not carry with it any idea that we would abandon our investment in our existing sheet glass plants. Rather that decision was made to place ourselves in a position to satisfy a growing market which we felt would develop. At the same time we carried forward our continuing program for process improvement in our existing sheet glass plants.

In retrospect, it is now quite clear that even before our Mount Zion plant commenced operations, substantial unused capacity was present in the domestic sheet glass industry. Since then Mount Zion, of course, has created additional idle capacity.

While all economic indications point in the years ahead to a period of steady growth in the American economy, clearly the domestic sheet glass industry is not sharing in that growth, such as it exists today, and every indication is that it will not share in any future growth. If the recent past is indicative of the future, the foreign producers will reap the benefits of the projected growth of our economy because of their cost and price advantages. This is the dismal picture which presently confronts the domestic sheet glass industry.

I would also invite your attention to the recent address of the President of the United States before the National Industrial Conference Board on February 13, 1961. On that occasion, President Kennedy had this to say with regard to economic growth:

"The economic program which I have set before the Congress is essentially a program for recovery—and I do not equate recovery with growth. But it is an essential first step. Only by putting millions of unemployed back to work can we expand purchasing power and markets. Only by higher income and profits can we provide the incentive and the means for increased investment. And only when we are using our plant at or near capacity can we expect any solid expansion. Capacity operation is the key. No matter what other arguments or stimulants are used, the incentives for investing new capital to expand manufacturing plant and equipment are weak so long as manufacturers are operating at less than 80 percent of capacity."

We emphatically agree with these statements of the President of the United States. It is imperative that we obtain profits that are commensurate with the risks if we are to continue to have the incentive for increased investment. Too often the degree of profit of a given business is superficially determined by looking only at the profit as a percent of sales. To measure all industries by that single standard is unrealistic. Certainly industries having heavy fixed capital requirements must earn a substantially higher rate of return on sales to provide a satisfactory rate of return on investment. It is equally important that heavy industry, in order to obtain a satisfactory rate of return on investment, must operate at a higher level of capacity—as President Kennedy stated: "Capacity operation is the key."

In sharp contrast with the President's minimum goal of operations at not less than 80 percent of capacity, I can tell you that we have not met that goal in any year since 1956. Indeed during the last 4 years and down to the present we have fallen considerably short of that goal.

Today we are operating only at about 60 percent of our capacity. The number of our unemployed sheet glass factory workers represents approximately 25 percent of our normal factory worker complement. Our inventories last summer were then at an alltime high but our inventories are even higher today than they were then. This, of course, means that while we are operating at only 60 percent capacity, we are by no means able to sell all the glass we are producing at that rate.

We firmly believe that a substantial part of the difficulties we have been experiencing in our sheet glass operations are the direct result of the large volume of low cost, low price foreign glass coming into this country. We believe further that this large influx of foreign glass and the appropriation by foreign manufacturers of an ever-increasing portion of the American market are the result, in whole or in part, of the successive reductions which have been made in the tariff duties applicable to sheet glass.

We see no real hope of reestablishing ourselves in the American market and, particularly, in sharing in any growth in this market, unless effective tariff relief be granted. Accordingly, on behalf of Pittsburgh Plate Glass, I fervently urge that the Commission complete this investigation at the earliest practicable date and recommend to the President the maximum relief possible under the law.

Cornell University Petition Against HUAC

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition signed by 528 members of the Cornell University community which was sent to the Congress urging abolition of the House Committee on Un-American Activities. Among the petitioners were 52 professors, 93 graduate students, and 312 undergraduates:

CORNELL PETITION TO ABOLISH THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE (HUAC)

Last week 528 members of the Cornell University community signed a petition to the Congress urging the abolition of the HUAC. Among the petitioners were 52 professors, 93 graduate students, and 312 undergraduates. (The text of the petition and the complete list of signatures is attached.)

The petition marks a period of intensive student activity on civil liberties at Cornell. Students were goaded into action by the showing in downtown Ithaca of the HUAC-supported film "Operation Abolition," a distorted version of the anti-HUAC demonstrations in San Francisco last May, and they took their cue from a nationwide anti-HUAC petition that appeared as an advertisement in the New York Times on February 9.

About 30 students participated in the drive for signatures and the concurrent campaign to enlighten the campus on the dealings of the HUAC. Some of the students canvassed faculty members for signatures. The main student effort was concentrated on mounting a huge display in the lobby of the student activities building on the Cornell campus, Willard Straight Hall. Relays of students manned a desk for 5 days to collect signatures for the petition. The literature displayed included San Francisco Chronicle reports of the May demonstrations, the text of the film "Operation Abolition," a California student analysis of the film, reprints of anti-HUAC editorials and articles, resolutions and petitions from across the Nation (including the New York Times and the Washington Post).

The sentiment that all is not well with the state of civil liberties was seen to be so strong on the Cornell campus that the

students have decided to form a permanent organization to plan further action in support of civil liberties. Already 70 students have signed up. One of the immediate aims of this student organization is to raise the funds to place the anti-HUAC petition in the campus newspaper as an ad.

Dr. Willard Uphaus, who was on the Cornell campus last week to give an invited talk on the first amendment, sat at the desk in the Straight lobby with the students for a time. In his lecture he urged everyone to sign the petition, and signed it himself.

Both the two new Cornell student journals, Controversy (edited by four graduate students) and Dialogue (edited by two freshmen), featured editorials and articles on the HUAC in their current issues.

Other recent related student activities were the picketing of Sigma Chi fraternity in protest over its overt discriminatory clause, a demonstration mourning the death of Patrice Lumumba in which Americans joined Cornell students from Africa, a rally last December at which about 300 students and faculty signed a telegram to President Kennedy urging him to come to a speedy agreement on a nuclear weapons test ban, picketing of the local Ithaca bomb shelter exhibit last December, etc.

PETITION TO THE HOUSE OF REPRESENTATIVES OF THE 87TH CONGRESS OF THE UNITED STATES

We, the undersigned students and faculty of Cornell University and friends, petition the 87th Congress to eliminate the House Committe on Un-American Activities as a standing committee.

We are confident that only a return to constitutional procedures can protect us against subversion without at the same time subverting the very liberties we seek to protect.

For two decades the committee has condemned individual Americans, has wrecked the lives of some, and has denied them the due process of law that English and American courts have toilsomely evolved over centuries.

The committee has habitually misused its mandate in unconstitutional ways for political purposes; it has become an agency for repression; it has usurped the functions of the executive and judicial branches of our Government.

1. The committee has perverted, and thereby imperiled, the proper and necessary powers of the Congress to conduct investigations.

2. The committee has helped discourage free study and inquiry in working for peace while the world is threatened with destruction.

3. It has harassed Americans who work for racial equality and justice.

4. It has increased bitterness between racial and religious groups of our citizens, which in turn has imperiled our good relations with the peoples of Asia, Africa, and Latin Amercia.

5. It has discouraged social and cultural contacts with our neighbors on this shrinking planet. It has discouraged U.S. students and scholars from studying in countries which we Americans desperately need to understand.

The House Committee on Un-American Activities has in these ways weakened America. At no time in our history have we needed to be stronger. At no time have we needed to be wiser. Let us rid ourselves of this agent of weakness and folly.

Italy: Old Yet Young

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. PUCINSKI. Mr. Speaker, March 17 marks the 100th anniversary of the unification of Italy. I am taking the pleasure today of calling to the attention of my colleagues an excellent editorial which appeared this morning in the Chicago Daily Tribune commemorating this anniversary.

I am very happy to join today in this tribute to Italy, a nation that has given the world great scholars, artists, composers, and philosophers. It would indeed be a most difficult task to attempt a complete analysis of the great contribution Italy has made toward enriching the cultural standards of the world. Suffice it to say that the entire world is rightfully grateful to this magnificent nation for its many contributions.

We in America have a particularly close relationship with Italy because Italian immigrants, from the very birth of our Nation, have been prominent in our Nation's cultural, spiritual, and industrial development.

I am sure that all Americans will join tomorrow in paying tribute to Italy and wishing this great nation every best hope for its second century as a unified country. Let the cynics and the skeptics, who so frequently have maligned this distinguished race with distorted television productions, ponder the real contribution to America and the world by the people of Italian heritage.

Mr. Speaker, the editorial follows:

ITALY: OLD YET YOUNG

One hundred years ago tomorrow, a legislature convened in Turin, at the foot of the Alps, proclaimed the kingdom of Italy. Though the dream of a united Italy is very old, the ancient city of Rome is today the capital of a national government now just completing its first century.

In 476 a Barbarian army revolted against its exclusion from the rich peninsula of which Rome was the principal city, and the foreign legions with which imperial Rome had overawed much of the known world finally roosted on the seven hills of the capital. The center of gravity moved north; Charlemagne's principal capital was Aix, now the German city of Aachen. Through dark ages and renaissance, princelings contended with each other in Italy. Out of generations of conflict, no unified government of and in the Italian peninsula emerged. Cities such as Florence and Venice had their golden periods, but there was no Italian nation.

At one time or another, the French, the Spaniards, and the Austrians were ascendant. Napoleon Bonaparte for a few years played a commanding role, and dominated all Italy except for the islands of Sardinia and Sicily. With his fall, power again splintered. From the unlikely source of Sardinia the process of unification began from scratch.

A reasonably flexible King of Sardinia, Victor Emmanuel II, presided over the effective consolidation of a realm reaching from Sardinia as far north as Geneva. In a Parliament of growing strength, the future architect of Italian unity appeared in Count Camillo Cavour. Exiles and rebels who in an earlier time would have left Italy altogether began to gather in Turin.

In 1859, Sardinia and France in alliance struck successfully against Austrian power south of the mountains, but France pulled back before Sardinia could annex more than Lombardy. The tide was running for the revolutionaries, though, and one small area after another declared for union with Sardinia. At this crucial point, by ceding to France its provinces of Nice and Savoy, Sardinia purchased French acquiescence to its expansion in Italy.

In Sicily, an uprising against the unpopular government at Naples was reinforced by Garibaldi and a thousand men from Genoa. Garibaldi moved on against Naples, which he occupied in September 1860. On the excuse that if he did not move against the papal states Garibaldi would, Cavour sent troops through those territories. When they made contact with Garibaldi, one regime at last had authority the entire length of the boot. The way was prepared for the proclamation in Turin the next spring of a kingdom of Italy; soon after, Cavour died.

Venetia, previously ruled from Vienna, was incorporated in 1866. In 1870, when the destruction of Napoleon III's Empire in the Franco-Prussian War deprived the Pope of his strong support from Paris, the new Italy gained temporal power in what had been left of the Papal States. In a sense, the unification of Italy had finally been achieved.

Of course, every nation is perpetually redefining its character. For a time it looked as if the unification of Italy would flower in nothing more admirable than the strutting nationalism of Mussolini. Fortunately for Italy and the world, the country has made a magnificent recovery from World War II, a recovery accompanied by marked economic advances and more particularly by a rebirth of the Italian genius in the arts, sciences, and letters.

Contemporary Italy, for both better and worse, lacks the degree of uniformity and unity which characterizes many nation states. The various regions have deep roots in different subsoils, watered and fed by different degrees of development and prosperity. Only against the background of its tumultuous centuries and the brevity of its national experience can present day Italy be understood.

Creeping Socialism

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1961

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial published March 11, 1961, in the Saratogian, Saratoga Springs, N.Y.:

CREEPING SOCIALISM

Near the shores of the Potomac in the massive agriculture building, a new group of state planners is cooking up a program of farm controls that makes the New Deal look like an exercise in free farming.

The American people—farmers and nonfarmers—ought to realize what's coming. And they ought to understand that they can't depend on just Congress to block it.

Already, Kennedy's new Secretary of Agriculture, Orville L. Freeman, has given a foretaste of what's to come by upping cotton support prices and sponsoring a bill to impose tighter controls on feed grains.

This legislation has a gimmick in it which permits the Federal Government to sell surplus grains and knock the bottom out of the market, just to punish farmers who don't want to cut back their acreage. It's having rough sledding in Congress, but the Freeman crew won't give up easily.

This is nothing, however, compared to what's coming later. There's a Minnesota professor named Willard W. Cochrane in the Agriculture Department now and he's working overtime dreaming up new control ideas.

One approach involves "the conscious adjustment of supply to demand, commodity by commodity, year after year, to yield prices in the market that have already been determined fair by some responsible agency," in Cochrane's words.

From that program, it's not a very long step to Government controls over the marketing process and perhaps even to Government regulation of what kind of food Americans will eat, all in the spirit of conscious adjustment of supply to demand.

This will mean higher taxes and a vast bureaucracy if the farmer is to be made to comply and if his income is to be protected, as the New Frontiersmen seem determined to do.

These are the reports from Washington, undenied, almost incredible to hear. Call it socialism, call it state planning, call it anything you like. It all adds up, in our view, to a frightening extension of Government control in prospect unless somebody blows the whistle, and quickly.

The City of Davenport, Iowa, Adopts a Resolution Urging Approval for Right of Municipalities To Buy Surplus Property

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. SCHWENGEL. Mr. Speaker, I understand that many municipalities have gone on record favoring approval of the right to purchase surplus Government property on the same basis as school districts and civil defense units.

The city of Davenport, Iowa, recently adopted a resolution to that effect. I take this opportunity to bring it to the attention of the Members of Congress.

The resolution follows:

RESOLUTION RELATIVE TO THE PURCHASE OF SURPLUS U.S. GOVERNMENT PROPERTY

Whereas the Federal Government of the United States now possesses, and will acquire in the future, surplus property; and

Whereas the surplus property is stored and sold at various points in the United States; and

Whereas it has been, and is sold, to school districts, civil defense and like organizations on a preferred basis; and

Whereas much surplus property still remains unsold that is purchased by private parties for speculation; and

Whereas the Government property was purchased with the taxpayers funds; and

Whereas a municipality is a tax body that should be afforded the same preferences afforded other taxing bodies, such as,

school districts and civil defense: Now, therefore, be it

Resolved by the City Council of the City of Davenport, Iowa, That we hereby urge the President and Vice President of the United States, and the U.S. Congress, to take the necessary steps to accord the same privilege to municipalities as now enjoyed by school districts and civil defense in purchasing surplus Government property: Be it further

Resolved, That copies of this resolution be sent to the United States Senators and Representatives from the State of Iowa.

Passed and approved this 1st day of March, 1961.

DON A. PETRUCCELLI,
Mayor.

A Menace to Our Freedoms

EXTENSION OF REMARKS
OF
HON. JAMES C. CORMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. CORMAN. Mr. Speaker, under unanimous consent I include the following editorial from the Los Angeles Times in the Appendix of the RECORD. It is a most inspiring and forthright exposure of a deadly menace to our freedoms, and one I would commend to all my colleagues. The articles which preceded this editorial provide a shocking but accurate picture of the blind philosophy and treacherous activity of the John Birch Society and its leader, Mr. Robert Welch. The articles are on file in the Library of Congress, and I would also commend those to my colleagues as required reading.

The editorial follows:

PERIL TO CONSERVATIVES

The Times published last week a heavily documented series of articles which defined the nature and methods of the John Birch Society in the words of its absolute master.

The quotations from Robert Welch, and from some of his lieutenants, nail down the treacherous fallacy that an honorable or noble objective justifies any means to achieve it.

Our fear of the John Birch Society is based on our own findings, on the meticulously researched articles written by Gene Blake. In them it can be read, within quotation marks, that Communists must be fought with their own weapons, smear for smear. Even—and the quotations are brutal—with sedition.

Every conservative must adhere to the general purpose of the society as it is stated by Robert Welch: "to promote less government, more responsibility, and a better world."

Every loyal American must agree devoutly with the society's immediate intention of stopping the Communists and destroying their conspiracy, or at least breaking its grip on our Government and shattering its power within the United States.

And every informed American must agree with the society's tenet that the United States is actually now engaged with Soviet Russia in a struggle for the survival of our system.

With all honorable Americans, this newspaper looks with disgust and dream upon the godless materialism and blood-soaked tyranny of the Communist conspiracy. It is because of our people's disgust and dread that the Communists must seek their ends by secret subversion, by seducing officials, by discrediting our institutions, sowing distrust among us, aggravating union and racial disputes, entering without conscience into any course that will serve the purpose of Moscow.

Then what is likely to happen to the member of the John Birch Society who abandons all the rules by which he has lived his decent life, and adopts instead the techniques and the rules of conspiracy to fight Communists in Communist fashion?

If the John Birchers follow the program of their leader, they will bring our institutions into question exactly as the Communists try to do. They will sow distrust, and aggravate disputes, and they will weaken the very strong case for conservatism.

What are we to think when our last three Presidents—Roosevelt, Truman, and Eisenhower—are accused either of being Communists or Communist dupes?

What are we think when these charges are leveled against Secretary of State John Foster Dulles, against his brother Allen who heads our vital Central Intelligence Agency, against the Chief Justice of our Supreme Court?

What are we to think when the honor and integrity of the Vice President of the United States, the Republican Party's nominee for President, are questioned?

What are we to think when we are told that our Nation's press almost without exception is Communist infiltrated and inspired?

What are we to think when we are told that our churches almost without exception are corroded with active agents of Moscow?

What is happening to us when all loyal Americans are accused of being Communist dupes unless they subscribe to the radical and dictatorial direction of one self-chosen man?

All sincere conservatives must ask themselves these questions. And they must answer them.

The Times believes implicitly in the conservative philosophy. It has challenged all these men and most of these institutions on the soundness of one or more issues. But the Times does not believe that the argument for conservatism can be won—and we do believe it can be won—by smearing as enemies and traitors those with whom we sometimes disagree.

Subversion, whether of the left or the right, is still subversion.

Finnish-American Trade Amity

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. PHILBIN. Mr. Speaker, it was reassuring to learn of the recent offer made to Finland by the Ministerial Council of the European Free Trade Association for that democratic country to become an associate member of the organization. Finland, with its vigorous private enterprise system, offers expanded trade opportunities, not only to the seven countries that make up this important trading bloc but with the United States as well.

Two-way commerce between Finland and this country is on the increase and I consider this a very healthy development. I understand that in 1960 U.S. exports to Finland nearly doubled the total of the previous year and our imports to Finland were about 12 percent higher than in 1959.

These cordial relationships are greatly desirable and gratifying because they do much to preserve the historic and cherished amity between our Nation and the great Finish nation and its devoted people.

To me, this valuable program has a more intimate significance because of the large number of people of Finish descent who live in my district. These good people are constituents of mine, of whom I am very proud. The magnificent contributions of Americans of Finish descent to this Nation in war and in peace are second to none.

An interesting and factual account of diversification within the Finish economy, and an indication of some of the export activities engaged in by this small but enterprising nation which is accelerating its industrialization, can be noted from an article that appeared in a McGraw-Hill publication "International Management Digest." I request unanimous consent to have this report printed in the CONGRESSIONAL RECORD.

[From International Management Digest, October 1960]

LETTER FROM HELSINKI

Prior to World War I, Finland's famed distance runner, Hannes Kolehmainen, literally ran his country onto the map of the world. The map has changed considerably since then. But until recently, the Finns have not bothered much about telling their story to the world—and especially to the business world.

Now the Finns are coming out of their Nordic hibernation. They are excited about the growing diversification of their economy; they are proudly pointing to new export successes in Western markets. You could see a changed Finland at last month's Finnish Industries Fair, in Helsinki. One-third of the space was reserved—not for the traditional forest industries—but for the metalworking industries. (Finland's wood, pulp, paper, and board still add up to nearly 80 percent of total exports, and when bad times hit the forests, the whole nation suffers.)

Look at the progress in metalworking. Capacity has been expanding at a healthy 7 percent annually, providing today 17 percent of total exports. Mining, too, is assuming greater importance (note the new undersea iron mine off the southern coast, to be producing 300,000 tons of ore by 1962; a joint Finish-Swedish venture will process the ore). Nor is the forest industry standing still—it is in the midst of a $340 million expansion, to be completed in 1962.

Growing production—in a nation of only 4.4 million—is making the Finns export hungry. And they are getting results by following two business principles and an unusual marketing effort.

The first principle lies in specialization. The Finnish metalworking industry concentrates on offering paper and sawmilling machines, cables, electric motors, transformers, icebreakers and refrigerator ships, and materials-handling and earth-moving equipment. (Finns believe their rugged terrain has inspired some especially well-engineered heavy equipment.)

How successful? Kone of Finland supplies 50 percent of Sweden's harbor cranes. Valmet is building a tractor works in Brazil.

The second principle is to concentrate on the potentially good markets, in the industrial and semi-industrial nations, not so much the underdeveloped lands (the Finns have real difficulty granting extended credit terms). In the process, Finland is breaking

its trade dependence on the Russians. For one thing, the Finns are tired of the caprice of the purchasing agents in the Kremlin; for another, they are meeting much stiffer competition from other westerners in the Communist market. One big Finnish company, which once sold 60 percent of its exports behind the Iron Curtain, now reports the total is only 7 percent. By 1965, Finns believe that 50 percent of their metalworking exports will go west, compared to 35 percent now.

To market its machinery exports, the Finns set up Metex Corp., a private company linking 42 member firms with 87 factories and an annual turnover of $250 million. The roving salesmen of Metex have made contacts in about 100 foreign markets, and won contracts to build factories or supply major machinery components in 23 nations, from India to South America.

The Finns also hope their European trade may improve, now that Mr. Khrushchev has given his tentative blessing to Finnish membership in the European Free Trade Association. The price: a guarantee providing the Russians with the same trade privileges that the Finns would grant to EFTA members. Next month, President Kekkonen will journey to [illegible]w to start negotiations.

Our First Line of Defense

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. ABERNETHY. Mr. Speaker, there are altogether too many folks who do not appreciate or understand our immigration program and its effect.

It is always encouraging to find leadership that is helping to get an understanding of such important legislation as the McCarran-Walter Act. I recently read an editorial entitled "Our First Line of Defense" in a recent issue of Life Lines published in Washington, D.C., which I believe my colleagues and readers of the RECORD will be interested in.

The editorial follows:

OUR FIRST LINE OF DEFENSE

The Immigration Act of 1952, known also as the McCarran-Walter Act, was under consideration in Congress for 5 years prior to its passage. It codified earlier laws on this important subject, and liberalized them considerably. It established an annual quota for each country of one-sixth of 1 percent of the number of U.S. citizens lately derived from that country. We admit to our shores well over 150,000 immigrants each year, together with special cases which almost double the number.

Preference is given to skilled workers, who can support themselves and their families and contribute to the arts and crafts needed in this country, while relatives of persons already absorbed into our population are accorded welcome up to the very limits of practicality. In addition to formal entrants, we have within our borders nearly 1 million nonquota, displaced persons and refugees, plus an unestimated number of foreign visitors, who have overstayed their temporary permits, plus 3 to 5 million of outright aliens who have arrived illegally.

The United States has been generous in admitting those who knock at our gates. Our immigration laws are adequate when weighed on honest, realistic scales. Although we are accused in some quarters of being cold and selfish because we do not admit aliens indiscriminately and without restriction, there exist a few good reasons for maintaining our carefully evolved immigration policies. It is not selfish to assess and safeguard our national interests. For if the United States falls to invasion of one type or another, then, all over the world, freedom will perish. The immigration front is our first line of defense.

Well-organized forces of the mistaken are solidly entrenched, urging repeal of the McCarran-Walter Immigration Act, or at least a drastic revision thereof, to lower our immigration barriers. According to a recognized authority on immigration, Congressman FRANCIS E. WALTER, the mistaken "have advertised the brazen lie all over the world that, under present immigration laws, access to this country has been curtailed if not wellnigh closed." On the contrary, our quota and above-quota admissions are humane and not at all narrow, as witness the figures cited above.

Higher rates of entry would soon result in a state of supersaturation which, far from being humane, would be suicidal. Would that be commonsense? A sensible nation is like a sensible individual, in that either must be governed by the head as well as by the heart.

There are those who think we should invite all the poor, the hungry, the inept, and the afflicted from across the seas to come and share our bounty; some even advocate our paying their passage over—with American taxes adjusted, naturally, to meet the extra strain. But this is not a workable program because our bounty would not last very long in such circumstances. At best, this attitude is unrealistic and sentimental and needs to be analyzed in the light of economic facts and figures.

Our own population, thanks to a high birth rate and enlightened health care, is growing at the rate of 2.5 million or more each year. Therefore, the United States does not need new immigrants beyond the fixed quotas.

It may cause you some dismay to know that powerful forces are urging that the volume of our immigration be increased in the ratio of approximately 3 to 1. And you will be properly alarmed to realize that repeal of the Connally amendment would take control of our immigration entirely out of the U.S.'s hands and would place it with the World Court—an agency of the United Nations. There would be no appeal from decisions of the World Court. If we are not very alert—and cautious—our immigration problems will be settled for us, once and for all, in ways not to our liking.

INFILTRATORS IN OUR MIDST

The eminent Patrick Jay Hurley once observed that America's passion for liberty began with our Declaration of Independence in 1776 and ended with the disgraceful Conference at Yalta in 1945. He explained that, in the first instance, the American people cared; in the second, they had quit caring.

Is this indeed a just statement? If so, we die-hards, who do care, had better get busy and alert the quitters, who won't, for we are living in times more dangerous than our forefathers experienced in 1775 and the decade which followed. "Dangerous to what?" you may ask. The answer is: Dangerous to our lives and our sacred honor; dangerous to our freedom as opposed to a condition of abject slavery, such as that forced upon all peoples behind the Iron Curtain.

Abraham Lincoln's famed remark that "You can't fool all the people all the time" is being challenged by the Soviet Union's intensive efforts to do precisely that. The Reds are spending $2 billion a year to prove Lincoln wrong. A lot of that money is our money—funds which the Soviet Union owes the United States but refuses to acknowledge as indebtedness; also, funds which have been paid out by us in our worldwide program of foreign aid, much of which has gone to build up countries before they fell victims to Red takeover, much as pigs and poultry are fattened for holiday slaughter.

The doctrines of Karl Marx form the Soviet gospel. Marx assumed that the Western World would be too gullible, too idle, and too indifferent, to rise up and fight his sordid socialist principles, until Marxism should have been solidly established and the time would be too late. And it is true that Marxist socialism, which is identical with police-statism, has succeeded almost entirely because of the don't-care attitudes on the part of those marked next for enslavement. A recent Senate document says: "Totalitarianism moves ahead less on the conviction of its members than on the confusion of its opponents."

Let us take a quick look at some of the methods used by the mistaken to deceive and demoralize free peoples, and to condition them for tyranny. These methods must be worth examining, if they merit $2 billion annual expenditure by the Communists, who are the world's tightest guardians of the purse. Their own paid agitators are held in line by blackmail and other threats, because the fierce dictators long ago learned that intimidation costs less than regular salaries, and gets more effective results.

First of all, the mistaken go directly after the minds of a target people. They secure agents who, kept under strict control, will zealously, blindly carry out orders no matter if those orders call for murder, rape, or terrorization.

Here is another economy they cultivate: In every land today the Reds maintain only a relatively small, hard core of active and dedicated party agents; but here is the catch—each agent can count on the help, sympathy, and cooperation of ten or a dozen unpaid pro-mistaken fellow-travelers, who have become infected with the poison of selling out their native country to the enemy. In some cases, they are mere dupes, of limited mentality to begin with, happy to be associated with subversives they admire as being clever and influential. In other cases, they are so-called intellectuals and idealists, often heirs to vast fortunes piled up by their grandfathers, but afflicted with a terrible blind spot which prevents them from seeing that they are headed for a crash landing with no rescuer anywhere.

Such are the prime movers of mistaken propaganda and infiltration. Such are the advance guard scattered all over the world today, numerous enough for mass action and for taking over the vital machinery of public life when so directed.

In the second place, the communists make a specialty of manufacturing crises. Any kind of crisis will permit the mistaken to bore a little deeper into the vital spots of a target nation. After having deliberately caused a crisis, they shout from the housetops—and they fool a lot of people: "World tensions must be eased."

The ability of our enemies to stage a revolution makes the Communist Party highly dangerous even though its visible membership be small (with the main part undersurface, like an iceberg). An example of this was Guatemala, where the Reds seized power through third parties when their own membership was 1,000. Another example is Cuba, where Castro was able to unseat the existing government, constantly denying communist affiliation, until the day came when he openly stated what informed observers had known all along—that any enemy of communism was also an enemy of Castro.

Mistaken propagandists think of everything. They overlook no area—social, political, religious, or educational. The United

States is learning to look with dismay on the current products of progressive education, which would better be called regressive education. We can only hope that young people, as they grow older, will come to realize that the philosophy of the mistaken is bound to rob them of all they hold dear. It is our duty to help them see how erroneous subversive activities are for themselves and their fellow citizens. It is our duty to urge removal of the root cause—the presence of Communist infiltrators in our midst.

A Strange View of the World

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared in the Wall Street Journal of March 15.

This editorial says something that I have longed to have said for many a long day. Why should the United States of America assume the guilt and responsibility for every sin, misfortune, cruelty, and stupidity on this plan. Why, oh, why, assume to play God Almighty to the whole of mankind.

Mr. Speaker, this cannot be done. It never has been done and it never should be done.

A STRANGE VIEW OF THE WORLD

Is it not strange that whenever we Americans look at the woes of the world—be they in Asia, Africa, or Latin America—we must adopt all faults as our own, and announce to the world that we were born to set them right?

This strange view of the world, and of ourselves, is met again in the program for Latin America outlined the other day by President Kennedy. It is not that the President misstates the troubles that beset the Latin American countries. Latin America is an area, taken by and large, that has not accomplished its potentials. There are, in many places, much poverty, a lack of decent shelter, a want of education, and a needless blight of disease. It is also a land of discontent, as its many revolutions testify, and this discontent, as no one will deny, is a source of new troubles.

But there runs through the President's speech the thought that all these troubles in Latin America are somehow the fault of the people of the United States. Our revolution of 1776 is not yet finished; our hemisphere's mission not yet complete. The ignorance, poverty and the political instability of Latin America are a part of our unfilled task. They must, so we are told, lie heavily—that is, guiltily—upon our conscience.

Ours is the attitude of the rich man who feels he must apologize for his affluence. He has taken the envious comments of his neighbors at face value and ascribes it all to a fortunate Providence. And we say: Our riches are a poor and slightly soiled thing—but let us make you rich, too. And if your poverty is greater than our riches can assuage, we must share some of your poverty.

And so it is the duty of the United States to embark on a vast sort of Marshall plan for the New World. We must provide Latin America with capital, send them teachers and school lunches, provide money for their universities, help them recast their social and political patterns, fill their gaps in trained manpower, wipe out disease and in general help provide "resources of a scope and magnitude sufficient to make this bold program a success."

Of course, there is a touch of the ridiculous in talk of sending teachers abroad at a time when we complain ourselves of a shortage of teachers, of subsidizing foreign welfare projects when we are hard put to pay for projects promised here at home. And more than a touch of the ridiculous in a new vast plan for pouring out dollars when this country is already wrestling with a deficit in its present balance of payments.

But the strangest part is the view of history here reflected. The Latin American continent is as rich in resources as the northern continent, richer in some. The United States has done nothing to prevent the Latin Americans from developing their continent and has done much that would have helped them. If Latin America has failed to reach its potentials, it is for many and complex reasons, but there is no reason why this country should bear the burden of guilt.

Yet this assumption of guilt about Latin America is part of a view we assume toward many parts of the world we describe as backward or underdeveloped. Ignorance in Africa or poverty in Asia is somehow also our fault and therefore our responsibility to cure.

No one ever specifies what it was exactly that we did to impede civilization in Africa, uncivilized for centuries before a European ever set foot upon it; or to block economic progress in Asia, a continent civilized before Europe was born. We just accept without question the charge that it was all due to colonialism or exploitation. The fault never lies in the economic systems or in the political institutions of those lands themselves.

But if we thus misread history in taking upon ourselves all these guilts, we misread the world around us when we begin to think that this country can, out of its own resources, uplift all these peoples, dissolve their ignorance, banish their poverty and remake their societies and institutions. The basic troubles in these backward countries are not entirely to be solved by an infusion of dollars, and even if they were, we overpride ourselves in thinking that we are sufficiently strong to carry all these lands upon our own shoulders.

There is nothing particularly remarkable about the proposed new program envisioned for Latin America. It is of a piece with our grand design all over the world, and in its way more modest and therefore more promising than some.

Yet in its assumptions of guilt and in its vaunting of our own powers of redemption, it reflects, once again, our strange view of ourselves and of the world around us.

Charles Silver: A Man With a Heart of Gold

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. SANTANGELO. Mr. Speaker, one of the great humanitarians in America is Charles H. Silver. His contributions to charity are legion. His efforts on behalf of the Alfred E. Smith Fund are perennial and his devotion to the daily kindness to his fellow man is well known. Mr. Silver is president of the Board of Education of the City of New York, president of the Beth Israel Hospital, and president of B'nai Jeshurun, the second largest temple in the city of New York.

Because of his deep concern for the educational system of our city of New York and the impact that proposed Federal legislation would have upon a large segment of our youth, Mr. Silver testified before the Subcommittee on Education of the Committee on Education and Labor on March 15, 1961, in Washington, D.C. His viewpoints are worthy of serious consideration and I take the privilege of inserting them for the readers to peruse. His testimony follows:

STATEMENT BY CHARLES H. SILVER ON FEDERAL AID TO EDUCATION AT THE HEARING HELD BY THE HOUSE OF REPRESENTATIVES COMMITTEE ON EDUCATION, MARCH 15, 1961, WASHINGTON, D.C.

I wish to express my gratitude to the committee for inviting me to make a statement of my views at these hearings on the proposed legislation regarding Federal aid to education. I am honored that they should be sought and I am pleased to give them.

In addition to my duties as president of the Board of Education of the City of New York, I am also president of one of our city's hospitals, Beth Israel, and president of B'nai Jeshurun, the second largest temple in the city of New York which has been in existence for 135 years. I mention this to point out the extent of my involvement in matters of education and welfare.

Intimate experience in the field of education during the past 10 years has made me aware of the many and complex problems facing our young people and those responsible for their education. I have more than a passing or casual interest in the proposals being made. Any effort to help our boys and girls during the important and formative school years is a vital matter to me. Anything done to assist and reinforce the work of our teachers and all others involved in the educational process enlists my interest and cooperation.

The President deserves our gratitude for the concern he has shown, and for the practical and aggressive spirit with which he has so quickly and forcefully addressed himself to the problems of education on all levels. I do not know of anything more important for the present and future welfare of America than improving and advancing our standards for the education of all our young people.

I am justly proud of our New York public school system, the largest in the world. Staffed by 40,000 teachers and educating close to a million boys and girls in almost a thousand buildings, our system is entrusted with the serious obligation of providing the best education possible for the children of our great metropolis. It is our duty to give them the training they need for the fuller development of their own lives and for the greater progress of our country and all mankind.

For these reasons, I welcome and endorse the proposals made to assist our children and our schools. Such a program will do much to help us accomplish more fully the challenging task with which we have been entrusted.

It is quite obvious that the staggering problems and complexities involved in organizing, financing, and operating the largest school system in the world would indeed be greatly increased, if it were not for the

private and church-related schools, which provide the education for such a large segment of elementary and high school youth in New York City. They are, and have been for generations, partners of the public schools in this great work of education. These nonpublic schools presently enroll approximately 450,000 boys and girls—a total slightly less than one-half the number of 960,000 enrolled in public schools. Thus, one out of every three children in New York City of elementary and high school age attends a nonpublic school. All will admit that if these schools did not exist it would be extremely difficult for New York City to finance adequate and proper school programs and facilities for this army of children.

Most of the parents who send their children to nonpublic schools have accepted the heavy burden, not only of building these schools, but of meeting the costs of their maintenance and operation. Speaking from a financial point of view, may I ask you to consider the following basic and important facts:

If New York City were confronted with the situation, whereby 450,000 additional children came into the public school system, this would entail a capital outlay of $1 billion for the construction of school buildings.

If New York City were responsible for the maintenance and operation costs of educating an additional 450,000 pupils, it would increase the cost to the city by approximately $200 million each year.

Aside from this staggering sum of money which would have to come from public taxes, the public school system would have the problem of obtaining the services of additional properly qualified teachers in the face of a present national shortage. A total of 18,000 new teachers would have to be employed. This represents approximately one-half of the total teachers presently employed in our New York City school system.

This staggering financial burden would be multiplied scores and scores of times, if local and State governments throughout the Nation had the responsibility of providing educational programs and facilities for all children now enrolled in nonpublic elementary and high schools.

It is estimated that these institutions, with a total enrollment of 7 million pupils, save local and State governments an expenditure of more than $3 billion annually in operational and maintenance costs. An expenditure of approximately $16 billion would have to be made from public funds to provide buildings to house this student population.

Personally, I am seriously disturbed that the President's proposals for Federal aid make no provision for assisting the children in attendance at our private and church-related schools. It is disappointing that no assistance of any type is proposed for the parents who, by their free choice, elect to send their children to nonpublic schools. This exclusion of children in nonpublic schools does an injustice to the objectives we are trying to achieve.

The total educational picture in this country includes both public and nonpublic sectors. Unquestionably, our goal is improvement in education. No matter how much aid is given to the public schools, it is not possible to ignore so large a segment as that which exists outside the public domain, without falling short of our objective.

It seems to me that there are only two alternatives.

We can provide aid only to the public schools—thereby limiting our objectives, at the expense of our national well-being. To me, this is unthinkable.

On the other hand, we might seek to apply Federal aid to all schools, by a method consistent with our national principles. A diligent search for such a method seems to me to be the soundest approach to a solution of our total educational problem.

Federal aid will be a New Frontier for educational expansion and improvement. It is important to remember, however, that public and nonpublic schools have both played a vital role, and each has a valid function in the traditional educational structure of this Nation.

In the course of our history, the contributions of public and nonpublic schools have created a balanced effort that has enriched American education.

Any plan of Federal aid that excludes nonpublic schools would tend to destroy this balance and do a disservice to our country.

What I am trying to say, in capsule, is that the relationship and the relative positions of the nonpublic and public schools are firmly established in the social and educational fabric of our society.

If the Federal Government enters directly into the field of education, it should maintain the status quo in this area. The balance is a very delicate one. Unless it is maintained, all of education may suffer, and Federal aid, instead of a blessing, may become a divisive influence.

At this very time, we find differences of opinion about the principle and the method of Federal aid to education. Speaking as a Jewish layman, I would like to point out that Jewish opinion is by no means unanimous. I will read, if I may, some excerpts from a translation of an article by Solomon Dingol, editor of the Day and Jewish Journal, the largest Jewish newspaper in the country. I submit the original article, which appeared on January 28, 1961.

"As it can readily be seen, there are valid arguments on both sides, and different opinions prevail in different Jewish circles.

"Orthodox Jewry is for Federal aid to religious schools. At a recent convention of the Union of Orthodox Congregations, Prof. William Brickman, head of the School of Education of New York University, asked for Federal aid for the religious Hebrew schools, which would be merely an extension of the aid which some schools receive now.

"The American Jewish Congress, a civil Jewish organization, is opposed to Federal aid to parochial schools.

"As for myself, I am opposed to the introduction of religion in public schools, but I can see some benefits to education in Government aid for the teaching of general subjects in the religious schools."

The President himself has repeatedly emphasized the importance of developing, conserving and protecting our natural resources. Moreover, he has stressed the urgency of going to great lengths to keep and preserve our forests with their material potential, our waterways with their power potential, our farms with their food potential, our mines with their mineral potential.

But what of our greatest natural resource—our children? For they are all our children, no matter what school they attend. How can we honestly say we are interested in all children and in the welfare of our Nation, if we disregard or overlook the physical, cultural, intellectual, and social needs of approximately 450,000 boys and girls in New York City, attending nonpublic schools, and the 7 million who attend these institutions throughout the United States? After all, the money needed to improve our educational standards is not, in its ultimate purpose, being given to any school as such—public, private or parochial, but to our children.

The battle against ignorance and intellectual inadequacy, at a time when knowledge was never more vital for the preservation of our way of life, must be fought at every desk, in every classroom, library, and laboratory of every school in our land, regardless of religious or nonreligious affiliation, regardless of the race, color or creed of its students.

Maine's 100th Legislature

EXTENSION OF REMARKS
OF
HON. STANLEY R. TUPPER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. TUPPER. Mr. Speaker, on May 31, 1820, the first State of Maine Legislature convened to commence formulating laws for the new State which had gained its sovereignty from Massachusetts on March 15, 1820, via the famed Missouri compromise.

It took Maine's first legislative body 4 weeks to act on the pressing problems of that era, a task that today requires 5 or 6 months.

Maine is proud of its State legislature and of the many distinguished legislators who went on to gain national prominence in the past. To mention only a few—Hon. Hannibal Hamlin, Member of Congress and Vice President of the United States under Lincoln; Hon. James G. Blaine, U.S. Congressman, Senator, and Republican candidate for President; Hon. William Pitt Fessenden, U.S. Congressman and Secretary of the Treasury; Hon. Nelson Dingley, Member of Congress; and Hon. Thomas B. Reed, former speaker of the U.S. House of Representatives.

Yesterday, March 15, ceremonies commemorating Maine's 100th legislature were held at the State house in Augusta, Maine. I wish, as a former member of the Maine Legislature, to take this opportunity to bring to the attention of my colleagues this momentous occasion, and know you will all join me in wishing the Maine Legislature and the people of Maine another 100 years of successful legislation.

I would like to have the following remarks by the Governor of the State of Maine, John H. Reed, inserted in the CONGRESSIONAL RECORD:

REMARKS OF THE HONORABLE JOHN H. REED, GOVERNOR OF THE STATE OF MAINE

The annals of Maine history will note this memorable occasion made possible through the efforts of a great many individuals. Those responsible for this fitting tribute to the Maine Legislature, past and present, deserve credit and recognition. We are assembled this morning to commemorate all the legislatures which have served our State and great has been that service. I believe the 100th Maine Legislature is setting a record which assures its place in the history of State government.

Although the State of Maine separated from her parent Commonwealth 141 years ago today, the ties which binds Massachusetts to the State of Maine are strong. Ours is a friendship and a close relationship of which there is no equal in the nation.

The members of the 100th Maine Legislature can look back upon a proud heritage of 99 legislatures composed of dedicated citizens who have been called to serve this great State. The members of the 100th Maine Legislature may also look forward with confidence to a future filled with accomplishment, to a future of their own creation, and to a record which I am confident will go down in Maine history as a truly great act of service to the people of the State of Maine.

The Power To Tax Is the Power To Destroy

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House Committee on Ways and Means on March 15, 1961:

Mr. Chairman and members of the committee, I am Congressman EARL WILSON, of the Ninth Indiana District.

First, I would like to thank the members of this committee for the opportunity to appear here today. I am happy to appear here on behalf of the Cummins Engine Co., of Columbus, Ind. This industry is vital to our Nation's progress and safety, essential for the forward movement of our transportation industry and a fundamental factor in the economic progress of my district.

I hope to be able to acquaint this committee with many of the facts pertinent to this proposal which tends to discriminate against an industry through the raising of tax on diesel fuel.

I am sure you gentlemen have heard this quotation by Chief Justice John Marshall many times in the past—"The power to tax is the power to destroy."

Tax proposals contained in the President's highway message would, if enacted, verify the truth of that statement. A vibrant, growing, efficient American industry stands to be seriously harmed if not destroyed once the proposed diesel fuel tax increase is approved.

A very unjust economic hardship will be imposed on the diesel engine industry if the tax raise of 75 percent is enacted. This industry has prospered; not through government favoritism; but, through its own enterprise and ingenuity. To tax the efficiency and economy achieved by this industry's product, is a direct contradiction of our American principles and is, in fact, an attack against a fundamental idea of American life.

This proposed tax poses the threat of crushing the diesel engine industry if enacted. Furthermore, by placing a penalty on the success of private enterprise we will stifle further diesel development and serve notice that the future success of private enterprise will always be in danger of tax penalties. Actually, diesel motored trucks represent only 2 percent of the entire trucking industry.

This Nation's progress depends upon preservation of historic principles of freedom and private enterprise which have made our country the "land of the free." Any other course is another step toward discouragement of individual initiative, toward socialism and communism.

This proposed tax is a proposal to tax efficiency, industry, and initiative, and discourage development of new and better products, as well as work a hardship on a vital American industry.

For your consideration I summarize below my findings on the subject of the proposed discriminatory fuel differential tax.

1. Taxing diesel fuel at a higher rate than gasoline would result in taxing only 15 percent of the heavy duty trucks, i.e., 26,000 pounds registered gross vehicle weight and above.

2. Differential tax on diesel fuel in effect is a tax on the efficiency of the diesel engine and therefore discriminates solely against the diesel engine industry as compared to its major competitor the gasoline engine industry.

3. The proposed diesel fuel tax increase from 4 cents per gallon to 7 cents per gallon amounts to a 75-percent increase, yet the Bureau of Public Roads, in its own exhaustive studies (table 5, p. 14, H. Doc. 91, third progress report of the highway cost allocation study), found only a 5-percent to 18-percent advantage of diesel trucks over gasoline trucks, making this proposed tax clearly discriminatory.

4. Development of the diesel engine to its present state of superior efficiency has been accomplished by private industry, without Government subsidy in any form.

5. Diesel-powered truck owners already pay substantially higher Federal taxes in the form of excise taxes on new trucks and on engines and repair parts than do the owners of gasoline-powered trucks of equivalent carrying capacity.

6. Federal differential taxation on diesel fuel would encourage every State to apply similar taxation with the inevitable result that diesel engines could be taxed off the highways.

7. Our military defense vehicle dieselization program would be adversely affected through restricting the ability of the diesel engine industry to continue its privately financed research and development programs. (Department of the Army 1960 policy calls for dieselization of all vehicles over 150 horsepower.)

8. The proposed diesel fuel tax would have a primary effect on one company—Cummins Engine Co., in my home district of Indiana, which produces 60 percent of all highway truck diesel engines. Cummins' average employment in 1960 was approximately 4,100, with a total payroll of $29,866,796. In addition raw material and finished products of $27,720,100 were obtained from Indiana suppliers in 1960.

In addition to presenting to this committee the preceding eight major arguments against the proposed diesel differential tax, I wish to comment upon an important point that was raised during the first day's hearing on this subject. You will recall that the Department of Commerce was asked if any studies had been made to determine what effect the proposed tax program would have upon the trucking industry. Their answers indicated that studies of the effect of the taxes on the profits of the industry had not been analyzed.

It was quite surprising to learn that this fundamental question had not been studied prior to recommending this tax program to the Congress. Had the Commerce witnesses been prepared to answer this question, I believe this committee would have been amazed at the unjust discrimination contained therein.

The success of many manufacturers and businesses depends upon efficient and economical truck freight transportation. To continue to provide such services to its many customers the trucking industry must be able to carry out its operations in a profitable manner. American Trucking Association figures indicate the proposed tax program would add $44.1 million per year to the total operating costs of the 1,076 class I and class II common carriers of general freight. Had the proposed tax increases been in effect in 1960, the added cost would have entirely eliminated the $43.7 million before tax net income of these carriers.

This significant fact demonstrates quite clearly that the trucking industry will be unable to absorb any portion of the proposed tax increases. This readily available information answers, at least in part, the earlier question raised by this committee.

Supposedly, the proposed taxes are aimed at the heavy duty trucks (26,000 pounds registered gross vehicle weight and over). Yet when we look into the makeup of this vehicle classification we find that only 135,000 (or 15 percent) of these 900,000 heavy duty trucks are powered with diesel engines. Since the proposed diesel differential tax affects such a small portion of the heavy duty trucks, this tax feature discriminates against a minority of those trucks. This fact is even more clearly emphasized when you consider that diesel trucks use between 13,000 and 18,000 gallons of fuel per year. Under the proposed tax increase their annual fuel costs will be increased by $390 to $540 per truck, with no corresponding increase in the costs of operating competitive gasoline engine powered trucks.

Another key point is that over 43 percent of the 135,000 heavy-duty diesel trucks are located in the mountain and Pacific regions. Yet, only 26 percent of the 40,943 miles of Federal highways will be located in these two regions—and an even smaller percentage of the total program dollars are to be expended in this western area. One can only conclude that the geographical distribution of this tax burden is unequal and does not follow the fair-share concept.

I am even more concerned about the effect the proposed tax increase program will have upon the suppliers of major components to the trucking industry. In this category, the Cummins Engine Co., the world's largest independent manufacturer of high-speed diesel truck engines, produces 60 percent of all highway truck diesel engines built in the United States. This company, through its own resources, inventiveness, and initiative, has been a leading pioneer in developing the diesel engine to its present state of operating efficiency.

During the past year Cummins has spent about $5 million on research to improve the efficiency of its engines about 4 percent. An additional $7 million is currently being spent for facilities to produce this improved engine. Each 1 cent increase in the differential price of diesel fuel over gasoline decreases the efficiency of the diesel nearly 5 percent. The total proposed tax increase on diesel fuel will have the same effect as decreasing the efficiency of the diesel engine by 14 percent—or nullifying almost fourfold the latest research efforts of this company. Taxing this type of ingenuity and inventiveness is about as logical as placing a penalty tax on the compact car for its superior fuel economy.

In conclusion, I am firmly convinced from my study of this matter that had the justification and effects of the proposed diesel differential tax been adequately studied beforehand, you would not find this feature in the tax program now before this committee. We are not opposed to taxes on motor fuels but we propose that all such taxes be placed across the board. The unjust, discriminatory aspects of this specific tax proposal will be most detrimental to the trucking industry, selected areas of our country, the consumer public and the diesel engine industry.

Expensive Low Cost Housing

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. DERWINSKI. Mr. Speaker, since the flood of messages we have received from the White House are of the nature of political editorials more than normal reports to Congress, occasional valid

newspaper comments make good reading in comparison. The editorial entitled "Expensive Low Cost Housing," which appeared in the Chicago Sun-Times of March 12 merits our attention.

EXPENSIVE LOW COST HOUSING

Senator PAUL DOUGLAS, Democrat of Illinois, is of the opinion that anyone who buys on credit or makes a loan ought to know exactly how much the carrying charges or interest amounts to over the years. He wants Federal legislation providing that credit costs must be spelled out to buyers.

Let us apply the Douglas proposals to President Kennedy's formula for giving a shot in the arm to the housing industry.

Mr. Kennedy wants more credit extended to persons in lower brackets to encourage them to build homes. As Senator DOUGLAS asks, how much will such credit cost them?

At present, the Federal Housing Authority insures mortgages for 30 years and requires downpayments. Mr. Kennedy proposes that it be permitted to approve 40-year mortgages with no downpayments on new houses of $13,500 or less.

Perhaps this would stimulate some housing and permit some wage earners who cannot now afford to do so to undertake the construction of a house. Many persons do not have cash for downpayment. Stringing out monthly charges over a longer period would reduce them.

Under the present FHA regulations, a $13,500 house requires a $450 downpayment. At the maximum 5½-percent interest rate, monthly payments on principal and interest come to $74.12. After 30 years, a total of $27,133 will have been paid.

Under the 40-year, no downpayment arrangement, the same deal would require payments of $69.66 a month. At the end of 40 years, $33,437 would have been paid.

These figures serve to underline the old adages about thrift: A penny saved is a penny earned, many a little makes a mickle, take care of the pennies and the dollars will take care of themselves, etc.

The family that can save up $450 before it buys a house saves, on that item alone, $900 in interest over 40 years. The difference in monthly payments of only $4.46 makes most of the difference of $6,304 between the total cost of the mortgages described above.

After applying the Douglas test to the Kennedy mortgage idea, it may occur to many families that the President is not offering them a great boon. It may also occur to them that the Democratic idea that a nation can become prosperous by spending more money and going deeper into debt may not necessarily work when adopted by individuals.

The Reds Talk, but United States Pays

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of March 14, 1961:

THE REDS TALK, BUT UNITED STATES PAYS

The United States has poured $3 billion plus into the United Nations and its related functions since 1946 and the U.N. today is unofficially bankrupt. Why?

This question was raised the other day by William Fulton of the Chicago Tribune Press Service. Mr. Fulton did not have to dig deep to get the answer. Soviet Russia and its Communist satellites refuse to pay their share of U.N. costs.

At the same time Russia and the balance of the Red bloc bellow arrogantly on the floor of the U.N. in a somewhat successful effort to lure more "neutrals" into the Communist voting camp.

Most flagrant example of Russia's ignoring the tab is the Congo. The Kremlin has refused to pay its assessed share in the tremendous cost of maintaining a U.N. force there. The United States is footing half the bill. And it is but one of 99 countries having equal voting powers in the U.N.

The free-riding Communist U.N. members have performed similarly in the case of the emergency force deployed around the Middle East to police the cease-fire between Israel and the United Arab Republic. Once again, the United States is paying nearly half the bill.

Khrushchev and his colleagues have refused to contribute toward dozens of other U.N. projects, including the refugee program. The Congo "no-payment" stand, however, is the most offensive denial Russia has yet tossed at the U.N.

Mr. Fulton wrote: "* * * it (Russia's refusal to pay) is in a sense crude blackmail * * * Khrushchev is demanding the U.N. force be withdrawn, a policy obviously aimed at giving the Red army a foothold and ultimate domination over mineral-rich equatorial Africa. By refusing to share in the Congo expenses, the Russians are weakening the effectiveness of the polyglot peace force, making its downfall a serious possibility."

Apart from the Congo, the Soviet is $10,225,627 in arrears for support of the U.N. force in the Middle East. Russia's Communist leaders have said flatly they will "not pay a single kopek" toward this international peace brigade because Britain, France and Israel—"the aggressors" in the 1956 Suez affair—should foot the bill.

The Communists aren't paying their dues in an international club that wields world influence. Yet the U.N. itself permits Khrushchev and his ilk to continue their shoebanging on a platform for all the world to see. It's time free world members of the U.N. told the Communists: "Put up or shut up."

The American Legion's 42d Anniversary

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial on the American Legion's 42d birthday appeared in the Evening News of Newburgh, N.Y., of March 14.

Newburgh, the largest and most historical city in my district is justifiably proud of its close ties with the American Legion: First, through the fact that our former Congressman, Hamilton Fish, was one of the three-man committee that wrote the truly magnificent Legion preamble; and also, last but by no means least, when one of Newburgh's most distinguished sons, Martin J. McKneally became national commander for the term ending in 1960. His term was one of outstanding accomplishment for one of our greatest patriotic organizations, the American Legion.

The editorial follows:

AMERICAN LEGION 42

This week the American Legion celebrates its 42d anniversary. Formed at the close of World War I (with its famous preamble written by a three-man committee which included former Representative Hamilton Fish), the American Legion appeared to be a dying organization in the 1930's as it saw its prospective membership dwindle each year. World War I veterans were decreasing in number and there were no new veterans eligible for membership from peacetime military forces.

Then came World War II and the deluge. Instead of restricting its membership to World War I veterans and leaving the younger men to create their own organization, the American Legion revised its constitution. The number of prospective members became almost unlimited (although still restricted to those who served their country in time of war).

With 17,000 posts and 3 million members the American Legion is a potent force, one that fortunately has been dedicated to God and country.

Orange County, and Newburgh in particular, have been honored notably in work of the biggest veterans' group ever formed One of the first State commanders was Arthur E. Brundage, of Newburgh, later an assemblyman and then postmaster.

Within the last decade Newburgh has gained even greater distinction. After becoming the community's second State commander, unique recognition for a city of its size, Martin B. McKneally was named national commander, a post he served with distinction until he yielded the reins last October to William Burke, of California.

As the American Legion celebrates its anniversary, Newburgh's Judson P. Galloway post is staging its own ceremonies under Commander Donald Leamy, culminating in a corned beef and cabbage dinner on St. Patrick's Day.

The community has good reason to be proud of its American Legion and Galloway post.

Economic System Basically Sound

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. DERWINSKI. Mr. Speaker, with the emphasis of the New Frontiersmen directed to curing our economic ills which they have adversely described and greatly exaggerated, I feel a nonpartisan column discussion of our economic system might be in order. The article entitled "Economic System Basically Sound," by Milburn P. Akers, which appeared in the Chicago Sun-Times on March 10 is appropriate reading at this time:

ECONOMIC SYSTEM BASICALLY SOUND

Unemployment in February reached 5,705,000, the highest since 1941. Simultaneously, the number of employed persons totaled 64,655,000, an increase in February 1961, over February 1960, of 207,000.

More unemployment and, coincidentally, more employment.

Labor Secretary Arthur J. Goldberg says this anomalous situation results from the fact that the labor force has grown faster than the economy. That seems to be a logical explanation. At least, it will do until a better one comes along.

The Secretary said the new unemployment figures demonstrate the pressing need for speedy congressional passage of President Kennedy's antirecession measures, including the depressed areas bill and the extension of unemployment compensation benefits.

Obviously, there is a pressing need; 5,705,000 unemployed persons, plus their dependents, should not be left in want, even partial want. The Nation has the resources to make certain that they are not.

Measures designed to make such provision should be speedily enacted, if existing ones are inadequate.

There is a vast difference, however, in meeting the temporary needs of the unemployed—which should, of course, be done—and in seeking, under the guise of doing so, fundamental changes in the economic structure. Those who would make America over according to their own textbooks on economics usually seek to do so in times such as the present.

Treasury Secretary Douglas Dillon told Congress only this week that Kennedy administration economic experts now expect an upturn in the economy sometime during the quarter which starts April 1.

A similar forecast was made as early as January 22 by Prof. Ezra Solomon of the University of Chicago. He said at that time the current business recession would reach its trough in the present quarter, that the upturn would be underway in the second quarter and that, by yearend, the gross national product rate would have risen about $25 billion to $585 billion. He also predicted 1962 would be a boom year.

Professor Solomon's economic forecasts have been remarkably accurate in the past. His January forecast, made at a time when some of the President's advisers were seeking major overhauls in the economic structure, are now being borne out.

The President himself seems to have had doubts as to the validity of the advice given him by some of his economic planners and dreamers. For he stated on several recent occasions he would wait until April before advocating fundamental changes.

February's unemployment figure, the highest in 20 years, has its origin in at least four factors: (1) The general business slump; (2) seasonal curtailment of outside work; (3) a growing emphasis on highly skilled workmen; and (4) competition of U.S. industry with foreign production. Each reacts on the other.

Foreign competition with U.S. industry in the domestic market could be quickly ended. But that would create more problems than it would solve. Perhaps little can be done collectively about the growing emphasis on highly skilled workers. But individually that emphasis contains a lesson for the youngsters who are, according to many an analysis, so large a part of the currently unemployed. Trade schools and colleges should be their goals.

Seasonal unemployment has long been the lot of many—and it is apt to remain so for such workers.

Maintaining full employment is, of course, a desirable goal. But it can be done only by maintaining full production. And a certain way to do that has yet to be found. For every economic planner and dreamer who think he has found the way there is another who is certain he hasn't.

There is little urgency in seeking a way to do so in times of prosperity. But that is the time when such plans should be undertaken. The present needs of the unemployed should be met, of course.

But let's not undertake major and fundamental reform, so called, at times when crackpots and charlatans easily get attentive audiences.

The American economic system has provided Americans with the world's highest standard of living. The system itself doesn't require major overhaul. A way might be found, perhaps, to level out its peaks and valleys. And a way should be found to distribute its benefits somewhat more equitably, and some of the restrictions which have been placed on it might well be lifted. But the system itself is sound.

Some Views on Foreign Aid

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks I would like to include the following editorial comment on foreign aid from the publication Life Lines, issue of March 10, 1961:

HOW LONG THE GIVEAWAY?

Money taken from American taxpayers has been given away, is still being given away, to foreign nations. Call it foreign aid, call it the Marshall plan, call it the Economic Cooperation Administration, or any of the other pseudonyms under which the program has masqueraded—it makes no difference, the money still comes from American citizens.

More than 15 years have passed since World War II ended and the first of this series of aid programs was instituted—programs which have increased everybody's taxes and raised the price of every purchase. After 15 years, and more—when will these programs be ended?

The State Department has given away money abroad for the construction of foreign-owned factories in low-wage areas. In some cases the wages are no more than one-tenth the wages paid Americans for comparable work.

The foreign aid program has caused a steady increase in imports. In the last few years many large American companies, as a protective measure, have built or bought plants abroad. Now their products are entering the United States in an ever-growing flood. The result is a loss of American jobs and lower American payrolls.

The equivalent of approximately $2,000 from every family in the United States has been poured down the foreign aid rathole. This farce has brought us neither security nor friends, nor has it stopped the spread of communism.

How long will the giveaway continue?

NEW FOREIGN AID GIMMICK

Thrifty Americans should note that the big spenders have come up with a new idea for foreign aid. A school of thought is developing in Washington which advocates the entrance of the United States into the home-building business in several foreign nations.

The general idea of the advocates of foreign aid has been to use American taxpayers' money to build factories or to provide airports, roads, and hospitals. Their argument has been that if we assist the underdeveloped nations in providing these essentials in a few years they will be self-supporting. There is no indication at all that things generally are working out this way. In fact, most of the underdeveloped nations are further from being self-supporting and self-reliant than when we started giving them money.

So now the big brains among the big spenders are saying that of course the folks in those countries are not classical economists and cannot be expected to understand everything about building a stable economy. What Uncle Sam must do, therefore, is to build homes for them. This would be done under mortgage financing—provided, naturally, by American taxpayers.

If private lenders were putting up the money, they might be concerned with such questions as these:

Will the borrower in a South American country, for example, actually maintain his property within the requirements of difficult climatic conditions to justify a loan extending more than 18 months.

Assuming that interest will be charged for the loans, might this fact not tend to bring forth the mistaken claims that Uncle Shylock is greedily exploiting unskilled and untutored natives in scores of faraway places?

In the event of default will the U.S. Marines move in to collect back payments, or will the United Nations bail the lender out? If the local government is supposed to do the bailing out, will foreign aid be increased in order to enable them to pay up?

The big spenders cannot be expected to answer such questions as these, and no doubt they will feel such questions should never be asked. How do you feel?

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. ULLMAN. Mr. Speaker, I have received a wonderful letter from a young constituent of mine, Pamela Mattes. Pamela attends the South Baker School in my hometown of Baker, Oreg. Pamela realizes the need for Federal aid to education and is planning to be a Congresswoman when she grows up so that she can work for better schools. It is refreshing to see such a keen awareness of the needs of our country among our young people. I know Pamela will not mind my sharing her letter with the other Members of the House:

SOUTH BAKER SCHOOL,
Baker, Oreg., March 9, 1961.

DEAR MR. ULLMAN: We are writing letters in our language class, and I decided to write to our Congressman from Baker.

We are studying about our schools and how they are financed. We also know we need many new schoolbuildings all over our Nation.

I know you are doing all you can for our schools. We are hoping President Kennedy's bill on Federal aid to education passes as we need much help for our schools.

I would like to be a Congresswoman when I grow up, so I can help work for better schools for America.

Sincerely yours,

PAMELA MATTES.

P.S.—My teacher's name is Mrs. Brown.

State Help Versus Self-Help

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. DEROUNIAN. Mr. Speaker, Mr. William Henry Chamberlin, in an article that appeared today in the Wall Street Journal, has put his finger on the great flaw in the basic structure of the philosophy of the wing of the Democratic Party.

SAVINGS AND SECURITY—INDIVIDUALS COULD MORE EASILY MEET MEDICAL, HOUSING NEEDS IF THE TAX COLLECTOR LEFT THEM MORE INCOME

(By William Henry Chamberlin)

It would be neither good sense nor good morals to leave a stretch of sidewalk dangerously slippery with glazed ice while preparing ambulances for the passersby who might be expected to break arms or legs.

This same kind of reasoning should apply to the prevention or maximum alleviation of poverty in old age. President Kennedy's health bill notwithstanding, State help is never a satisfactory substitute for self-help.

The most effective and truly humanitarian means of helping an individual in his years of diminished or lost earnings capacity is to give him more chance to provide for his own future by not taking away so much from him during his most productive period. Many of the indigent aged can take paper and pencil and calculate acurately how much more opportunities for comfortable living and recreation they could have enjoyed, if so much of what they had earned had not been siphoned off to satisfy the demands of Federal, State, and local tax collectors.

Or consider the young man, newly married. By President Kennedy's housing plan, he would be "taken care of," if he wants a middle income house, by a 40-year, no-down-payment mortgage plan. But if he were not taxed so high on his income, he might well have saved a conventional down payment and have enough of his paycheck left to pay off his mortgage on a 20-year basis.

Yet the policy of imposing heavier and heavier levies, calculated to make the individual less and less capable of looking out for his own future, advanced steadily under a relatively conservative administration and is plainly gaining momentum with the change of power and psychology in Washington. Individual saving is the best kind of social security. Yet the opportunities for individual saving, for the large number of Americans who lack inherited wealth and earn incomes in the median range, are being steadily curtailed.

STATE AND CONSTITUTION

The State in America has assumed the role of an omnicompetent provider, for which there is no warrant in the American Constitution—it is mainly concerned with telling the Government what it may not do in abridging the freedom of the individual citizen. This role is radically at variance with American principles and practice during the 19th century, which witnessed the impressive pioneering of this continent. The Government has become a price and wage fixer, a purveyor of housing, a regulator and, if the "liberals" in Washington have their way, a large-scale financier of a public school system that was formerly left to local management and local resources.

The whole trend recalls the definition of the state by Frederic Bastiat, a 19th century French classical liberal economist: "That great fiction, by means of which everyone hopes to live at the expense of everyone else."

For the central fallacy in the philosophy of Government spending as a painless form of social progress is that government, by its nature, creates no wealth. A foundation deriving funds from a large private fortune can extend benefactions to various projects and causes without taking the money out of any source except the private fortune. Government can acquire funds in only two ways, by taxation or by borrowing, which, when pushed too far, leads to the most deadly and insidious kind of taxation, inflation by debasing the value of the currency.

It may, of course, be argued that state social spending programs achieve the purpose of transferring money from the pockets of the rich to those of the poor. But, at a time when the maximum rate of Federal income tax is 91 percent, this contention loses most of its force. Taxes designed to hit high incomes have reached the point of small and diminishing returns. Most of the money for additional spending projects will be extracted from taxpayers in medium and low brackets, whose ability to provide for their own social security will be correspondingly diminished.

THE END PROCESS

It has been the general experience of financing the welfare state in Great Britain and in other countries where it has developed even farther than in the United States that the end of the process is for the government to take out of one pocket what it puts into another, with the inevitable overhead costs of bureaucracy as an extra charge.

Perhaps some day, when the futility of this process becomes quite evident, there will be more recognition for the simple truth that one of the best services government could render to the peace of mind and the real social security of its citizens is not to pile on new exactions, but to get off their backs to the extent of making it a little easier for them to save for their ultimate retirement.

One widespread form of saving in America, in contrast to Europe, where stocks are held rather narrowly, is investment in common stocks. A handicap here is the double taxation involved in the fact that corporation income is first taxed at a rate of 52 percent and then taxed again at progressive rates, insofar as it is distributed in dividends. A very slight concession, designed to alleviate this injustice, was the introduction, under the Eisenhower administration, of a 4-percent credit for dividend income. Yet there is a strong drive to do away with this credit.

The Government could offer a number of positive inducements to saving for retirement purposes. There could be tax exemption for funds set aside for this purpose and invested in Government bonds or annuities, which should be, up to a limit of perhaps $50,000, free from taxation. But here, of course, there is little role for a Federal bureaucracy.

A national population permitted and even encouraged to save for their own maintenance on a not too pinched standard of living would be happier and economically much healthier than one forced to depend on State handouts and State-provided services.

The ideal society is one in which people are allowed to retain enough of what they earn to pay for their homes, medical services and other needs without Government assistance. There was a time when we actually had such a society in the United States.

The Great St. Patrick

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. PHILBIN. Mr. Speaker, on St. Patrick's Day, the heart of every Irishman quickens with pride and the whole world pauses in its busy life to hail the magnificent Irish saint, whose blessed memory throughout the centuries has fired a great race and given inspiration and strength to peoples everywhere.

St. Patrick is more alive, more famous, more celebrated and more honored today than most of the historical figures who lived long after him, while his contemporaries are almost entirely forgotten in the ruthless surge of the centuries.

St. Patrick still lives in the hearts and souls of Irishmen and many other people of every race, religion, and station.

He was not only great in heart, mind and spirit, but he was endowed with a boundless energy, a fierce determination and a loyalty and devotion to his cause that compelled very many people to follow him into the sacred precincts of Christianity.

Patrick was one great figure of history who seemed more than most others to thrive on adversity and in spite of many disappointments and obstacles he steadfastly pursued his high goals until he had triumphed over the bitter opposition, brutality, and cruelty of early barbarians and had founded a new civilization in Ireland based on the exalted precepts and sound moral values of the Christian faith.

A gifted organizer, Patrick had a way of attracting to his banner thousands and thousands of people, who at first had savagely opposed him with powerful zeal and feverish activity, he and his influence covered practically all of Ireland and from that time forward, the Irish people have loyally kept his teachings, influence, and inspiration deeply enshrined in their hearts.

The troubled world in which we live today would be blessed indeed if we had another St. Patrick of the 20th century and the space age to take up the torch of morality and freedom and inspire our people to work militantly and unitedly against the insidious evils which surround us.

It is for us, not only those who boast of their Irish blood, but those of every nationalistic, racial, and religious strain, to be inspired anew on St. Patrick's Day by the example, the perseverance, the strength, the determination, the supreme faith of the great patron saint of Ireland to the end that the verity and the dignity of the individual soul shall be recognized in the world, and that all men and all peoples who believe in freedom shall band together more united than ever in one great human union actuated by divine faith to renounce and defeat the barbarian hordes

of this age who are seeking to enslave mankind, and thus to install and perpetuate peace, security, prosperity, and freedom in the world.

I ask to include as part of my remarks a very brilliant article by Mr. Hugh A. Mulligan, recently printed in the distinguished Worcester (Mass.) Telegram entitled "Time Hasn't Diminished St. Patrick's Glory":

TIME HASN'T DIMINISHED ST. PATRICK'S GLORY—LEGENDS DRAMATIZE HIS CLOSENESS TO THE IRISH HEART

(By Hugh A. Mulligan)

(Some folks wearing of the green next Friday may just be wondering who St. Patrick was, after all. Well, the easiest way to find out is to go to Ireland and follow the trail of the ancient saint. He is as alive today as he was 1,500 years ago and if you don't believe it, just ask an Irishman who stole St. Paddy's goat. Then duck.)

CROAGHPATRICK, COUNTY MAYO, EIRE.—Fifteen centuries have passed since an Englishman or maybe a Scotsman named Patrick waved his shamrock over Ireland, drove out her snakes and had his goat stolen by some unconscionable blatherskite.

Yet the good saint who died in 461 A.D., exactly 1,500 years ago this March 17, is more alive today than Charlemagne, William the Conqueror, Catherine the Great and most of the other famous historical figures who came centuries after him.

To listen to the talk at any Irish crossroads and around the turf fire in any pub, you'd think it was only last week, or a month ago at best, that he came over, shirt flapping in the breeze, to put the fear of God into the druid high priests and convert this lovely jewel of an island to Christianity.

An AP reporter and photographer, following St. Patrick's route for more than 1,000 miles through Ireland, seldom suffered for lack of directions, despite the long lapse of centuries.

"It's St. Patrick you're after?" demanded a grizzled farmer, pausing with his donkey and a cartload of potatoes in the shadow of Slieve Gullion, a haunted mountain in County Armagh.

"By God, you've come to the right man. Patrick and his whole retinue came up that wee lane to the left there, just over yon hillock."

An authoritative wave of his stick, an essential item in every Irishman's haberdashery, pointed out the very route, as if a good squint of the eyes would reveal a few stragglers in Patrick's party just emerging out of the mists of history.

HOW KNOWN

How does he know it was that particular path and not the one on the right or maybe the left?

"Me great-grandmother told me. Sure it would take me 2 days and 2 nights to tell you all she told me about St. Patrick. His horse had dropped a shoe, but the blacksmith in town here was heading over the mountain to bury his daughter and didn't have time to do the job. Patrick blessed a new graveyard there and then for the smith and got him to shoe his horse. Go up to the field beyond there and you'll see the stone marking the little girl's grave."

What does it matter that St. Patrick was already 14 centuries dead when his great-grandmother was a girl?

TIME LOST, TOO

Time has never gotten the upper hand over Patrick, any more than the high kings of Ireland could have when they matched wits with him on the ancient hill of Tara.

Like the slender, thousand-year-old round towers rising up out of the bogs, like the gray tumbled ruins of the abbeys and monasteries hunched every few miles in the fields, like the crumbling castles of the Normans and the Danes, Patrick endures in a land where time and eternity can meet in a field.

Everywhere you go in Ireland, from Ulster to Munster, from Leinster to Connacht, you hear of his exploits in the most extraordinary detail. Here he left a footprint. There he built a church. He baptized a king at this well. He knelt in prayer on that rock. Without his ageless presence Irish conversation might be in a near famine state.

The slow, silent trickle of the years may have eroded the thin line between historical certainty and fireside legend, but the fact of his coming is indisputable.

Patrick came without troops or arms, without crown or colonists. Yet his conquest endured, a glimmer of learning to light the hopes of Europe in the dark ages of the barbarian invasions, a conquest that outlasted the Normans, the Danes, the Cromwellians, the Tudors, the Stuarts and all the others who swarmed over Ireland in the centuries after him and left only the ruins to speak for them.

From his confession, now regarded as authentic by most scholars, we know that he was born at Bonnavem, which may have been at the estuary of the Severn River in England, or the esuary of the Clyde in Scotland.

Like the other great missionary, Paul, he was a Roman citizen, the son of Calphyrnius, a platoon leader stationed in Britain. The Roman legions never got to Ireland, but Patrick did.

At the age of 16 he was kidnaped by Irish pirates and taken to the Slemish mountains in County Antrim, where he tended flocks for 6 years as a slave of Milchu, a Druid high priest. Patrick finally escaped to his home in Britain, only to find his sleep troubled by the cries of children, somewhere in the west of Ireland, who kept calling: "O pious youth, come back to Erin."

TOO INCESSANT

The dream was too incessant to be ignored. With the blessing of Pope Celestine I, Patrick returned to Ireland in 432 as a missionary. He attempted to land at Wicklow Head on the east coast but was driven off by the same hostile chieftain who had turned back another missionary, named Palladius, several years before.

Skirting Dublin, which wouldn't be founded for another 400 years, Patrick and his party put in at Skerries for supplies. It was an unfortunate choice. By morning the goat he had trained to carry his water jars was gone and one of history's longest feuds was launched.

After 1,500 years the question of who stole St. Patrick's goat still smoulders. The Skerries men insist the heist was made by the men from Rush, 2 miles to the south. The Rush men hold an opposite opinion. Either will defend their innocence at the drop of a hurling stick.

At a British officers' club in India during World War II, someone made the mistake of calling an Irish volunteer from Skerries a "goat eater." The ensuing riot reduced the club to rubble. Only recently sculptor Albert Power affixed a goat to a statue of St. Patrick commissioned by the church in Skerries. In the interests of preserving the peace, the parish priest made him chisel it off.

BOTH GUILTY

Eighty-year-old John McNally, a Skerries man who has witnessed many a brawl over St. Patrick's goat, thinks both towns equally guilty. "It was the Rush men stole and the Skerries men ate it," he told us, judiciously smacking the foam of a dark glass of stout from his lips.

Like other oldtimers, McNally claims to have cured many a toothache by drinking the brackish water accumulating in "St. Patrick's footprint," a scooped-out crevice in a rock down on the beach. Local legend has it that this and an identical footprint on an island 1 mile out in the bay mark the spot where Patrick came ashore with his goat in one mightly leap.

"I could tell you more only the wife was expecting me an hour ago," McNally apologized. "It's the cold shoulder and tongue I'll be getting when I go home, Patrick or no Patrick."

So it fell to Terry Ferguson, a fisherman with a boat named *Padraic*, and Henry Boylan, the local lighthouse keeper, to show us the footprint on the beach and point out its mate on the island.

"An Englishman saw it last summer," Boylan recalled, "and his only comment was: 'Patrick must have had some pair of britches to make that step.' So you see the likes of the visitors we get in these parts."

Bereft of his goat, Patrick continued north and made his first real landing at Saul in County Down. He baptized Dichu, the local chieftain, after miraculously silencing his dogs, said mass in a barn and founded his first church. Next he headed to the Slemish Mountains to pay off his ransom to his old slavemaster, Milchu, who at his coming set fire to his house and hurled himself into the flames. Pride would not permit him to bow down to a former slave.

The heavens were spilling rain, in the words of a local constable, as we drove down the lovely valley of the Boyne to the hill of Slane, overlooking Tara, the scene of St. Patrick's greatest triumph. Summoned by High King Leoghaire, the kings of Ireland had gathered at Tara to cope with Patrick's assault on the pagan beliefs of the Druid priests.

Protocol decreed that no fire should be lit until the lamps went on in the great hall of kings at Tara. Patrick defied the Druid law on Easter Eve, 433, by lighting a huge bonfire on the opposite hill of Slane. The King dispatched a dozen charioteers to extinguish the alien blaze, but the oxen ran wild and the flames would not die. Conceding defeat, Leoghaire gave Patrick permission to preach the gospel throughout Ireland. His lighting of the pascal fire is believed to have established the date for our modern Easter observance.

WANDERED 20 YEARS

For the next 20 years Patrick wandered about Ireland, preaching the gospel, baptizing the faithful at wells once worshiped by the Druids, praying and fasting on lonely mountaintops, like Croaghpatrick in Mayo and on remote islands, like Lough Derg in Donegal, where thousands of pilgrims now come barefoot each year to pray and fast in his footsteps. The origin of both pilgrimages is lost in the mists of the Middle Ages.

An ascetic who slept on a rock, ate little and preached mostly by example, Patrick knew the secret of all great missionaries. He gently blanketed the old pagan beliefs without stamping too hard on the customs of the people. Which is why the old, secret, mysterious, mystical Ireland still exists in vanishing lakes, haunted mountains and eerie creatures who cry of death with the dogs in the night.

The headquarters he established at Armagh is still the ecclesiastical capital of Ireland where two cathedrals face each other on opposite hills and silently proclaim that Patrick is everybody's saint.

JUST IN CASE

On the way into this charming cathedral town, we encountered a caravan of tinkers, Irish gypsies, who travel the countryside in colorfully painted wagons, mending pots, selling horses and telling fortunes. No one really believes that the tinkers can cast spells and make the cows go dry, but most people

slip them a couple of coppers for the baby, just in case.

It's like the priest who saw an old woman tossing salt over her shoulder after dropping a fork on the floor.

"Molly," he exclaimed, "you don't really believe in leprechauns, do you?"

"Of course not," she assured him. "But they're there."

Similarly, the legends that have grown up around Patrick through the centuries have not harmed his stature as a saint and missionary, and, if anything, have dramatized his closeness to the minds and hearts of the Irish people.

EXIT SNAKES

At Croaghpatrick, the Devil tried to disturb his prayers by blackening the sky with screaming crows and ravens. Patrick dispersed the flocks by flinging his bell down the mountain, crashing against the rocks, and further retaliated by driving the snakes "and every evil thing" out of Ireland into Clew Bay.

On the tiny island of Inchagill (which means "Island of the Devout Stranger") in Lough Corrib, Patrick buried Lugnadon, his nephew and favorite navigator, under a headstone that may be the oldest in Europe.

On the Rock of Cashel in Tipperary, Europe's most impressive religious ruins, Patrick plucked a shamrock to explain the mystery of the Trinity and inadvertently drove his staff through the foot of King Aengus of Munster. The king, thinking it part of the baptismal ceremony, did not cry out.

Patrick is believed to be buried under a huge rock in the graveyard of the Church of Ireland Cathedral in Downpatrick, County Down, not far from where he first came ashore at Saul.

SPOT IN DISPUTE

The exact burial spot may be in dispute, just as many of the footprints and knee prints are, but there is no doubt that a man named Patrick came to Ireland in the fifth century and left his indelible mark on the island and on all of Europe. The exploits that legend has credited to him are not nearly as impressive as his real accomplishments.

In the centuries after Patrick, Irish monks trained by him and his followers "walked the world for God," founding universities from Gaul to Kiev, bringing the light of the fire lit on Slane into the chaos of darkness left by the collapse of the Roman Empire and the barbarian invasions.

After 1,500 years, Patrick endures. His name is on a thousand churches. They parade for him in New York, Dublin, Baltimore, Montreal, Baton Rouge, and San Juan, Puerto Rico, and this Friday, as it has for countless years, the shamrock will bloom again in thousands of lapels in his honor.

Address by the Honorable Herbert H. Lehman at 77th Annual Meeting of United HIAS Services

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1961

Mr. HART. Mr. President, former Senator Herbert Lehman has been one of the leaders in the United States for many years. Last February 5, for the annual meeting of the United HIAS Service in New York City, he reviewed some of the history of the efforts to bring about revision of our present immigration and citizenship laws.

I ask unanimous consent that excerpts from his remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF THE HONORABLE HERBERT H. LEHMAN AT 77TH ANNUAL MEETING OF UNITED HIAS SERVICE, HOTEL ROOSEVELT, NEW YORK CITY, FEBRUARY 5, 1961

To me, coming here to address this gathering is almost like a homecoming. One of the main threads running through the fabric of my lifelong interests has been immigration.

A few years ago, in clearing out some old effects, I came across a box of compositions I had written in college. One of them was on immigration. I read it over. I was surprised to find out how sound my views had been 60 years ago. In fact, they haven't changed much since. It is a little startling to realize that the issue itself hasn't changed basically over the years. The need is still there—our country's need for immigrants and the immigrant's need of asylum, freedom and opportunity. And the same type of opposition to immigration which we confront today was active and vocal 60 years ago. * * *

Yes, I have been interested in the immigration question as far back as my memory runs. I began to rub elbows with the voluntary organizations concerned with immigrants and immigration soon after I left college, first through the old Henry Street Settlement House, of whose board of directors I am still a member; then in the early 1920's, when I was chairman of the reconstruction committee of the joint distribution committee.

As the years went by, I retained my deep interest in immigration. It accompanied me into my political and public life. In 1942, migration and immigration became one of my chief official concerns, when UNRRA was created to confront the tragic problems arising from the cataclysmic population shifts, flights and displacements which occurred during and toward the end of World War II.

During my brief period as a private citizen after 1946, one of my major public activities was with the Citizens Committee for Displaced Persons Legislation. And then in 1949, after my election to the U.S. Senate, my first experience in major legislative battle in the U.S. Senate was over the liberalizing amendments to the Displaced Persons Act of 1948 * * *

The 1950 fight over the Displaced Persons Act was followed during the next 2 years by our desperate efforts to stop the McCarran-Walter Act from becoming law. It became law. And then the long undertaking to amend the McCarran-Walter Act—to humanize and liberalize it—began. That effort, punctuated by intermittent pauses for emergency measures to meet special crises, such as the Hungarian upheaval of 1956 and its aftermath of terror—is still going on. For the past 8 years we have maintained what has often seemed like a lonely and almost hopeless vigil on this important issue.

But now, a new day in this, as in other matters, may be dawning. But before discussing this possible new day, let me complete my references to the old days—to the past—and specifically to my past associations with our host organization here, United HIAS Service.

I came to know the old HIAS during my Henry Street Settlement House days, almost 60 years ago.

As for the second parent organization of United Hias, United Service for New Americans, I had contact with it too, from the first days of its constitution. Yes, I have long been privileged to work frequently and intimately with both HIAS and USNA, and with the merged organization since the merger. We have fought and worked side by side, under a common banner, for the same good cause and for the same high and noble purpose—to enact just and humane laws and to succor and assist those who need succor and assistance, here and across the seas.

So much for the past. These are days of the present. These are times when one can begin to feel the long-absent surge of the national spirit of action. The beat of the national pulse has begun to quicken, and an air of excitement, emanating from Washington, has begun to spread throughout the land.

Whether the early promise of a dynamic national resurgence will be wholly or largely realized remains, of course, to be seen. But I do believe that in the months and years immediately ahead, much will be achieved for our country, and our countrymen, and for the cause of peace, understanding, justice and freedom abroad.

Now we must ask ourselves, what are the prospects for immigration and naturalization reform in the period ahead?

While during recent years Congress has enacted a number of bills for special or general refugee relief, and has approved some few fringe changes in the McCarran-Walter Act, it has persistently refused to deal with the central structure of our immigration and naturalization laws, and the hundreds of basic discriminations—and cruelties—imbedded in that structure.

In 1953 I introduced into the Congress a substitute omnibus immigration and citizenship bill which was the result of 8 months of study, formulation and drafting by teams of experts in the field, including those of your organization—notably, as I recall, Carlos Israels, Ann Petluck and William Males.

The provisions of that substitute omnibus bill and their underlying principles are still sound, desirable, and necessary today.

That omnibus bill provided a uniform immigrant selection system, based on the worth and need of the immigrant—and the need of the Nation—in place of the present national origins quota system which discriminates on the basis of national origin in the case of Europeans, and on the basis of race in the case of Asiatics.

That omnibus bill humanized deportation law, and, among other things, eliminated the deportation penalty for long-past acts which were perfectly legal when committed.

That bill abolished the status of second-class citizenship for naturalized citizens.

All these improvements, and many more, need to be made in present law. They must be made.

I understand that our old omnibus bill, updated and with some changes—has again been introduced into the House by a number of Members, including Representative CELLER, chairman of the House Judiciary Committee. But if we are realistic, we must recognize that the prospects for the consideration and passage of that bill are quite remote.

This was true also last year, and the year before, and the year before that. There is no need to review the obstacles to this legislation. We all know them. * * *

But in my judgment the situation today is radically different from that of last year, and the years before. We now have a new President and a new spirit in the White House and in Washington.

I believe that during this administration we can get major changes in our basic immigration and naturalization laws—changes which will move substantially in the direc-

tion of the omnibus bill which we formulated in 1953.

It is a notable fact that in 1960 the platforms of both major political parties strongly supported the kind of changes in the McCarran-Walter Act which we have long been advocating. And during the campaign both presidential candidates vied with each other in promising action on this front.

I believe that President Kennedy is wholly committed to the proposition that the discrimination and bigotry must be taken out of our immigration and naturalization laws, and these laws must be humanized.

But we are realistic enough to know that party platform planks, and even campaign pledges by candidates, no matter how sincerely meant, are a long way from performance. The political word usually precedes the deed by a long, long time.

I am deeply convinced that President Kennedy intends to perform on his promises in regard to immigration and citizenship. After all, he has been an advocate of immigration reform throughout his political career. He supported President Truman's veto of the McCarren-Walter Act in 1952 while he was still a Member of the House, and joined with me as a sponsor of my omnibus bill in the Senate of 1953. He has introduced one piece of immigration reform legislation after another; and some of them have passed.

In legislative matters he is, above all, a practical-minded man. He knows the legislative process and the compromises which are entailed. He is inclined to go along with a solution that is less than ideal, if it represents some forward progress. This was his approach while he was in the Senate. I suspect it will be his approach from the White House.

We must be ready to suggest, and to consider suggestions from the White House for new formulas in immigration legislation. It is also a Kennedy inclination, as I have perceived it, to make detours, wherever possible, from legislative roads which have been too much traveled in emotional controversy. I would judge that this might be the President's inclination with regard to immigration legislation.

Speaking for myself, I am ready to accept and embrace any hope for substantial progress on this front, and to acclaim any real progress which is actually made. But let me warn my friends in this and other organizations not to make their compromises too soon. Making legislative compromises is the business of the Congress and, up to a practical point, of the President. It is still up to us who want immigration reform, to supply the pressure from below which will facilitate, encourage, and support bold leadership in this matter from above.

We must ask for what we believe to be sound and right. We must take a fresh look and, where desirable, make a fresh start in our thinking and rethinking of legislative formulas. But it would be foolish, in my judgment, for us to depart from our principles and offer compromises to the opponents of immigration reform, before the legislative battle has even been joined.

I hope we can all stand reasonably united, together with all the organizations of all sects and creeds which are concerned with immigration legislation—for the achievement of our common purposes: to erase discrimination and bigotry from the laws, to eliminate discriminations against naturalized citizens, to humanize and rationalize our deportation laws, and, in general, to open our gates in gracious welcome to the number of immigrants we can afford to receive and absorb, and to make much more welcome than in the past the visitor, the student, and the scholar. Thus we will make the name of America ring out again throughout the world as the synonym of freedom, hospitality, and opportunity.

The greater glory will be ours in the fulfillment of our traditions and in the realization of our national potentialities.

Could Build Million-Pound Booster

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, many of the projects and programs being carried on in space research depend for their ultimate utilization, both commercially and militarily, upon the development of giant new space boosters with millions of pounds of thrust. Recently, witnesses before the Committee on Science and Astronautics expressed the belief that these giant boosters could be constructed now, in much less time than many had thought possible.

For the benefit of the Members and the public, I insert in the RECORD a news account of this testimony which appeared recently in Aviation Daily, authoritative publication on aviation, space, and missile activities:

THIOKOL, UAC SAY THEY COULD BUILD MILLION-POUND BOOSTERS SOONER THAN 1964

Two defense manufacturers yesterday told the House Space Committee they could deliver million-pound-plus thrust solid fuel rockets for space flight experiments sooner than 1964. If carried out successfully, their proposals would cut time and costs from the current schedule for clustering either the liquid fueled Saturn or single chamber F-1 to achieve thrust ratios above the 1.5 million pound level. Neither witness directly advocated slackened effort to develop the liquid boosters.

Chairman OVERTON BROOKS, Democrat, of Louisiana, and other members expressed surprise at testimony by Thiokol Chemical Corp. and United Aircraft Corp. that solid fuel thrust boosters of that range could be produced so quickly. BROOKS recalled that NASA testimony indicated the 1.5 million pound thrust Saturn probably won't fly until 1965.

Dr. Harold W. Ritchie, vice president of Thiokol, testified that his plant could produce and deliver within 18 months a solid booster capable of generating 3 million pounds thrust at costs comparable to liquid fuel rockets. Though some NASA officials are interested, he said, there has been no official go-ahead. Ritchie outlined another Thiokol proposal for a multistage heavy duty space flight rocket capable of 21 million pounds of thrust. He said it could be produced within 2 years, but since no payload worthy of its giant power will be available then, it is probably best to think of it as a long-range project. A cluster of seven such units would provide an orbit capacity of 2.1 million pounds and push a 600,000-pound payload into gravity-free space. "This booster, in combination with selected nuclear and electric propulsion stages, will permit cargo flights and transport flights to all planets of our solar system in the 1970 time period," he said. "The lead time to achieve this capability requires thorough planning and an early decision to proceed."

Dr. Barnet R. Adelman, vice president-general manager of UAC's United Technology Corp., Sunnyvale, Calif., said the firm is developing with its own funds a family of reliable low-cost first-stage solid boosters that will permit the "firing of the world's largest flight-weight solid propellant rocket engine (500,000 lbs. for 60 secs.) in the fall of 1961. With what he called its "unique conical segmented" design, the engine will be able to deliver over 2 million pounds of thrust by 1964.

"Use of these engines as first stage boosters for large launch vehicles should permit a reduction in the cost per pound of payload in orbit—or escape—by a factor of 2 to 10 under those estimated for presently planned launch vehicles," he said. United could deliver seven of these boosters by 1964 to provide 14 million pounds of thrust required to put a 150,000-pound payload on the moon. Estimated cost through preliminary flight testing would be $150 million to $200 million for a Nova class (15 million to 20 million pounds of thrust) first stage. "These figures are substantially less than the estimated cost of developing liquid propellant stages of comparable performance," he said.

Hard-Headed Plan for Americas

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. BOGGS. Mr. Speaker, President Kennedy has presented to the Congress and to the Nation a challenging, far-reaching, and realistic program for strengthening hemispheric unity and aiding all American countries to promote their own economic growth and to raise the living standards and the education of their peoples. The 10-year plan is not a giveaway program—it asks much of the Latin American leaders and the people themselves. It will provide direction for these nations which help themselves to improve their living standards, their educational level, and their economic growth.

The President's program is a challenge to us and to all the Americas—in his words—"to demonstrate to the entire world that man's unsatisfied aspiration for economic progress and social justice can best be achieved by freemen working within a framework of democratic institutions." He said that only in an atmosphere of political freedom throughout the Western Hemisphere can we attain the economic growth and social stability which will provide higher living standards and greater education for all our peoples.

In his plan he reaffirmed the Monroe Doctrine and called for strengthening the Organization of American States as the center of "the collective security system." Tyranny must be eliminated from this hemisphere in order to achieve these goals, he said.

Never once in his address before the ambassadors of 18 Latin American nations and other leaders did the President say that his plan was designed to halt communism in this hemisphere. But certainly, if all the American nations join together willingly and fully, in President Kennedy's long-range program, and thus bring greater freedom, education, and living standards to all in an atmosphere of liberty, then communism will not be long with us. It cannot—it will not survive.

With these thoughts in mind, Mr. Speaker, I include in the Appendix of

the CONGRESSIONAL RECORD the following column by William White, which presents a salient feature of the President's plan for the Americas. The column, entitled "Hard-Headed Plan for Americas," appeared in the Evening Star of Wednesday, March 15, 1961, and is as follows:

HARD-HEADED PLAN FOR AMERICAS—KENNEDY PROGRAM IS LAUDED FOR LINKS TO NATIONS' SELF-HELP AND REFORM

(By William S. White)

Like the old Marshall plan for Europe, the Kennedy plan for Latin America has a tough and profoundly realistic anti-Communist political motive beneath the generous economic aid it offers this hemisphere.

What President Kennedy really intends to do is to halt communism in Latin America just as the Marshall plan largely halted it in Western Europe in the period immediately after the war. This is to be done by making communism politically as well as economically unprofitable. If all goes well, communism or procommunism will become unprofitable, even among those of our hemisphere neighbors who are, at this moment, far from good neighbors and very far from procapitalist democracy.

This is no ribbon-wrapped package of Christmas in the springtime for the Latinos. This is no social worker's scheme for a "a quart of milk for every Hottentot." This is, at bottom, a hard-headed plan for an economic revival of Latin America under "strings" that are very real, indeed.

For in political terms the very core of the Kennedy plan is this: It is simply not going to be possible for any Latin American nation to obtain any real benefits unless it joins in truth and loyalty into a far larger pattern of collective strength and collective Western-style security for this hemisphere.

Any Latin American president who excludes his country from aid by his unwillingness to go along with this security pattern will surely have a good deal of explaining to do to the home folks. He will, indeed, be shooting Santa Claus; except that in this case Santa will be a muscular old boy carrying more in his bag than toys for the kiddies.

True, the President's outline of his policy to Latin American diplomats put a good deal more emphasis on what we intend to give the Latins than on what we intend to ask of them. But this was the traditional rhetorical politeness, the frosting on the real cake below.

No nation will receive help unless it lives up to the principles of self-help and domestic reform. This is the bluntest requirement ever put on any American-aid program. And, parenthetically, it may well foreshadow a tougher line toward all other recipients of American aid under the old and familiar programs.

But what is far more significant is the nature of the political strings, more bluntly they might be called strong ropes, which will attach to Kennedy aid. These strings will lead in the end to one place and one alone, the Organization of American States. No nation can really get anywhere under this aid plan without operating under the OAS.

The OAS, in consequence, is bound to be greatly strengthened. And the OAS is the sole instrumentality through which the United States can really get at the most dangerous example of Communist intrusion in this hemisphere, Castroism in Cuba.

The Kennedy administration—no less than the Eisenhower administration before it—knows it dare not act alone against Castro, short of some assault on our naval base in Cuba. A howl about "Yankee imperialism" would go up from the Rio Grande to the bottom tip of South America.

Fidel Castro, himself, clearly gathers what the Kennedy plan means. Within hours of its announcement, he was screaming in angry pain in Havana. The White House and State Department were not made exactly unhappy. For every assault he makes on the plan will help it in Congress, just as the Soviet Union's violent denunciations, plus its invasion of Czechoslovakia, put the then new Marshall plan over the top in Congress a decade and more ago.

Port Program, City of Philadelphia

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. TOLL. Mr. Speaker, one of the projects dear to the heart of Philadelphians is the development and promotion of our port. The distinguished president of our city council, the Honorable James H. J. Tate, spoke on this subject recently, and his remarks, which were carried over the Philadelphia radio stations during the weekend of February 25, may be of interest to other Members of Congress. Therefore, I include them below:

REPORT TO THE PEOPLE

The most important single project in our entire urban renewal movement in Philadelphia is the development and promotion of our port. I do not exaggerate when I say that the future prosperity and progress of Philadelphia, and the metropolitan complex extending throughout the Delaware Valley, depend to a large extent upon success in our port expansion program.

More than 96,000 employees in this area, with an aggregate annual income of about $516 million, derive their earnings directly or indirectly from our port. It offers services and inducements to all forms of industry, those which we now have and others we seek to attract. It is our gateway of commerce to all the world.

I am glad to report on this broadcast that a comprehensive program of port development is now being planned and carried out in Philadelphia. This ambitious project is being implemented by various local government and private agencies, spearheaded by our administration, the city council, and the Delaware River Port Authority.

For example, preliminary plans have been started on the construction of a major marine terminal at Packer Avenue, which will have six berths and will provide facilities for handling all types of cargoes. The cost of this terminal will be about $15 million, to be supplied jointly by city and State funds. It should be able to handle about 1 million tons of cargo annually.

Encouraging progress is being made in the city's negotiations to purchase piers, 96, 98, and 100, located below Oregon Avenue, now owned by the U.S. Army, which handle 25 percent of the general cargo entering this port. We have offered a half million dollars to the Government for these piers. We have also promised to spend $3,500,000 in rehabilitating them over a period of 10 years. Private interests sought to buy these same piers for their own use, but this was halted by Philadelphia Congressman WILLIAM J. GREEN, Jr., at the last session of the Federal Congress.

Already in the planning stage is a proposal to construct a marina or marine recreation center on the Delaware waterfront from Market to Catherine Streets, by acquiring outmoded piers in that area. This would not only serve as an excellent tourist attraction, but would also be visited by many of our own citizens and help them become more port conscious.

In addition to these major projects, we are now improving truck handling facilities at all of our piers. There is today a growing trend toward the delivery of seaborne cargoes by truck rather than by rail. This movement will be greatly accelerated with the completion of the Delaware Expressway. We will thus be prepared for that development.

Nor have we neglected the expansion of tourist facilities at the port. Seven cruises to the Caribbean on luxurious passenger ships are scheduled this year, and with the substantial economy and convenience our port offers in comparison with New York, I am sure this phase of our port business will continue to grow.

Two recent developments have been most favorable to our port promotion program:

The Federal Interstate Commerce Commission ruled that Philadelphia should have a rate differential under New York of 2 cents on each 100 pounds of freight moved by rail car between Philadelphia and the Midwest. This differential, which was opposed by New York and other eastern port interests, but defended by counsel for the Delaware River Port Authority and our city, will continue to help us in our promotion of waterborne commerce here.

A compact between Pennsylvania, New Jersey, New York and Delaware for the development and allotment of the water resources of the Delaware River Basin was approved this month by the Governors of the four States, and is now being submitted for approvel by the Federal Congress and the respective State legislatures. If effective, this agreement will insure the protection of the water supply required for the development of our port.

But with all of these advances, we still must do a selling job. The competition for waterborne commerce is unusually keen among the big seaports of the Nation.

The Delaware River Port Authority is developing a comprehensive program to meet this competition. It is now maintaining freight solicitation offices in Philadelphia, New York, Pittsburgh, and Chicago, and is establishing an office in London, England, so that we can solicit more commerce for our port from European and Scandanavian countries. It is also studying a proposal to establish foreign offices or send trade missions to South America and the Far East.

We are well on our way to making Philadelphia the Nation's greatest seaport. It is one of the most challenging and interesting phases of our plans to bring ever more progress to Philadelphia.

The 4–H Program

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the 4–H Club members throughout the Nation recently celebrated National 4–H Club Week and again reminded everyone of the wide range of their interests. The celebra-

tion was particularly significant this year, at a time when we are discussing the Peace Corps proposal and other suggestions to make greater use of our youth to meet national and international needs.

An editorial in the Daily Home News of New Brunswick, N.J., on March 8 described some of the activities that keep 4–H Club members busy. An article by Newark Evening News Washington correspondent William May on March 12 gave us some other facts on 4–H work abroad.

Mr. President, both articles give us helpful information about one of the great youth movement in this Nation. I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Daily Home News, Mar. 8, 1961]

THE 4–H PROGRAM SERVES ALL YOUTH

More than 2 million 4–H Club members across the face of the Nation are celebrating National 4–H Club Week this week, and the theme of the observance is "Learn, Live, Serve, Through 4–H."

Here in New Jersey we have over 11,000 members enrolled in 850 clubs. And, which may be surprising to many people, a tremendous amount of the emphasis is on town and city projects rather than country projects.

We tend to think of 4–H as a rural program, but over the years as our population has become more and more urban and suburban, 4–H has adapted to meet changing needs. The most popular 4–H projects here in the Garden State are clothing, meal planning and preparation, garden, beautification of home grounds, in that order.

The 4–H movement today, stronger than ever before, serves all young people, offering them a broad field to learn and work in. This broad field opens up interesting and worthwhile vocations and avocations, in such diverse pursuits as auto mechanics, dairy farming, forestry, fashions, teaching, cookery.

We recommend 4–H as one of the great youth movements creating the better America of tomorrow.

[From the Newark Evening News, Mar. 12, 1961]

4–H'ERS DOING PEACE CORPS WORK: MENDHAM YOUTH IN NEPAL AMONG INTERNATIONAL SERVICE ENTHUSIASTS

(By William May)

WASHINGTON.—Without attempting to take any of the glory away from the Peace Corps proposed by President Kennedy, the National 4–H Club Foundation is politely calling attention to a people-to-people program of its own, now entering its 14th year.

The program is known as the International Farm Youth Exchange (IFYE) and its leaders say that the officials who are studying the possibilities of the Peace Corps have found the IFYE has pioneered in many of the basic objectives.

"While IFYE is primarily a cultural exchange, delegates have made a lot of important contributions to improved rural living in many of the less developed countries around the world," Ted Hutchcroft, information director for the National 4–H Club Foundation, said. "Working with like groups in some 60 countries, IFYE's have lived and worked with rural people and become familiar with their problems."

JERSEYMAN IN NEPAL

One of the IFYE's who has made national headquarters proud is Denis Dalton of Pitney Road, Mendham, who is celebrating his 23d birthday today in Nepal, where he has volunteered to stay an additional 4 months.

Mr. Dalton was due to return to the United States March 1, but he and Sharron Scheline of Donnelly, Idaho, have offered to stay on as English teachers in a new binational center just opened in Katmandu.

"Dennis and Sharron have done remarkably well in learning the language, and Nepalese is quite difficult," Hutchcroft said. "They have really been out in the boondocks living with the people. Their term of service may be shorter than those proposed by the Peace Corps, but they are participating in the kind of work suggested for members of the Corps."

In his letters back to 4–H headquarters, Mr. Dalton has stressed his enthusiasm for working at the new school in Katmandu. He told of farmers who barely make a living coming out of the forest to contribute a few rupees to the school.

NATIVE SUPPORT

The farmers cannot read or write and their signatures are a thumbprint on a document, he said, but their spirit is amazing.

"We have worked in the villages and found our contact with the rural people most satisfying," Mr. Dalton said in a recent letter to Washington. "Now we are looking forward to a stimulating and equally rewarding association with the people of Katmandu. The center intends to lay emphasis upon youth projects, such as discussion groups, lectures, and recreational projects. The principle of the binational center appeals to me; the exchange of ideas and cultural activities to promote better understanding between the United States and Nepal."

Mr. Dalton, who graduated from Rutgers University with a B.A. in political science, wants to return home and go to graduate school with the idea of becoming a college instructor. But meantime he is happy in his work.

LIKES THE PEOPLE

"I like it here in Nepal," he wrote 4–H authorities recently. "I like the people, the culture and the idea of contributing something toward the nation's development. I find many great qualities in the Nepalese people. I see first enormous energy and then mental perseverence and physical stamina."

The 4–H headquarters here has come to look forward to Mr. Dalton's letters because he has a zest for experience and a knack for describing the lighter side of his life in Nepal. A favorite report of the Mendham man, according to Hutchcroft, is the one dealing with his first ride on an elephant.

"I always wanted to ride one and suddenly this big elephant appeared and the villagers gathered around and 100 hands pointed for me to get aboard," Mr. Dalton wrote.

The attendant on the elephant made it kneel and Mr. Dalton backed away 100 yards, got a running start and headed for the beast. His mistake, he said was in closing his eyes.

"I missed the main target, landed on the rear end and slid to the ground while the crowd cheered," he said. He backed away, made a second start and finally got safely aboard the elephant.

RIDING AN ELEPHANT

His first reaction as the ride started, he said, was sheer panic.

"The rise and fall was awesome," he said. "There was a special Elvis Presley swing and sway sensation as we moved along. I imagine the feeling was something like shooting Niagara in a canoe."

Finally the jaunt was over and it was time for Mr. Dalton to descend.

"Getting off the elephant was like falling three stories in a fast elevator," he said, "but I made it. I had ridden an elephant, what more can be expected of an IFYE?"

The Decatur, Ill., Story

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. SPRINGER. Mr. Speaker, this week Look magazine in conjunction with the National Municipal League announced the selection of 10 cities and one county as recipients of this year's All-America Cities awards. The story of the awards, with pictures, will appear in the next issue of Look magazine, to reach the newsstands March 28. The city of Decatur, Macon County, Ill., was awarded the honor of being known as an "All-America City" for 1961. I am proud of Decatur, in the heart of the congressional district I represent. America has grown great and will continue to remain great through individual ingenuity and initiative, self-reliance, and determination, and devotion to community and country. I can think of nowhere where these attributes have been more clearly demonstrated than in the city of Decatur, and I am sure the editors and publishers of Look magazine, and the jury that decided upon the 11 awards from over 100 U.S. cities considered, realized this in making the award to Decatur.

The story of Decatur, the "All-America City" nestled in the Land of Lincoln, is the story of America. It is not only the story of America past and present, but the story of America tomorrow and in all the tomorrows which lie ahead. It is the story of agriculture, of industry, of education, of religious freedom, of culture. It is the story of God-fearing industrious men and women adhering to the high ideals of the past to serve their community in carrying out constructive plans for the physical, spiritual, and cultural advancement of themselves, in their day, and those who have followed after them. And it is the story of the people and leaders of Decatur today following in the same great purposes that those who follow—their children and their children's children and their children—continue to live and work and prosper, in peace.

Perhaps Decatur is a shade more imbued with the high principles that have led America from a hodgpodge of 13 Colonies to the world's greatest Nation of 50 States. I say this because the early history of Decatur is intimately a part of the early history of the immortal Lincoln, more than any other man responsible for the might and right of our country, and the spirit of the Great Emancipator has ever been part and parcel of living in this community near the geographic center of Illinois, and today but 100 miles from the center of U.S. population. When one walks the streets of this busy yet friendly city today, one cannot help but feel the impact of its history, the aura of dignity, of majesty humble but real, that is the heritage left by Lincoln.

A tall, gangling young man of 21 brought his ox team to a halt in a muddy clearing surrounded by log cabins, in central Illinois, in March of 1830. This was Lincoln, and the hamlet he had entered was that which has grown into today's city of Decatur, with a population now exceeding 78,000. The spot where Abe then halted is now called Lincoln Square. During the next 30 years, Lincoln became a familiar figure in the area as he and the town grew. And it was in Decatur, in 1860, with Republicans meeting in a tent called the Wigwam, where the city's Millikin Bank now stands, that the railsplitter was first proposed for the Presidency.

But Decatur is not just Abraham Lincoln. Like Abe, the community saw hard times and good times; and like Abe, from the crucible of the changing years, Decatur has emerged strong, resolute, thriving, one whose great purposes augur well for the future not only of itself, its county, its State, but its Nation.

Incorporated as a town in 1836, it now ranks 8th among the cities of Illinois, and 176th in the United States. It ranks 80th in per capita income in the United States and 161st in retail sales. It is a great farm center, the heart of Macon County where farming is big business. Crop production in Macon County is bountiful. Average yields for corn, soybeans, wheat, and oats are above the State averages. Livestock inventories are high and dairy production compares with the best. This is all reflected in the economic pattern of Decatur, the county's chief trade center.

Decatur has its industry, too. While grain milling provides the largest employment, there is heavy employment in metal working and in the railroad industry. Five railroads serve the city, with a network of over 25,000 miles of track which connect the community with all parts of the country, with division shops where locomotives and freight cars are repaired and rebuilt. The railroads have enabled Decatur manufacturers to develop trade with all parts of the world. Significantly, this has contributed to the growth of the milling and processing plants which depend on the surrounding farmland for soybeans and corn which they turn into hundreds of valuable products, shipped to every corner of the free world's trade, bringing to Decatur the deserved title of "soybean capital of the world."

While Decatur has been growing rapidly during much of its life, it has never forsaken cultural interests. The growth of those things which make life worth while has kept pace. Schools, churches, libraries, recreation facilities, art, drama and music facilities, all these continue to contribute toward making Decatur a more pleasant city in which to live.

Mr. Speaker, too many individuals, too many communities today have forgotten how to think and to act for themselves. Rather do they look toward a paternal Federal Government to think and to act for them. They have lost somewhere the knowledge that the "do-it-yourself" principle is that which has made and will keep America great. Decatur has never been in this category. The history of this progressive and truly American city speaks for itself, and I submit that history for the Congress and all the country to know.

Before that, however, I want to reiterate that Decatur's citizens of today have not departed from the ways of their forebearers. Today's sons follow the example of their forefathers, giving expression to their ambitions and ideals that Decatur remain a busy, livable city and an example to all of America. While adhering to the tried traditions of the past, Decatur does not stand on past accomplishments. It knows that the future, the "great purposes" of tomorrow, can only be one of progress, peace and prosperity through the meeting and solving of the problems of today.

Today Decatur, as all America, is on the threshold of a new era. There are new industrial and agricultural developments. With these new developments come new responsibilities. I am happy to say that Decatur is facing, and meeting, every responsibility that has come with the past years of its growth, with those of today and those it can foresee in the coming years. Homes are being built, new schools are being built, churches and hospital facilities are being enlarged and new ones built, new factories are going up and additions are being made to many of those that have been long established, improvements are being made in public services, and community and civic problems such as those of water supply, traffic safety, sewage, and others are being met.

Mr. Speaker, we are facing one of the most critical times in our national history. That we may meet the crisis, that we may in solving it maintain our American system of government and our American way of life. I feel sure that all of our people must reaffirm their faith, rededicate themselves to truly American principles. That this can be accomplished, millions of Americans must be shown the way; they must be told over and over again. And the best way to tell the American story is by example, by the example of Decatur, and her sister cities, who have never strayed, whose community integrity and devotion, through trial and tribulation, through the long hard pull, have led us from a noble past and, if followed, into an even nobler future.

The path to the fulfillment of "great purposes" and a world at peace is that which Decatur treads and on which in the days ahead must be heard the footsteps of all America.

Yes, Mr. Speaker, Decatur is truly an "All-America City," not just for 1961, for it has been in the past and will continue to be for long years to come.

Mr. Speaker, as quoted in the issue of Look magazine which will carry the All-America Cities awards, Dr. George H. Gallup, foreman of the All-America Cities jury, states:

> The citations are not given for good government or efficient municipal administration, but rather on the basis of energetic, purposeful citizen effort.

Within this concept, Look magazine says of Decatur, in naming it an All-America City:

> Middle age came early to Decatur. The city's downtown section was traffic-clogged. Parking space was scarce. Slums choked the city's choicest sections. Industry grew, but outside city limits. Even worse, water reserves were low.
>
> In 1958, a citizen group campaigned for and won a council-manager government. Later, the reformers elected a mayor and five out of six councilmen. Meanwhile, a $2.5 million street program had been adopted, augmented by State and Federal funds, along with a $5 million plan to raise the reservoir level. Merchants purchased parking sites, and urban-renewal funds were obtained to clear a blighted area of 50 acres. Today, Decatur is a rejuvenated city.

Liberalizing Social Security Act

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. HOLTZMAN. Mr. Speaker, I am today introducing in the House of Representatives a bill liberalizing the Social Security Act and providing an essential package break for our older citizens.

The bill provides for three major changes in the act: First, removal of the present limitation on outside income that can be earned by recipients of social security benefits; Second, lowering of the retirement age for men to 60 and women to 55 years of age; Third, continued payments to dependent children after age 18 provided the dependent child is actually attending full-time school.

The first revision is the removal of the present limitation on outside income that can be earned by individuals who are receiving social security benefits. We are all well aware of the fact that the cost of living has continued to spiral upwards, and it is almost impossible for the majority of our older citizens to live on savings, small pensions or their social security. Pensions and social security are not that generous, and whatever savings might have been accumulated over the years have been for the most part dispersed for various reasons. In many instances the older folks are forced to become dependent to some degree on relatives or friends, or on the various welfare agencies for the additional help they need. To remove this restriction on the amount of income which they can earn would correct a great inequity in the law and would most assuredly make it easier for them and their families. Wage earners, for whom the act was originally intended, would then be on a par with those who have trust funds, real estate, and other investments, against whom there is no limitation whatsoever.

The second provision would give full benefits to men and women at age 60 and 55 respectively. Early retirement of our older workers has been advocated and encouraged to make way for young-

er employees who are coming on the labor market in greater numbers each year. After working for a period of 30 to 40 years an individual is certainly entitled to some rest and a relaxation of pace. The fact that he has retired from active full-time employment would not necessarily mean that the benefit of his qualifications and years of experience would be lost and unused. However, his responsibility would be lessened and his burden lightened; yet he would be free to continue to contribute his ideas and know-how, but on a more limited basis.

With regard to provision three, for many years we have been mindful of a great deficiency in our approach to the educational needs of our people. Literally thousands of young men and women are obliged to forego a full education because of the need to contribute to the maintenance of their home. This provision, if enacted into law, will be a real step forward, not only from the viewpoint of our educational needs, but also from the viewpoint of a parent who has only an average income and wants to provide his child with additional schooling.

The Congress has a substantial responsibility for the welfare of all our citizens. If we are to be practical and realistic we must at this time revise this program to meet the challenge of the times.

Reasons for Locating Los Angeles-Long Beach Harbor Customhouse at the Harbor

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. HOSMER. Mr. Speaker, the Government proposes to locate one of its customhouse 22 miles from the harbor it is intended to serve. This is the Los Angeles-Long Beach Harbor. Although it would seem ridiculous to have to explain why a customs house should be located at the harbor, rather than 22 miles away, nonetheless Bob Wells of the editorial department of the Long Beach Independent Press Telegram did a good job of it in a letter to Assemblyman Vincent Thomas of the California Legislature, who has introduced two resolutions in that legislature requesting the customhouse be placed where it should be. The letter is as follows:

MARCH 8, 1961.

The Honorable VINCENT THOMAS,
Assemblyman, 68th District,
State Capitol, Sacramento, Calif.

DEAR ASSEMBLYMAN THOMAS: Needless to say, we are very pleased by your action in introducing two resolutions requesting that customs headquarters be located in the harbor area. Would you please send two copies of each resolution to me here at the newspaper?

I am sending along some of the material we have collected or prepared on the customhouse problem in the hope it may be useful.

The main justification made by Customs Collector Carl White and some GSA officials for a downtown customhouse seems to be that business interests who deal with customs—brokers, banks, shiplines—are located in downtown Los Angeles and only in downtown Los Angeles. This reasoning is erroneous as you well know:

The main justification made by the customs service and the GSA seems to be that business interests who deal with customs—brokers, banks, ship lines—are located in downtown Los Angeles and only in downtown Los Angeles. This reasoning is erroneous on two counts.

First, many of the businesses mentioned are present in the harbor area. The shipping lines all have offices in the harbor. Our banking facilities are adequate. There are 27 customs brokers in Los Angeles; there are 7 in the harbor area; there are a similar number near International Airport in Inglewood. The harbor area is closer transportationwise to the airport than is downtown Los Angeles.

Second, customs brokers are located in downtown Los Angeles because the customs headquarters is there, not the other way around. If the customhouse were located in the harbor, all brokers would have offices there. The brokers are concentrated at Sixth and Spring Streets in Los Angeles, the present site of customs offices. If the customs headquarters is moved to the proposed new building in the civic center, the brokers will have to run special messengers. This will pose a problem because there are no provisions for off-street parking at the proposed new Federal building. Lack of civic center parking has already reached crisis proportions.

I am enclosing a Verifax copy of a copy of a letter sent to the GSA by Carmichael Freight Forwarders and Customhouse Brokers. This firm is located in downtown Los Angeles, but the reasons for a harbor customs center and against a downtown customhouse are very well summarized.

D. B. Strubinger, acting commissioner of customs, in a report prepared for Senator WILLIS ROBERTSON, has acknowledged that there is a transportation time of 1 hour between the downtown Los Angeles headquarters and the harbor branch customs. He shrugs it off, but let me tell you what it means.

First, every day the appraiser of customs has to send eight men to the harbor to appraise merchandise on the docks. By Strubinger's own figures, it takes these eight appraisers 1 hour to reach the area where they work. It takes them 1 hour to return to the appraiser's headquarters in downtown Los Angeles. That is 16 hours a day lost in transportation—or the equivalent of two more appraisers per day.

Second, imported merchandise that cannot be accurately appraised on the docks has to be sent to the Appraiser's Stores in downtown Los Angeles. Samples—or, as in the case of antiques, sometimes the entire shipment—are picked up and trucked at Government expense from the docks to downtown Los Angeles. The fee for this cartage is 85 cents per package. The bill to the Government runs between $3,500 and $4,000 a month, or between $40,000 and $50,000 yearly.

Third. The customs service has one messenger a day that makes the trip between downtown Los Angeles and the harbor. He carries entries—customs forms—between the customs headquarters and the merchandise. Thus an entry that is sent up one day will not be sent back until the next. That is a delay of at least 1 day for entries, which at other ports (with customs near the harbor) are handled in less than an hour. Sometimes, the messenger misdirects the entry, or there is an error on it. In this case it must go back to Los Angeles and be sent down all over again. This can cause a minimum delay of 3 days.

I received this information from customs employees, who, contrary to their Los Angeles-oriented bosses, favor a harbor customhouse for efficiency.

The Bureau of Customs and GSA say the decision to locate customs headquarters in Los Angeles was reached only after extensive surveys. Port officials in both Los Angeles and Long Beach Harbors would like to know what surveys. As far as I can determine, no one in the harbor area was consulted. We learned about the surveys only after it was announced that customs headquarters would be located in downtown Los Angeles.

GSA Public Buildings Service Commissioner Karl E. Wallace states in a letter to a Long Beach businessman—a copy of which I am enclosing—that customs has to go into the new building because the Department of the Treasury is the principal tenant and, after all, the Bureau of Customs is a part of the Treasury. This, again, is contrary to practice at other ports in the United States.

In other ports, the following agencies, all of which are concerned with maritime commerce, are located in a customhouse: Federal Communications Commission; Coast Guard Search and Rescue, Coast Guard Steamship Inspection and Shipping Commissioner and other Coast Guard bureaus; Public Health Service; Immigration Service; Maritime Commission.

The Internal Revenue Service will take a large share of the space in the proposed new Federal building in Los Angeles. The IRS gets lots of business from taxpayers, as you know, and it is going to cause a parking problem under present plans, which do not provide for parking areas.

Proponents of the downtown customhouse are trying to make it appear that Long Beach is demanding the customs headquarters be located in Long Beach. This is untrue. What Long Beach has asked is that customs be located at a site mutually convenient to the two ports of Los Angeles and Long Beach. There are excellent sites available in Los Angeles. Reeves Field on Terminal Island, which is within the city limits of Los Angeles, would be ideal.

I am sending copies of this letter to Assemblymen Kennick and Grant, to Senator Engle and to Congressmen Hosmer and King.

Sincerely,

BOB WELLS,
Editorial Department, Independent Press-Telegram.

A Dignified and Well-Informed President

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. SMATHERS. Mr. President, John S. Knight, editor and publisher of the Miami Herald, observes in his weekly column "The Editor's Notebook," which appeared in the March 5 Miami Herald, that President Kennedy was "dignified, surefooted, and remarkably well in-

formed" in his preceding press conference.

Mr. Knight is one of the Nation's foremost editors and his remarks in this regard bear great significance. He notes that in his time six Presidents have faced the Nation's press in these Washington news conferences.

I ask unanimous consent to have Mr. Knight's editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Miami Herald, Mar. 5, 1961]

THE EDITOR'S NOTEBOOK—KENNEDY'S SURE-FOOTED WORDS FAR FROM NAIVE, IMMATURE

VIEWS ON THE NEWS

The President's press conferences are disclosing some unsuspected qualities in our Chief Executive.

Or so is must seem to those who charged in the campaign that Jack Kennedy was "naive, immature, and inexperienced."

As I watched the President on television last Wednesday morning, he was dignified, surefooted, and remarkably well informed.

The anouncements which preceded the questioning were made without flourish. A lesser politician might have waved the flag in urging the restoration of Eisenhower's former rank, but Kennedy stated quite simply what he thought ought to be done and that was that.

Nor did the President attempt to claim credit for the halt in the net outflow of gold from the United States to foreign countries. He conceded that "this complete halt is only temporary" but expressed the belief that confidence in the dollar is being restored.

Kennedy made no extravagant claims for the new Peace Corps, but voiced the hope that it may be a contribution to world peace.

He conceded that the task of dedicated people, receiving no salary and living at the same economic level as the people of the countries to which they are assigned, will not be easy.

PRESS PRECEDENTS

In my time, six Presidents have faced the Nation's press in these Washington news conferences.

Two of them, Calvin Coolidge and Herbert Hoover, insisted upon written questions in advance. They answered only the ones they cared to answer.

Franklin D. Roosevelt used the press conference as a device to help accomplish whatever purpose he had in mind. Mainly FDR specialized in selling the Roosevelt programs. An arranged question was often the launching pad for a lengthy dissertation on what Roosevelt thought the country should know.

The question and answer period enabled FDR to send up trial political balloons, clout his enemies and convey as little or as much information as he wished.

Harry S. Truman, though humble at the start, was a new man after his surprising victory in 1948.

He thoroughly enjoyed his encounters with the press and never ducked any of the tough questions. When the meetings were on the dull side, HST would try to liven things up.

He was testy at times, often cocky, and generally well liked by the reporters.

Dwight D. Eisenhower's press conferences were always illuminating, though seldom inspiring. The general, unpracticed in the art of deception, gave honest if involved answers.

I have seen him flush with anger when asked prying questions about personal matters, and give the short rebuke to windy interrogation.

Ike never mastered the simple direct answer. A grave problem was always "this thing of which you speak" and the dangling participles came in endless flow.

Nevertheless, the Eisenhower conferences were productive of news. Although Ike disliked these meetings with the press, he dutifully gave his best without artifice or evasion.

ALL'S DIFFERENT NOW

The Kennedy technique is quite different from the methods used by his predecessors.

He has dispensed with the requirement that his questioner identify himself and the newspaper represented.

This has come as a sharp disappointment to some Washington correspondents who (a) have a tendency to ham it up and (b) to others intent upon displaying their perspicacity to editors back home.

To date, the cool, confident, and reserved President has won the respectful attention of the Washington press corps.

There is no banter, nor any wisecracks. Kennedy's opening announcements sound like the chairman of the board reporting to the directors.

As one of our correspondents wrote me this week: "The blandness, the tedious excellence of the Kennedys must seem like dull copy. Hence the aridity of the bureau's report."

CHALLENGES AHEAD

In time, as the newsmen grow restive over this unaccustomed efficiency, they will become bolder and pose the shrewd, penetrating questions which give no comfort to the gentleman who must answer them.

It will be interesting to see how the President handles the little lady who has parlayed a funny hat and a vinegar voice into a national television reputation.

Or the pompous chief of bureau who always makes a speech before getting to the question.

And the needling prosecutors of the press who, in the past, have caused Presidents to feel as uneasy as a corporation officer charged with price fixing by the Department of Justice.

A MATCH IS MET

I have a hunch, however, that the Washington press corps has met its match in J. F. K.

This knowledgeable young man will not easily be thrown off stride. He gives the impression that he has done his homework, is fully conversant with all aspects of his job, and understands the magnitude of the problems he faces now and in the future.

A few editors are complaining that Kennedy's televised press conferences disadvantage the newspapers in terms of publication time.

Even so, it seems to me that the greater exposure a President has, the better informed are the people he leads.

Our Fear of Nuclear War Kremlin's Greatest Asset

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. HOSMER. Mr. Speaker, Capt. J. H. Morse, Jr., U.S. Navy, retired, has for long been an outstanding authority on nuclear problems. On the eve of the resumption of the Geneva nuclear test ban talks it is well to remember his words on November 27, 1960, on the Manion Forum. Pertinent extracts from Captain Morse's broadcast are as follows:

"The only thing we have to fear is fear itself." These cogent words of Franklin D. Roosevelt in 1933 state as well as any words can the situation as I see it today. They form the essence of the thought I shall express today in the few minutes at my disposal. I shall make the following basic points:

1. America today seems a fearful nation lacking in self-confidence and determination.

2. The Communists are, to a large extent, responsible. They have fought for years to erode deliberately our individual and national courage, in recent years through nuclear lies and half-truths.

3. They have done so in order to weaken their strongest opponent and achieve their goal of world domination through surrender by installment, won from irresolute and frightened opponents.

4. We can thwart their aim by recognizing what they have done and what they mean to do, by reviving the individual and national courage required for life in the dangerous world today. We are physically stronger than the Soviets and can retain this lead. But, there is no substitute for courage as the indispensable supplement to physical strength.

The nature of today's crisis is clear, but our national response to this crisis is still in doubt. Neither we nor our anxiously watching allies can be sure how we will react. This doubt is natural under the circumstances.

There is good reason to believe that we as individuals, and hence our Government, are dangerously inhibited by fears that assume two basic forms:

1. We fear the possibility and the consequences of nuclear war if we take the kind of positive action and initiative which history and commonsense call for today.

2. We fear what other people, including our enemies would think or say if we took such positive action. The latter fear shows unhealthy lack of confidence in ourselves and in our country. Both fears are greatly inflated beyond justification by the facts. And this inflation has not come about by chance.

It would be only natural if Khrushchev thinks us fearful. After all, the Communists have deliberately sought to erode our national courage for many years. It would be most surprising, particularly to them, if they had failed completely. Let me be specific.

In their short 40 years of history, the Communists have demonstrated astounding skill in psychological warfare. They got their start that way. The founders of the Communist movement had no physical power—only ideas, lies, and a basic understanding of psychological warfare against men and nations.

By such warfare against the mind, backed judiciously by threat of force, they have come in only 40 years or so from nowhere to control directly now one-third of all the people on this earth. Indirectly, and again by psychological warfare, they largely control millions more. What would be more natural than to concentrate this devastating form of warfare upon Americans who for years have been the No. 1 Soviet target?

From the very beginning of this assault the Soviets have recognized that any nation's power consists of two main elements: First, its physical power, such as military and economic strength; and, second, its moral courage and determination to use that physical power where required for survival and to attain the other national ends.

The Soviets have also recognized that until recently they could do little directly about America's physical strength. They could not appreciably influence the size of our Armed Forces or our weapons, for example. Nor could they affect our economic policies appreciably. Our individual and national courage, however, they early recognized as

another matter, an essential element of our national strength which is peculiarly vulnerable to their particular skill in psychological warfare.

Even before nuclear weapons, they made some progress though not too much; however, the nuclear weapon in their skilled hands has now changed the picture drastically and provided a perfect tool for them to destroy our national courage. Now our courage is being really tested. You may be sure that the Soviets are making the most of this opportunity.

How have they gone about it? As you might expect—by deliberately stressing nuclear half-truths and outright lies to inflate and distort the possibility and the very real dangers of nuclear war. There is no field of progress more encumbered with misunderstandings than that of nuclear weapons. Much of this misunderstanding is deliberate. Much is the result of our own inept handling of the problem. Whatever the causes, the results are clear. Nuclear weapons have acquired a no hope connotation in the eyes of most Americans. And the end result, if this situation continues, is likely to be fatal, by installments.

Two nuclear half-truths among the many implanted by the Soviets have been particularly devastating in this regard. For example, you have heard many times over that major nuclear war means the end of everything for you as an individual, and for your children and your Nation—all that you hold dear. You have heard that major nuclear war will probably destroy all life on earth. Who wants most for you to believe this? Khrushchev. Of course.

You have also heard that the use of any nuclear weapon anywhere, no matter how small the weapon or how remote the area, or how unimportant the occasion, must inevitably expand into all-out nuclear war. Who want most for you to believe this? Khrushchev. Of course.

Why? The answer, it seems to me, is very simple. If you really believe with certainty these two concepts: That major nuclear war means the end of everything; if you really believe with certainty that any use of any nuclear weapon must surely bring on a major nuclear war; then the use of nuclear weapons must mean to you no hope. Think about the implications of these words for a moment. No hope. These are terrifying words.

They mean that you know there is no hope if anyone ever uses nuclear weapons under any circumstances. Thus, the very essence of our national military strength, our absolutely indispensable nuclear elements are useless for your defense, or for achieving your national objectives. They will remain unavailable until and unless you face an equally hopeless situation with little to choose between the two.

It is difficult for many Americans today to imagine any equal or more hopeless situation than one which calls for using any nuclear weapons. Certainly Khrushchev will not present us with such apparently hopeless alternatives which might lead us to choose that of nuclear weapons until he is certain he can win no matter what we do. Then it will be too late. This is what he hopes and plans. There are more ways than one to skin a cat.

So it is easy to see why he wants you to believe these two ideas so carefully implanted into our national thinking. If we are sufficiently fearful of nuclear war, the Soviets can thus avoid the one inhibiting restraint which has so far curbed their growing power.

Whenever we have shown that we mean business, with nuclear weapons in our arsenal and the credible will be to use them to stop the Soviets, they have drawn back. Whenever we have shown indecision and willingness to compromise, we have fared badly. I am aware of no exception.

I am not concerned about our physical strength. Despite the current debate about our physical strength which rages in many circles, I am confident that America still is many times stronger than the Soviet Union and can remain so if we, the people, so determine. And we will, if we keep our courage. If we were not stronger than the Soviets, do you think that America as a Nation would be alive today? I don't.

No, our physical strength does not concern me at the moment. I believe that we can and will provide the military and economic strength required to stay ahead if we do not completely lose our courage. We will, I believe, make the financial sacrifices required to assure sufficient missiles of modern vintage and the military forces required in other fields of military strength.

Our appalling decision to stop improving our nuclear weapons argues against this optimism about our continued physical strength. I would hope, however, that our blindness here is temporary. It may disappear if the Khrushchev tactics call for continued bullying as at the United Nations recently, and if our courage gradually recovers as Khrushchev again shows us the facts of modern life.

Please do not assume that I favor nuclear war of any kind, or that I criticize the Republicans and not the Democrats for lack of courage. I am calling only for a rebirth of national and individual courage by which this Nation can face the facts of modern life in realistic fashion clear of wishful thinking; by which Khrushchev will know that America courageously faces any risk he can impose, including that of nuclear war on any scale that may be necessary to stop him. He must know that Americans do, indeed, regard some things that he would do to us and to the world as worse than death. This, I believe, is the most effective way to avoid a nuclear war, and yet retain a free world for our children.

The courage, I believe, must come from you, the people, demonstrated to your Government leaders so clearly that they also find courage within themselves. After all, they get it from you. This is a democracy. Your opinion is important. Make it known to your friends and to your leaders on any level accessible to you.

We can thwart Khrushchev only by showing traditional American courage and determination of the sort that made this Nation. We must recognize that just being alive today takes courage—but, it is also fun.

Between implacable Soviet hostility and the threat of nuclear weapons there is no way that we can positively assure a favorable outcome for us. Let us accept that fact and stop looking for easy ways like trusting Khrushchev, or the threat of the Red Chinese, or early changes inside Russia.

We must recognize the cold hard facts of modern life, its inevitable risks, as well as its rewards, and shun the kind of wishful thinking which blinds our Government to such simple facts as how to treat a bully, and what happens when one tries appeasement, no matter how cleverly disguised.

The Chains of the Constitution

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I wish to include therein an address by Willis E. Stone, chairman of the National Committee for Economic Freedom, 6413 Franklin Avenue, Los Angeles, Calif. Due to the expanding and continuing interest in my bill, House Joint Resolution 23, which I reintroduced in the 87th Congress, I believe the contents of this speech will supply valuable information in support of this measure:

THE CHAINS OF THE CONSTITUTION

(By Willis E. Stone)

Power corrupts, and absolute power corrupts absolutely. Lord Acton's dictum is not a cliché; it is a tragic truth. And unfortunately the lust for power is an innate vice of men. The pages of history run red with the blood of those who have lived in misery and died in agony under the absolute power of tyrants. And the instrument of every tyrant's power has been a corps of satellites who yielded him unquestioning obedience in return for the privilege of dominating over and terrorizing his subjects.

To protect the new Nation from this fatal vice of mankind, the founders of our Republic acted on the maxim enunciated by Thomas Jefferson: "Let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution.

But we have neglected our Constitution, relaxing the vigilance with which we should have enforced it, and permitting gradual and systematic encroachment on our liberties. And even now, when a vast and greedy bureaucracy has almost openly become our master, we try to reassure ourselves with the hope that it can't happen here.

Unfortunately, it not only can happen here, but it is happening to us, and our plight grows progressively worse day by day. Incredible as it would have seemed to the authors of the Constitution, our Government is little by little wresting from the people the right to own and operate the productive enterprises that the people have created. And we can no longer avoid the unhappy realization that our income taxes pay for the destruction of our property rights.

In our dismal plight, however, one hope for the revival of our institutions of economic freedom is growing brighter and stronger. The proposed 23d amendment is constantly gaining momentum as it becomes increasingly apparent that this measure, which would undoubtedly control the bureaucracy's lust for power and restore economic justice to our troubled land, can command enthusiastic popular support.

The proposed 23d amendment will free the American people from the crushing burden of financing socialism at home and abroad in direct violation of the spirit of the Constitution.

II

It is an appalling fact that Americans, who have never known military defeat, have been forced by their Government, under the pretext of economic aid, to pay more tribute to foreign Socialist and Communist governments than all the vanquished peoples of the earth have paid to their conquerors. And these vast sums, when not simply wasted, are used to give to foreigners industries which, if successfully operated, necessarily deprive Americans of foreign, or even of domestic, markets.

At home, our whole economy is being overgrown by a jungle of bureaucratic agencies with strange names and often incomprehensible activities, which operate without the slightest pretense of constitutional authority, and whose very existence is unknown to most of the taxpayers from whom they suck nourishment. The first clear picture of this jungle is provided by the series of fact sheets available from Post Office Box 2948, Los Angeles, Calif.

Fact sheet No. 1 listed more than 700 Federal agencies which compete with private

enterprise on a cost-free, interest-free, dividend-free, rent-free, and tax-free basis—and even so usually produce admitted or concealed deficits. Subsequent issues report on single agencies and projects, of which the following are typical examples.

The Cuba Nickel Co. (fact sheet No. 3) involved us deeply in the troubles of Cuba, which it possibly helped to generate. More than $90 million of our taxes were poured into the economically unsound mining of extremely low-grade nickel. Even without Castro, the hope of salvaging any part of our "investment" would have been extremely remote.

Eskimo dwellings (No. 4) is one of the eight projects included in the single budget entry titled "Independent Offices Appropriations Act of 1955," and in which a total of $2,500 million was invested. Of this original capital, about 25 percent has been recovered, 60 percent has been lost, and most of the remaining 15 percent will probably have to be written off. But the admitted loss to date of more than $1½ billion in this mad-cap enterprise seems to embarrass no one, nor does it discourage the promotion of similar schemes.

Passamaquoddy (No. 5) was a scandalous New Deal project abandoned in 1936 as obviously impractical and notoriously corrupt. But it has been revived, and a new preliminary survey has already cost us $3 million.

The Alaska Railroad (No. 10) has the distinction of possessing the world's only steam-heated railroad tunnel. As a political effort, the tunnel is a great success, requiring a large staff to keep it warm 24 hours a day, 7 days a week. But unfortunately it was necessary to open the doors to let the occasional trains go through, and this produced difficulties of such magnitude that, according to a recent report, the railroad has been rerouted around the tunnel.

These are but samples of the bizarre misuse of political power and our money. The detailed studies made by the Hoover Commission report, among other things, that the Federal Government taxes us to operate no less than 104 money-lending institutions.

The Rural Electrification Administration (No. 17), for example, takes money borrowed by the U.S. Treasury at the current rate of 4 percent and lends it to tax-exempt cooperatives at 2 percent. Of course, the differential is so obvious that the cooperatives are taking more and more of this 2-percent money and investing it in the Government bonds which yield 4 percent. And no one—except the taxpayers who pay for this folly—can complain because the cooperatives recognize an opportunity to make a sure profit on no investment.

Another one of the 104 lending agencies was the Reconstruction Finance Corporation (No. 14), which, according to page A–10 of the U.S. Budget of 1950, dissipated more than $10 billion during the single year of 1948. Exposure of such facts forced the abolition of the RFC—but it vanished only in name, since its powers were transferred to the Small Business Administration (No. 15) and General Services Administration (No. 21), which squander money by the same methods, although currently on a somewhat reduced scale.

The Federal programs to usurp the business of producing electrical power were all labelled "economically unsound" in the Hoover reports. The best known of these are the Tennessee Valley Authority (Nos. 11 and 28) and Bonneville (No. 34). It is interesting to note that the TVA, which has already inflicted on American taxpayers a direct loss of more than $2 billion, was recently made independent of all restraints when it was granted the fantastic power to issue its own bonds against the credit of the United States, without reference to the budget or the national debt limit, and without review or control by the Congress or the Treasury Department.

The list of Federal agencies which, in violation of the Constitution, tax us to invade and corrupt every area of our national life, is long—and tragic in its implications. It is estimated they have grabbed more than 20 percent of our industrial capacity.

III

The invasion of our business community is matched by the spectacular capture of land empires by other Federal agencies.

The Department of the Interior proclaims on page 229 of the U.S. Government Organization Manual for 1959–60 that it has "custody of 750 million acres of land." The sheer magnitude of this domain has somehow escaped notice. We assume that this must be all right because the Department is part of our Government, and we further assume that it has observed its obligations under the Constitution. We forget that the Federal Government has no right or power to have or to hold land in any State except within strict limits specified by the Constitution—limits which the Department of the Interior has patently transgressed. Without the slightest constitutional authority, it has invaded the States and taken control of 750 million acres, which are 32.3 percent of the total land and water area of the United States and all of its territories and possessions.

The Department of Agriculture does not itself claim ownership of vast tracts of land, but it does hold the power of life and death over the agriculture of the Nation. The threat of seizure of private farms is very real. The farm acquisition plan devised by Henry Wallace, Henry Abt, Lee Pressman, Rexford Guy Tugwell, and others of their kind, provides for the confiscation of farms, crops, and livestock if the farmers fail to obey the commands of the Department. And who knows when the bureaucrats will decide to exercise their tyranny on a national scale?

While the Department merely threatens its subjects, agencies within it are building great feudal baronies. Although the Forest Service has no constitutional authority for being the proprietor of any land in any State, it now, according to page 261 of the manual cited above, "administers approximately 150 national forests, together with land utilization project lands, experimental forests, and other lands, aggregating about 188 million acres." This domain equals 8.1 percent of the total land and water area of the United States and all its territories and possessions.

The Founding Fathers of this Nation well knew that, as was shown by all history and emphasized by the experience of the English people, the ownership or control of large or economically important tracts of land by a central government was an infallible incitment to despotism—that the theory of the "divine right of kings" had been in fact less baneful to human liberty than the powers of political corruption and arbitrary control inherent in the monarch's possession of great areas. For this reason they stringently limited in the Constitution the territory that could be under the jurisdiction of the Federal Government, restricting it to an area of not more than 10 miles square (the present District of Columbia), military and naval establishments, and buildings for the conduct of Federal business. And they provided with equal clarity a single procedure whereby the Central Government might acquire even these restricted areas, making the decision in all cases rest exclusively with the State concerned.

It is true that the new Federal Government also had jurisdiction over the western territory that had been ceded to the Confederation by New York, Virginia, and other States, but this jurisdiction was merely provisional and temporary, since the cessions had been made with the express proviso that this territory was to become, as soon as it was sufficiently settled, a number of new States equal in all respects to the Original Thirteen. This equality included, of course, complete sovereignty over all land within the State's boundaries except Army posts, naval bases, and Federal buildings. The terms of cession were confirmed by the first Congress under the Constitution, and carried into effect when the first new States, Kentucky and Tennessee, were admitted in 1792 and 1796.

It is quite clear, therefore, that the Constitution did not contemplate, and does not permit, permanent possession or occupation by the Federal Government of even 1 acre of land outside the District of Columbia, except as provided in article I, section 8, paragraph 17, of the Constitution:

"The Congress shall have the power * * * to exercise exclusive legislation * * * over all places purchased by the consent of the legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dockyards, and other needful buildings."

The stringency of this limitation is emphasized in "The Federalist," No. 43, and it was assumed that the States would be vigilant to prevent trangression of the carefully prescribed limits. This assumption, implicit in the Constitution itself, is reiterated throughout "The Federalist"; for example, in No. 85: "We may safely rely on the disposition of the State legislatures to erect barriers against the encroachments of the national authority."

But where are those barriers? Under the spell of unprecedented prosperity and a wild optimism we not only relaxed the vigilance of freemen, but seem now almost to have forgotten what a State really is.

When Alaska was recently admitted as a State, it was permitted jurisdiction over only a small part of its total area, and even this part was made subject to permanent restrictions as to occupancy and use. The people of Alaska obviously do not have authority over their own territory, and therefore do not enjoy equality with the inhabitants of the older States, for they have been made subject to the sovereignty of a multitude of bureaucrats in Washington. Alaska is not a State in the meaning of that word in the Constitution; it is a monstrous hybrid and, in effect, a disguised colony of the Federal Government.

In the meantime, the bureaucracy is assiduously eroding the States by legal usurpation and, most fantastic of all, by buying them up with money obtained by taxing them.

The bureaucracy has become so arrogant that it now challenges even a State's jurisdiction over land owned by the State government, as, for example, in Ohio, where the State has been sued by the U.S. Department of Agriculture for daring to plant wheat on its prison farms.

Today, 48 percent of the State of California is federally owned, so that the legislature and people of California have sovereignty over only half their State—and even the part that has been left to them is being steadily diminished. The plight of Arizona is worse; there Federal agencies own and control 75 percent of the entire State. In Nevada, Federal agencies hold 87 percent of the land, and three new programs of acquisition will increase this to 88.8 percent, thus leaving but 11.2 percent of Nevada under the control of its Governor, legislature, and people. These monstrous and ever growing domains are strangling the States and threaten to extinguish the whole concept of individual property rights.

Just two Federal agencies—the Department of the Interior and the Forest Service—have between them attained jurisdiction over nearly 1 billion acres of American land—a land mass equal in extent to the combined areas of England, Ireland, Scotland, Wales, Portugal, Spain, France, Belgium, Holland, Luxembourg, Switzerland, East and West

Germany, Iceland, Denmark, Poland, Czechoslovakia, Austria, Hungary, Italy, Albania, Greece, Yugoslavia, Rumania, and Bulgaria.

This incredible usurpation has been effected and is maintained by wringing from American taxpayers money to violate and subvert the Constitution. While we were unaware of what was happening and heedless of our own safety, the bureaucracy took our own money to conquer us from within; but we, the people, still have the power under our Constitution to reestablish economic freedom, private property, and self-determination.

IV

The procedure is clear. The provisions and intent of the Constitution can be reinstated by an amendment to clarify and define the terms and purposes that have become vague through abuse and quasi-judicial distortion. A single amendment, enacted as provided in article V of the Constitution, can take from the bureaucrats the enormous powers they have usurped.

The proposed 23d amendment, introduced as House Joint Resolution 23, by Congressman JAMES B. UTT, of California, provides:

"SECTION 1. The Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution.

"SEC. 2. The constitution or laws of any State or the laws of the United States shall not be subject to the terms of any foreign or domestic agreement which would abrogate this amendment.

"SEC. 3. The activities of the U.S. Government which violate the intent and purposes of this amendment shall, within a period of 3 years from the date of ratification of this amendment, be liquidated and the properties and facilities affected shall be sold.

"SEC. 4. Three years after the ratification of this amendment the 16th article of amendments to the Constitution of the United States shall stand repealed and thereafter Congress shall not levy taxes on personal income, estates, and/or gifts."

This amendment will erase the privileges and immunities claimed by Federal agencies, cause the lands and facilities held without constitutional authority to be sold back to the people or transferred to the States, and free us from an oppressive taxation that has become virtual serfdom. * * * This will be obvious from a simple calculation.

The value of the lands and facilities now held by the Federal Government has been appraised by the Government Operations Committee at $262 billion. This appraisal is undoubtedly conservative, for the Federal Government recently sold barge lines, synthetic rubber plants, and various parcels of land at nearly three times the appraised value. It may safely be assumed, therefore, that the lands and facilities affected by the "23d amendment" would find a market, even at forced sale, which would yield far more than one-fourth of the 1959 appraisal for all Federal properties. But if only one-fourth were realized, this would reduce the national debt more than $65 billion. And on this modest estimate we can readily compute that, in terms of the 1960 budget, the proposed measure would at least—

	Million
Save interest on this portion of the debt (at 3 percent)	$1,950
Save amortization ($65 billion in 40 years) per year	1,625
Save losses of agencies affected (1959 level)	19,000
Save payroll paid by general fund for free services to Federal corporate activities (estimate 1959)	4,300
Save costs of goods, services, and facilities required to make above payroll operative (three times payroll)	$12,900
Domestic savings	39,775
And also save foreign grants and credits (estimate 1959)	5,000
Total savings	44,775
Therefore we can repeal personal income taxes, which yielded in 1959	—36,900
Leaving a surplus of	7,875
And also repeal estate and gift taxes, which yielded in 1959	—1,393
Leaving the Federal Government a net surplus of	6,482

Furthermore, the purchasing power that will be released, and the economic activity that will be stimulated when the American people are liberated from the serfdom of income taxes will increase the revenue from other taxes by approximately $9 billion per year.

This great financial gain is merely a by-product of the multiple benefactions that the proposed 23d amendment will bring to the American people. Freedom yields rich rewards, and no one can set a price on the gain in human dignity, personal integrity, individual enterprise, and faith in our national future.

V

The campaign for enactment of the 23d amendment is being conducted by local groups which federate to form State committees, whose efforts are coordinated by the National Committee for Economic Freedom, 6413 Franklin Avenue, Los Angeles 28, Calif. This unified activity is producing remarkable results.

The first success was reported by Mr. Dan Hanson, chairman of the Wyoming Committee for Economic Freedom. The proposed 23d amendment, introduced in the Wyoming Legislature as a joint resolution, was approved by a voice vote in the Democratic house, with which the Republican senate concurred without a single dissent, and was approved by Governor Hickey, a Democrat, on February 26, 1959.

Texas was the second State. Dr. Ernest E. Anthony, Jr., of Fort Worth, and Mr. Robert E. Nesmith, of Houston, cochairmen of the Texas Committee for Economic Freedom, reported that a resolution identical to the one approved in Wyoming had been adopted by the Texas house by a vote of 80 to 55, and on the following day, May 6, 1959, by a voice vote in the senate.

Nevada has a senate of 17 members, 13 of whom (9 Republicans and 4 Democrats) cosponsored the 23d amendment and approved it on March 1, 1960. The house then voted 31 to 10 for it on March 11, 1960, and Governor Sawyer, a Democrat, signed it. Mr. George E. Shaner, chairman of the Nevada Committee for Economic Freedom, has since reported unanimous endorsement of the amendment by the Nevada Republican Convention.

Louisiana became the fourth State to approve the 23d amendment. Introduced as a concurrent resolution, it was adopted almost unanimously by the house, and by a vote of 28 to 9 in the senate on June 20, 1960.

There are good prospects for early action in a number of other States, and what has thus far been accomplished is proof that Americans are developing a cumulative determination to regain their economic freedom.

We need no longer submit to the lust for power. We have been shown by our dolorous experience that liberty can be preserved only by perpetual vigilance, and that we must, as Jefferson warned us, "bind down those whom we are obliged to trust with power"—bind them down from mischief "by the chains of the Constitution."

Cuba's New Rebels

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16, 1961

Mr. SMATHERS. Mr. President, I ask unanimous consent that a letter to the editor which was published in this morning's edition of the Washington Post and Times Herald entitled, "Cuba's New Rebels," be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CUBA'S NEW REBELS

I wish to commend you on your March 2 editorial, "Cuba's New Rebels," which so accurately grasps the tragic and ironic situation in my country.

I share the view of the editorial that the same historic tendencies which worked against Batista may now be working against Castro, and that the long survival of the anti-Castro defectors in the Escambray Mountains suggests that an armed internal rebellion is possible.

Unfortunately, however, he is still strong, not only because he has the best weapons, equipment and military personnel from the Communist bloc of nations, but because he has the fanatical support of a small minority of the people of Cuba—mainly the well organized and disciplined apparatus of the Communist Party. Also the bulk of his indoctrinated militia mistakenly believe that the movement against the Cuban revolutionary government is actually a reactionary counterrevolution hatched by the U.S. Government, and that both the Eisenhower and Kennedy administrations stand for the support of dictatorships of the right, dollar diplomacy, and opposition to the agrarian reform because it confiscates the property of U.S. citizens.

For this reason I believe it most important to accelerate the overthrow of the Castro regime, not only by giving military assistance to the freedom fighters within Cuba such as those in the Escambray Mountains, but also by using every means of communication to let the Cuban peasant and militiaman know that the anti-Castro movement is not a counterrevolutionary one, and that its leaders are not "stooges of American imperialism" as they have been told.

Finally, and perhaps most important for the Kennedy administration not only in Cuba but in all of Latin America, all media of communication should emphasize that the U.S. Government is not against the Castro government because it is carrying out a social revolution, but because it has become a brutal tyranny and an instrument of subversion of the Sino-Soviet bloc throughout the Western Hemisphere.

NICOLAS RIVERO,
Former Cuban Diplomat.

WASHINGTON.

Appendix

This May Be the Answer to the Problem of Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. KEARNS. Mr. Speaker, on March 16, 1961, I introduced two bills, H.R. 5672 and H.R. 5673 which offer an eminently sound and fair solution to the growing controversy over loans to private education. These bills would: First, establish $1,000 a year scholarships in all fields for needy students winning a national competition; second, grant taxpayers an additional deduction from taxable income for expenses incurred by him, his spouse, or his dependent or dependents, while attending college; and third, provide an optional tax credit for contributions to education which may be chosen by the taxpayer in place of the deductions now allowed. This feature extends to all taxpayers the tax advantages now available only to taxpayers in the top-income brackets who make contributions to education.

H.R. 5672 and 5673 include many of the ideas and recommendations of the country's leading educational organizations. Increased private giving to education is supported by leaders in both public and private educational fields. Such powerful and respected organizations as the Association of American Colleges, which represents over 1,000 public and private colleges, the American Association for the Advancement of Science, the Council for Financial Aid to Education, and the U.S. Chamber of Commerce support private giving to education. Loans to private education may be the issue which defeats the administration's Federal aid-to-education proposals. But no one can honestly object to steps to encourage private giving to education.

A resolution adopted by the Association of American Colleges declares:

> The American people must give consideration to the more adequate support of higher education from both public and private funds. The traditional friendliness of government to education in America through its tax structures needs to be continued through the modernization of that tax structure.

H.R. 5673 would update and modernize the Internal Revenue Code of 1954.

The administration's program for American education ignores the fact that the Congress has taken a number of concrete steps in recent years with the support of all segments of American education to encourage private giving to education. It is remarkable that the Democratic administration has made no recommendations regarding the updating of the tax structure to encourage private giving to both public and private education, though its leaders surely know very well that such a step would have overwhelming support in the Congress, and throughout the country.

For many years I have been advocating—as have many others—that the tax dollar be kept at home where it does the most good. Many people are surprised when they learn what a large share of the tax dollar is required to administer it in Washington. My theory is that if private giving to education were increased, the pressure for huge appropriations by the Federal Government would be correspondingly reduced. Thus, the $6 billion Federal aid-to-education programs of this administration could easily be reduced by as much as 2 to 3 billions of dollars if private gifts of that amount were forthcoming.

The Congress obviously intended to encourage private giving to education when, in 1952, it raised allowable deductions of adjusted gross income from 15 to 20 percent, and in 1954 raised the allowable deductions to 30 percent for such purposes. These steps had bipartisan support in the Congress and were taken while President John F. Kennedy was a Member of the Congress. They had the support of leading Members of both parties in both Houses of the Congress at that time.

H.R. 5673 is based on the sound theory that private giving to education would greatly increase if the tax deductions for philanthropy now allowed persons in the top-income bracket were extended to all taxpayers. At the present time the taxpayer with a moderate income pays $80 out of his own pocket for each $100 he gives to education. At the same time, the wealthy taxpayer in the 91 percent bracket pays only $9 out of his pocket for each $100 gift he makes to education. The bill, H.R. 5673, ends this unfair treatment of the American taxpayer and makes it possible for everyone to make gifts to education.

Members of the House and Senate who believe in private giving to education, both public and private, and who are seriously interested in a sound legislative solution to the problems facing American education, may find the Kearns' proposals worthy of sponsorship and support. I would be pleased to hear from you.

John Day Jackson

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, March 20, 1961

Mr. BUSH. Mr. President, on Friday last, March 17, there died in New Haven, Conn., Mr. John Day Jackson, retired publisher of the New Haven Register and the New Haven Journal-Courier, at the age of 92.

He was one of the most distinguished newspapermen in the United States during his active years, a man of wide acquaintance and influence, and an expert in many fields, particularly the field of taxation and fiscal affairs of Government.

He was indeed a rugged individualist, and one who was respected as such not only throughout Connecticut but most of the United States, where he was very well known.

He was a friend of Cabinet officers and Presidents of the United States. He was one of the most remarkable men I have ever known.

Accordingly, Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, following these remarks, an editorial which appeared in the New Haven Register of Saturday, March 18, 1961, entitled "John Day Jackson," followed by a newspaper account giving a brief biography of this distinguished gentleman.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

JOHN DAY JACKSON

It is difficult for anyone not connected with the Register to realize fully the void created by the death of John Day Jackson, the paper's guiding spirit for 62 years and its owner and publisher since 1905. He was its editor and publisher in the fullest sense. To replace him is impossible.

To a man of conscience and integrity, such as John Day Jackson was in a measure far above the ordinary, a position such as his carried with it a responsibility as heavy as man can bear. To say that he bore it worthily is to appeal to the history of this newspaper under his direction.

The great newspaper which the Register is today was not John Day Jackson's by inheritance or gift. Rather was it the result of a lifetime of hard work, of devotion to a cause, and of directness of purpose.

John Day Jackson, of course, made mistakes like the rest of mankind; he had his prejudices and his predelictions. But he was seldom wholly wrong; and never, it can confidently be said, did he err purposely. No unworthy motive led him astray.

He served to illumine public issues with a mind of wide grasp and fine culture. By nature he was bound to the pursuit of high and serious purpose. His shrewd judgment, sensitive conscience, vast experience and innate conservatism were combined with an integrity of purpose as inflexible as it was fearless.

The world is apt to think that organizations like the Register live and move, and even prosper, of themselves. So they do, perhaps, in a certain sense and measure. There have been other forces and personalities at work, besides those of John Day Jackson, to make this newspaper what it is today. But no one who knows the delicacy of such an operation, the vigilance, the judgment, the forethought and the sincerity of purpose that are incessantly needed for its successful conduct will be tempted to under-

rate the value of John Day Jackson's share in the work to which his life was devoted.

There would be much more to say if this were the place and the occasion to say it. John Day Jackson's influence has been powerful wherever it has been applied. We may confidently appeal to the history of the Register under his management as a measure of his real influence on the affairs of men, and as an index of the spirit in which that influence was exercised.

Of such a record we are unashamedly proud. And though we have no desire to pronounce final judgment on the conduct of this newspaper under Mr. Jackson's management, we do render what no one unconnected with the Register is qualified to give—a faithful appreciation of his public services and a sorrowful tribute to his private worthiness.

JOHN DAY JACKSON DIES; EX-NEW HAVEN PUBLISHER

NEW HAVEN.—John Day Jackson, retired publisher of the New Haven Register and the New Haven Journal-Courier, died Friday after a long illness at the age of 92.

Jackson died in Grace-New Haven Hospital, where he had been a patient for some time. Death was attributed to pneumonia.

Funeral services will be conducted at 10 a.m. Monday at Christ Church (Episcopal), Broadway. The rector, the Reverend Mr. William G. Kibitz, will officiate. Burial will be in the family plot at Cedar Hill Cemetery, Hartford. Interment services will be private.

The publisher was a charter member of the Associated Press when it was organized in its present form in 1900.

CAME IN 1896

He worked as a newspaperman in New York and Washington before he came to New Haven in 1896 as managing editor of the Register.

A few years later, Jackson and Samuel A. York of New Haven purchased the newspaper from York's father. In 1905, Jackson bought out York's interest and became sole owner.

Under Jackson's management, the Register climbed from a circulation of 4,000 to more than 100,000.

In 1899, he and the late George F. Booth, then a cashier at the Register, purchased the Worcester Gazette. Their partnership continued for 20 years, with Jackson remaining in New Haven and Booth going to Worcester. They sold the newspaper in 1920, but a few years later Booth purchased the Worcester Telegram and the Gazette and was publisher of those newspapers until his death in 1955.

BECAME SOLE PUBLISHER

Jackson purchased the New Haven Journal-Courier in 1925. Three other dailies in the city subsequently went out of business and Jackson became the sole newspaper publisher in New Haven.

A native of Hartford, Jackson spent most of his boyhood in New York City. His father, Gen. Joseph Cooke Jackson, was an attorney and one time assistant U.S. attorney there.

Jackson was educated at Yale University, the University of Berlin, and the Ecole Libre Des Sciences Politiques and the Sorbonne in Paris. He attended Harvard University Law School for a year, but decided to give up law for journalism.

WORKED FOR MANY PAPERS

He worked for the New York Herald, the Washington News, and the Washington Times. He was also Washington correspondent at various times for the New York Evening Post, the Newark Evening World, the New York Journal of Commerce, and other newspapers.

Jackson was particularly interested in the fields of public finance and taxation and won attention for his knowledge of estate and inheritance taxes. He was known in Connecticut for his strong positions on State and municipal finances.

In his youth, the publisher was a track enthusiast, a mountain climber, and an ardent horseman and golfer. He traveled widely, making more than 30 trips to Europe.

He was an accomplished linguist, speaking German, French, and Italian, and reading Spanish, Latin, and Greek.

JOINED MANY GROUPS

Jackson was a member of many organizations, including the American Society of Newspaper Editors, the National Tax Association, the Political Science Association, and the Society of the Cincinnati, Sons of the Revolution.

He is survived by his widow, the former Rose Marie Herrick, of Elgin, Ill., and six children: Richard S. Jackson and Lionel S. Jackson, of North Haven, copublishers of the Register; Henry Jackson, of Phoenix, Ariz.; Mrs. John W. Sheppard, of Greenwich; Mrs. John I. Ely, of New Haven; and Mrs. William B. Reese, of Havre de Grace, Md. He leaves 28 surviving grandchildren.

One of his sons, John H. Jackson, died in 1951 at the age of 39. His youngest son, William B. Jackson, a staff sergeant in the Army Air Force, was killed in action in China during World War II.

Hungarian Freedom Day

SPEECH

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. ROONEY. Mr. Speaker, today, March 15, 1961, marks the 113th anniversary of the victorious Hungarian Revolution of 1848.

The recent history of the brave Hungarian people is full of trials and tribulations. They have certainly had their share of cruelty and misfortune. Notwithstanding the pressure of the Soviet tyrants the people of Hungary expressed their denuciation of the Communist Party and its interference in the nation's affairs in the revolution of October 23, 1956. Unfortunately, their efforts to regain freedom were crushed after great bloodshed. One of the injustices of this century is that these people with their record of many years of independence are forced to languish in the bondage of the Soviet despots.

This is a most appropriate time to raise the Hungarian issue as the observance of this national holiday will precede United Nations debate on the problem of Hungary.

I sincerely hope that something may be accomplished toward withdrawal of Soviet troops and that the human rights and the privilege of self-determination may be restored to the Hungarian people so that they may decide the form of government they want through the establishment of free elections.

I join with other freedom-loving people throughout the world in a prayer that they will soon regain their treasured freedom and liberty.

The Soviet Squeeze on U.S. Trade

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 20, 1961

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent analysis of the economic aggression conducted by the Soviet Union, entitled "The Soviet Squeeze on U.S. Trade," prepared by Maj. Gen. Julius Klein, retired.

In my judgment, the observations contained in this statement warrant careful study by the American public.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

THE SOVIET SQUEEZE ON U.S. TRADE

(Prepared by Maj. Gen. Julius Klein, AUS, retired)

Soviet economic activity in individual raw material markets and in certain countries is characterized by sudden, coordinated measures which, according to Western concepts, frequently appear to make little economic sense. The considerations usual in a free competitive economy are completely alien to the Soviet system of a planned state economy. The line of thought which takes costs and profitability into consideration is foreign to it. A state-controlled economy can concentrate on and try to achieve political aims by means of economic measures.

In addition to the psychological successes which can thus be gained in some countries, such measures can directly and indirectly result in damage to the economy of the free world in several respects, which the U.S. economy in spite of its relatively small degree of dependence on foreign countries cannot escape.

In the case of a number of raw and basic materials, the United States is dependent on imports, such as mineral oil, natural rubber, various nonferrous metals, wool, and sugar, as well as luxuries such as tea and coffee. By carefully coordinated purchases, particularly in the form of long-term commitments of supplying countries, with the Soviets, the Soviet Union can cause shortages and send prices soaring.

Such commitments by countries economically beholden to the Soviet Union automatically reduce the export opportunities of the United States. The Soviet contracts always provide for compensatory transactions, i. e., they compel the supplying countries to accept Soviet goods in payment instead of purchasing them from the Western World.

The close economic interrelationship of the United States with countries all over the world not only covers its foreign trade but also penetrates to a large extent into the financial sphere. The extraordinarily large American investments abroad are given to numerous countries—their value and stability stands or falls according to the intensity of the trade relations these countries have with the United States.

The danger of Soviet harassing operations often lies therefore not so much in the individual measures carried out as in the tendency to cause long-term destruction of the equilibrium in world trade relations with the United States, both in the exchange of goods and in monetary and capital transactions.

Should the Soviet Union receive any substantial reinforcement through intensification of her economic relations with West-

ern Europe, it is obvious that the disturbance of the equilibrium in world economy by coordinated Soviet measures would have an intensified effect on the U.S. economy.

It can, therefore, only be in the interests of America to prevent the European economy from being geared to the eastern bloc. By closely knit European-American economic connections the effects of the Soviet economic offensive could be substantially mitigated.

THE SHRINKING U.S. ADVANTAGE

If we take the economic potentials of the United States of America and Western Europe as a whole, their joint achievement in the world economy at present is still second to none in spite of the precipitate advance of the eastern bloc economy. The net value of industrial production at 1950 prices reached the level of $136 billion in the United States, in 1957, i.e., roughly 39 percent of world production and in Western Europe approximately $87 billion; i.e., 25 percent of world production, so that together they accounted for almost two-thirds of total world industrial production. The eastern bloc accounted for $69 billion; i.e., about 20 percent of world production. Current political conditions permit of such an approach, but if they were to change it would mean the end of the industrial superiority of the United States of America.

Already, the superiority which the United States still has over the eastern bloc in the economic sphere is diminishing year by year; owing to the large and as yet unexhausted raw material and labor reserves at Communist disposal and because the Communists can utilize a far larger part of their national product for new investments that can free countries, thus enhancing their economic and political objectives. The economic expansion of the eastern bloc is advancing much more rapidly than that of the United States at present relative growth rates. But if the Communist economic area were extended to Western Europe, the percentage of world industry accounted for by the United States would, on the basis of present production, be 39 percent compared with a Communist-controlled share of 45 percent.

Similar conclusions are reached when we consider the production of individual products essential for economic efficiency. Taking international standard values as a basis, 28 percent of world mineral production is covered at present by the United States, another 10 percent by Western Europe, while the eastern bloc share including Red China, amounts to 24 percent. The superiority of the free world over the eastern bloc which is shown in a ratio of 38 to 24 would shift to a ratio of 28 to 34, if the mining production of Western Europe were added to that of the eastern bloc. Even if mining production of the other great mining countries connected with the United States in the Western World, especially Canada, were to be added, this would only insure a slight superiority and probably only for a short time, as the eastern bloc countries are known to be pushing their raw material production with particular drive.

As regards hard-coal alone, on the basis of the share of world production as of 1957, the present ratio between the United States, plus Western Europe and the Eastern bloc, viz, 56:34 would switch to a ratio of 27.61, if Western European production were combined with that of the Eastern bloc. Similar ratios would result for steel, in which the United States today still dominates world production with 35 percent and, taken together with Western Europe, accounts for no less than 65 percent of world production. As against this, the Eastern bloc only reached 25 percent of world production in 1957. For 1958, a recession year in the United States, the ratio for the West was less satisfactory, whereas 1959 again saw a certain degree of recovery. At any rate, the ratio of 65:25 in steel production would change to 35:55 if the steel capacity of the United States were to be faced by the combined steel capacity of the Eastern bloc and Western Europe. Finally, the production of electricity should be cited. In this field, the United States today accounts for 41 percent, Western Europe for 24 percent, and the Eastern bloc for 20 percent of world production. In spite of the tremendous capacity of the United States, even its present production figures would be inferior to the combined achievements of Western Europe and those of the Soviet Union.

In view of the extraordinary importance of this type of production, not only for economic development but also for political and cultural achievements in the countries concerned, it can be seen what an abrupt change the role of the United States would undergo in world events should its present close relations with the countries of Western Europe be disrupted and those countries come under Communist influence.

More important, any such shift in the East-West economic balance would have a telling impact on the domestic U.S. economy. Actually America's economic turnover is much more closely geared to the home market than that of the smaller Western European countries. In 1957, the United States contributed to world trade to the extent of 13 percent. The European Economic Community alone accounted for 23 percent of world imports and 22 percent of world exports. Even today the United States is to a very considerable extent self-sufficient, that is, we ourselves mainly produce the raw materials, food, and manufactures, that we require. Nevertheless, for many branches of the American economy, especially the processing industry, the foreign markets are of considerable importance, and Western Europe is by far our most important customer in these branches of industry. Western Europe imported 26 percent of the total exports of the United States, which in 1957 reached the level of $21 billion; among the Western European countries, Great Britain, followed by the Federal Republic of Germany, and finally Italy, are the best purchasers of American goods; machines and transport equipment, metal goods and chemicals being the categories of goods most in demand.

It is obvious that these marketing outlets, in many cases of vital importance for American exporters, would at once be jeopardized if the present economic structure of Western Europe were changed. Furthermore, we must keep in mind the ability and tendency of the Soviet economy to manipulate exports in accordance with political aspects and regardless of prices and costs; accordingly the Soviet economy is in a position seriously to disrupt world markets at any time by calculated cheap exports. In view of the generally poorer quality of Soviet goods, this possibility has been so far confined mainly to raw materials, e.g., aluminum and tin. The dangers arising here would, of course, be multiplied if the factories of Western Europe, which are so efficient as regards both quality and quantity, were also available for these purposes.

Naturally imports are less important for the United States. Our raw material requirements are covered almost exclusively from countries outside Western Europe, and, moreover, the goods imported from Western Europe are scarcely of vital importance for the United States. Nevertheless, for reasons connected with economic transportation, inter alia, the supplies of iron ores from Scandinavia and Spain are not unimportant for the blast furnaces situated along the American east coast, and of fertilizers for poor soils in our Atlantic States; interruptions in these supplies would at an rate result in certain disadvantages for the overall economic development of the United States.

On the whole, it must be realized that the hypothesis of Western Europe's inclusion in the Communist power bloc, no matter how improbable it may seem in view of actual military conditions and the atmosphere in the countries concerned, would mean a disastrous change in the present position of the United States with regard to world economy. The rapid increase in raw material and industrial production in the eastern bloc states being alarming enough, any extension of their political influence to the Western European countries which are for the most part economically very efficient, would completely reverse the present ratio potentials, expose the United States to a possibly overpowering pressure, and most decisively weaken the position of all the other countries still belonging to the free world.

Operation Fearmongering

EXTENSION OF REMARKS
OF
HON. WALTER L. McVEY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. McVEY. Mr. Speaker, fearmongering causes an alarm reaction in a nation's people. Sometimes, this apprehension of fear is sudden and hysterical, as was the case back in October of 1938 when a radio network carried the report that a meteor containing strange creatures from Mars, armed with death rays, had landed near Princeton, N.J. The broadcast, a fantasy production of Orson Welles, based on "The War of the Worlds," by H. G. Wells, created national havoc as panic gripped thousands of Americans across our land. This, of course, is an extreme example of how gullibly we Americans accept the oral or written word. Whether the fearmongering is trumpet voiced, or voiced through a gloomy news forecast, the effect of scare tactics is felt.

Mr. Rex Woods, editor of the Arkansas City Traveler, from my Third District of Kansas, protests the economic fear campaign being conducted by the administration, and though he points out that there are many areas in the South and Midwest where business and industry are "rolling with the punches" and looking confidently to future expansion and growth, he is fully aware that if our people believe these mouthings, their fear becomes a prophetic reality.

Mr. Speaker, I ask unanimous consent to insert into the Appendix of the RECORD, the editoral "Demand Equal Time," from the Arkansas City Traveler.

DEMAND EQUAL TIME

Business and industry in this Midwest region and parts of the South should band together now and protest the fear campaign being conducted by the administration in Washington.

This isn't the job to tackle through the chamber of commerce. It is something that should be done by petition. Washington should know how we feel out here.

Last week Secretary of Labor Goldberg talked to men in the unemployment line back East. He led them to believe these

conditions existed across the Nation. That is not true. Such will happen if the talk continues and it is apparent the administration is setting the stage for a depression.

The psychology of the scare tactics are being felt by some merchants. Consumers everywhere are beginning to believe the country is hard pressed. Industries in these healthier areas as well as businesses, have plans for expansion on the drawing board. Talk could eliminate expansion and progress.

We believe businessmen and industrialists in the unblemished regions should insist the administration give equal time and conversation to the areas that stand on their own two feet and look to the future with enthusiasm.

Seoul's Fire of Discontent

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 20, 1961

Mr. WILEY. Mr. President, daily the struggle between communism and freedom in countries around the world continues.

By its nature, freedom finds itself at a disadvantage in this competition. Why? Because inherently freedom implies respect for the rights of other people to determine their own destinies. By contrast, communism—by military, economic, cultural, ideological, and all other means—attempts to spread its ideology; more than that, to gain control of more people and resources around the world. The struggle continues at almost all levels of human life.

The free nations, if they are to win the battle against communism; if they are to preserve the integrity of lands where freedom now exists; if they are to prevent the extension of Red control to more lands and people—need a greater effort not only to block the many-pronged efforts of the Communists at expansion but to aggressively educate them for and convert them to the ideas and ideals of freedom. The conversion to freedom, however, cannot be an abstract thing in terms of just dedication to high ideals. Rather, the free countries must show the way in which freedom itself can bring more of the good things of life to the millions of people now undecided about which way they shall go in the future.

Freedom without bread is an abstract thing which cannot satisfy nor meet the needs of the people. As the leader of the free world, then, we must learn not only how to more effectively preach the gospel of freedom but also to create the kinds of practical life-giving programs that can serve the needs of humanity.

Recently, the New York Times published a thought-provoking article by A. M. Rosenthal entitled "Seoul's Fire of Discontent." The article reveals the way in which problems of disenchantment and discontent may arise for people, such as those in South Korea—with the opportunity for freedom, but without adequate tools and know-how to make it work to effectively serve their country.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEOUL'S FIRE OF DISCONTENT—DISENCHANTMENT OF SOUTH KOREANS GROWS AS SEASON OF REVOLT SEES LITTLE CHANGE

(By A. M. Rosenthal)

SEOUL, KOREA, March 17.—Mong Yong, the handsome, brave yound lord, comes charging to the rescue of his beloved Choon Hyang just as the wicked old lord is about to chop her pretty little head off.

The good guys then lead the wicked old lord and other bad guys off to meet their just and terrible doom and everybody on the screen and in the theatre cheers as the Korean epic movie, "Fragrance of Spring," fades away and ends. The movie is South Korea's smash hit and the people seem grateful for 2 hours of wide-screen forgetfulness spent in a medieval world where everything turns out for the best, and virtue triumphs and the wicked perish.

But outside, in a city lying in a saucer-bowl with mountains all about, there is not much smiling and no cheering. The fragrance of spring in Seoul this year is soured with discontent and grievance, complaint and cynicism, and yesterday's heroes are mocked and weary.

"They give us freedom without bread," an unshaven, ragged orator shouts hoarsely in a park. "They only care about feeding themselves, not us."

"Our people had 50 years of Japanese occupation and war and Rhee's dictatorship, and now they expect the Government to change everything and work miracles in 8 months," a politician says angrily.

Foreigners who spend a few days in Seoul become so wrapped in gloom that they seem convinced another spring of revolution is coming to Korea like last year's spring, which saw the overthrow of President Syngman Rhee—only this time without a goal.

In Seoul itself, however, Korean politicians and most foreign diplomats say, no, it won't be that way. They say that people are unhappy and that there may be demonstrations, but that the mood is not of revolution but of restlessness and unfulfillment.

Everybody talks about the problems. They are a heritage of decades and built so deeply into the cement of society that nobody really knows how to dig them out. Everybody simply lists them, in frustration—a divided country, wars, devastation, too many people on too little land, not enough jobs and not enough resources to create enough industry to sop up the unemployed, inefficiency and graft as traditions and the "spring hunger," those lean months before the June crop can be harvested.

But the special discontent of this spring is an offshoot of last year's revolution. Last spring, for the first time in the memory of most men, the Koreans found themselves free from dictatorship, foreign or domestic, free to talk and shout and hope and say what they hoped for.

Their hopes of sudden, blessed change have not come true and they search for scapegoats. There are men who work hard and plan, but there are others to whom cynicism has become the answer.

Ideas that were once forbidden fruit—neutralism, economic democracy, the right to march and protest and hang up signs saying down with this or that—were plucked and tasted. Sometimes in Seoul men say things loudly just because they have the right to say them and want to remind the people they have the right.

Opposition leaders complain that the new government is just as bad as the old. But when they are asked what they would do if they were in power, they do not have much to say.

Newspaper writers and students talk about the need for increasing ties with neutral nations—partly because they believe it and partly because this was a swiftly punished heresy in Dr. Rhee's time. They snap angrily at the United States out of their own sense of humiliation for national dependence on the American dollar, but then demand that the United States contribute more and more.

There is an education fever in the city. An elevator boy keeps a hand on the controls and an eye on an English-Korean dictionary. Older people act a bit frightened of the students, who led the rioting of 1960 and tasted the power of rule by agitation.

The students are not always sure of what they want, but they want it quickly.

In Pagoda Park, a dusty place where recreation-starved Koreans go to spend a few hours, snake-medicine men in snappy bow ties put on magic shows to draw crowds. But for every crowd around the medicine man there is a crowd around a man denouncing the government or a man saying, "Give them a chance."

But there are times when even the young Koreans are weary of it all and search for relief from the triphammer of political talk.

They go then to large halls, dimly and flickeringly lit by neon, and sit closely packed in soft chairs. They lean back with their eyes closed and listen to recorded music—Beethoven, Verdi, Mozart. They have to pay an "appreciation fee" of about 20 cents, but it is worth it to them, for the right to listen to music and sit silent for a quiet hour.

Farm Bureau Philosophy—An Address by Mrs. J. S. Van Wert, of Hampton, Iowa, State Women's Chairman, Iowa Farm Bureau Federation, at Banquet for Iowa Congressional Delegation in Washington, D.C., March 7, 1961

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. SCHWENGEL. Mr. Speaker, on Monday, March 7, the members of the Iowa congressional delegation were the guests of 96 members of the Women's Division of the Iowa Farm Bureau Federation during this organization's biennial trip to Washington, D.C.

At this banquet, we heard three outstanding addresses: "Farm Bureau Philosophy," by Mrs. J. S. Van Wert, of Hampton, Iowa, who is State women's chairman of the Iowa Farm Bureau Federation; "Federal Aid to Education," by Mrs. Walter Heuer, of Princeton, Iowa; and "Trade and Cropland Adjustment," by Mrs. Gene Murphy, of Reinbeck, Iowa.

Because of the sound thinking represented in these addresses, I have asked that they appear in the Appendix of the RECORD so that they can have the attention of the Members. The following is

Mrs. Van Wert's address on "Farm Bureau Philosophy":

FARM BUREAU PHILOSOPHY

The two speakers following me will be discussing current issues which you are considering and our thinking on these issues.

So that you can better understand the reasons for our recommendations, I would like to spend a little time on the general philosophy of Farm Bureau.

We all know that an individual must have a rather definite moral philosophy which goes beyond his own interests. If he is to make a contribution to his community—in fact, if he is to survive, he needs a definite economic and political philosophy, too. We think such well established philosophies are almost as important for organizations.

The purpose of Farm Bureau is to represent farmers—to fight for farmers. However, we believe firmly that the welfare of the Nation and the people as a whole must come first. Any other policy would be shortsighted on our part. The Nation is facing some crucial problems. Survival of America as we know and love it is not an absolute certainty. We will survive and improve our welfare only if we make intelligent decisions concerning international affairs, monetary and fiscal policies at home—maintain in our own people a strong sense of personal responsibility and initiative.

For farmers to recommend policies that would put money in their own pockets and weaken the Nation as a whole would be uter foolishness. To quote: Mark 8: 36 "For what shall it profit a man if he shall gain the whole world, and lose his own soul?" To paraphrase this—what would it profit farmers, or any other group, to gain for themselves, if they weaken our Nation economically, politically, or morally and lose the cold war to Russia and Red China.

In addition, we believe that recommendations that are purely selfish will cause an organization to lose its influence and its prestige.

We believe:

"In our constitutional form of Government and its division of powers."

"That self-government is a precious heritage which can be preserved only by active, intelligent assumption of basic citizenship responsibilities by everyone of us. We urge all of our members to participate."

We believe:

"In the American competitive enterprise system, in which property is privately owned, privately managed, and operated for profit and individual satisfaction, and in which supply and demand are the ultimate determinants of market price."

"That efficiency of production and maximum per capital production are primary elements in determining standards of living." People should be paid according to their ability and how well they do their jobs.

"That property rights cannot be separated from human rights and are essential to the preservation of individual rights guaranteed by the Constitution."

"That the exercise of free will, rather than force, is consistent with the maintenance of liberty."

"That the desire for 'security' must not lead to the curtailment of individual freedom and opportunity." Security doled out through governmental programs leads to inefficiency and loss of individual incentive.

We believe:

"That monopoly in any form—whether by government, industry, labor, or agriculture—jeopardizes freedom and self-government."

"In strong and responsible State and local units of government and in protection of State laws against Federal preemption."

We believe:

"That farm people have the right and the responsibility to speak for themselves through organizations of their choice without coercion or Government intervention."

"That the centralization of power and authority in the Federal Government, the movement to socialize America, the apathy of the American people toward this trend, and the apparent lack of responsibility on the part of individual citizens are among the greatest dangers threatening our republic and our system of competitive enterprise."

Our women have been studying the isms and are aware of governmental programs which lead us in the direction of socialism. That is not what we want for our generation nor for future generations.

Of course, we believe in intelligent use of our Government—at all levels—to provide an economic and political climate in which individuals can solve their own problems. However, as I have just indicated, we are very much concerned about the amount of responsibility the Federal Government is taking for individual affairs. A nation is no stronger than its people. I can think of no more pitiful object than a young man in his 20's whose parents, through love for him, have made all of his decisions, satisfied all of his wants, and taken on their own shoulders all of his responsibilities. Such a young man—or woman—starts life with the greatest of handicaps even though the parents had wished him to have every advantage. When my two sons were young and started their 4–H livestock projects, it was their father who insisted that it was their full responsibility to care for the animals. It was their responsibility to build the temporary fences around the portable housing. I must confess that I felt a bit sorry for them at the time and if I hadn't been so busy with the younger members, I might have gone out to help. It was after the sudden death of their father that I realized how fortunate my sons were to have been surrounded by this philosophy in their formative years—for they had learned to be self-sufficient and could stand on their own feet. Don't we owe this same type of training to our individual citizens in relation to our governmental policies for a continued strong Nation?

I would like to quote some of the Nation's religious leaders to further clarify this point.

R. W. Lindberg, Secretary, Des Moines, YMCA said:

"One of the great dangers of social services these days is the tendency by Government, churches, and agencies to help take care of the needs of people to their own injury. In spite of the high motives which prompts these services, the results sometimes create within the individual lack of personal initiative and responsibility."

"After 37 years of working with young people, I am well aware of this danger. If you are not careful you can help youth so much that it leads to pauperism."

Rev. E. W. Mueller, a national church leader, and a former Iowa Luthern pastor says, "There is danger if we plan too much for too many people. We could destroy initiative."

From a recent statement by the Catholic Bishops of the United States:

"If our future is to be worthy of our past, if the fruit of America's promise is not to wither before it has reached full maturity, our present preeminent need is to reaffirm the sense of individual obligation, to place clearly before ourselves the foundation on which personal responsibility rests, to determine the causes of its decay and to seek the means by which it can be revised."

"Although personal responsibility and initiative have been our national characteristics, explaining in large measure our country's progress in human welfare, yet pressures are growing for a constantly greater reliance on the collectivity rather than on the individual. An inordinate demand for benefits, most easily secured by the pressures with a further infringement on personal freedom and responsibility."

"Intensive socialization can achieve mass benefits, but man and morality can be seriously hurt in the process."

Recently we had a group of our young members assembled for a program on American heritage. The films and the discussions were fine, but it was the young farm wife, formerly of England, who expressed most impressively the disadvantages of socialism. She had seen the Labor Party execute many governmental control programs at the end of World War II when people were more receptive, thinking that was the atmosphere for rebuilding their country. She has seen how her farming parents must have governmental permission to sell their produce and be told where to sell and then let the government take a big bite of the check. The English, she said, now under the Conservative Party are trying to rid themselves of some of these controls—a very difficult thing to do, once controls have been established. May our foresight be vivid enough and our cooperation strong enough for us to maintain our freedoms so basic to our Christian Nation. As Iowans we have inherited the motto, "Our liberties we prize and our rights we maintain." Let's be able to bequeath it to our children and future generations.

Public Land Policy May Get First Real Review in 25 Years

EXTENSION OF REMARKS
OF
HON. GALE W. McGEE
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, March 20, 1961

Mr. McGEE. Mr. President, in the Washington Post of yesterday, I noted an interesting summary and digest of the public land policy of the United States. The article was written by a staff reporter of the Post. Because of the excellence of the summary and because it brings into focus some of the intricate problems of a question that is very keenly in the hearts and in the interests of the people in our State—and I say "our State," Mr. President, because the present occupant of the chair [Mr. HICKEY], my colleague from Wyoming, and I have been close to this matter for many years—I believe it will be helpful to the Members of this body to have access to the article, especially in view of the fact that under the new Secretary of the Interior, Mr. Stewart Udall, our public land policy will get its first real review in 25 years. Therefore, I ask that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUBLIC LAND POLICY MAY GET FIRST REAL REVIEW IN 25 YEARS

(By Julius Duscha)

The trouble all started way out West a few years ago when the Government land office began doing a land-office business.

Meanwhile, back East, the boys in the Interior Department got so stirred up they decided that land claims ought to be checked at the door awhile like six-shooters.

But to some in the West a land claim is as precious—and as profitable—as water, and therein lies the rub, pardner.

By establishing an 18-month prohibition on the purchase of public lands last month Secretary of the Interior Stewart L. Udall called attention to a Western land problem that few persons had been aware of in the East.

Although fewer than 100,000 of the 770 million acres of land that the Government owns are involved in the controversy, Udall's action may lead to the first comprehensive review of public land policies in 25 years.

The problem is the large number of claims that have been filed in the last 5 to 10 years for desert land and sites in the mountains near Los Angeles, Tucson, Phoenix, and other fast-growing Western cities.

The claims are encouraged by land locators, who are as familiar in the West as cowboys are on television.

For a fee of perhaps $25 an acre, a land locator will file a claim to a 5-acre tract of the public domain for a person who wants a weekend retreat on the desert or in the mountains.

LONG LINES FORM

Difficulties arise, however, when scores of claims are filed by land locators on one piece of property.

The Bureau of Land Management of the Interior Department maintains that land locators deliberately pile up applications in the Bureau's western offices because every application means profits for the locators.

When the Bureau turns down an applicant because the tract he is seeking has already been sold or, for other reasons, the land locator blames the Government. Frequently, the locator will encourage the applicant to try for another tract, even though it, too, may have been sold.

It was to stop practices of this sort and to clear up the backlog of applications resulting from the indiscriminate encouragement of land claims that Udall put the 18-month prohibition on new claims.

FILED UNDER OLD ACT

The applications have been filed under the Small Tract Act of 1938, which permits purchase of sites up to 5 acres for recreational use.

Many of the tracts are sold at regular Bureau of Land Management auctions in Los Angeles and other western cities. The more desirable sites frequently are sold for high prices.

Not only is the procedure for filing claims on public lands about the same as it was when the first Western land boom began almost 100 years ago, but both the Homestead Act of 1862 and the Desert Land Act of 1877 are still on the books.

And out of the 770 million acres of public land—about one-third of the original public domain of 1.8 billion acres—an estimated 177 million acres conceivably could be turned into farmland.

A homesteader, however, who got 160 acres of free land from among the 177 million dry and arid public land acres of the West would have to spend from $20,000 to $60,000 to irrigate and equip his land for modern farming.

Mineral leases, most of which are for oil and gas rights, and grazing permits are granted to persons who want to use the public domain for these purposes. Government revenue from such leases and permits amounts to more than $100 million a year.

HOW MUCH IS THERE?

Of the remaining 600 million acres of public lands, half are inaccessible mountainous areas of Alaska. More than half of the 300 million remaining acres in the United States are in national forests.

The rest of the public domain is used for national parks, wildlife refuges, defense and atomic energy projects and other governmental activities.

As the Interior Department—and Congress—try to decide how all of this land can best be used in the public interest, the General Services Administration continues to try to make an accurate count of the Government's vast landholdings.

It's a job as big as all the West. The GSA has been at it for 6 years now and is still not sure exactly how vast the public domain is—a century after the great American land boom.

Brethren Service Commission Endorses Peace Corps

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. BRADEMAS. Mr. Speaker, for two decades the Brethren Service Commission, which has many strong supporters in my district, has been very effectively operating a voluntary program very similar to the Peace Corps plan now being organized by the administration.

Because of this dedicated group's experience in this field, I think it would be immensely valuable to consider its counsel in establishing the Peace Corps. It is reassuring, I might add, that the Brethren Service Commission, looking at the Peace Corps in light of its own experience, endorses the concept. The commission predicts that the Peace Corps, if soundly developed, will make a valuable contribution to the world's needs.

The views of the Brethren Service Commission are contained in the following statement which it recently issued:

The Brethren Service Commission enthusiastically commends the Congress and the administration for the studies underway to establish a Peace Youth Corps for service abroad. We feel the general concept of the corps is sound, especially in helping meet the felt needs in the less developed areas of the world, in creatively using the mounting interest of American youth in constructive service overseas, and in enhancing the sensitivity of Americans to the problems of the world community.

The long-time conviction of the Brethren Service Commission, confirmed by 20 years of experience in utilizing the voluntary services of youth in oversea projects, has been that a corps of carefully selected and properly oriented American youth could render a most significant and needed service abroad. Particularly in the developing programs of health, education, agriculture, and small industries at the village level, such youth could provide the missing link between highly specialized technical knowledge and the need for bringing this know-how into actual practice by villagers. Moreover, these youth could become the most effective carriers of our best American image abroad.

Without attempting a definitive, comprehensively structured proposal, our interest and experience leads us to suggest the following considerations:

1. GENERAL POINT OF VIEW

The Peace Youth Corps should be guided by the spirit of mutuality rather than the spirit of assistance. Superiority and condescension must be avoided. The program should reflect the attitude that America has much to learn from contacts with other people. A growing understanding among Americans of the problems of the world community would increase America's effectiveness as she participates in mankind's efforts toward peace with justice.

The Peace Youth Corps should be noncreedal and devoid of dogma whether it be religious, economic, political, or technological. The character of the youth involved is of more importance even than technical training, for the sharing of life is of more significance than the offering of material or ideological advances. Emphasis in the selection of corpsmen should be placed on sensitivity and human relations skills because the program will succeed in terms of the mutual trust and respect found in the human relationships established at the grassroots level.

In the more primitive and needy situations, often the immediate need for highly specialized knowledge and precise technical skills is not great. To work among those with no pure water supply, a degree as a plumbing engineer is often more training than can be utilized properly. A graduate agriculturalist has training and methods which may be beyond the realistic next steps in the development of people who till the soil with hand-forged hoes. Instead, a corpsman with adequate farm background and sufficient creativity to help plan and direct the next steps will be of immense help in such a situation, providing he has sensitivity for the people and a willingness to share in their experience and to earn the right to add to their experiences from his own. Whatever expert knowledge he or his village associates require can be secured through specialists in the country or from specialized international agencies.

True mutuality is to be achieved best in two-way or even multilateral exchanges of young people. Consideration ought to be given to receiving young people for service in our country as well as sending our youth overseas, and to provide for increasing international participation in the program. Aspects of exploitation and self-interest, often inherent in our very acts of helpfulness, can be reduced by bringing youth from other countries to America to participate in social service projects.

The spirit of mutuality, likewise, needs to be expressed in the negotiations establishing projects. The oversea projects of the Peace Youth Corps should grow out of genuine requests of host governments. Preliminary discussions with governments should be made in an atmosphere free from coercion or necessity and should explore the possibilities of mutual cooperation and exchange. No program should be undertaken except as it grows out of clearly defined agreements between the host government and the management of the Youth Corps.

Programs overseas should have practical continuity. The cessation of the activities of the corps must not be the end of project activities. To insure continuity, the projects should be integral to existing institutions and programs. The role of the Peace Youth Corps should be to help people achieve their own objectives rather than to impose new goals on them or to create new institutions which may be too complex or too burdensome for the people to carry on their own. The goal of the Youth Corps should be to help people help themselves in terms of their own aspirations, institutions, and developing resources.

2. ORIENTATION AND TRAINING

Training should emphasize proper motives of service so as to remove attitudes of condescension and superiority in the approach of the corpsman. The corpsman must possess or develop a genuine desire to be helpful and a willingness to build mutual trust rather than any desire to dominate or pressure for change.

Practical language study should be a part of the training. Appreciation should be developed for the culture, beliefs and way of life of the people to be served.

Whenever practicable, training should be carried on within a physical context similar to that of the project, rather than exclusively in academic institutions or in American establishments abroad.

Few potential corpsmen know how the other half of the world lives. The cultural shock that will be experienced initially by some corpsmen might be sufficient to make them permanently ineffective. Therefore, training should include not only orientation in this country but also an early introduction to a different culture in order to provide opportunity for any possible cultural shock before going to the permanent project overseas.

The fields of service into which corpsmen will go are often so alien to anything in their own experience that opportunity ought to be given for firsthand observation and practice in a nearby but foreign culture before final acceptance for service overseas. Existing health, education, and welfare projects within continental United States as well as in Mexico, Puerto Rico, or Jamaica might well serve as training locations for periods of 1 or 2 months. This intern experience in an unfamiliar culture would provide a selection and screening device not available in other forms of testing used in the program.

3. INITIAL PROJECTS

The initial projects of the Peace Youth Corps should be situated in places of generally recognized human need in order to more readily sell the American public on the purpose and value of the corps. The corps will undoubtedly be attacked by many who now oppose foreign aid, but these critics will find it harder to criticize the program if it is at work alleviating pronounced human suffering.

The initial projects should be carefully selected and organized with the possibility of making early, tangible accomplishments in relieving human suffering or solving immediate basic problems. To insure some early successes, the first units should be under the supervision of leaders who have had comparable and successful experiences in oversea programs. Several American voluntary service agencies with service programs overseas have personnel resources that could provide tested leadership for early units of the corps. Likewise, early units might include in each one or two corpsmen who have had comparable experience in oversea service programs. The proposed Youth Corps will be able to expand in direct proportion to its concrete accomplishments.

The formation of early projects should be aimed primarily at intensive programs of depth rather than at extensive programs which may be superficial. The success of the Peace Youth Corps will depend not as much on the number of projects nor on the number of American youth involved, as on the solid achievements of the program. Growth of the corps should come through experience and achievement rather than through popular recruitment programs and propaganda media.

4. MOBILE SERVICE TEAMS

In addition to the more normative projects in the fields of health, education, agriculture and welfare, the Peace Youth Corps might include a well formulated network of mobile service teams, composed both of mature technicians and younger volunteers, which could move with dispatch to any point on the globe to give immediate assistance in disaster situations. Such a plan might require stockpiling of emergency supplies in regional warehouses, and a quick reference for immediately available personnel for emergency service where needed.

5. REMUNERATION OF CORPSMEN

Mutuality will be increased in the program to the extent that youth live with the people, and will be decreased to the extent that they are set apart from the people. One determinant of the social distance created will be the salary received by the youth. The sincerity and effectiveness of the program can be increased by providing only maintenance for members of the Youth Corps. Maintenance might include transportation, room, board, clothing, medical care, and a small personal allowance. The cash allowance should not be enough to encourage the corpsman to participate in leisure activities beyond the reach of those with whom he lives and serves. Any additional financial remuneration, if provided, should be retained for the corpsman and paid when he returns home following his service overseas. This additional remuneration might be in the form of scholarship aid for additional professional or technical training.

6. RELATIONSHIP TO SELECTIVE SERVICE

Service in the Youth Corps should not be the basis for automatic exemption from the draft. However, acceptance for service in the Youth Corps should provide local draft boards with sufficient reason for temporary draft deferment, and upon completion of 2 or more years of Youth Corps service such service might be considered as fulfillment of Selective Service obligation. These matters, however, depend on a coordination of the Peace Youth Corps and the Selective Service System which can be better achieved through administrative directives than through legislative policy. The Youth Corps should be recognized as an alternative service program for properly certified conscientious objectors.

7. OPERATIONS AND ADMINISTRATION

In the early stages of the corps, there should be provided a full complement of very able supervisory personnel, in residence at projects, between project and host country, and between project and the corps agency in the United States.

The administration and fiscal policies of the Peace Youth Corps should be freed as far as possible from government bureaucracy in order to work creatively and flexibly. If it is not possible to provide sufficient freedom of operation within government, then a civilian agency might well be created to administer the program under general directives and financing established by the Government.

In conclusion, it is the considered judgment of the Brethren Service Commission that the proposal for a Peace Youth Corps is basically sound and that it will render a significant service abroad in assisting community development programs in health, education, agriculture, and welfare. Motifs of the program must include full recognition of the basic interests of the little people of the world as well as the wholesome desires of American youth for service overseas. Careful planning and adequate support can make this program a helpful instrument for peaceful change in many parts of the world. A corps of well-trained and properly motivated American youth serving hand-in-hand with village people, who themselves welcome additional help on their most pressing problems, might well bring a new climate of international goodwill and cooperation. The program should reflect at every level of involvement such basic concepts as mutual trust, human dignity, shared leadership, and helping people to help themselves. In short, the Youth Corps should reflect the best of our American traditions in community building without the intention of imposing any of our values or institutions upon others. The true measure of success for the Peace Youth Corps will be the degree of its effectiveness in helping people in other lands to achieve their own best values in community development.

The Brethren Service Commission expresses its willingness and desire to participate as fully as possible in the proposed Peace Youth Corps and offers its support and facilities as needed in the program.

W. HAROLD ROW,
Executive Secretary,
Brethren Service Commission.

ELGIN, ILL.
(Revised February 22, 1961.)

Mercy Ship "Hope"

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Monday, March 20, 1961

Mr. BUSH. Mr. President, a Connecticut eye surgeon, Dr. Paul Tisher, of New Britain, recently returned from 7 weeks' service aboard the hospital ship *Hope* off the Republic of Indonesia. An interesting account of his experiences aboard this mercy ship, which Dr. Tisher describes as an instrument for generating good will for this country, has been published in the New Britain Herald, under the headline "Dr. Paul Tisher Sees Mercy Ship *Hope* As Effective Weapon Against Communism."

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RETURNS AFTER 7 WEEKS' SERVICE—DR. PAUL TISHER SEES MERCY SHIP "HOPE" AS EFFECTIVE WEAPON AGAINST COMMUNISM

(By Sigmund Kramnick)

Dr. Paul W. Tisher of 389 Shuttle Meadow Avenue, an eye surgeon, returned yesterday after a 2½-month trip that brought him to such exotic-sounding places as Cairo, Calcutta, Bangkok, Borneo, Java, and Singapore, among others.

Despite his predeparture statement, "Call it a love of adventure or an attempt to get away from a humdrum existence that seems to trap a man when he becomes too settled," the trip was no pleasure cruise.

For 7 weeks, Dr. Tisher served on the famed hospital ship, *Hope* (Health Opportunities for People Everywhere), off the Republic of Indonesia. He was the first Connecticut volunteer to be accepted for duty on the ship.

He considers the *Hope* an effective weapon in the fight against international communism. There is an "excellent possibility" that a second such hospital ship may be established, he said. He claimed there is a long waiting list of doctors who are willing to serve.

A highlight of the trip occurred on February 24 when he had a formal audience with President Achmed Sukarno of that new nation. He bore a letter of introduction from

Abraham A. Ribicoff (written while he was Governor), containing greetings from the State of Connecticut.

Dr. Tisher described Sukarno as "pleasant and cooperative." "He spoke on medical subjects with remarkable knowledge for a doctor of engineering," he added.

Reviewing the trip, the local physician was obviously proud of his participation in the mercy ship project sponsored by the People-to-People Health Foundation of Washington, D.C.

"The *Hope* has been a tremendous success from the standpoint of good will," he said. While he was aboard, a letter was received from President Kennedy commending all on the ship for the fine job they were doing, he disclosed.

Joining the *Hope* on January 10, Dr. Tisher remained until February 23. During that time the ship anchored off several Indonesian islands including Borneo and Java. The *Hope* goes wherever it is asked, according to the doctor. It will be off Indonesia until June and will then be in drydock in Singapore for awhile before proceeding to South Vietnam, he said.

The ship is staffed, ideally, by 25 American doctors (the number is usually lower because of transportation and arrangement difficulties). Of these, 10 are permanent staff members and 15 are rotating volunteers. In addition, there are 10 Indonesian doctors. Aiding them are 25 American nurses and 27 Indonesian nurses, permanent staff members.

Before the ship arrives at a port of call, a committee composed of doctors in the area decides which patients will be treated on board. The ship has medical facilities not available to many natives and by the same token helps to relieve the workload on the too few native doctors.

While medical treatment and surgery are important functions of the ship, with its two operating rooms, the primary interest, says Dr. Tisher, is in training native doctors. More precisely, the intent is to teach them the medical advances. The doctor, who instructed approximately half a dozen himself, said this was no reflection on the abilities of the native doctors.

"Some are actually better than our doctors because they have more patients," he said, "but they get out of touch with modern techniques." He estimated that between 25 and 30 native doctors received valuable training on the ship while he was aboard.

At one stop, he learned that native doctors had studied English for 6 months before the ship's arrival so that they could converse with American doctors. After the ship arrived, meetings were held every day for 3 weeks, alternating between the ship and shore.

Dr. Tisher reiterated that it was not a case of "doing something for them, but a case of doing something with them." He called it "an international medical exchange" and in his enthusiasm described it as being "way ahead of Kennedy's program of workers for peace."

During most of his visit, the temperature was in the 90's, he said. He described the soil in the moist, tropical Indonesian climate as being "so lush you could plant a pencil and get fountain pens."

Besides its rich soil and the abundance it reaps from the sea, Indonesia is rich in other natural resources such as oil and tin, he said. He described its problems as "poor dietary and sanitary knowledge." The Dutch, he said, kept them suppressed but "they have tremendous potentialities and should do well. It should take a generation."

He recalled an experience which occurred just before an operation in an Indonesian hospital. He asked a native doctor where he might wash his hands, standard operating procedure for an American doctor. The reply was "nowhere." He asked why and was answered, "no water."

Despite the absence of running water, Dr. Tisher claims everything went along just fine. They used carbolic acid to sterilize their rubber gloves: standard operating procedure in this particular hospital.

Before he joined the hospital ship, Dr. Tisher stopped off for conferences with medical authorities in Cairo, Egypt; Calcutta, India; Bangkok, Thailand, and Djakarta, Indonesian. He spent 5 days working at the University of Djakarta where he met a Dr. Isaac Salim who will be visiting him here next month.

After leaving the ship, Dr. Tisher flew to Singapore where he met his wife. Mrs. Tisher does radio publicity work for the foundation which sponsors the *Hope*. Mrs. Robert P. Brown, of 550 Shuttle Meadow Avenue, accompanied her from London. The three were joined by Mr. Brown in Hong Kong. The Tishers returned via the Pacific, completing round-the-world journeys. Mr. and Mrs. Brown are expected this weekend.

Project Mohole

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, in these days of interest in the prospects of penetrating the mysteries of outer space, we may overlook another step that is being taken to penetrate the mysteries of yet another dimension—the challenging vastness of the depths of the earth. This step—known as Project Mohole, a joint venture of the National Science Academy and the National Academy of Sciences—has as its ultimate goal the drilling through of the earth's crust under the ocean to determine the composition and physical properties of the crust and of the underlying rock known as the mantle. Scientists have called the project "one of the most important scientific undertakings of modern times, for it will probe into new and totally unknown regions of the earth. Knowledge gained from ocean sediments alone will greatly enhance our understanding of the history of the oceans, climatic changes and the evolution of life."

The New York Times of Sunday, March 5, contains a graphic description of this first attempt to gain knowledge of the earth's mantle, and I wish to bring it to the attention of my colleagues.

The article follows:

TEST DRILL IS READY TO PIERCE SEA FLOOR

(By Walter Sullivan)

In about a week, barring equipment failures, a strange-looking craft is to take station 40 miles east of Guadalupe Island in the Pacific Ocean and begin the first attempt to bore through the ocean floor to the mysterious second layer.

With a rig originally designed for drilling oil wells in a few hundred feet of water, a drill pipe is to be extended downward 2¼ miles until it touches bottom. It will then bore a succession of holes that, it is hoped, will penetrate into the so-called second layer, some 1,000 feet below the ocean floor.

The nature of this layer is unknown, except that shock waves from explosions or earthquakes travel through it faster than they do through the soft sediments that lie above. Some believe the second layer consists of solidified sediments that may extend our knowledge of evolution and of past climates.

The project, sponsored by the National Academy of Sciences and financed largely by the National Science Foundation, is a rehearsal for the drilling of the "manhole," which would pierce the ocean floor and bring up a sample of the earth's manhole.

EIGHTY-FOUR PERCENT OF VOLUME

The latter is a massive shell enclosing the earth's liquid core and constituting, in volume, about 84 percent of the planet. Yet, as with the second layer, its composition is a mystery. It is only known that it transmits shock waves much faster than the rock layers above it.

The point of the sudden increase in these travel times, as waves descend into the mantle, is known as the Mohorovicic discontinuity, or "Moho," named for Andrija Mohorovicic, the Yugoslav geologist.

Above it is the crust, many of whose rocks have been brought within reach of the geologists' hammer by the upthrust that has built the mountains.

Some believe that we actually have a few fragments of the mantle in hand. Dr. Harry H. Hess, chairman of the geology department at Princeton University and a scientific adviser to the project, suspects that the peridotite of St. Paul's Rocks, a wave-swept outcrop midway between Brazil and Africa, is an erupted bit of mantle. Others hold contrary views. The Mohole should settle the matter.

TESTED IN PACIFIC

On Friday the drill rig, known as Cuss I, had its first experience with Pacific Ocean weather since its modification for this job.

In heavy seas off San Diego one of its derrick guy wires carried away and the rig is now in that port for repairs. On Tuesday it is hoped to take it out again to test the rig in the San Diego Trough 18 miles off La Jolla in about 3,000 feet of water.

Last Wednesday the drill site there was marked with two taut-wire buoys of the type that are to ring the site off Guadalupe. The buoys are about 100 feet below the surface, their locations marked by surface floats and sonic transponders. When the drill rig pings, each buoy pings back. When the answering pings arrive simultaneously, the barge is on station, equidistant from the buoys.

At the four corners of the barge four huge outboard motors of 200 horsepower each have been mounted to keep the rig on station.

The Cuss I does not have any means of finding the hole again after the drill has been hoisted out to replace a bit or make other adjustments.

Hence every time a bit wears out, a new hole will be dug. The experience gained will be used to design a special rig for the far deeper Mohole.

It is hoped that the cores brought up from off Guadelupe may greatly extend present archives of the earth's history. For millions of years the debris of oceanic life has been raining downward. Climate changes and catastrophes such as volcanic eruptions, have added additional layers of silt or ash in some areas.

The resulting sediments are 1,000 or more feet deep over much of the oceanic basins. The portion of the oceans that is more than 2 miles deep covers roughly half the earth's surface.

How peaceful has been the history of these depths? Some believe the sediments have largely lain undisturbed since the evolution of life first began. If the earliest fossils

remained intact in this record, they would fill in the missing first half of the history of life.

Other scientists fear that landslides and mud torrents knowns at turbidity currents, periodically sweep away the record at any one point. Dr. Hess, for example, believes this sedimentary record will have many gaps.

HOPEFUL FOR DATA

Nevertheless, he and the other scientific sponsors of the Mohole project believe light will be thrown on a multitude of scientific problems.

Under the second layer there is a region that seems to scatter shock waves and that some think is the earth's primordial surface. They say it is littered with meteorites and dust that fell during a weatherless, waterless period when the earth looked more like the moon than its present-day self.

Even such questions as continental drift and polar wandering may be resolved from complete cross sections of the deep sediments. They might show whether or not continents once ploughed across the oceanic basins. The orientation of metallic filaments would point to the ancient locations of the magnetic poles.

The Cuss I is named for the initial letters of the four oil companies that have used in shallow water: Continental, Union, Shell, and Superior. If the tests off La Jolla go smoothly the rig is to be towed by a Navy tug to the site off Guadalupe about March 12.

Smithsonian Institution Numismatic Display

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, March 20, 1961

Mr. ROBERTSON. Mr. President, we read in the Bible that the love of money is the root of all evil. That statement illustrates a historic fact as well as a grave human weakness. The historic fact is that more than 2,000 years ago money was used as a medium of exchange throughout the Roman Empire. The human weakness is the fact that even since King Midas struck off gold coins men have loved money, and some have loved it to the extent of losing their souls in its acquisition.

In a sense, the history of money is the history of civilization. Savages did not have money, and even today savage tribes of north Africa have no coinage of their own. The Romans were the first to mint coins with milled edges, which would easily indicates whether or not they had been defaced, because all money prior to that period represented so much in weight of gold, silver, copper, or iron, and ignorant people would be cheated by the moneychangers who would take a small portion of gold or silver from a coin before passing it on. Consequently, before the milled coin of the Romans, money was weighed by those who wished to be sure they were getting full value.

Even in our own country, money can tell us a lot about the history of a given period. One complaint of the colonists against the mother country was that the mother country would not permit the colonists to coin their own money, so in order to supplement an inadequate supply of British coins, tobacco was used for money in Virginia and beads and wampum in Massachusetts.

Mr. President, on last Saturday, the Smithsonian Institution opened to the public its new Hall of Monetary History and put on public display the most extensive and most historic display of ancient and modern coins and paper money the world has ever known. Not only is this exhibit of the greatest interest to those interested in numismatics, but it should be of interest to every citizen in our country, because whether we love money or not a certain amount of it is a necessity in our modern way of living. Indeed, if we seek the secluded happiness of the desert, boldly proclaimed by Omar Khayyam, we still must have the money with which to buy the loaf of bread and the jug of wine to be taken with us into our desert retreat.

In order that my Senate colleagues and all who read the Appendix of the CONGRESSIONAL RECORD may have a better understanding of the numismatic collection now on display at the Smithsonian Institution, I ask unanimous consent to publish in the Appendix of the RECORD a brief description of the principal displays prepared for me by Dr. Vladimir Clain-Stefanelli, Curator of Numismatics of the Smithsonian Institution.

There being no objection, the description was ordered to be printed in the RECORD, as follows:

The Smithsonian Institution's new Hall of Monetary History and Medallic Art opened to the public on Saturday, March 18, 1961, in the Arts and Industries Building.

The main display in the new hall is dedicated to monetary history and illustrates in a sequence of 19 specially designed cases the major aspects of the development of the units used in economic systems employing money from the beginning of primitive barter to the establishment of our modern monetary systems. The exhibits have been arranged to show the evolution of money as related to a sequence of significant historical events, and thus as an integral part of the cultural development of human society. The development of the various forms of currencies in Colonial North America is traced and especial emphasis is given to the evolution of U.S. coins and paper money.

This new exhibit illustrating monetary history forms an important step in the Smithsonian's long-range program of exhibition modernization. Displays of coins, tokens, and paper currencies have been arranged in their historical and cultural contexts, rather than by conventional classifications. These exhibits are thus intended to give a new dimension to the visual record of history on display at the Smithsonian.

Several topical displays complete the basic monetary history exhibit. The themes of these displays are: "The Origin of Coin Names," "The Reformation," "Confederate Currencies," and "State Bank Notes." A reconstruction of a coin-stamper designed by the renowned Italian artist and inventor Leonardo da Vinci—1452–1519—is also on view. It marks the introduction of mechanization in coining techniques.

"The New World" is the title of a special panel, recalling the first coins struck in the Western Hemisphere, in the Mexico City Mint at the beginning of the reign of Charles and Johanna of Spain—1536–56. It is followed by a display of the monetary history of North America which starts with "Barter on the Frontier," an illustration of the trade of the primitive Indians and the hardships of the white man on the advancing frontier, when only a few hundred years ago Dentalium and Mercenaria shells, wampum, skins of animals and many other articles were used in lieu of money.

"Colonial Money, 1607–1754" is an exhibit showing examples of English, Dutch, and French coins brought by the early settlers, and the first coins struck in Massachusetts in 1652 as well as early paper currency issues.

Other displays show paper bills issued by the States and by the Continental Congress, coins of the States struck after the Declaration of Independence, and the first national currency in relation to the organization of the national banks.

"Economic Adjustments, 1812–60" is the title of an exhibit reflecting a period marked by a series of financial crises and the institution of various banking systems intended to guarantee financial stability. The gold discoveries in Georgia, North Carolina and California resulting in a variety of private gold issues are also featured.

Another is "War and Reconstruction, 1860–73," depicting the different currencies and monetary intermediates, from cardboard money and encased postage stamps to the first U.S. "greenbacks," as well as some of the Confederate issues of this troubled period.

A significant section of the hall is dedicated to the U.S. mint collection. This exhibit is of unusual importance since it represents the oldest collection of coins owned by the Government. In fact, it had its inception in 1792 at the U.S. Mint in Philadelphia. That year and during the rest of his career the chief coiner, Adam Eckfeldt, set aside a specimen of each type and date of coin minted. The mint's collection was increased systematically through purchases made possible by Congress since 1839. This original collection was transferred to the Smithsonian after World War I and is known for the unique or extremely rare pieces it contains. One of its sections is devoted to the pattern or experimental pieces which were made at the mint as early as 1792 and continued until fairly recent years. Many of these designs were never adopted, but they served a useful purpose in helping our coin engravers arrive at designs that would be attractive as well as resistant to wear. The artistic merit of some of these patterns is indeed unusual. Others are notable for their historical import, particularly the $50 gold pieces dated 1877, designed by William Barber, and the so-called metric issues of 1879 and 1880.

The hall features also the world's largest collection of gold coins on public display, given to the Smithsonian by the late Paul A. Straub. It is a "type" collection consisting of 1850 gold coins of Europe and the Americas. Almost 4,000 silver coins of the world complete this series. Remarkable, among others, is the group of oversize multiple talers of the Brunswick duchies issued mainly during the 17th century. A study of the elaborately detailed mining landscapes on some of these coins led to new contributions to the knowledge of early mine-pumping devices.

On view also are outstanding specimens from the Willis H. du Pont donation of Russian coins and medals. It is an authoritative collection paralleled only by that of the Hermitage in Leningrad. The selections are displayed in two cases; one of them illustrates coinages issued between 1700 and 1740 by the Czars Peter the Great, Peter II, and Anna; the other one depicts the life and political aims of Peter the Great as shown on medals.

Another outstanding exhibit is the collection of rare Japanese gold coins presented

in 1880 to General Grant, by the Japanese Government, on the occasion when a thoroughbred stallion was given by the general to the Emperor.

The completion of this hall would not have been possible without the assistance of many public and private institutions and organizations as well as most generous gifts from numerous private citizens of the United States. Notable contributors have been: The American Antiquarian Society, Mrs. Frederick C. C. Boyd, Mrs. Catherine E. Bullowa-Moore, Philip H. Chase, Willis H. du Pont, Eric P. Newman Numismatic Education Society, First New Haven Bank, Mrs. Ulysses S. Grant, International Business Machines Corp., Hon. and Mrs. R. Henry Norweb, Mrs. Wayte L. Raymond, Joseph B. Stack, Morton Stack, Paul A. Straub, U.S. Mint, William H. Vanderbilt, and many others.

The Curator of the Division of Numismatics, Dr. Vladimir Clain-Stefanelli of the Smithsonian, reports that the total number of coins, medals, and paper currencies has nearly doubled since 1957 and amounts today to approximately 120,000 catalogued items, not a few of which are unique.

Army Makes a Comeback: What It Will Get and Why

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the U.S. News & World Report of March 20, 1961, that I found to be most satisfying and gratifying because it supports what I have been urging for a number of years by the introduction of the necessary amendments in the Department of Defense Subcommittee as well as in the full Appropriations Committee and on the floor of the House when the defense appropriations bill was before the membership. After reading this article, I feel it is better late than never and it is my hope that it is not too late.

The article follows:

ARMY MAKES A COMEBACK: WHAT IT WILL GET AND WHY

Overhaul of U.S. defenses, now in the works, signals a bigger role for the Army—which has felt neglected for years.

More troops for "brush fire" wars—a billion dollars for new weapons—greater strength and mobility on the ground and in the air—these are only part of what's being planned.

Result: The U.S. Army is on its way back.

It is the U.S. Army—after a period of lean years—that suddenly stands to gain most from shifts now being made or planned in defense strategy. The Army, you are told by officials in Washington, is making a comeback.

This is to be the shape of the new Army, if plans now being proposed are carried out.

More manpower. The Army's troop strength, cut sharply since 1955, will grow by stages to 925,000 men—up 55,000 from present levels. This in turn means higher draft calls in sight. Some of the new manpower will go to form a fifteenth combat division, this new unit earmarked for the Strategic Army Corps. STRAC is the Army's emergency force for "brush fire" wars, now totaling 3 divisions of paratroopers and infantrymen based in the United States.

Other new troops would be sent to revitalize 5 understrength divisions in Germany and 2 others in Korea. Urgent need is seen for sharper combat efficiency for U.S. troops in potential trouble spots overseas. Already, 5,000 more soldiers have just been ordered to Central Europe and the Pacific.

More, newer weapons. Swift modernization of arms, costing at least $1 billion overall, is to be started almost immediately. Whole families of World War II weapons must be replaced by newly designed rifles, tanks, combat cargo carriers, faster vehicles, disposable flame throwers. An example of what the Army has developed and needs money for: A mobile radar that can pinpoint hidden mortar emplacements 6 miles away.

Additional funds are to be sought, also, for longer range development of itmes such as combat planes that can take off and land like helicopters on rugged airstrips, and new tactical missiles light enough to be flown to any battle area in a hurry.

More mobility. On the ground and in the air, there is to be more mobility. The Army's present fleet of 5,000 light planes, small troop carriers, and helicopters is to be increased and modernized.

Mobile "fire brigades" of about 4,000 men are wanted and may be created. They would be based overseas, always ready to move in Asia, the Middle East, or Africa. More guerrilla-warfare experts are to be trained to support and lead native insurgents behind enemy lines.

More for home defense. The Army's traditional role in antiaircraft defense is being expanded to include defense against enemy missiles. A plan is now before President Kennedy to start limited production of Nike-Zeus antimissile missiles without waiting for a series of full-scale tests to be completed. The speedup would save 2 years and is expected to win approval.

The price tag on such actions over the years is put at more than $15 billion above current budgeting. A complete Nike-Zeus system alone will cost from $8 to $13 billion, depending on how many U.S. cities are to be protected. In practice, these costs would be spread out. The Army budget, now running at just under $10 billion a year, would go up to $12 billion as programs move into high gear.

Why the beefing up? A broad shift in U.S. defense policy is behind the Army's comeback. Decision has been made to end this country's concentration on massive nuclear weapons alone. Balance is being sought between the old doctrine of massive retaliation and a new policy of meeting Red aggression with nonnuclear means, if that is the choice. This is where a stronger Army comes in—an Army ready for big or little wars in any situation.

A report just given to Congress by Pentagon intelligence is another reason for the new concern over the relative state of U.S. conventional forces. In the report, the Soviet Army was pictured as having 100 combat divisions in the line and 50 in reserve. In the hands of these Russian troops, in quantity, were said to be weapons completely modernized since World War II—heavy field missiles, new tanks, self-propelled artillery, helicopters and planes.

Such weapons have been developed in this country but not purchased in quantity because of budget restrictions since the Korean War. Spending on nonnuclear hardware slid from 3.7 billions in 1954 to 600 millions last year.

Criticisms of such economy were made by a parade of high Army officials, some of whom resigned in protest during the administration of President Eisenhower. Charges were made by these officers that the Army had been completely subordinated to a new look in military affairs in which the greater emphasis was on nuclear weapons. During that period—from the end of the Korean war in 1953 through 1960—the Army was chopped in size from 1.5 million men to 870,000. Six divisions were retired as a result, and the size of existing divisions was reduced.

An urgent need. A swing back to greater dependence on the Army actually started during the last session of Congress, when legislators increased the Army budget over the amount asked by President Eisenhower's fiscal planners. The action followed a study of Army deficiencies by the Senate Preparedness Investigating Subcommittee.

That report, drawn up by Committee Chairman LYNDON B. JOHNSON saw the Army "in urgent need of modernization." It found that only one-sixth of the Army's needs for modern rifles and only one-tenth of the new tanks needed were on order, and in other cases hundreds of new weapons and vehicles were being purchased when thousands were needed.

Any overnight build-up of the Army even now is not seen as possible. After a long series of reduced budgets—some running $4 billion below the Army's formal requests—new weapons and manpower must be absorbed slowly. Time needed to produce new weapons is another factor. And Congress, by controlling the purse strings, also controls the timetable.

Before the end of March, the President will officially ask Congress for specific changes in military spending. He will request more money for projects to be started before June 30, and recommend major amendments to the defense budget for the next fiscal year. That budget was left by President Eisenhower.

Outlook is that the Eisenhower budget, pegged at $42.9 billion, will be increased by more than 2 billion for all services if President Kennedy's revisions are adopted. This new total would exceed the peak spending of the Korean war years.

More money for all? There is to be more money, as plans now stand, for all services. The Army buildup is not to be at the expense of others. Biggest share of the first increase will go for Air Force speedups of costly missile systems and new preparations for the Strategic Air Command. There is also to be a speedup in the Navy's Polaris submarine fleet. The Marine Corps is in line for an eventual increase of 25,000 men to bolster its limited-war capability.

But in the longer run, as a shift in strategy takes hold and more time and money are made available, officials say it is the Army that stands the best chance of making the biggest relative gains among this country's armed services.

World's Fairs Contribute to Science and Technology

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 20, 1961

Mr. KEATING. Mr. President, in the March 12 edition of This Week magazine, Mr. Joseph Gies has written an excellent article outlining the chronology of World's Fairs for the past 100 years

and describing their contributions to science and technology.

Mr. Gies shows how each World's Fair has generated a spirit of scientific exploration and discovery.

In Philadelphia in 1876, it was the telephone. In Paris in 1889, it was the automobile; in Chicago in 1893, the electric light; and as recent as the Brussels Fair of 1958, it was the spirit of the space satellite that inspired and challenged man's imagination.

Mr. President, the most exciting thing about this chronology is that it makes us wonder in a spirit of anticipation what will be the great contribution and great technological advances that will inspire the New York World's Fair to be held in 1964 and 1965.

A World's Fair is not only an opportunity for entertainment and enlightenment, it truly transcends the fair grounds and speaks out to all nations of scientific progress and technological advances to better the world we live in.

Mr. President, as one who has long been interested in the New York 1964–65 World's Fair, I am delighted to see that already there is building up a great enthusiasm for this event. The article by Mr. Gies certainly illustrates this enthusiasm. It is an excellent and worthwhile article, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOWS THAT MAKE DREAMS COME TRUE

(By Joseph Gies)

The unusual version of the world shown on our cover is the first official color picture of a major symbol of the sixties—the unisphere.

The unisphere is the theme symbol of the 1964–65 New York World's Fair, now in the planning stage on drawing boards. This fair will be held in Flushing Meadows, scene of the 1939 New York World's Fair. On our cover is an artist's representation of the stainless steel giant (120 feet in diameter) that the United States Steel Corp. will construct and present to the fair for installation at Flushing Meadows Park. At night flashing lights will pinpoint the capitals of the world while satellites zip around in orbit.

"The unisphere," says Robert Moses, president of the New York World's Fair 1964–65 Corp., "represents man's achievements on a shrinking globe in an expanding universe, and the necessity of achieving peace through understanding."

The unisphere will be the biggest armillary sphere ever constructed. An armillary sphere, just in case you didn't know, is a model of the world formed on concentric rings—a sort of global skeleton. The Unisphere, which will be mounted over a 350-foot pool, will not be taken down after the fair, but left as a permanent embellishment of the park.

Meantime, on the opposite coast, Seattle has picked a symbol for its own World's Fair, the "Century 21 Exposition," due to open in April 1962. Seattle's fair planners have possibly even outsymboled New York's, with a 550-foot-high tower called the space needle. It will house a 220-seat restaurant which will revolve as you eat. You'll get a view of the Cascade Range with your soup, Puget Sound with your entree and snow-capped Mount Rainier with your ice cream. The bar, luckily, will be in the hub and won't revolve.

The space needle too will outlast the fair it symbolizes, and become a permanent feature of downtown Seattle (the Century 21 will be located close to the business district).

Leaving enduring landmarks behind is an old World's Fair custom—but often what survives isn't what the people in charge intended. Whether it turns out to be an engineer's dream shape in structural steel or the memory of every man's dream shape behind a couple of fans is something nobody knows till the fair's over, and sometimes not then. The first fair on record was when King Ahasuerus staged his big 180-day fair in Shushan, Persia. He never figured it would get him a new wife, but Queen Vashti refused to put in an appearance for the fair's closing ceremony, and lost her royal job to Esther, according to the Bible.

There were a lot of local fairs after that, including some pretty big ones during the Middle Ages. In the 18th century London and Paris launched industrial fairs, showing the latest wrinkles in Sheffield cutlery, liquor distilling, etc. But it wasn't until the middle of the 18th century that the first World's Fair opened.

Here's a short rundown of some unforgettable World's Fairs—and what made them unforgettable:

London 1851: The First World's Fair, with exhibits from all the leading nations, was dreamed up by Prince Albert. The Great Exhibition, as it was called, gave the world its first World's Fair symbol—and a magnificient one it was. The committee in charge had rejected 245 straight blueprints from leading British and European architects, when an ex-gardener named Joseph Paxton submitted a design based on a greenhouse. The idea of a glass building left the committee speechless, but Paxton, a man far ahead of his time, sent his idea to the new Illustrated London News, the world's first picture magazine. With the London public it was love at first sight. Despite dire predictions from experts (the Astronomer Royal said the thing couldn't stand up) Paxton's towering greenhouse, enclosing several Hyde Park elms, was built. Punch called it the Crystal Palace, and overnight it became one of the world's most famous buildings. After the exhibition it was taken down piece by piece and moved to the outskirts, where it served as a glittery exhibition and amusement hall for eight decades, before a fire destroyed it in 1936.

But Prince Albert's Great Exhibition left more behind than the Crystal Palace. Out of its handsome profits were eventually built the Victoria and Albert Museum, several other museums and a cluster of schools and colleges. And since 1891 the estate left by the exhibition has financed thousands of scholarships to British universities. Known as 1851 scholars, the recipients have numbered seven Nobel Prize winners and many scientists.

The exhibition left at least one other souvenir—Antoine Sax's new instrument, the saxophone.

Paris 1867: Two miraculous new chemicals, gasoline and aluminum, were introduced to the royalty-studded throngs who flocked to the "Exposition Universal." And a more raffish survival: a picturesque maze of booths, restaurants, minarets, aquariums, sideshows, concert halls, captive balloons and games of chance—the first midway. Today, who can imagine a fair without one?

Philadelphia 1876: The Emperor of Brazil tried out the funny little gadget Alexander Bell had invented an exclaimed, "My God, it talks." That lasted. So did another talking novelty brought to the fair by a young fellow named Thomas Edison—the first phonograph. And Philadelphia contributed an important fair idea: that a World's Fair should commemorate something. This one, of course, was the 100th birthday of the United States.

Paris 1889: Like the Crystal Palace, Engineer Gustave Eiffel's giant steel tower stirred bitter controversy. But like the Crystal Palace the Eiffel Tower was built anyway, 984 feet high, taller than any building in Europe then or now.

But the exposition in 1889, marking the centenary of the French Revolution, left two other things behind for good measure: (1) the automobile, the first of which was exhibited by Karl Benz, and (2) a muscle dance, performed by a sinuous lady named Little Egypt. History does not record which drew the most bug-eyed stares—the Eiffel Tower, the automobile, or Little Egypt.

Chicago 1893: The Columbian Exposition, the 400th anniversary of Columbus' landing, got going a year late, but made up for its tardiness with three new wonders: (1) the electric light, powered by George Westinghouse's new generator, which flooded the fair, creating a dazzling "white city;" (2) the present-day Museum of Science and Industry, a limestone-built 1893 original building, and (3) the first ferris wheel—Chicago's answer to the Eiffel Tower, not as tall but more fun to go up in.

Paris 1900: Not content with leaving two famous Paris buildings, the Grand Palais and the Petit Palais, this exposition left the escalator. In fact the very "moving sidewalk" that was a hit of the fair later carried thousands of Christmas shoppers onward and upward in Gimbel's, Philadelphia.

St. Louis 1904: Atop the dome of the main auditorium at the Louisiana Purchase Exhibition stood a heroic-sized statue: the Victorious Athlete, by Evelyn Longman—a salute to the Olympic games, held in St. Louis. Today the statue is in trophy rooms all over the Nation, because manufacturers of athletic trophies have copied it ever since.

Less prominently displayed was the exhibit of a young genius named Lee De Forest, whose audion tube shortly led to the development of radio.

San Francisco 1915: A 435-foot "tower of jewels," made of thousands of glittering glass prisms, symbolized this celebration of the digging of the Panama Canal. That's long gone, but the fair-built Palace of Fine Arts still is standing on Baker Street.

Philadelphia 1926: The Sesquicentennial Exhibition was a patriotic pageant—so it figures that the huge stadium it left behind is the scene of every fall's Army-Navy football game.

Chicago 1933: "A Century of Progress" exhibition, marking Chicago's 100th birthday, was officially symbolized by the impressive hall of science. But its unofficial symbol was a fan, for despite science, Fan Dancer Sally Rand was the thing whose name became a household word.

New York 1939: Remember the trylon and perisphere? The unisphere will be mounted on the perisphere's old pedestal in 1964. The symbols of "The World of Tomorrow" are long gone, but three items unveiled at the fair have definitely lingered: Nylon, home air conditioning—and television.

San Francisco 1939: The Golden Gate Exposition left an unusual legacy—an island. Treasure Island, scraped together out of shoals in the bay, was originally designed as an airport, and fair buildings were constructed for easy conversion to an air administration center and two hangars. Today it's an important Navy base.

Brussels 1958: Most of the buildings of the last World's Fair have vanished, but the fair's great symbol, the atomium, remains in Brussels to remind of man's determination to mold the atomic age to the benefit of hu-

manity. Two other Brussels exhibits left enduring memories: Russia's first sputnik, whose pioneer orbit has been followed by dozens of U.S. and Russian satellites since; and the beautiful U.S. pavilion, designed by Edward Stone, which will inspire architects for years.

What will remain of "Seattle 1962" and "New York 1964." The space needle and the unisphere, parks and gardens, sports arenas, and concert halls.

But that's far from all. Out of the fabulous scientific exhibits, which at this moment are still perhaps only gleams in researchers' eyes, will come new advances, new ways of doing things, new ways of thinking even, that will influence the life of every human being on this planet far beyond the reaches of this century.

Our Vanishing National Seashores—Subdividers Threaten Proposed Point Reyes Seashore Park

---

EXTENSION OF REMARKS
OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. CLEM MILLER. Mr. Speaker, in both the 86th and 87th Congress, I have sponsored legislation to provide for establishment of the Point Reyes National Seashore in California as a unit of the national park system.

The Committee on Interior and Insular Affairs has scheduled a hearing on this legislation—H.R. 2775—for March 24.

Mr. Speaker, I consider our ocean seashores a uniquely national natural resource.

I, coming here from the north coast of California, recognize that our Pacific Ocean shoreline in California—as in Oregon and Washington—is also the Pacific shoreline for the people of our neighboring States of Arizona, Nevada, and Idaho and of the States further inland.

I believe that the people of all the States are entitled to access and enjoyment of some of the limited seashores of our continent.

Therefore I also believe that the people of all the States are entitled to help insure protection and development—for public access and benefit—of certain segments of this irreplaceable and fast-vanishing national resource. Such national seashores properly should be those few remaining natural segments which possess exceptionally high public recreational values.

The National Park Service has identified several such superlative seashores. They include portions of Cape Cod, Mass.; Padre Island, Tex.; Oregon Dunes, Oreg., and Point Reyes Peninsula, Calif. Legislation has been introduced to establish national seashores at each of these areas.

Increasing population pressures have added new dimensions of urgency to congressional consideration of this legislation at this session.

Under leave to extend my remarks in the RECORD, I include portions of recent newspaper articles which report certain of these developments at Point Reyes. The articles are from the San Francisco Chronicle of February 11, 1961, and from a series in the San Francisco News-Call Bulletin beginning March 6, 1961.

The articles referred to follow:

SUBDIVIDERS VERSUS NEW U.S. PARK—LOTS AT POINT REYES READIED FOR HOMES

(By James Benet)

Subdivision seemed to be winning the race against park use for the magnificent Point Reyes Peninsula yesterday.

"The lot owners will be able to start building as soon as we finish putting in these roads and the water system," said Walter G. Moore.

He is a salesman for David S. Adams of San Anselmo, who has already brought bulldozers, power shovels and roadscrapers into the heart of the proposed national seashore park in Marin County.

Adams is advertising that 1,000 acres will be devoted to his "Drake's Beach Estates" in the area that, the National Park Service has said, "provides a combination of scenic, recreation and biologic interests which can be found nowhere else in this country as near to a large center of population."

"We already have commitments for more than half of the first 80 half-acre lots that we are preparing," Moore said.

"We are asking—and getting—$4,250 each."

The lots are on a south-facing slope overlooking the long white beach along Drake's Bay, a beach the U.S. Congress is being asked to set aside for public use.

The subdivision plan shows a beach club to which lot owners will belong, adjacent commercial development and large beachside parking lots, but no public access.

"Of course the beach below high water line is public," said Moore. "If people can get access to it they couldn't be kicked off."

And what of the proposed park, which Congress last year appropriated $15,000 to study, and for which bills have been introduced into the new Congress by both California Senators, Republican THOMAS H. KUCHEL and Democrat CLAIR ENGLE, as well as by Representative CLEM MILLER, Democrat, Corte Madera.

"I doubt if it will go through, myself," said Moore.

"They are talking about $8 million, but I doubt if they could buy up this peninsula for less than $80 million."

James Cole of the National Park Service confirmed that it will cost far more to create the proposed park if subdivisions are built in the area, since the cost of improvements must then be paid for by the Government if it still goes forward with the park.

"And," he added, "it would create a situation that would take many years to get rid of."

However, Cole said, the National Park Service cannot prevent Adams from proceeding on private land.

"We plan a good development," Moore said. "We will have the right to disapprove architectural plans. The houses, on half-acre lots, won't be jammed together."

The developer has built a road of about eight miles south along a ridge and there, stark against the skyline on the ridgetop, stand two water tanks that are the first structures of the new development.

The Park Service's present proposal, backed by Governor Edmund G. Brown, State park authorities and others, is for a seashore reserve of about 53,000 acres. Of these, 21,000 acres would be designated as a pastoral zone.

Park authorities said the park can serve wide recreational use, including camping, picnicking, hiking and beach activities, as well as enabling preservation of the historical area where Sir Francis Drake is believed to have landed in the 16th century.

POINT REYES: PARADISE LOST?—SUBDIVISIONS HAVE STARTED

(By George Dusheck)

It is now possible to live in view of the white Marin cliffs beneath which Sir Francis Drake careened the *Golden Hind* in June 1579.

The subdivisions which have threatened Drakes Bay ever since the National Park Service proposed, 2 years ago, to make Point Reyes a national seashore recreational area, have arrived.

The bulldozers are at work making roads and streets. The ditchdiggers are furrowing the rolling moor for drainpipes.

The stakes are up, with fluttering blue and red ribbons attached, on the half-acre homesites.

Architects and engineers are at work on plans to dredge a small boat harbor, lay out a golf course, erect a "Carmel-type" commercial development.

Salesmen are ready now to sell you a site, on a hill overlooking Drakes Bay or on Limantour Spit below the hill, for a fancy price—$4,250 to $10,000, depending on size and location.

There is a bill now before Congress, supported by the Kennedy administration and members of the California congressional delegation, to make 53,000 acres of Point Reyes Peninsula a great national park, a seagirt, forest-crowned playground and pastoral reserve.

But unless Congress acts quickly, it may find the National Park Service will have to buy up and destroy a residential and commercial development.

When Point Reyes dairymen appeared before a Senate committee at San Rafael last spring to protest the proposed national park, they said they wanted to be left in peace to graze their cows and milk them on the rolling green hills of western Marin.

They were warned then that being left in peace was not in the cards—that they must choose between a national park and residential and commercial development of the peninsula.

In the hope of winning them over, the National Park Service has gone so far as to offer to let them continue their cattle and dairy operations within the boundaries of the proposed national park.

Now a group of Marin real estate men and developers have tightened the screw. They have set up Drakes Beach Estates, subdivision No. 1, and Drakes Bay unit No. 1 on Limantour Spit.

They have roughly surfaced an old fire road to within a mile of the subdivision and bulldozed an extension to the homesites.

Drakes Beach Estates was incorporated a year ago, with Benjamin P. Bonelli, a San Rafael attorney, as president, and David S. Adams, a San Rafael real estate man, as the principal—25 percent—stockholder.

This was, of course, after the announcement of the National Park Service's intention to make Point Reyes a national seashore recreational area.

The first subdivision is on a sloping ridge above the sand spit. It is roughly 50 acres, with 81 homesites marked off. About half of these are marked "sold" on the subdivision map in the Inverness office.

But a salesman told a customer last week: "Some of the sites marked 'sold may still become available. People's dreams are sometimes bigger than their pocketbooks."

The second subdivision is on the spit itself. This is about 25 acres, divided into 88 homesites.

The hill sites are less expensive—$4,250 and up—than the Limantour Spit sites—$10,000 for the tip of the spit.

"Some press statements about our development have been misleading. This is not just a lot of tract homes. In fact, we're not building any homes at all.

"This is a recreational development. We're going to put in a small boat harbor and, later, a golf course. There will be a beach club, to which all lotholders may belong. There will be a small, Carmel-type commercial development—to sell boat sails, gasoline, food, and so on."

It is also possible, he conceded, that Pacific Bridge Co., whose engineers are laying out the master plan, and Campbell & Wong, the San Francisco architects who are drawing the plans, may include such things as:

A motel (or yachtel), a restaurant, a gift shop, and a clothing shop.

"We don't know yet what the commercial development will be," says Bonelli.

But there will be one. One paragraph in "declaration of conditions, covenants, and agreements" which lot-buyers sign contains this language:

"The purchasers of lots in this subdivision agree * * * not to oppose any commercial, residential, or recreational development whatsoever by Drakes Beach Estates, Inc. * * *."

This could presumably include such things as hot dog stands and a drive-in movie on the beaches of Drake's Nova Albion. The corporation owns about a thousand acres in all, once part of the great 10,000-acre Murphy Ranch on Point Reyes.

POINT REYES BUILDERS ENJOY EXEMPTIONS; BYPASS RESTRICTION, SUPERVISION

(By George Dusheck)

Some conservationists are complaining that Drakes Beach Estates, the developers who are subdividing a thousand acres of grassy hills and sandy beaches on Drake's Bay, are cutting corners and putting in substandard work.

This is not true. Everything being done there is perfectly legal—the Marin County supervisors and planning commission have granted the company exemption from much of the restrictions and supervision that bind other subdividers.

Here are some examples:

1. Ordinarily subdividers are required to build county-standard roads and streets, dedicate them to public use and turn them over to the county.

Drakes Beach Estates, Inc., asked for and got an exemption from this requirement. Their roads and streets will be private and purchasers of homesites are warned by the California Division of Real Estate that owners may be forced to maintain them at their own expense.

The roads would not be accepted by the county in their present condition, even if offered; they are too narrow, their roadbed is substandard, their tar topping is too thin. They have already begun to wash out and gully at the shoulders here and there.

2. Ordinarily, subdividers are required to file a complete set of plans for development with the planning commission and with the county road commissioner, who thereupon inspects such installations as roads, streets, gutters, sidewalks, storm drains, sewage pipes and utility lines.

Drakes Beach Estates, Inc., asked for and got an exemption from this requirement. The only part of the subdivision which County Road Commissioner Marvin Brigham is permitted to inspect is the water system.

The water will come from nearby wells owned by the Limantour Mutual Water Co. A mutual water company is not a public utility, is not regulated by the California Public Utilities Commission, and the California Division of Real Estate warns buyers:

"No public agency (other than the health department) has any supervision over the management, rates, assessments, charges, or conduct of business of a mutual water company.

"In some instances, a subdivider or some other person may own the majority of the stock and thus control the mutual water company. If this is so, the stockholders may find it difficult or impossible to get improvement if the service is unsatisfactory."

3. Ordinarily, a subdivider must file with the planning commission a map showing any parts of the subdivision that conceivably could be flooded by rain run-off, high tides, high waves or any combination of these.

Drakes Beach Estates, Inc., asked for and got an exemption from this requirement. It is a fact that Limantour Spit has not been inundated by the sea in recent years, but the Marin County Planning Commission staff believes it was so washed over many years ago.

The subdivider also asked exemption from the legal requirements that such areas (subject to flooding or wave washing) be filled to a level 7 feet above mean sea level.

Benjamil P. Bonelli, president of Drakes Beach Estates, Inc., says this part of the subdivision code will be strictly adhered to—but the records show he is legally exempt from this requirement at his own request.

How were Bonelli and the other corporate subdividers able to escape application of these parts of the law?

Very simple—they asked the supervisors for exemption and got it. The vote, last June 28, was 4 to 1.

It is well known that a majority of Marin County supervisors are opposed to creation of a national seashore recreation area on the Point Reyes Peninsula. On two occasions they have formally taken this position, in response to entreaties from Point Reyes dairymen, and from Capt. Adolph Oko and other peninsula real estate men.

The California Division of Real Estate's "Final Subdivision Public Report" on the Drakes Beach estates project also makes these points:

There is no gas except bottled gas. There will be electricity and phone service. Sewage will go into septic tanks, to be built by and maintained by the homeowners. Fire protection will come from the county; the nearest fire truck is at Inverness Park, 6 miles distant over a substandard private road. It is 12 miles to the high school, 6 miles to the grammar school, 6 miles to the nearest store. There is once-a-day Greyhound service on Highway 1 at Inverness Park, 5.6 miles from the tract.

Foreign Aid Where It Counts

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. BRADEMAS. Mr. Speaker, in connection with the Peace Corps, I would also like to bring attention to a lucid and discerning editorial which appeared March 6 in the Indianapolis Times. The editorial, I believe, makes a valuable contribution to the current discussions about the spirit that should underlie the Peace Corps:

FOREIGN AID WHERE IT COUNTS

The Peace Corps idea, now officially launched by President Kennedy, has a chance to revolutionize the American attitude toward foreign aid—and the attitude of many foreigners toward America.

The billions of dollars loaned and given away since the last World War have served a necessary purpose, even though a lot of the money has been wasted on grandiose, hurry-up projects of doubtful benefit to anyone.

These expenditures have preserved order when civil chaos invited communism. Undoubtedly they made possible the recovery of Europe and Japan.

But there has been little warmth in them, either for the American taxpayer, putting up the money, or for foreign peoples who were benefiting, at least in theory.

For this there are several reasons, including the uncomfortable feeling in America that we were trying to buy friends and military support—the widespread instinct abroad that this was the case.

The dozens of private American organizations which have been in the foreign aid business for years have made an entirely different impression.

They have furnished shovels and hoes to farmers, plus cattle and chickens for breeding stock.

Sewing machines have been accompanied by sewing lessons.

Building tradesmen have helped erect houses and schools.

Doctors and nurses have tended the ailing at posts deep in the jungles or across wide deserts.

Food packets by the millions have been furnished directly to the hungry.

In all this there is the feeling of direct, friendly contact between the world's unfortunates and their better-off fellow human beings in America.

The type of aid being furnished by American universities, church and nonsectarian groups more nearly fills the needs of underdeveloped countries anyhow.

Industrialization is the fad but benefits from this lie in the distant future, if ever.

What these countries need first is a sound basis in agriculture, which will enable them to feed themselves, in the mechanical trades which will permit them to house themselves, and in basic education which will enable them to understand the new kind of world they are entering.

There is so vast a void for these things, in Asia and Africa and even in Latin America, that no amount of American effort can fill it. But American Peace Corps men and women can establish small islands of instruction and aid, setting an example for neighboring communities to imitate.

The Peace Corps idea thus starts at the bottom, with food and medicine, plows, seed and fertilizer, instead of showy buildings of little present use to primitive people whose routine is hunger and disease, millions of whom never heard of democracy, or communism, or the United Nations.

The Peace Corps idea appeals to the American missionary spirit—particularly so since the wages will provide a bare existence, hence emphasize personal sacrifice in a good cause.

If our missionaries are carefully chosen for dedication and special skills, if they are carefully placed where they obviously are wanted, this Peace Corps idea can work wonders.

Temporary Unemployment Compensation

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. UTT. Mr. Speaker, H.R. 4806 is a bill to provide a temporary program of extended unemployment compensation and to increase the Federal unemployment taxes imposed on the employers in the respective States to finance

that program. At the time this legislation was before the House of Representatives I opposed its passage and joined in minority views to that effect. These minority views expressed opposition on the grounds that the bill first, did violence to the insurance principle of unemployment compensation; second, purported to impose $1 billion in additional taxes to meet a problem that had not been adequately defined; and, third, posed a threat to economic recovery by imposing higher costs on employment. These views pointed out how this legislation represented a backdoor approach to the imposition of Federal standards on the States and threatened the experience rating system which operates so successfully in the States to encourage employers to stability in employment opportunities.

Mr. Speaker, since expressing those views the legislation has passed the House of Representatives and has received approval in the other body. It now comes back to the House improved in some minor respects but still containing the basic defects that I criticized in the House version with respect to financing.

It is in regard to the financing features that I would like to comment further at this time.

In 1958 when the Eisenhower administration and the Congress considered that the economic situation required the enactment of a temporary unemployment compensation extension, legislation was then approved dealing with the situation. That legislation provided for a system of repayable advances to the States on a voluntary basis with the borrowing States having responsibility for the repayment of their respective advances.

The bill before the Congress today is markedly different. The benefit payments are voluntary with the States, but the Federal tax increase imposed on the employers in the States is mandatory and will be assessed against the employers in a particular State regardless of whether or not benefits are made available to the unemployed in the State. The anticipated consequence is that all States will make benefits available even though the responsible State officials may not consider that the economic situation in a particular State makes such an extended benefit program necessary. But the mere fact that benefit payments are to be made available in every State does not mean that the benefit payments in the State will equal tax collections in a State; it does not mean that the employers in a particular State will be taxed only to the extent that benefits are paid in the State. On this point we said the following in our minority views on this legislation:

Those States that have responsibly administered their unemployment compensation programs today have the financial ability to deal effectively with existing unemployment conditions. However, the approach set forth in H.R. 4806 would tax the employers in those States to pay for the benefit needs in other States where perhaps less satisfactory administration of unemployment compensation programs has occurred.

Mr. Speaker, the Senate Finance Committee report contains a table setting forth on a State-by-State basis the estimated additional tax collections and the estimated benefit payments under H.R. 4806. I will include that table as a part of my remarks and urge my colleagues to examine this table for the purpose of ascertaining the patent inequity in the financing arrangement of this proposal.

Estimated additional tax collections compared with expected benefit payments by States under H.R. 4806

[Amounts in millions]

State	Tax collections	Benefit payments[1]
Total	$964.0	$928.2
Alabama	12.2	10.0
Alaska	1.2	2.2
Arizona	5.7	2.1
Arkansas	5.3	4.7
California	99.4	80.0
Colorado	8.3	2.0
Connecticut	18.5	18.2
Delaware	3.2	2.0
District of Columbia	5.5	2.2
Florida	21.4	9.5
Georgia	16.7	12.0
Hawaii	3.1	.7
Idaho	2.5	1.6
Illinois	68.6	40.0
Indiana	28.0	26.0
Iowa	10.8	3.5
Kansas	8.5	3.5
Kentucky	10.6	15.0
Louisiana	13.1	12.9
Maine	4.5	2.0
Maryland	15.8	10.0
Massachusetts	34.2	30.0
Michigan	46.6	93.0
Minnesota	16.0	14.4
Mississippi	5.7	2.2
Missouri	23.6	11.0
Montana	2.6	1.1
Nebraska	5.2	.5
Nevada	2.0	2.0
New Hampshire	3.4	.4
New Jersey	39.7	51.2
New Mexico	3.9	2.3
New York	119.9	170.0
North Carolina	19.9	7.9
North Dakota	1.6	.9
Ohio	62.4	85.0
Oklahoma	8.9	5.8
Oregon	9.6	10.6
Pennsylvania	70.7	82.0
Puerto Rico	3.2	3.2
Rhode Island	5.5	5.5
South Carolina	9.1	7.3
South Dakota	1.6	.2
Tennessee	15.0	8.0
Texas	42.1	30.0
Utah	4.1	2.0
Vermont	1.7	.6
Virginia	16.1	5.5
Washington	15.4	8.9
West Virginia	8.4	9.5
Wisconsin	21.5	16.0
Wyoming	1.5	1.1

[1] Includes about $100,000,000 in benefit payments in excess of 26 weeks made under State law, and excludes payments to Federal civilian employees and ex-servicemen.

Source: Estimates of tax collections furnished by Department of Labor and estimates of benefit payments furnished by State employment security agencies.

Mr. Speaker, that table reveals that there are 40 surplus States with tax collections exceeding benefit payments, 3 break-even States with the tax collection and benefit payments equal, and 9 deficit States in which the tax collections in the respective States will not equal their estimated benefit payments. A table showing a recapitulation of the three categories of States follows:

[Figures in millions of dollars]

	Tax collections	Benefit payments	Surplus or deficit
Surplus States (40)	604.2	399.0	+205.2
Break-even States (3)	10.7	10.7	
Deficit States (9)	369.1	518.5	−149.4
Total	984.0	928.2	+55.8

The employers in the 40 surplus States would pay in taxes $205.2 million more than would be paid in benefits in their respective States. The 9 deficit States would have $149.4 million more in benefit payments than the employers in these States paid in increased unemployment compensation taxes. There would be a net surplus of tax collections over benefit payments for all 52 States under this temporary program amounting to $55.8 million, and I will comment on the disposition of that surplus later.

Five of the deficit States—Michigan, New Jersey, New York, Ohio, and Pennsylvania—would account for $141.9 million of the $149.4 million total deficit incurred by the 9 deficit States. Mr. Speaker, this fact raises the obvious question: Are the employers in Michigan, New Jersey, New York, Ohio, and Pennsylvania so impoverished that they are unable to pay their respective State's own way in regard to their State unemployment compensation programs? And the second question follows: Are the employers in the other States so wealthy that they can afford to pay their State program costs and contribute to paying the way of the deficit States?

Now, Mr. Speaker, I would like to comment on the disposition of the $55.8 million surplus under the bill. The formula for distributing this surplus under the legislation provides that it should be allocated to each State in proportion to the taxable wages as defined under State law. This means that the deficit States would be participating in the distribution of this surplus and it is inevitable that the five States contributing the most in the way of deficits will be among the leaders in the amount of the surplus they will receive. In other words Michigan, New Jersey, New York, Ohio, and Pennsylvania, which created the lion's share of the deficit-State-total, will have a lion's share of the surplus created by the surplus States.

Mr. Speaker, I believe that if unemployment compensation is to be a State responsibility, it should be kept exactly that. I believe that the States have demonstrated their ability to manage their unemployment compensation programs responsibly and adequately. Therefore, I am opposed to this legislation.

Some of my colleagues who want to preserve State preeminence in regard to unemployment compensation do believe that a temporary program of extended unemployment compensation is necessary in view of the present eco-

nomic conditions. I respect their viewpoint; however, I cannot understand how anyone can support the method of financing provided in this bill. Even those individuals who come from deficit States should be concerned that this financing pattern contains a strong inducement to loose administration which threatens the future of the unemployment compensation program. Those individuals who come from surplus States must determine whether or not the employers in their respective States should be called on to pay for an unemployment compensation program in other States where the employers have no vote and no influence as to the character of the program in those other States.

Mr. Speaker, this legislation in its present form should not proceed one step further in the legislative process. If legislation is necessary, then we should start all over again to develop legislation that is equitable and proper in its conception and which does not endanger the continued existence of our State unemployment compensation programs.

Russians Run Show for Castro in Mexico

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Evening Star, Washington, D.C., Tuesday, March 14, 1961, written by Mr. William L. Ryan, Associated Press news analyst, which is very indicative of the direction that Castro's Cuban Government is going.

The article follows:

RUSSIANS RUN THE SHOW FOR CASTRO IN MEXICO

(By William L. Ryan)

MEXICO CITY, March 14.—One of the first things Fidel Castro's current Ambassador did when he arrived in Mexico—even before presenting his credentials to the government—was to call on the Soviet Ambassador.

From that time a year ago until today there has been a steady stream of traffic between the embassies of Moscow's Vladimir Bazykin and Cuba's Jose Antonio Portuondo Valdor.

There is every evidence that activities of the two embassies, less than two blocks apart on the Calzada Tacubaya, are carefully coordinated, and that the Russians are the unquestioned bosses of their common efforts.

Mr. Portuondo now is the leading spokesman for Fidel Castro and Castroism in Latin America. He attacks the job with enormous energy, lecturing frequently throughout the country.

ONCE TAUGHT IN UNITED STATES

Mr. Portuondo was a member of the Young Communist League and later of the Popular Socialist (Communist) Party of Cuba. He once taught in several U.S. universities but left 10 years ago when the heat was on him for his Communist connections.

Able, intelligent, and fluent in English, he now is in full charge of Castro intelligence operations in Mexico. Aiding him are members of a top-heavy embassy staff and about a half dozen employees of Prensa Latina, the Castro news service which is devoted strictly to propaganda.

The Cuban Ambassador seems to have plenty of money. His agents are highly paid. His propaganda output is expensive. There is one report that he brought from Havana $200,000 to help finance last week's Latin American conference sponsored by the Communists in Mexico City. The Russian sare reported to have put up more than twice that and to have pledged to foot any additional expenses.

Mr. Portuondo works hand in glove with Mr. Bazykin, who speaks English and Spanish fluently. Mr. Bazykin is in constant touch with the Soviet Embassy in Havana and the suspicion has been raised that the Embassy in Mexico is in charge of all Communist activities in the Caribbean and Central America.

Mr. Bazykin's Embassy has been stepped up in size recently and now has about 140 staff members, none of them Mexicans and all of them carefully shielded from unauthorized contact with the outside.

The U.S. Embassy has a staff of about 430. Half are Mexicans. But the U.S. Embassy must deal with issuing tens of thousands of visas, with the influx of 700,000 U.S. tourists annually, with a multiplicity of common United States-Mexican trade and border questions. The Russians have no such obligations.

The Russians and the Castro Cubans concentrate much of their energies on recruiting among Mexico's students and teachers and the intellectual class in general. They obviously are making significant progress in building a dangerous fifth column for Mexico.

ECONOMY IS SOUND

Mexico is one of the bright spots of Latin America in many respects. The capital has a bright, hopeful look and hums with an energy seldom encountered elsewhere in Latin America. Mexico's economy is sound, its currency strong, its prospects encouraging.

Most Mexican labor unions are headed by strongly anti-Communist leadership. The Confederation of Labor itself is a stabilizing influence in Mexican politics. The Communists have practically no strength in trade union leadership—with one exception. This is the National Union of Education Workers, embracing all Education Ministry workers outside the university, both in the state and federal school systems.

The Mexican Confederation of Labor leadership disagrees with the charge that the teachers' union is Communist-dominated. But at least 6 members of its 18-member national executive are known Communists. It is the only Mexican union affiliated with the Communist World Federation of Trade Unions.

Working for Democracy in the United States, and in Africa

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. DIGGS. Mr. Speaker, I would like to call to the attention of my colleagues a remarkably discerning and historical address on the issue of democracy in the United States, and in Africa. The address was made by Prof. John Hope Franklin, formerly of Howard University, and now chairman of the department of history, Brooklyn College, New York, and was delivered in Detroit at a testimonial honoring one of our State's most distinguished citizens, Dr. DeWitt T. Burton. It was an extraordinarily fitting address for the occasion, because it points up the contribution American Negroes have made, and are challenged to make, toward the fulfillment of the African dream for self-realization, and it focuses the vital point that democracy in Africa is forwarded as Africans see democratic institutions working effectively in wholesome environment.

Dr. Burton, first Negro elected member of the board of governors of Wayne State University, is one who gives unstintingly of his mental, spiritual, and material resources to causes which foster and actualize democracy's highest ideals of human dignity, liberty, and justice. He spearheads a private and increasingly successful endeavor which provides scholarships for African students. One could list among other of his working memberships that of national board director of the United Negro College Fund; board member of the United Foundation-World Medical Relief Organization, of the Detroit Urban League, the NAACP, the Boy Scouts of America, and member of the Citizens Advisory Committee on School Needs in Detroit. Dr. Burton brings honor to the 13th Congressional District, and it is for me a distinct privilege to count him among my constituency and to work with him as fellow colleague in Michigan, national, and international affairs.

The address follows:

WORKING FOR DEMOCRACY IN THE UNITED STATES AND IN AFRICA

(Address delivered by Prof. John Hope Franklin, chairman of the Department of History, Brooklyn College, at the testimonial honoring Dr. D. T. Burton, Detroit, Mich., February 18, 1961.)

One measures the growth of a city not merely by population, its economic and industrial strength, its educational achievements, and its social development, but also by that city's own understanding of the forces and personalities that have contributed substantially to that growth. This occasion clearly demonstrates that the city of Detroit, by paying tribute to one of its great citizens—one who has done so much for it in so many ways—is not only a great metropolis, it is also a most civilized and cultivated community. It would be highly presumptuous for me to come among you this evening and speak at length about Dr. Burton and his many highly meritorious activities. Your presence here signifies your deep appreciation of them and, without doubt, as much greater firsthand knowledge of them than I could ever hope to have. I am nevertheless honored to be present and to make public acknowledgment of my own appreciation of his great works and to say a word in behalf of those beyond this community who feel the warmth of his passion for humanity and the sensitivity that he shows for the importance of human values whether they be found in Paradise Valley or on the banks of Lake Victoria in East Africa.

I propose to say a very few words about something that I know is near to Dr. Burton's heart and mind and to dedicate these remarks to him. For a number of years he has been interested in establishing the proper educational and cultural communication between this country and the emerging

African states, in stimulating the growth of important educational and social institutions in that great sister continent, and in assisting in other ways their proper assumption of responsibility in the complex world into which they are emerging. In doing so, Dr. Burton is standing in a great tradition that is a part of this country's attempt to extend the area of democracy; and he is also standing in a great tradition that belongs to the Negro citizens of this country in attempting to establish and maintain ties with the continent from which their ancestors came.

For more than a century and a half this country assumed the responsibility for keeping the torch of democracy burning in the Western World and for extending the light into the darker recesses of other worlds. If the light has at times flickered rather falteringly and if it has not always burned brightly here, the hope that the light has held out to underprivileged persons here and around the world has never dimmed. It has been one of the great inspirations to all peoples from the time that it first appeared on the horizon. In 1776 Thomas Jefferson held out the torch to what he called "a candid world." James Monroe declared in 1823 that he would guard the torch as it was being kindled in the nations to the south of us. Abraham Lincoln said in 1865 that it would be the basis of a just and lasting peace not only in the United States but among all the peoples of the world.

We need to remind ourselves, moreover, that the interest of American Negroes in Africa has seldom flagged. In our own burst of enthusiasm about events that are transpiring in the African nations today, we tend to forget that Negroes in this country extended the hand of fellowship to Africans shortly after emancipation almost a century ago. Since that time they have shared their meager resources with their black brothers of the dark continent. Negro missionaries in Africa back in the 1870's and 1880's recruited African students for Negro college and university training in the United States. The story of the work of the Lott Cary Missionary Society is a most inspiring and dramatic story of efforts in this regard. One of my earliest recollections is hearing my father tell of his proud, intelligent African classmates at Morehouse College in Atlanta, Ga., 60 years ago. When one reads of the herculean efforts of Dr. Hastings Banda to secure independence for his beloved Nyasaland, one is reminded of an earlier fellow countryman of his, John Chilembwe. As a result of the influence of missionaries in Nyasaland, Chilembwe came to this country, studied diligently, and caught the inspiration to carry forward the struggle against tyranny from his Negro associates at the little Baptist school in Lynchburg, Va. When he returned to Africa, he knew what he wanted. He wanted freedom and independence for his people. The uprising he led in Nyasaland in 1915 ended in his own death, but it kindled the torch of freedom and independence that has burned ever since. It is this torch that Dr. Banda and his fellows are holding up today as they carry on the fight for independence. It was in this spirit that Aggrey, Nkrumah, Azikewe, and literally hundreds of other Africans trained in this country, sharing the fortunes and misfortunes of American Negroes, returned to their countries to build societies and governments based on human dignity and freedom. It is in this spirit that Tom Mboya, though not educated in the States, looks to his friends here to give him strength and support in his fight for freedom.

What has happened in Africa during the past decade is a result, in part, of the work of dedicated men and women like those African leaders who got much of their training and inspiration in this country. What is happening in Africa at the present time must be viewed in the perspective of history as well as in the context of current complex developments. This is as true of the Congo with all its tragic bloodshed and chaos as is of Nigeria with all its sophistication and obvious preparation for the responsibilities of citizenship. In Australia last summer I heard the Commonwealth Attorney General, Sir George Barwick, deplore conditions in the Congo and describe them as being at variance with independence movements in the Western World. In an address before the Australian Association for the United Nations I reminded Sir George and the Australian people that the United States fought 6 long, bloody years for its independence and even after that time neither an Englishman's life nor his property was worth much in New York, Boston, or Philadelphia. When one remembers the centuries of darkness and oppression that characterized European rule in Africa, one can deplore bloodshed, but one must understand it in the light of what had happened in Africa. And what has happened to Africa under European rule never happened to the United States under British rule. One is greatly distressed over events in some parts of Africa, but one must be greatly encouraged by other events that are, unhappily, obscured by the chaos in some places.

I was present in Nigeria in October when the Union Jack of Britain was lowered and the green and white flag of independent Nigeria was raised. It was an inspiring sight. Even more inspiring, however, was the countenance of the Nigerian people who could, at long last, hold up their heads in dignity. Whether it was a Hausa from the north riding a camel through the streets of Lagos or a Moslem medical student at the University at Ibadan, they had one thing in common: they were proud to be regarded as people worthy of their own land and traditions and ready to become forces in the modern world. If, however, one was impressed with what they were and what they had, one was more deeply impressed with what they could become and what they needed for that purpose. They, like their less privileged fellows in the Congo, in Nyasaland, and Kenya, need greater opportunities for their intellectual and economic development. They need technical assistance and training in order to master their own environments and promote their own general welfare. They need a healthy world environment in which to fulfill their own destinies.

They look across the Atlantic today as they have for a century in the hope that they will secure the assistance and inspiration that the people of the United States are capable of giving them. They want and need your help and mine. But we must be careful in defining the kind of assistance that they need. To be sure, they need the kind of substantive aid to which I have referred. But they also need the inspiration that we can give them. And it is about this that we must be most careful. The inspiration cannot be given by our merely sitting on the sidelines and cheering them on. They can look to the East of them and get this kind of encouragement. The inspiration they need and that we too seldom provide for them is the inspiration that comes from their seeing democratic institutions work effectively in a wholesome environment.

We have had every advantage in the effort to win the peoples of Africa over to our side. Long before Moscow had any interest in Africa, long before Moscow thought of establishing an International Friendship University, Africans looked to the West, traveled to the United States by the thousands to secure an education, and assimilated Western culture in a variety of ways. But they had their doubts, sometimes lingering, always present. They entertained serious doubts and they continue to entertain serious doubts about the good faith of the people of the United States. They continue to have doubts about the real interest of this country in their welfare or their future. The acceleration of solicitude in this country on their behalf is interpreted by many of them as merely a selfish gesture on our part to save our own necks by keeping the Russians out of Africa. When we come bearing gifts today, Africans are extremely suspicious of the contents of the package. One well-educated Nigerian, and one with sympathies for the West, told me that he remains unconvinced that the United States is interested in anything in Africa but keeping the continent in the orbit of the Western Powers. He doubted that there was any basic respect for the dignity of the African personality or for the Africans as a human being.

One's perception does not need to be very keen to understand what this week's demonstrations at the United Nations meant to the African people. To the African, it did not mean—as so many people in this country insist—that this was a Communist inspired demonstration in which American Negroes were given the cue to lash out against the United Nations and the U.S. delegation there. It did not mean to the African merely that a group of African Nationalists seized on this as on other opportunities to embarrass the United States and to promote their own peculiar and selfish interests here and abroad. To many Africans it meant, as James Reston said, that young Negroes were identifying with the larger struggle for freedom in which the Nation's ideals are proclaimed to the world but denied to many Negroes at home. It reminded the African that despite the great progress that Negroes have made in many areas, they still live under the most appalling condition in many cities and suffer many indignities which their rising knowledge of the world will not permit them to accept.

Regardless of what interpretations Africans themselves might have put on the unfortunate demonstrations in New York on Thursday, these demonstrations should serve as a warning to us that as long as our own house is not in order, we lend ourselves to attacks at home and lack of faith abroad. The inspiration that Africans need from us today is the inspiration of knowing and seeing that democracy works here, that people of African descent are not victims of the blind and unconscionable racism that has characterized too much of our history. They need to be certain that as they look about them and examine the conflicting ideologies, ours is indeed the best hope on earth. If they do not find this to be so, they will desert us; and we shall be left to work out our salvation without the support and endorsement that would come to us if we were a real democracy, practicing what we preached.

There were times when we could enjoy the luxury of inch-by-inch evolution in the progression toward decency in human relations. In 1865 the whites who had enslaved Negroes for more than 2 centuries asked this Nation to give it time to get accustomed to the idea of Negroes as free people. Not only did this Nation and the world give them time, but the Negro in his remarkable patience, also gave time—plenty of time. When any step forward was made or attempted, there was the cry that things are moving too fast, radicals and subversives are infiltrating, and we must take our own good time. A century has elapsed and, indeed, time has run out. In the middle of the 20th century, the luxury of snail's pace improvement has yielded some good returns but not enough; and it has also yielded some bitter fruits.

A minister of finance from the Republic of Ghana is denied service in a Delaware

restaurant. An African delegate to the United Nations is insulted when he goes to Georgia to observe the workings of democracy in a national election. A South Carolina Negro is chased at the point of a shotgun from a gasoline station by a white proprietor who shouts that desegregation is a Communist plot and that he wants no Negro in his place of business. A white Methodist minister escorts his 6-year-old daughter to a desegregated school in New Orleans and is spat upon by hissing hysterical white mothers. A white nursing supervisor in Florida is caught having lunch with her Negro colleague and is dismissed for the "crime." An Illinois town condemns property to be occupied by Negroes and declares that the town needs the land for a public park. Members of the U.S. Senate oppose the confirmation of one of the Nation's most distinguished housing authorities as housing administrator because his skin happens to be a shade or two darker than lily-white. When our heart goes out to Africa in its so-called backwardness, save some heart for the medicine men, headhunters, and cannibals of the United States. They deserve the pity of all men here and in Africa who live on a civilized plane.

But if they deserve our pity, they do not deserve our indulgence. For they, in their folly, would wreck our civilization and would, at the same time, destroy every chance for us to join hands with our brothers in other parts of the world to erect on this earth a social order in which all men can live in peace and dignity. Bigots and bigotry must be destroyed, not by violence but by the quiet, impatient, dignified destruction of every vestige of power wielded by these purveyors of hate. This house of ours must become a place in which all can live peacefully together, respecting each other, conceding to each other all the rights that any of us enjoy. As we look to our brothers across the seas, whether they be in Europe, Africa, or Asia, or Australia, we in America must be conscious of the ways we can help them. The extended hand must come from one whose heart is committed to equality. If the heart is not committed to equality the hand will be rejected. And as surely as we are standing in this place honoring this great and good man who has done so much with such a good heart, we shall live out our lives in misery and chaos. We deserve a better fate than that only if we work for it with all our hearts, souls, and minds.

Railroaders Seek No Favors or Special Privileges—Only Equality of Treatment for All Forms of Transportation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. VAN ZANDT. Mr. Speaker, recently the board of directors of the Association of American Railroads, representing railroads that account for the great bulk of the industry's 800,000 employees adopted a Magna Carta for transportation appealing for equal Government treatment for all forms of carriage.

A copy of the association's declaration follows:

MAGNA CARTA FOR TRANSPORTATION

(Declaration adopted by the board of directors of the Association of American Railroads, made public on March 20, 1961, by AAR President Daniel P. Loomis)

The railroaders of America, responsible for meeting our country's transportation needs in war and peace, solemnly declare that their industry is in jeopardy to the detriment of the national interest.

A major cause of this condition lies in unequal Government treatment compared with other forms of transportation—in overregulation, subsidization of competition, and inequitable tax policies which discriminate against railroads.

As a result of these conditions, thousands of jobs in the railroad and related industies have been lost and more thousands are in jeopardy, the public has been denied the kind of fast, low-cost transportation a dynamic economy demands, and the Nation's defense capability has been weakened to an alarming degree.

The national interest cries for an end to such distressful conditions. These are matters of legislative determination and can be corrected only by legislative action.

We, the railroaders of America, therefore respectfully petition the Congress of the United States and the governing authorities for the following four freedoms: Freedom from discriminatory regulation, freedom from discriminatory taxation, freedom from subsidized competition, and freedom to provide a diversified transportation service.

Railroaders seek no favors or special privileges. They seek only equality of treatment for all forms of transportation—the traditional American concept of fairplay.

Reelfoot Lake History and Tradition

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. EVERETT. Mr. Speaker, I have the honor of representing the Eighth Congressional District of Tennessee. In this district is Reelfoot Lake. It is such an outstanding body of water that I feel I should bring this to the attention of the Congress. The history and tradition of this fine lake follow:

REELFOOT LAKE HISTORY AND TRADITION

The northwestern corner of Tennessee where Reelfoot Lake lies, although the youngest section of the State in regard to settlement and development, is nevertheless very rich in history and tradition.

If we begin with history, we find that it was not until 1785 that the white man spent any time in west Tennessee. Henry Rutherford, a surveyor from North Carolina, and two companions were early travelers in this territory. A survey called the I.C. Line was made which now marks the main street of Tiptonville.

Tennessee became a State in 1796; but west Tennessee was not then a part of the State, being still Indian country. It was not until 1818 that Andrew Jackson and Isaac Shelby inveigled the Chickasaws into signing a treaty by which this beautiful country was added to the domain of Tennessee.

Reelfoot Lake came into existence between the time of the surveyors' entrance to the section and that of the Jackson purchase. Rutherford and his companions came into northwest Tennessee on the Reelfoot River, which is now included in the lake where it can clearly be seen because of the fact that no trees nor stumps lie in its channel.

According to Indian legend, Reelfoot, a chieftain of the Chickasaws, in the course of his wanderings, met and fell violently in love with Starlight, princess of the Choctaws. Forbidden by her father to marry her, Reelfoot and his braves stole her. After the return home, as they celebrated the success of the venture, the earth opened up and swallowed the whole tribe as an indication of the wrath of the gods.

History is more reliable than this legend. It states that Reelfoot Lake was formed during the earthquakes of 1811–12, when the whole Mississippi Valley north of Louisiana was virgin forest and when only a few settlements of white men existed in this region.

Today, Reelfoot Lake is a magnet which draws tourists from every section of the Nation to Lake County—a county different from all others in Tennessee in that there cannot be found within its borders a native rock, a hill, nor a running rill. Here lies the beauty spot, Reelfoot Lake, having nationwide admiration—a land of delight for the naturalist, the angler, and the hunter.

The House Rebukes James Roosevelt

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. SCHERER. Mr. Speaker, I am asking unanimous consent to insert in the CONGRESSIONAL RECORD an editorial from the Santa Monica Evening Outlook of March 6, 1961, forwarded to me by Mr. Donald Jackson, former ranking Republican of the House Committee on Un-American Activities. This editorial speaks for itself:

THE HOUSE REBUKES JAMES ROOSEVELT

If any further proof were needed of the widespread public support of the House Committee on Un-American Activities, the overwhelming vote in the House on the annual appropriation for the committee should be sufficient. In unmistakable terms, by a tally of 412 to 6, the House told Representative JAMES ROOSEVELT and his five supporters that it wanted no part of his plan to make America safe for traitors by abolishing the committee.

Even Mr. ROOSEVELT should get the point now.

The House went further and rendered an unusual tribute to the committee and its chairman, Representative FRANCIS E. WALTER of Pennsylvania. Members rose to their feet in a standing ovation when Representative WALTER addressed the House, taking Mr. ROOSEVELT to task for his continuing efforts to emasculate HUAC.

Far more responsive to the grassroots sentiment than the Senate is the House of Representatives. Its Members must stand for reelection every 2 years, so it is incumbent on them to keep their fingers on the public pulse at all times. Their vote of confidence in HUAC, denying any cut in its appropriations, undoubtedly reflected the sentiments of the great majority of their

constituents—meaning the great majority of Americans.

Let the strange assortment of Communists, fellow travelers, Soviet apologists and liberal dupes of Moscow take note of what can happen when an aroused people indicate their wishes in no uncertain terms through those who represent them in Congress.

Address by Hon. Jessica McC. Weis, of New York, Before the Federation of Citizens Associations of the District of Columbia

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of the Honorable JESSICA MCC. WEIS, of New York, before the annual dinner of the Federation of Citizens Associations of the District of Columbia, Saturday, March 11, 1961, at the Mayflower Hotel:

TEXT OF SPEECH OF HON. JESSICA MCC. WEIS, OF NEW YORK, A MEMBER OF THE HOUSE DISTRICT OF COLUMBIA COMMITTEE, BEFORE THE ANNUAL DINNER OF THE FEDERATION OF CITIZENS ASSOCIATIONS OF THE DISTRICT OF COLUMBIA, SATURDAY, MARCH 11, MAYFLOWER HOTEL

The District of Columbia is today confronted with a large variety of serious problems, some typical of all major metropolitan areas and some quite unique. These problems have been aired and studied and analyzed by House and Senate District committees, joint committees, congressional hearings, advisory committees, private study groups, car pool riders, businessmen at lunch, women at bridge parties—everybody discusses the District's problems, but it sometimes seems as Mark Twain once observed about the weather, "Everybody talks about it but nobody does anything about it."

In thinking about the District, I have found it useful to think in terms of the problems which are common to all large metropolitan areas in this country on the one hand, and those which seem unique to the District on the other. It is easy to forget, sometimes, that other areas are suffering the same stresses and strains with which we ourselves are confronted, but I can assure you that many of your civic vexations here are also being experienced and grappled with in my own home city of Rochester, N.Y., as well as in every urban center in the United States. Among these I would list at least the following:

The shift in population, which has produced a decline in total population within the District and an even greater relative decline in the productive, wage-earning portion of the population between ages 21 and 64. This has produced in the District the seeming paradox of declining population and rising welfare costs.

The increase in juvenile delinquency and in crimes of almost every kind. Washington has increased the size of its police force regularly—a force recognized for its dedication and efficiency—and still the crime rate moves upward at an alarming rate.

Then there is the traffic problem—enough to try the patience of a saint which I certainly am not as I fight my way back and forth to work every day. The crush of traffic has become insupportable, and I am convinced that the longer we wait the more it is going to cost to solve this Chinese puzzle. Some form of rapid transit, be it monorail, subway, freeway, or a combination of all of them would seem to be an absolute must. You are all familiar with the transit survey which was undertaken jointly by the National Capital Planning Commission and the National Capital Regional Planning Commission. In some ways the survey is startling, both in its scope and in its projected cost. Largely this is true because in recent decades not a single solitary step has been taken toward development of a mass transportation system for the metropolitan area, and as a result, the problem has become acute. No doubt the costs will be high, no one denies this, but the alternatives are equally unpleasant to contemplate. In my opinion, either we manage to pay the cost or we resign ourselves to further decay of many portions of the central city and the complete strangulation of traffic throughout the entire area.

Likewise common to metropolitan areas everywhere are the slum areas, the question of urban renewal, pollution control, which in Washington with the historic Potomac has esthetic as well as sanitary implications. Also, the problem of education, of adequate school facilities, of competent administrators and of adequately paid teachers. These matters are in the papers daily. We know the problems and in many cases we know the answers. Further than that, I am convinced that real progress is being made in some areas. These are among the metropolitan difficulties shared by all our cities. But, as I mentioned earlier, Washington has some unique situations which are extremely serious. At least three matters come to mind which fall into this category: the race question, the difficulties of dealing with an extremely unwieldy governmental structure, and the problem of a wholly inadequate tax base from which to generate the revenues needed to keep the city going. One could easily devote a doctor's thesis to any one of these, but tonight I can only comment on each of them briefly.

The race question in the District is one of serious proportion and its ramifications, both direct and indirect, are numerous. The white population has dropped 20 percent in 10 years, and while I am the first to admit that I am no expert on this subject, I do not believe it would be in the national interest, or in the best interests of the residents of the District, of whatever race or nationality they may be, for this trend to continue. In this connection, I might say that the adjacent neighborhoods and communities in the suburbs of Maryland and Virginia have an obligation to welcome Negro citizens and provide opportunities for housing and education comparable to those in the District, for the great bulk of the Negro population of the Washington metropolitan area is, in effect, now quarantined within the boundaries of the District. This is not, I know, a subject which it is popular to discuss, but it is with us and it must be not only discussed, but solved.

Another situation which I find extremely disturbing is that of the hopelessly confusing assortment of local governmental agencies through which the affairs of the District are handled. After 2 full years on the District Committee, I have yet to solve the mysteries of the labyrinth known collectively as the District Government. Four separate congressional committees exercise jurisdiction over District matters, a situation which is tailor-made to produce snafus and bottlenecks of all types, and if the organization of the Congress for dealing with District matters is less than desirable, and ineffective, the structure within the District Government is equally bad. Ever since 1874 the District has been administered by Commissioners, but their administrative function is often questioned and interfered with by the Congress—the result being that over the years a patchwork of legislation has created about 20 Federal agencies and local boards to operate independently of the Commissioners. Regardless of one's position on the question of complete home rule, surely the present situation could stand considerable improvement.

An incidental matter which concerns me is the fact that a high percentage of top jobs in the District government are held, not by District residents, but by residents of nearby States. This raises the question of whether their interest in the District is as great as actual residents might be presumed to have. I have not checked recently, but in March of 1959 all three assistants to the engineer commissioner were from outside the District, as were the chiefs of the Employment and Training Division and the Classification and Wage Administration Division in the Personnel Office. Other high ratios were noted in the Fire Department, in which only 9 of 20 battalion chiefs were local residents, the Department of Licenses and Inspections, with only 6 or 19 executives living in the District and the Motor Vehicles Department, in which 1 officer in 8 was a District resident. Is it too much to ask, I wonder, that high-ranking District employees make their homes in the District?

Finally, there is the toughest one of all—an inadequate tax base from which to generate the revenues to do the things which need to be done in the District. With 52 percent of the real estate in the District off the tax rolls, and with productive, income tax paying citizens migrating to the suburbs in increasing numbers, the burden is constantly being shifted to that property and those people who do remain. It is only a question of time before demand for tax dollars completely outdistances the sources of revenue available. The competition of neighboring jurisdiction places an economic ceiling on tax measures, and as a result District budget planners have found themselves virtually impaled on the horns of this dilemma of rising costs and dwindling revenue—and may I add that to date the Congress has contented itself on many occasions with watching them bleed.

But it's time to leave the wailing wall. Washington is a beautiful city and we all love it. But it seems to be the fashion to bemoan the plight of the District and to criticize the effort—or lack of it—which has been made to lift the District to a new plateau. I have perhaps been guilty myself, for it is extremely easy to be critical, but if so I want to balance the scales by referring to the encouraging trends which are clearly visible within the District, for certainly substantial progress has been made in the face of heavy odds.

And let me say, in this connection, that the activities of the citizens associations and the civic associations within the District have made a real contribution to finding solutions to the District's problems. In its magnitude and enthusiasm, the citizens movement in the District is to my knowledge absolutely unique. I am certain that there must be more citizens associations per square mile in the District than in any other place in the world and this is good. Your citizens associations meetings resemble the town meetings of our forefathers, at which residents of the community came together periodically to consider, discuss and make decisions on a tremendous variety of local problems. The citizens association movement presents an attempt to make democracy work at the lowest grassroots level, and I commend you for what you have done and wish for you a long period of even greater service in the years ahead. I hope and trust that you will continue to maintain effective liaison with all civic-minded associations,

and that all groups can work closely together in effecting solutions to all of the many problems of mutual concern to white and Negro alike, for it would be a great loss if the two groups served to drive a wedge between the two races rather than to build a bridge between them.

With reference to specific improvements which I have observed in the District, I am convinced that substantial progress is being made with the District school system, despite what some of my colleagues may say to the contrary, most of which is for home consumption. The important teacher-pupil ratio has been decreased, and Washington ranks with any of the major cities in this respect. Building of new schools is keeping pace with demand and slowly overcoming the schoolroom shortage. Salaries have achieved comparability with other metropolitan areas—though they are all a bit low. Advances are being made in scholastic attainment among children in the public schools, even though median achievements are still below national norms.

In the area of slum clearance and urban renewal, much remains to be done, but I made an extensive visit through the southwest redevelopment area on Thursday of this week and I was much impressed with what I could see there now and what I was assured would be there in the years immediately ahead. Solid progress has been made there, and I share with you the hope that the entire project can go forward to completion as quickly as possible. I can see the distinct possibility that completion of the southwest redevelopment could trigger off and serve as a magnet for a return from the suburbs, which is something that is drastically needed.

Despite its promise, however, I am distressed by the plight of some of the people whose homes have been literally torn out from under them in the southwest and for whom apparently inadequate provisions have been made elsewhere. Individual cases which have been discussed with me are nothing short of tragic, and I hope that every effort will be made to correct all of the injustices which exist in this regard.

Other accomplishments of potentially major significance are the establishment of the Washington Metropolitan Regional Conference, and the activities of local businessmen, typified by the organizations such as Downtown Progress, Inc., to revitalize the downtown shopping area.

The Washington Metropolitan Regional Conference, envisioning as it does close cooperation among an assortment of governmental units in the metropolitan area—including two States, six counties, two independent cities, and several Federal agencies—gives promise of developing into a most effective vehicle for coordinated multijurisdictional action. Downtown Progress, Inc., in a like manner gives promise of serving as a most productive self-help organization for attracting more trade to the downtown area.

I have discussed the problems of the District and some of the efforts which are being made to solve them. Let me look now for just a few minutes at what still needs to be done, and let me preface these final remarks by saying that adequate solutions to the District's problems are going to take the combined efforts—and the best efforts—of everyone concerned, including the citizens of the District themselves, the District Government and the Federal Government, both the Congress and the executive. To make the District what it should be, and could be—we are going to have to roll up our sleeves and do the job ourselves, and it will require a maximum amount of patience, tolerance, good will and plain hard work—and, I might add, a great deal of money—for rebuilding and breathing new life into a city cannot be done on a shoestring.

There are two items which seem of particular importance to me. One of these is the need for a concerted program to retain the well-educated productive citizens who still make their homes in the District, as well as a program specifically designed to bring similar type people back from the suburbs or into the District for the first time. Such a program will serve two important purposes: It will broaden the tax base, and it will provide the District with a valuable reservoir of new talent with which to cope with future problems. In the same way, more should be done to promote the location in Washington of the national headquarters of more of our trade associations, more stimulus for reserach and engineering firms to locate here, more encouragement for industry to set up offices in Washington. All of these things could be done without changing the character of the District appreciably, and all would, in my opinion, add to the economic vitality of the District.

A second item, which I have also touched on lightly, is the need for enlightened cooperation between Negroes and whites in the District. For many of us, and I do not exclude myself, the roots of racial prejudice are difficult to weed out. Many of you can remember a time when Washington was, at least as race relations go, a part of the Deep South, and memories linger long, but we have come to a different age, and unless we develop the tolerance and good sense to deal with this problem realistically, it will surely defeat us.

Finally, I come to what some of you will call the main course, those things which I think the Congress should be doing for the District, and may I say that not only as a Member of Congress, but as an American citizen with a deep and abiding interest in the American Government and in the Capital City in which that Government is situated, I am deeply concerned with the obligation of Congress to provide for the needs of the District of Columbia. I am only one Member among a very large number, but it seems to me that this responsibility is so clear and so plain that no reasonable and well-intentioned person could deny it.

Because Washington is our Capital City, it draws people here on business and also brings vast numbers of tourists as well, not only from this country, but from all over the world. It is, in a sense, a showcase of America for all the world to see. As such, it should be a model city, employing all the knowledge and professional skills of our civilization to make it beautiful, attractive, clean, and safe. This is important, not only to you and me who live here and work here, but to all Americans now and for all the years to come. And because it is the Nation's Capital, established specifically and solely for that purpose, and because the Constitution contains a specific mandate to the Congress to provide for its needs, it seems to me that the responsibility of the Congress is inescapable. Inescapable, too, is the fact that the Congress has not effectively discharged this responsibility to the District.

What is past is finished, but for the immediate future, it is my belief that the Congress must do at least the following things:

First, it should bear a more realistic portion of the costs of operating the District. A larger Federal payment can be justified on several grounds. It is my belief that the Congress has a responsibility to provide financial support over and above the moneys that can be collected from taxes comparable to those of surrounding communities, in the amount necessary to care adequately for the District's needs. For many years the Federal payment was 50 percent of District needs; today it is little over 10 percent and if the authorized payment were raised to $56 million, as requested by the Commissioners, the Federal Government would be contributing less than 15 percent of the estimated needs for 1962. An authorized Federal payment of $50 million would still be less than 20 percent of the District's overall budget for next year. With a total budget of $290 million, $50 million does not seem to me to be an unreasonable amount for the Federal Government to make available to the Nation's Capital when I consider the amounts which are being spent on other items.

Secondly, I think we should move quickly to provide the two additional juvenile court judges who are so desperately needed. The juvenile court is now 2,200 cases behind and the backlog is growing daily, while in the meantime the delinquency rate grows steadily worse. There is no excuse for this situation to continue.

Finally, I would hope that the new administration will take a long look at its responsibilities and that the President will move to exercise the positive leadership which he has talked so much about. His interest in District affairs might go a long way toward getting more sympathetic action in the Congress. With his Democratic Party in control of both the Congress and the White House, the responsibility for action is clear cut—and I might add that blame for lack of action is equally easy to assess. I sincerely hope and pray that the President will take an active interest in the District and that we can move ahead now with the steps which must be taken if we are to make of the District the splendid and beautiful central city of the Nation that it ought to be.

I pledge to you that as one member of the Congress, I shall do all that I can by my vote and through whatever influence I may possess, to see that this great national objective, so close to the minds and hearts of all of you, is realized.

The College Social Fraternity—Cradle of Future Public Leadership

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Dr. Brendan F. Brown, professor of law, Loyola University of the South, New Orleans, La., at the annual national convention of Alpha Delta Gamma on August 24, 1960, at New Orleans, La.:

THE COLLEGE SOCIAL FRATERNITY—CRADLE OF FUTURE PUBLIC LEADERSHIP

I

Mr. Chairman, Your Excellency Archbishop Rummel, Acting Mayor Schiro, officers and brothers of Alpha Delta Gamma in national convention assembled, it was with a very deep sense of appreciation and gratitude that I accepted the cordial invitation to address you today tendered on your behalf by Brother Fritz Veters, the dynamic national steward of Alpha Delta Gamma. After 5 years Epsilon Chapter is again your host in beautiful New Orleans.

The objectives of Alpha Delta Gamma are necessarily coordinated with the aims of the Catholic tradition. Though membership is not restricted to Catholics, yours is the only national Catholic social fraternity, which exists exclusively in Catholic colleges and

universities. It is wholly dedicated to the task of uniting intellectual, moral, and social living together with the ideals of Catholic learning. The founders of Alpha Delta Gamma in 1924 extracted the best and most constructive elements from the system of the American Greek letter fraternity, as it then existed, and combined them with the truths of Christianity, even as Thomas Aquinas in the 13th century utilized the wisdom of the Greeks in his famous synthesis.

Hence, as members of Alpha Delta Gamma, you have a very special responsibility to understand the unique character of Catholic education. This was the obligation you assumed, when, as an elite corp of select men, gathered from far flung campuses which span the continent, you became united in the fraternal ties of eternal friendship, comradeship, and mutual support in the cause of Catholic action. You have a living stake in the knowledge of the total implications of the history and philosophy of Catholic higher education, and of its ceaseless struggle against the forces of secularism.

Catholic higher education has been inspired by an intellectual and spiritual culture which is founded on the wisdom of divine revelation and the profound insights of a philosophical tradition built by such masters as Aristotle and Aquinas, Suarez and Bellarmine, Chesterton, and Maritain. This concept of the nature of Catholic education was expressed by Cardinal Newman when he wrote: "I wish the intelect to range with the utmost freedom, and religion to enjoy an equal freedom; but what I am stipulating for is, that they should be found in one and the same place, exemplified in the same persons" (Newman, "Intellect, the Instrument of Religious Training," in "Sermons Preached on Various Occasions," first sermon). Hence, Catholic colleges and universities are needed for adequacy of knowledge. The product of a sound education is the person, who, in the words of Pius XI, "thinks, judges, and acts constantly and consistently in accordance with right reason illumined by the supernatural light of the example and teaching of Christ" ("Encyclical on Christian Education of Youth, Five Great Encyclicals," p. 37 at 65, Paulist Press, New York, 1940).

Historically, the chief problem of Catholic education was to discover a proper balance between the study of the supernatural law and the investigation of the rational, social and physical sciences as integrated under natural law. Trial and error were required to find that balance from the time of Isidore of Seville in the 7th century down through the time of Alcuin and Charlemagne, later through the period of the rise of the great medieval European universities of Bologna, Paris, and Oxford, and eventually in the stages of the Renaissance, the Protestant Reformation, and the modern era of materialism. During this historical progression, the true ideal of a Catholic university remained constant, namely, the seeking of perfection in the discovery and communication of knowledge, and the cultivation of the intellect, but always by way of vital relationship with the most luminous of the sciences, i.e., that of the divine positive law.

The chief inadequacy of the modern secular college or university results from its incapacity to teach that the immutable and eternal truths of the natural and supernatural laws constitute the bedrock foundation of our civilization, and that the survival and propagation of these truths are essential for the happiness of men on earth, and for their salvation in the hereafter. The adoption of relativistic attitudes toward the educational processes by secular institutions of higher learning has opened the door to conflicting philosophies, ranging from the obviously pragmatic and antimetaphysical theories of John Dewey to the more acceptable but inadequate views of Alfred Whitehead, who believed in the need of sensitivity to beauty and human feeling, yet maintained that a principle was only a habit of thought. Conflicting philosophies, often in the same institutions, destroy each other, create intellectual confusion and moral doubt, and lead to belief in a power concept of human existence.

The overall objective of supporting the principles of the Catholic tradition is the most fundamental justification for the existence of our fraternity. It looms large when a student is pledged to Alpha Delta Gamma. But in every human society, there is a tendency for ideals to suffer in the mundane routine of daily living. Truly it has been said that great ideals never fail men, but men often fail great ideals. Hence, a word of caution may here be in order lest the spirit of the group, as expressed in its actual conduct, its typical conversations, and its habitual policies, deviate from the ideals which have been formally expressed with the resulting disillusionment of neophyte members.

It is evident that the principal purpose of joining a social fraternity varies somewhat with each individual. That purpose may be to facilitate companionship with congenial friends, or to obtain the recognition and support of an organized group by coming within one of the standardized corporate structures of undergraduate college life. Again, secrecy may have been the chief attraction to the fraternity, or the opportunity to associate closely with the best men on the campus, men who have achieved honor and prestige, and who have won the good will and friendship of the faculties of their respective schools.

These are all legitimate purposes as long as they are subordinated to the promotion of the dominant social ideal. The justice and effectiveness of the adjustment of the individual and social interests in this regard are the measure of the success of any chapter. The record of the activities of the various chapters, as contained in your excellent official publication "Alphadelity," gives assurance that not only does our fraternity use social life to stimulate congeniality, but combines social activities with Catholic practice in such a way as to leave no doubt that the ideals of Catholic education do control the subultimate aims of convivial living and good fellowship.

II

The fraternal life in college or university is for the final purpose of acquiring experience and training for leadership in the national and international communities. The activities in which you are now engaged are symbolic of your future contributions to church, state, and society. Today, as members of Alpha Delta Gamma, you act as leaders in the activities of your school and the promoters of its spirit. You engage in several extracurricular activities, and financially and physically support all the functions of your school. Your policy is to promote the good of the fraternity by advancing that of the university in question. Tomorrow, you will be expected to act as leaders in the maintenance and extension of that cultural tradition which made possible our most cherished institutions by lifting mankind from the abyss of barbarism. That tradition alone provides the cohesive force which holds the civilization of the free world together as it courageously awaits its greatest crisis in the impending final showdown with communism. Tomorrow, you will participate in professional, social, civic, charitable, political, and religious activities which will redound to the credit of your fraternity, your alma mater, and the system of education in which you have been nourished.

The fraternal activities, in which you now engaged as members of an organization transcending the limitations of an isolated campus, develop a national point of view and afford a comparative approach cutting across geographical variations. You have been trained to measure and evaluate your own conduct and social contributions by an external standard which has been created for Alpha Delta Gamma. A test of leadership is ever before your eyes. This constitutes the indispensable measure of an extracurricular training and experience which will aid you in assuming an effective initiative in the beneficial service of the larger fraternity of the Nation.

You are the bearers of the values which form the basic postulates of our national way of thought and action. The preservation of these values, insofar as they relate to the nature of man, law, the family, the state, and God, will be the most important part of the mission which awaits your leadership. All else must be considered as final means toward this aspect of your mission in afterlife.

While your fraternity has trained you for action by providing practice in the techniques and methods of group living and cooperative action for the achievement of praiseworthy goals, the schedules of studies offered by your respective alma maters have taught you to recognize the existence of a divine plan in the drama of the cosmos. From this plan, it becomes evident that there is a natural law, which may be described as that objective, immutable, and eternal hierarchy of moral values, which are sources of obligation with regard to men because they have been so ordained by the Creator of nature. The philosophy of an objective natural law drew the pattern for our American political, social, and legal institutions. This philosophy wrote the Magna Carta in 1215, dictated the Declaration of Independence in 1776, inspired the American Bill of Rights in 1789, and chartered the course of constitutional law in the United States from the days of John Marshall. It alone provides the authority, implemented by the Federal Constitution, by which the Supreme Court of the United States dares to strike down a legislative enactment as unconstitutional, under the uniquely American doctrine of judicial supremacy.

Your contribution to American life and culture will include the most compelling justification ever proclaimed for the existence of human rights and their protection. For you, these rights are not the creation of physical force, however necessary that may be for their effectuation. You are convinced that human rights are not derived from compacts or human will. Man was never without these rights, for the so-called state of nature is a historical fiction. These rights are the inescapable consequences of human nature and the dictates of the natural law. Yet your faith in the inestimable value of man exceeds even that which springs from the natural law, for you believe that man has been exalted to the status of an adopted son of Almighty God. This is the maximum appraisal of the dignity of human nature. It provides the firmest possible basis for the inviolability of human rights.

The attitude toward teamwork, brotherhood, and the requisite balance between the individual and the group, which you have learned in the association with your fraternity brothers, will be valuable regardless of your particular future calling or life work. Some of you will enter the business, professional, and scientific worlds. Others will undertake the service of the state, while some will respond to the call of a religious vocation. Some will have greater opportunities than others to influence and mold public opinion for the common good, and to direct trends toward the formation of sound policies resulting in justice and peace. But regardless of the diversity of your careers, your present fraternal experience gives promise that each of you will make an

indispensable contribution whether it be in the national or international community, commensurate with the unusual opportunities which you have been privileged to enjoy.

The crises of our times challenge your leadership by forcing the issue whether the American people are able to remain faithful generally speaking, to the truths of a natural law, or whether they will surrender that philosophy, which historically has made them great, as the result of pressures from false and often malicious modes and habits of thought. These have created destructive interpretations of what is good for man and society. The people of this country have never been quite sure whether or not their concept of natural law rested on an immutable and extrinsic foundation. They have not been able to decide definitively whether the will of a majority of the people, or the basic principles of the natural law, should prevail as the final source of moral authority in case of an ultimate and final conflict between the two in an important matter. It will be your responsibility, as scholastic thinkers in the rational and social sciences, to convince your fellow countrymen that any withdrawal from the reality of the natural law can lead only to national schizophrenia or split national personality.

III

Ever increasing opportunities are being made available to promising college graduates for education, training, and experience, as a preparation for world leadership. These opportunities include fellowships, scholarships, and financial grants which will assist you to realize your ambition of intelligent public service. Other opportunities include the availability of participation in projects fostering such service, which are now being undertaken by certain institutions of higher learning, and also by a few national organizations. Fortnightly discussions of the great books of the past are sponsored by the Great Books Foundation throughout the land.

The purpose of all these systematic programs is to make you aware, generally speaking, of the goals of true democracy, as well as the experience of history, and the success or failure of preceding generations to solve problems which are at least analogous to our own, because they spring from the very nature of man himself and his complex drives. I exhort you to make an inventory of all possible educational opportunities with the assistance of your school advisers and friends, at least upon the completion of your undergraduate education. It is your duty to cooperate in every possible way with those who have created these opportunities at the cost of great effort and expenditure of money.

The knowledge and experience which you will accumulate by following a continuous program of adult education in after life must be galvanized into social action by a dynamic motivation to serve the common good rather than the individual interest of monetary acquisition and gain. The need for such service by the most talented and intellectually gifted is being ever more widely recognized. It was long ago emphasized, for example, by two men of widely different backgrounds, personalities and mentalities, who have done much to influence the American scene. I refer to my old professor, Felix Frankfurter, and my good friend Father James G. Keller, founder of the Christopher movement, which calls upon each individual to do his utmost, as an individual, in advancing the brotherhood of man under the fatherhood of God. Professor Frankfurter, decades ago, substituted the ideal of public service in Washington for that of a lucrative career as a Wall Street lawyer as most worthy of the mettle of a Harvard Law Review man. For many years, Father Keller has preached the Gospel of leadership through careers in government, teaching, mass media of communication, labor organizations and the like, despite personal financial sacrifice. These are the areas which Communists have been directed to infiltrate and exploit as channels for their subversive propaganda. It would indeed be ironical if the profit motive, which has played such a praiseworthy role in generating psychological power for the capitalistic system, should lure our best brains from careers of public leadership, and thus aid the cause of communism.

Men of Alpha Delta Gamma, educate yourselves progressively all through life in order that you may transmit the benefits of your educational experience to others. Acquire maturity in the art and techniques of administration so that you may apply the resulting wisdom to the preservation of the freedom of man, within the framework of right reason, as a spiritual being, endowed with the power of making free moral choices. It is true that the need of leadership in the field of the physical sciences is essential to cope successfully, for example, with the still unsolved problems of certain types of diseases which shorten human life. It is also true that such leadership is essential to maintain our supremacy in the invention and perfection of superior weapons of defense in the disarmament race with the slave world in order to deter unjust aggression. The experience of the Nation during the past few years in the face of Soviet achievement in the missile and rocket fields has resulted in an adequate emphasis upon the imperative demand for better and more extensive training and education to produce scientific leadership. But it must never be forgotten that leadership in the physical sciences depends for its success, and for the establishment of the goals to be reached through such success, by leadership which influences public opinion and controls the policymaking power of the State, in the sense of politically organized society.

IV

I know that the advantages of this convention will be many. The annual convention has become an integral part of the life of almost every national organization, because there is no substitute, in the realm of intellectual growth and understanding, for the living exchange of ideas between persons, meeting face to face. Such a convention is particularly required in the instances of those associations and groups which are engaged in the advancement of cultural, educational, professional and scientific projects, because the subject matter of intercommunication with regard to such projects is more abstract, complex, technical, and ideational. The objectives of our fraternity come within this classification.

Many benefits will accrue during the numerous instructive and pleasurable hours which you will spend together at this convention. Like its predecessors, it symbolizes the realization of the objectives of our common brotherhood. It will afford a formal occasion for rededication in national assembly to the aims and purposes of our fraternity. It will enable men of high caliber and broad outlook from many schools to compare views. It will engender a spirit of camaraderie among the representatives of the member chapters, which will tend to weld them more together than in the past. It will afford an opportunity for the delegates to meet, in a socially intimate atmosphere, many whom they had hitherto known only by name or correspondence.

In conclusion, I congratulate Mr. Veters for his efficient handling of the overall work of preparing for this convention. I commend Father Louis Hiegel, the popular and beloved moderator of Epsilon chapter, and the officers of that chapter, as well as all others who have been responsible for launching this magnificent meeting. I praise your enthusiam, imagination, and lightness of heart as you spend yourselves unselfishly in the service of a God-given cause. Those who direct the destinies of church and State are proud of you.

And now, brothers in Alpha Delta Gamma, I bid you farewell. May your days be many and full of joy and happiness. May you carry away fond memories of Loyola University of the South and of her loyal sons. May you come again ere long to this quaint and historic Crescent City, the pride of the Southland. May God bless you and keep you and smile upon you.

Grants-in-Aid for Public Health Services

EXTENSION OF REMARKS
OF
HON. L. H. FOUNTAIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. FOUNTAIN. Mr. Speaker, I have today introduced, for appropriate reference, a bill to implement recommendations made recently by the Advisory Commission on Intergovernmental Relations for the purpose of simplifying and improving the administration of Federal grants-in-aid for public health services. The gentlewoman from New Jersey [Mrs. DWYER], who represents the House so ably as my colleague on the Advisory Commission, joins me in this action.

The Advisory Commission was created by Congress in September 1958 as an instrument for bringing together public officials from all levels of government for the consideration of common problems, including feasible methods for achieving greater coordination and simplification in programs requiring intergovernmental cooperation. Earlier this month I introduced H.R. 5155 relating to the first of the Commission's legislative recommendations seeking to increase the coordination and effectiveness of Federal-State programs. That bill deals with Federal and State taxation of estates and inheritances.

The bill which I have introduced today is intended to accomplish two objectives. First, it would amend the Public Health Service Act of 1944 to permit States, at the discretion of the Governor concerned, to transfer up to one-third of the Federal funds granted in any one category to one or more of four other public health categories. It is proposed that this flexibility apply to the following five categorical grants: general health assistance, cancer control, heart disease control, tuberculosis control, and venereal disease control. The bill would not affect the remaining health categories of mental health, maternal and child health, and crippled children's services.

It is believed that the transfer provision would allow the States sufficient flexibility to apply the Federal funds to the categories of the greatest need within the particular State, while at the same time providing assurance to the Congress that in terms of the Nation as a whole

the categorical areas would receive the relative emphasis placed upon them by the Congress in annual appropriations.

Second, the bill would establish a uniform allotment and matching formula for Federal grants to States in the special categories listed above. A number of differing formulas are now applicable to these five categories. The Advisory Commission believes this diversity is of doubtful value and causes unnecessary complexity at both the National and State levels. It is the Commission's view that a combination of population, as a general indicator of relative program need among the States, and per capita income, as an indicator of financial ability, would be fair to all the States.

The Commission has not yet been able to study the general question of the extent to which Federal grants should be used to equalize variations in State fiscal resources. However, since the Hill-Burton formula has come into general use in other Public Health Service grant programs, such as the hospital construction program, the Commission recommends that a formula patterned generally along the lines of that formula be applied to the disease-control grants in place of the present diverse requirements.

Chief Justice Earl Warren

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. COHELAN. Mr. Speaker, yesterday a native Californian and a great American, Earl Warren, celebrated his 70th birthday.

In his 11 years as Governor of the State of California Mr. Warren served with a distinction clearly evidenced by the widespread support he received from California's voters.

He is a distinguished graduate of the University of California and its school of law, which recently honored him by naming the impressive new law building on the Berkeley campus Earl Warren Hall.

As holder of the highest judicial office in the land for the last 8 years, Mr. Warren has been a steadfast and unrelenting guardian of the rights of individual citizens. The Washington Post yesterday recognized his outstanding contribution and the major role he played in the momentous 1954 Supreme Court ruling that "segregation amounted to a denial of the equal protection of the laws." I include this editorial for its clear commendation of Mr. Warren's position:

[From the Washington Post, Mar. 19, 1961]

When Earl Warren quit the governorship of California in 1953 to become Chief Justice of the United States, he left behind him every vestige of political partisanship and political ambition. But he brought with him, as the product of nearly a quarter century of robust participation in the lively politics of this State, an intimate knowledge of American political institutions and a ripened understanding of human nature, human needs, and the patterns of human adjustment.

He came to the Supreme Court at a moment when it had peculiar need of his harmonizing skills and his political wisdom. Divided internally, the Court faced one of the most dramatic decisions in its history—a recognition that contemporary sociological and psychological insights forbade further reliance on the fiction of half a century that racially segregated public schools can be said to offer equal educational opportunity. The time had come when the Court had to rule that such segregation amounted to a denial of the equal protection of the laws.

Manifestly, the decision demanded a major social readjustment in the United States. That readjustment was fostered by the fact that the Supreme Court was unanimous. The new Chief Justice spoke for the Court in an opinion as simple and comprehensible in language as it was firm and resolute in meaning. Surely the Court's unanimity was a product, at least in part, of his judicial statesmanship; surely his leadership has had much to do with maintaining that unanimity.

On many other matters that come before it, the Court is sharply divided—composed, as it is, of men with strong convictions. The Chief Justice has alined himself for the most part with those of his colleagues who think that the Court should serve as an active champion of individual liberty against the sometimes overbearing power of the state. A tough and vigorous public prosecutor in his younger years, the Chief Justice has always recognized that strict adherence to the rules of fair procedure is an indispensable condition of a free society. His concern for individuals reflects not sentimentality but a conviction that freedom affords the key alike to public welfare and to national security.

Today marks Mr. Chief Justice Warren's 70th birthday. We congratulate him warmly on the occasion and on the vigor with which he faces the useful years that lie ahead. And we congratulate the country on the blend of commonsense, compassion, and ardor which he brings to its highest judicial office.

Mr. Speaker, Americans throughout our country have joined in congratulating the Chief Justice on his birthday. As a Representative from Alameda County in California where Mr. Warren began his career as district attorney, I would like to express a special note of congratulation from people who remember him with deep fondness and respect.

Happy birthday, Mr. Chief Justice, and may you have many more years of productive service.

Immigration Quotas

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. FOGARTY. Mr. Speaker, the bill I have introduced today has a twofold purpose. It is designed to facilitate the reunion of separated families and, at the same time, to benefit a considerable number of skilled immigrants whose services have been determined by the Attorney General to be urgently needed in the United States, but who cannot be issued a first preference visa solely because a quota number is unavailable. In recent years the Congress has attacked the problem of backlogged immigration quotas by enacting special legislation which afforded only nominal relief and provided no real remedy for the problem. Quotas of many countries continue to be heavily oversubscribed, while other countries, notably Great Britain, and Ireland, fail to use their allotted quotas year after year to a very substantial degree. It is estimated that approximately one-third of all authorized quota numbers remain unsued at the end of each fiscal year, and are consequently discarded. One of the underlying principles of our immigration laws is the preservation of the family unit. The instant bill is intended to give meaning and reality to that principle.

The problem of backlogged quotas is attributable in large part to the great disparity between the size of quotas proclaimed for certain northern European countries and the size of quotas proclaimed for all other countries throughout the world. For example, three countries of northern Europe are assigned 70 percent of the overall annual quota of 155,000 and the other quota countries, about 100 in number, variously divide the remaining 30 percent of the overall quota. These quotas were computed under the national origins formula which Congress wrote into the Immigration Act of 1924 and carried forward in the Immigration and Nationality Act of 1952. They range from the minimum quota of 100 per annum to the maximum quota of 65,361 proclaimed for Great Britain and Northern Islands.

In addition to bringing families together and hastening the entry of hundreds of skilled aliens, this bill will tend to alleviate the hopeless predicament which faces many prospective immigrants whose chances of ever being reached on the waiting list are extremely remote, particularly the nonpreference immigrant. To the extent that the quota numbers now unused are made available for the issuance of visas to aliens within the preference classes, more numbers will become available for the issuance of visas to aliens in the nonpreference class. The vast majority of refugees fall in the nonpreference category.

The redistribution of unused quota numbers on a regional basis is not a new idea. It was first broached by President Eisenhower in his message of February 8, 1956, to the Congress and repeated on other occasions. This proposal does not increase the overall quota of 155,000 established for all quota countries nor does it relax in the slightest degree any of the substantive conditions which every alien must meet before he is issued an immigrant visa and admitted into the United States. The bill simply authorizes the use of the present quotas to the fullest extent possible within the framework of existing law except for the national origins concept.

Specifically, this bill authorizes the Secretary of State to create four regional quotas representing Europe, Africa, Asia, and Oceania, and to assign quota

numbers unused at the end of each fiscal year to the appropriate regional quota. For example, unused numbers attributable to the quota for Great Britain and Northern Ireland would be assigned to the regional quota for Europe, while unused numbers attributable to the quota of Vietnam would be assigned to the regional quota for Asia. The Secretary of State would then make these numbers available for the issuance of immigrant visas to qualified immigrants to whom a first, second, third or fourth preference status had been granted on the basis of a petition approved by the Attorney General. The first preference class consists of skilled aliens so classified because of their high education, technical training, specialized experience or exceptional ability, and because of the urgent need for their services in the United States. The second-preference class consists of the parents and the unmarried sons or daughters of citizens of the United States. The third-preference class consists of the spouses and the unmarried sons or daughters of aliens admitted to the United States for permanent residence. The fourth-preference class consists of the brothers, sisters, and married sons or daughters of U.S. citizens, including their accompanying spouses and children. The assigned numbers in each regional quota would be made available for the issuance of visas to these preference immigrants who were born within the respective region, regardless of their country of birth, and in the same chronological order in which quota numbers are now allotted and charged against the national quotas. Any regional quota not fully used within the period specified for allotment of quota numbers would expire automatically at the end of such period.

Addresses of Mrs. Gene Murphy, Reinbeck, Iowa, and Mrs. Walter Heuer, Princeton, Iowa, Members of the Women's Division, Iowa Farm Bureau Federation, Before the Iowa Congressional Delegation, March 7, 1961

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. SCHWENGEL. Mr. Speaker, elsewhere in the Appendix of the RECORD, appears the address of Mrs. J. S. Van Wert of Hampton, Iowa, State women's chairman, Iowa Farm Bureau Federation, at the banquet for the Iowa congressional delegation on March 7.

Two other addresses were made at that banquet, one by Mrs. Gene Murphy of Reinbeck, Iowa, on "Trade and Cropland Adjustment"; the other by Mrs. Walter Heuer of Princeton, Iowa, on "Federal Aid to Education."

Under leave to extend my remarks, I wish to include two other addresses at this point:

TRADE AND CROPLAND ADJUSTMENT

Farmers have always been involved in the process of adjustment—to weather, to prices, to new technology, to yields, to economic growth, and changing conditions. But in no period in American history have they been subject to such a rapid and radical period of change as during the past decade. And the forseeable future continues to point to an era of even greater adjustment.

The highly productive agricultural segment of our economy has been responsible, at least in part, for the high standard of living enjoyed by the people of the United States. Yet this same productive ability in which the resources of land, labor, management, and capital have been invested have resulted in an imbalance between level of total output and consumer demand for farm products. Because of this imbalance many farmers are not receiving a return over and above their cost of production that is comparable to the income received for similar labor effort and management ability by the other segments of our economy.

The acute nature of the agricultural problem is indicated by the continuing rise in the cost of production, the mounting supply of farm commodities in storage, and the low real income of many farmers.

Traditionally the farmer has always been a free and independent maker of decisions in regard to his own enterprise. The role of Government in his behalf should be along the lines that assist without tampering with his freedom. The control of inflation would be a big help in the cost price squeeze. The prevention of Government held surpluses being placed in competition through regular domestic and foreign markets, the stabilization of farm prices through minimum price supports, stopping of all Government payments which result in increased production, and a 60- to 80-million acre land adjustment program are ways in which Government could play this role of assistance.

To rectify the imbalance efforts may be taken in two directions—to increase the demand or reduce the supply. Some programs, in which food is distributed to the needy, are desirable from the humane standpoint, but as real aids in reducing surpluses or increasing consumption their value is negligible. When this given away food program is broadened to include food for peace projects, while the motive is compassion for hungry humanity, many complexities arise in implementation and effect. We may be perpetuating corrupt governments, limiting the orderly development of agriculture in underdeveloped countries, making it more difficult for the people of these countries to learn how to support themselves and injuring trade relations of some of our friendly allies.

The high rate of population growth in the United States would seem to warrant an increasing domestic demand for more food. But a comparison of the current rate of U.S. population increase with the rate of increase in agricultural production shows that production will outrun population for some time. The capacity of the human stomach is no greater than it was 50 years ago—the annual per capita consumption of food, close to 1,500 pounds has remained about the same since World War I. The increased consumer expenditures have been in the quality not quantity of food, and in payment for greater marketing services which does not necessarily mean increased demand at the farm levels.

Since the expansion of domestic demand for food products seems somewhat inelastic, except through upgrading diets, maybe greater emphasis should be placed on research to find new industrial uses for some of our farm products. Even though it isn't likely such a program would have much immediate effect on farm incomes, in the long run there is a chance for improvement. It may even be quite necessary to carry on such a program to maintain the status quo incomewise and prevent more of our farm markets being researched away by other industries.

The expansion of foreign demand through trade seems to be the program that offers the most possibility in the sphere of increasing demand for our farm products in the immediate future. First, let us take a very brief look at the general advantages of international trade. A higher standard of living is maintained through the theory of relative advantage. Even though the United States could produce all commodities more efficiently than any other country, it's an economic factor in our prosperity that, in concentrating on producing those products with other countries for those that they produce at the greatest relative advantage, we raise their standard of living as well as our own. International trade also provides us with a powerful weapon in the cold war—as the old adage states, "When goods cannot cross borders, soldiers will." And trade imports perform many important functions for our economy—make domestic monopoly price fixing more difficult, keep labor unions demands for wage increases more reasonable, fill supply gaps in case of strikes (steel), make possible the use of very specialized equipment, increase the types of models available for use, and furnish an opportunity for market testing sometimes followed by domestic production (small foreign cars).

The special advantages of international trade to agriculture lie in the $2 billion net gain in markets through trade, since we have quite consistently exported approximately twice as much as we import of competitive farm products. Also, the importing of many items duty free or at low tariff rates, such as agricultural machinery and parts, fertilizers, twine, petroleum products, automobiles, nails, rubber tires, have helped hold farm costs down. To bring the trade advantage even more closely to home, will you please bear with a few statistics on percentage of 1959 Iowa farm products exported—soybeans 42 percent, inedible tallow 42 percent, nonfat dry milk solids 38 percent, wheat and wheat flour 30 percent, calf and kid skins 29 percent, dry whole milk 27 percent, lard 26 percent, barley 25 percent, cattle hides 18 percent, rye 17 percent, sorghum grains 17 percent, corn 6.4 percent evaporated milk 3.7 percent, meat products of beef and veal 7.5 percent, pork 1.7 percent, live cattle 1.7 percent, and oats 1 percent.

Europe is our principal unsubsidized commercial market and takes almost half of our $4 billion agricultural exports. So we are vitally interested in the economic union of West Germany, France, Italy, Holland, Belgium, Luxembourg, known as the Common Market. The Outer Seven, England, Norway, Denmark, Switzerland, Portugal, Austria, and Sweden, form another rather loosely organized union. Proposals are also underway for the formation of the Latin American Free Trade Association, and also a Central American Customs Union.

These economic unions comprise both a threat and a promise to our expanded agricultural trade. A threat as is presently proposed that trade barriers around the unions be established and the unions become self sufficient in the production of most agricultural products. The promise lies in the fact that these unions may actually bring about a greater industrial growth than it will agricultural expansion. If such a growth occurs

there should be an even greater market for our farm products.

The United States has even greater stakes in all this development that our economic concerns, important as they are. We can apply ourselves to the difficult problems which agricultural trade poses. We can take active leadership in moving toward relaxation of trade restrictions and use our influence as a rich, powerful trading Nation to encourage progress toward trade based on comparative advantage. This greater flow of trade should benefit all and contribute indirectly to our national security.

These few facts give us only an inkling into the complexities of our agricultural and international trade problems, but should encourage us in our efforts to become informed on the ramifications of international trade. Only as we become more aware of how good trading policies aid our international relations will we be able to influence public attitude in this most important phase of our national policy development.

You remember we said there was another approach to this problem of imbalance besides expanding demand and that was reducing the supply. Total agricultural production can be curtailed by retiring land from cultivation through voluntary agreements. To bring about a satisfactory adjustmentment studies made at the Iowa State University's Center for Agricultural and Economic Adjustment indicate that between 60 to 80 million acres of the 450 million acres of cropland would have to be retired. This would be between 13 and 18 percent—a rather high percentage shift but we must realize the less productive land would be taken out—there might be some slack in administration of program and that some production comes from the 965 million acres of permanent pasture program—hay land. At this level a 2 percent adjustment in land is allowed for each 1 percent change in supply desired. We feel sufficient acreages can be taken out on the voluntary basis if payments are high enough. Such an approach can result in the most efficient agriculture and the least monetary cost to society. We fell that such a voluntary land retirement program properly conceived and administered can aid in bringing about needed adjustments while protecting farm income.

Senators, Representatives, Farm Bureau leaders, and guests, those of you who are in Washington regularly may have forgotten the thrill it is to come here for the first time. This is a new experience for me and one which I am enjoying very much. It is also a new experience for me to find myself addressing our congressional delegation. Until now I have usually been a listener while they did the talking. In the period just prior to November 8, I believe we all did quite a bit of listening. I hope you gentlemen will not think that we have invited you here this evening with retaliation in mind.

During the time that I have been a farm bureau member, and I imagine for many years before that, it has been our custom to keep in fairly close contact with our legislators, both State and National. We feel this is the best possible way to gain mutual understanding on our problems. The good relationship we have usually enjoyed with our Congressmen must be due to the fact that we send such dedicated statesmen to represent Iowa.

This evening we would like to visit with you for a few moments about the great task of educating our young people. This is an area of great interest to Farm Bureau members, and for many years we have been working for improvements in this field. I doubt if any organization has done more to educate its members regarding school taxes and school reorganization. We believe our whole school program can be improved by increased State aid, and the Iowa Farm Bureau is leading the fight to get such measures adopted in our State legislature. Recognizing the fact that the schools are only as good as their teachers, our own Iowa Farm Bureau women have tried to encourage worthy young people to become teachers by offering a number of scholarships for this purpose.

Certainly it is self-evident that free public education has been a major reason for our astounding advancement to the position we now hold in the world. We believe that the whole future of our Nation lies in a well educated population. George Peabody once said, "Education is a debt due from the present to future generations." We have no intention of shirking the responsibility for this debt.

I have always been especially proud to be a Farm Bureau member because this organization is constantly working for the betterment of our country, as well as the individual farmer. This requires that we try to assess the dangers to our form of government. Where does the greater danger lie today? We believe sincerely that we are threatened most from within, and that we need to be on guard against those things which insidiously weaken us as a Nation. Those of us who are determined to keep our country free must speak up in opposition to programs which encourage greater centralization of government and greater dependency on Washington. Farm Bureau people must put Federal aid to education in this category.

We find Federal aid not only a danger but also unnecessary. Rapid progress is being made by States and local districts. In the last 10 years, teachers' salaries have increased dramatically compared with other salaries and wages. Today there are teacher shortages in only a few specific fields. Since 1930, the number of teachers has increased 65 percent while pupils increased only 42 percent. School construction has also been rapid, with 81 percent of bond issues in 1959 and 1960 being approved. Five hundred fifty thousand classrooms have been built since World War II. Three hundred sixty-five thousand would have been enough to provide for the increased enrollment.

Strangely enough, it is not lack of finances that prevent some States from providing adequate education for their pupils. As in Iowa, some States need to change their tax structures so that more money can be channeled to the schools. States can levy sales, excise, and income taxes just as easily as the Federal Government can. Nothing is gained by sending the money to Washington and having only a percentage of it returned. Federal money is not free.

Today Federal aid might be only indirect, but as time goes on, it can only lead to Federal control. Farm Bureau's position was stated clearly in its 1961 policy. I quote: "The financing of public elementary and secondary education is quite properly a State and local responsibility. We oppose expanded Federal aid to education, because it would be a 'foot in the door' toward a federally controlled system of education. It is unrealistic to contend that the mere insertion in a legislative proposal of a clause disavowing any intention of authorizing Federal controls would prevent Federal encroachment. The Supreme Court has ruled that the Federal Government can regulate that which it subsidizes. The greatest control available to the Federal Government is its power to allocate funds."

Coincidentally, the evening before I was asked to make this presentation, I attended a local meeting called by a citizens' committee to discuss school problems. We are in one of Iowa's largest school districts, areawise, and although we have a new junior-senior high school, we are greatly in need of elementary schools. I was much surprised to hear people saying we should only plan for the schools now, but be ready to build when Federal aid becomes a reality. These are people whom I am sure would be opposed to a Federal aid bill being enacted if they had a choice, but if it is available they want their share. Once again we are willing to turn over to the Federal Government a function which belongs to the people. Once again we are willing to give up just a little freedom for added security.

Ours is not the only community in which this is happening. Picture this situation multiplied by the number of school districts in the United States. The complaint is often voiced that people today are not interested enough in our schools—that school elections and bond issues are decided by a small percentage of the population. Will people's concern for their schools increase as local control gives way more and more to Federal dictation?

We do not mean to imply that there are no problems in education. There are many, but we can work them out ourselves. Today the trend seems to be that everything must come from Washington. This is not the American way. We cannot fight ideologies foreign to our own by becoming more like them. People must have confidence in their Government, but Government must also have confidence in the people.

When legislators and individual citizens, thinking clearly, cooperate to set the proper climate, then our country can continue to progress in the spirit of our beloved Iowa motto: "Our liberties we prize and our rights we will maintain."

The 113th Anniversary of the Revolutionary Movement in Hungary

SPEECH

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. GIAIMO. Mr. Speaker, Europe has been witness to countless revolutions throughout her long history, but no year saw a greater revolutionary fervor than did 1848. Nationalist ferment kindled by the examples of the American and French Revolutions swept the continent awakening the long-dormant aspirations of the oppressed and shaking to its foundations the long tradition of autocratic tyranny.

On March 15, we commemorate the 113th anniversary of this revolutionary movement in Hungary. On this day in 1848, the Austrian Empire acceded to the Hungarian people's long cherished demand for freedom. That freedom was short lived, however. Russian troops soon moved to help crush the infant state, but the people's love of liberty and their desire for national independence remained unmoved. Their aspirations were again realized after World War I when an independent state with its own constitution was established. Under the heel of Nazi Germany, Hungary once again lost her independence. The Nazi armies were defeated only to be replaced by Soviet troops.

This tragic turn of history did not kill the spirit and courage of the Hungarian

people. In 1956, these brave people sought to realize their aspirations for freedom in a revolt so courageous and fervent that the Soviet Union resorted to the cruelest of military suppression. Against overwhelming odds, the immediate battle was lost, but the sacrifices of countless men, women, and children were not in vain. The year 1956, as does 1848, stands in solemn testimony to the Hungarian people's indominable spirit and their irradicable desire for freedom and independence.

Since 1956, the United Nations General Assembly has adopted 12 resolutions which call for the full restoration of Hungarian independence and speak the conscience of the world in condemnation of Soviet brutality in crushing the 1956 revolution. Today I am happy to join with my Hungarian friends both here and abroad in the firm hope that the time will not be long before the aims of these resolutions are realized and all Hungarians can freely join in an open and joyous celebration of the anniversary of their freedom. Until this happier day, let us look to the record of the Hungarian people as a constant source of inspiration, and let all of us who now enjoy the blessings of liberty mark this day as a time of rededication to the cause of human dignity and freedom.

Our People Are Looking to Congress To Carry Out the Promises Echoed by Fervent Candidates for Office Within Those Valleys of Depressed Economy Only a Few Short Months Ago

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. VAN ZANDT. Mr. Speaker, over the past 5 years volumes of evidence have been presented to Congress and relevant committees thereof on the need for depressed area legislation. Any long explanation of conditions in a specific surplus labor region would be superfluous. Time and again I have outlined the problem and its implications with respect to Pennsylvania's 20th District.

I need only assert at this time that conditions are worse than they were when a Senate subcommittee visited Pennsylvania several years ago; they are worse than when I reported to the House in subsequent years; they are worse than they were when spokesmen for the present administration were promising quick action in the windup of the general election campaigns.

Congress is a deliberate body which should and usually does study carefully all matters of consequence before setting the finishing legislative machinery into operation. For this reason it is on rare occasions that bills of major significance are finalized on short notice.

While the new Congress has been in session for less than 3 months, it would seem that there is a sufficient accumulation of testimony and statistics on the matter before us today to permit passage without further procrastination. Data assimilated and distributed by the Department of Labor provides ample substantiation of the need for expeditious action. Many thousands of residents of surplus labor areas have been subjected to the many misfortunes that walk with unemployment since the early 1950's. Our people are looking to this legislative body to carry out the promises echoed by fervent candidates for office within those valleys of depressed economy only a few short months ago.

I have introduced legislation to provide an avenue of quick relief to communities of chronic unemployment. I have indicated my willingness to support other measures which have not concurred precisely with my own ideas as respects the method of approach, the size of appropriations necessary on the part of the Federal Government, and the administration of the legislative product. I was highly optimistic about prospects in the 85th Congress. Failure of the 86th Congress to enact responsible legislation was even more alarming. Now the new Congress is faced with a dual responsibility. While we cannot compensate for what amounts to nothing less than a delinquency of responsibility that occurred during preceding sessions, we must nevertheless act promptly not only to make it possible for those citizens long deprived of employment opportunities to get back to work; we must preclude additional hardships that would come with further delay.

Unemployment nurtures unemployment. Families without income cannot purchase commodities whose sales provide work for other segments of the population. The incidence of poverty increases daily in a recessed economy. In my particular constituency, and I know that I speak for members of both parties from coal-producing States in the Appalachian range, a further impediment to recovery was cast here in Washington earlier this month with the remolding of the concept of the residual oil import control program. The revision added emphasis to the urgency for enactment of a distressed area bill.

Mr. Speaker, our district has experienced mine closings—one after another—since the tide of residual oil imports began to take its toll of coal markets on the east coast more than 10 years ago. Mine workers waited anxiously for Congress or the executive branch to correct what they assumed would be only a temporary situation. As American citizens, they felt confident that the Federal Government would not permit their sources of livelihood to be destroyed through the contemptuous machinations of an international business entente.

As shipments of bituminous coal to seaboard industry declined, railroad workers took their place alongside displaced miners seeking new jobs. General economic inertia set in. In ensuing years, those affected areas have been given top billing on the Department of Labor's listing of areas of chronic unemployment.

The recent order by the Department of Interior was another cruel blow. The administration has succumbed to the pressures of shipping companies determined to unload their surplus product anywhere, at any price, without regard to the welfare of America's citizenry. The impact of the increase in residual oil import quotas will be felt simultaneously with delivery of the alien product. Mines whose product will be preempted by that increase will be forced to cut work days accordingly. There will be less money for our mine workers and our railroaders. The mine workers' welfare fund will suffer proportionately.

To give precedence to the international oil crowd over our own working men is shortsighted and costly. I hope that the Department of Interior will reconsider its hasty decision and revise its order in keeping with the principle of the purposes of the program. Meanwhile we must be realistic. The economy of coal and railroad communities is faced with a turn for the worse. Distressed area legislation becomes even more necessary than it has been throughout the years of suffering to which our people have been subjected. I appeal to my colleagues to act quickly.

A Cloud That Shouldn't Be on Federal Aid to Education Issue

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. SCHERER. Mr. Speaker, the Cincinnati Enquirer in its lead editorial of its Sunday, March 19, 1961, issue puts its finger on the real issue confronting the Congress on the matter of Federal aid to education.

All Members should carefully consider what the Enquirer says in this exceptionally well-written and well-reasoned editorial which follows:

A CLOUD THAT SHOULD NOT BE

It is nothing less than tragic that the debate both inside and outside Congress on the Kennedy administration's program for Federal aid to education has been beclouded by the wholly extraneous question of whether private and parochial schools should be among the institutions allotted Federal aid.

This subsidiary question has aroused such intensity of feeling that many Americans are likely to forget the central issue—the soundness of Federal aid for any of our elementary and secondary schools.

We are against Federal aid to private and parochial schools.

We are also against Federal aid to public schools.

And the reasons for our opposition are the same: Both are a direct violation of the

10th amendment to the Constitution, which reserves to the States all of the powers and responsibilities not specifically assigned to the Federal Government. Education clearly is one of these.

Nonetheless, Washington today is seeing one of the most massive pressure campaigns in history in behalf of Federal aid to education.

The campaign's purpose is to paint a picture of desperate need on the part of school districts in every corner of America. Congressmen are told of crowded classrooms, harried teachers, inadequate equipment, deficient curricula.

The implication is that money from Washington can solve all these problems. But we believe that whatever shortcomings do exist in the Nation's educational machinery are shortcomings that cannot be corrected with money. They are, in reality, shortcomings introduced by the same professional educationists who are campaigning today for Federal control to education.

In one State after another, these educationists have turned our schools away from such rudimentary courses as reading, writing, and arithmetic; they have substituted in their place the notion that the primary mission of our schools is equipping young people for life. The products of this life-adjustment approach to education are the young people who find themselves in college unable to read.

The educationists, in addition, have set up teaching requirements that would bar a Nobel Prize winning scientist from teaching a junior high school course in elementary science for lack of enough credit hours in teaching methods. The same system entrusts the training of tomorrow's scientists to experts in teaching techniques who have never studied science at the college level.

The day will never come when our schools cannot be better. But their betterment will come from where it has always come—from the communities they serve, from the parents, the teachers, the students themselves.

It would be nothing less than a calamity if the church-State debate were to becloud one of the basic constitutional issues of our day and destroy one of the American people's most precious possessions—the local control of their schools.

His Eminence Archbishop Iakovas

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. GOODLING. Mr. Speaker, yesterday it was my privilege to attend a function in connection with the dedication of the Greek Church of the Annunciation in York, Pa.

During this portion of the service, Archbishop Iakovas, of New York City, who serves both North and South America, delivered a brief, soul-searching and inspiring message. In it every denomination of every race, creed, or color might well find inspiration to help further the primary function of the church—that of directing people to a better way of life.

I commend this message to every Member of the Congress:

I am still absorbing the sacred moments of the consecration of your church, which we celebrated in the most impressive and colorful liturgical tradition, this morning.

I can easily imagine how deeply moved and happy you are for, after all, it was your industrious piety and your dedication to God and His church, which made today's ceremonies possible.

Such an occasion will never cease to serve as a source of inspiration and strength for me. For it is in the life of the church that I find the meaning and the purpose of my ministry.

Today's consecration of your church is, on the other hand, one more most profound and convincing testimony to the fact that our Orthodox faith, in this blessed and beloved country of ours, is experiencing a growth unprecedented in its recent history.

These very thoughts compel me to make a new appraisal and evaluation of the potentialities which our church has—not only to make new and greater strides on its divinely assigned path of development and evolution, but also to meet the challenge which the tragically declining spiritual and moral values in our society, present for us today.

It is hightime that churches and temples of all faiths realize that they have a new mission and a new task to perform. So-called religious needs cannot fully justify the existence of our many beautiful and imposing church buildings.

Churches are not monuments; churches are not institutions; churches must never be considered like rest stations or milestones, or landmarks. Churches are like living organisms; organisms that grow, that develop, that produce life—the much needed and moral life for all believers as well as non-believers.

I cannot conceive of the church in a different way. Either it is the house of God, a place where man meets God and where God condescends to meet man—uplifting our souls—or, it is a soulless, a spiritless building, where people meet each other on various occasions to celebrate the kind of feasts that God despiseth. The churches must snap out of their state of self-righteousness and arm themselves with a militant spirit and a moral courage, adequate to challenge and prevail over organized atheism in all its various forms. Christians, who care for nothing more than their own comfort, are absolutely unworthy of Christ. In like manner the churches, which care only for economic stability and for their numerical strength of membership, are also unworthy of Christ.

Tragic and disheartening as it may be, Christian churches have lost both the proper insight and the true scope of the purpose for which they exist. One needs not look far in order to verify the fearful truth of this grave statement. Look into your own hearts. Are you aglow with the love of God? Are you ready to dedicate your very life to Him? Are you willing to confront and combat, along with Christ, organized evil—lying, covetousness, crime, corruption?

God is not mocked, my friends. He is not satisfied with lipservice and shallow and meaningless "hosannas" and "allelouiahs." He cannot be pleased with the formal acts of dedications or consecrations of simple or magnificant temples of worship. He can be pleased only when we dedicate or consecrate ourselves.

Believe me, my dear brethren and friends: There is no greater need, than the need for dedicated and consecrated men and women; for believing and practicing men and women; for followers and soldiers of the cause of God. Insincere and faithless to God and to ourselves, we shamelessly speak about truth and faithfulness, about God and religion, about our tenets and our beliefs, about ideals and principles, while we do nothing in order to implant them and make them active, first in our own life, and then into the life of our family and of our society.

Never before was the distance so great between that which we claim to be and what we really are, as proclaimed by our Christian action; never before in history has our religious faith meant so little; never before in history have our churches and our places of worship, in general, failed both man and God, as much as in our days.

Let us, therefore, gain a new insight into the dedication which we celebrated this morning, and let us supplement it—or rather, give meaning to it—by a personal dedication, each of us, so that the church may become a driving force which will raise us from lowliness to exaltation, from pettiness to greatness, from weakness to moral and spiritual strength and fortitude. May the all-merciful God sanctify our souls with His saving grace, and may His spirit inspire and animate and create within us a new life for each of us and for our church.

A Tribute to Ireland and the Irish People

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mrs. KELLY. Mr. Speaker, to those who admire the characteristics of faith, of home, and of courage, the story of Ireland shall forever stand among the fascinating sagas of history. Never have a people been known to fight so long and so heroically in the name of freedom, for themselves and for the sake of the principle, itself.

Beginning with the Norse invasions of the eighth century A.D., the Irish revealed a fiery spirit against which the invader was powerless to triumph. This was the era of the Vikings, then the most powerful warlike force in the Western World, accustomed to sweeping the enemy aside at a single thrust. They came in fleets, sometimes large, sometimes small, landed suddenly in a bay or creek, despoiled the countryside and retired with booty to the safety of their ships. So long as that remained the pattern, the Irish were virtually powerless to resist. But in the year A.D. 837 the Norsemen sought permanent settlement on Irish soil and in so doing, sealed their own fate. Aroused to action, the Irish determined to resist the invader and waged relentless war against him, building up an army that in time would alter Irish history. In the end, so strong did the army become that it not only subdued the foreigners, but also secured for its commander the kingship of the Irish State of Munster. The hero of the occasion was Brian Boramha, who, in the Battle of Clontarf, in the year A.D. 1014, smashed the Norse army and drove it from the field. The victory, won at the cost of Brian's life, was the first of many in which the Irish were to show their determination to live in freedom, or die in the attempt. The Battle of Clontarf broke forever the power of the Norsemen in Ireland. In the next century, those who remained were to accept the Christian faith and submit to Irish laws.

Yet so inviting a prize was Ireland, so small her population and so greedy her neighbors, that the people no sooner overcame one enemy than another inevitably appeared.

In the 12th century it was the Norman knights, clad in armor from head to foot, armed with lances, mounted on horseback, and aided by rank upon rank of archers. Incomparably superior to the Irish in the matter of military might, the Normans swept to victory in a clattering wave of steel, and settled down to live as permanent lords of the land. But by the year 1300 their power had passed its peak and Irish recovery had begun. At the battle of Dundalk, in 1318, the Irish were again defeated in the field. But so fierce was their assault that from that point forward, the Norman power was to wane and in short order would disappear entirely.

Next, it was England with whom the Irish had to cope; the same England that was to extend her power to every corner of the earth and rise to dominance in every continent but one. Yet while all this was going on, the Irish were putting up a battle for independence wholly out of keeping with their political strength, and winning the admiration of the world.

From that day to this, the Irish have persistently fought for the right to self-government, in the fact of awe-inspiring odds. Nor has their struggle been limited to their own shores. In 1776, the American patriot cause was promoted by many an Irish immigrant, to the benefit of every American alive today. And as recently as the past decade, Irish volunteers could be found in the ranks of the gallant little army of Israel, fighting, as always, for the right of smaller nations to determine their own destinies.

The battle for Irish freedom is not yet over, and shall not be until the day when Ireland—all of Ireland—is free to rule itself in the manner of free men everywhere.

But even then, I doubt that the battle will be entirely over. For the Irish spirit requires, and the Irish conscience demands, that freedom encompass every inhabitable portion of the earth. And until that goal is reached, there will be no rest for the Irish.

Campfire Girls Birthday

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. ZELENKO. Mr. Speaker, the week of March 19 to 25 has been designated as "Campfire Girls Birthday Week." Campfire Girls are to be congratulated on the observance of their golden jubilee celebration started last November. They are to be especially praised for their 2½ year golden jubilee conservation project which has been of inestimable value all across the Nation, not only to people living today, but to generations who will follow us in populating this great country.

Only recently President Kennedy appealed to Americans to develop and preserve the Nation's natural resources, as he dedicated the new building of the National Wildlife Federation, and only last month he outlined in a message to Congress his plans for protecting our natural resources. It is stimulating to know that we have a President who is vitally aware that "we draw our strength and sustenance from our earth." It is equally inspiring to know that 2½ years before these great addresses were delivered by President Kennedy, the Campfire Girls had launched a grassroots program which answered his appeal for help in protecting and developing the Nation's resources of water, power, forests, and wildlife.

The U.S. Department of Agriculture printed "Soil and Water Conservation Activities, a Guide for Leaders of Campfire Girls." And to guide the girls in their work, the Campfire Girls national headquarters published a beautifully illustrated book "Conservation," suggesting a program so flexible that each member could select an activity which appealed to her, while meeting the needs of her community. As a result, more than a million trees have been planted in the past 2 years, many raised from seeds by the girls themselves. Vast acres of burned over or abandoned areas have been reforested, with Campfire Girls working together in small teams to do the planting. A census of trees has been taken throughout entire cities, and diseased or dead trees replaced.

Recreational areas have been improved by the addition of many new parks and children's forests. In some cases, Camp Fire Girls raised money to purchase the land which they developed into parks and then turned over to the community. In other instances, the Government gave them land from which they created the parks. Tremendous clean-up campaigns have been undertaken to improve both rural and urban areas.

Conservation of wild life has been achieved by participation in many activities which affect the soil, improve the quality of water, and foster better planning for land use. Ponds have been freed of choking vegetation. Cold water for trout has been supplied by a new deflector dam. Pheasant eggs have been hatched by chickens and raised by members for restocking. All forms of new wildlife housing have gone up, including 15,000 bluebird houses built by the Blue Birds, youngest members of the Camp Fire Girls family.

Camp Fire Girls have made speeches, conducted dedication ceremonies, designed display posters, and enacted plays to inform communities of the need for wise use of natural and human resources. In some States Camp Fire Girls restored historical monuments and sites as a part of the conservation program.

Significant as these facts are, they form only a partial picture of the Camp Fire Girls conservation program for the past 2½ years. The completed report will be made to the Nation at an early date following the close of the golden jubilee celebration.

Conservation, however, is not new to Camp Fire Girls who have made notable contributions in other years, including the planting of 700,000 trees throughout the Nation 34 years ago. It is a fine example of the law of the Camp Fire Girls in action, and has called into play all eight tenets of their law, which is: "Worship God, seek beauty, give service, pursue knowledge, be trustworthy, hold on to health, glorify work, be happy." Our hats are off to the Camp Fire Girls.

Donald Comer, Avondale Mills Chairman, Cites Injury from Cotton Imports

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. HUDDLESTON. Mr. Speaker, one of the outstanding manufacturers of textile goods and a leading citizen of Alabama has written the following letter to the New York Times. The writer, Mr. Donald Comer, is the chairman of the executive committee of Avondale Mills. His letter, and he is an expert, details some of the shortcomings in our present trade policies. I am hopeful that the Congress will shortly heed the advice and counsel of men like Donald Comer and come to a more realistic position in our foreign trade policy.

The letter follows:

MARCH 13, 1961.

The EDITOR, THE NEW YORK TIMES,
New York, N.Y.

DEAR SIR: I am in New York once a month in connection with sales problems in our business. Last month when I was here your paper of February 12 carried a news item written by Mr. B. M. Jones against Government protective measures against foreign imports. I wrote two letters, dated February 13 and 15, but had no acknowledgment.

This morning I am more concerned by your own editorial position in your Saturday's paper, headed, "Unwise Boycotts." You quote the administration as having spoken out vigorously against this procedure; you fail to quote Secretary of Commerce Hodges' statement in the Daily News Record of March 1, "Mills Need Government Aid to Survive: Hodges." You refer to the fact that Japan bought a billion dollars' worth of our goods in 1 year, 1959; you fail to mention that the two largest items were our pulpwood and our cotton—both raw products which the Japanese want to return in a larger measure to us as manufactured synthetics and cotton goods. I am not quite sure of the terms of our Government's trade regarding the sale of our pulpwood; our cotton is sold to her at 6 cents a pound less than our American spinners pay for it. The Government has just increased this differential to 8½ cents. We take our pay in local currencies, and I am enclosing a statement made by Mr. Charles Cannon regarding the further advantages that this gives our foreign competitors.

Our foreign trade operates under a renewal of the Hull miscalled reciprocal trade program. We know that there can be no foreign trade except on a two-way basis.

Secretary Hull describes this as nations swapping what each has in overabundance that the other needs, with some three-way trading. When this legislation was up for renewal President Eisenhower wrote Congressman JOE MARTIN of Massachusetts that it would be administered without injury to a single American industry. Senator SPARKMAN of Alabama told the Congress that neither Hull's original intention nor the President's promise had been carried out.

Included in this overall and continued injury to our American industry, I'd like to cite just two particular cases in our own experience. A garment manufacturer in Tennessee bought 12 million yards of cloth from a mill in Korea, which put one of our mills on short time. A knitter began supplying his needs of yarn from Portugal at 10 cents a pound under our price, which put our million half time.

The immediate cause of your editorial comes from a protest of union plumbers asked to use imported material. This clearly indicates that this problem is broadening. The trouble may have begun because of textile imports from Japan but is now spreading to everything America makes, and supplying sources are now from all Europe and Asia—in fact, all over the world.

Our American income and wages provide the most lush purchasing power in the world and we are the target of every foreign manufacturer.

I know of no farmer who provides a clover pasture for his cattle who doesn't put a fence around it. In our desire to live and help live we have suggested limited quotas of imports of which our country is already oversupplied and the market sharply competitive. We could welcome imports which were new or improvements on our own; our objection is to imports of imitations of ours coming in only because they are cheaper, and cheaper only because they are made under cheaper foreign wages and standards. You quote the Government as saying, "Please, no boycotts," but the Secretary of Commerce adds, "The Government must take steps to protect home industry."

Your offer "the only real long-range protection against effective foreign competition is increased productivity and lower costs of production here."

In the past we had the machines and the know-how. Even so, our industrial might was built and protected from Europe by a tariff. No protection was needed then from the teeming millions of Asia who had only their hands.

Your suggested program would only invite a lowering of our standards to a world level. The same machines are available to all the world today and no nation has any corner on their efficient use. In connection with textiles let me remind you that the late Secretary Knox said that textiles were second only to steel for our defense needs. You admit that some protective measures might be desirable for some particular industry during its adjustment to the world standard. We are looking for no temporary adjustment; therefore we want a permanent protection, whether by tariff or quota or both, that will maintain our American standards today, tomorrow, and forever.

Please, whether you use my letter or your words, let your readers see this side of the question. Industry needs your help right now.

Very truly yours,

_____,

Chairman of the Executive Committee.

The Honorable Victor L. Anfuso, Member of Congress from New York, Chairman of the American Honorary Committee for the Italian Centennial

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. RYAN. Mr. Speaker, last Thursday, March 16, it was my pleasure to be present at a very impressive and significant ceremony at the Department of State on the occasion of the centennial celebration of the unification of Italy. An important part of the proceedings was the opening address by my respected colleague from New York [Mr. ANFUSO]. In his eloquent remarks he took note of the strong and lasting bonds of friendship between the people of Italy and the people of the United States.

Under leave to extend my remarks, I include the text of his address:

REMARKS BY HON. VICTOR L. ANFUSO, ITALIAN CENTENNIAL CELEBRATION, MARCH 16, 1961

It is a great honor for me to have been singled out by my colleagues on the American Honorary Committee to be the chairman of this historic event. It is my pleasure to welcome you.

It is of particular significance for me, since I came to this country as an immigrant from Italy at the tender age of 9. Little did I dream then that some day this immigrant boy would preside at a celebration of this sort in Washington, where the President and other great leaders of this Nation would gather to pay tribute to my ancestral homeland on the centennial anniversary of its unification as a single strong nation.

I am deeply grateful this morning, as never before, to this wonderful country of ours for the unlimited opportunities which I and millions of other Americans of Italian extraction have received. This is a feeling which only immigrants and the children of immigrants can fully appreciate.

The President of the United States has played a significant role in these celebrations. I have had the honor and the privilege to know the President ever since I first came to Congress in January 1951, when I served with him in the House of Representatives. I remember the kindly guidance he gave me then—and I shall never forget his encouraging assistance on several projects which I proposed to the Congress in those days.

This association continued also after he had moved over to the U.S. Senate, and it is best exemplified by the fact that after I had introduced the resolution on the centennial observance of Italian unification and brought it to the attention of Mr. Kennedy, he immediately introduced it in the Senate. May I quote just a brief remark by Mr. Kennedy at the time he introduced the resolution on July 13, 1959, when he said:

"The concurrent resolution expresses our pleasure in receiving the invitation (to participate in the observance) and testifies to our admiration for the contributions this great Nation has made to our common ideals of freedom and independence. It is fitting and proper that we recognize in this fashion the progress and achievements of the people of Italy during the past century."

During this entire decade that I have been privileged to know Mr. Kennedy, I have always found him to be an admirer of Italy and of its achievements in the annals of culture and civilization. Likewise, he has a keen appreciation of the contributions of Americans of Italian descent toward the upbuilding of America and its way of life.

It is to a certain extent an irony of history that, as Italy was reborn as a united nation, the United States was on the threshhold of facing its greatest test for survival. As the guns were stilled in Italy, and Garibaldi was going back to his beloved island of Caprera with a bag of bean seeds on his shoulder, the guns of Fort Sumter on this side of the Atlantic were rumbling. Italy's Risorgimento, which means rebirth as a nation, was being accomplished.

And speaking of Garibaldi, I take particular pleasure in greeting here this morning the grandson of that great patriot, General Ezio Garibaldi, and also his granddaughter, Mrs. Giuseppina Ziluca. May I ask them to take a bow.

Today there exist strong bonds of friendship between the United States and Italy. The bonds joining our two nations are, in my estimation, stronger and deeper than those resulting from a military pact or an economic program. They are the bonds of faith and confidence in one another, of mutual respect and understanding between two great peoples, of genuine friendship and reciprocal contributions.

The bridge of understanding between the people of the United States and the people of Italy was not constructed overnight. It is a process which is at least as old as the United States, and in fact goes back to our earliest days when small but significant numbers of Italians joined the waves of early explorers and settlers who came to these shores. They and succeeding generations of Italian immigrants, who settled in this land, have made lasting contributions to our American heritage over the long centuries. The imprint of their contributions on American life and civilization is visible all around us.

We live in a crucial time in the annals of human affairs which requires utmost unity in the ranks of the free nations. The future survival of democratic America and of the whole free world depends, in large measure, on reinforcing our bonds of cooperation with nations like Italy, and on the creation of working partnerships with such nations in every endeavor which could serve the best interests of mankind.

It is not for me to spell out in detail how this partnership between our two nations is to be created, nor is this the time and the place to do so. Suffice it merely to indicate that we have the beginnings of it in several ways: the fact that Italy has been willing to give as much as she receives; the fact that Italy has made available to us areas for the establishment of military bases; Italy's significant role in NATO; Italy's strategic position in the Mediterranean in relation to Europe, Africa, and the Middle East; and Italy's ancestral ties in Latin America.

Our partnership can be extended and deepened in other ways through many new ideas and bold action. Instead of working alone in certain areas, where our help has been misunderstood, let us invite the participation of partnership—nations like Italy—if such participation will bring about better understanding and more fruitful re-

sults. The possibilities are unlimited. This, too, may in time prove to be a New Frontier in our international relations.

It is, therefore, only fitting and proper that we choose this occasion to rededicate ourselves to the same ideals which triumphed over a hundred years ago. In this era of the New Frontier, let us, in the words of our beloved President, pray that the future years will prove to be the years when the tide came in—when America, together with a strong and united Italy and a free world, moved forward again.

National Wildlife Week

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. WESTLAND. Mr. Speaker, this week, March 19 to 25 is National Wildlife Week. Yesterday, the Governor of Oregon, officers of the Washington State Sportsmen's Council, representatives of both Washington State and Oregon Fish and Game Departments, officials of the U.S. Forest Service, members of the Fish and Wildlife Service and representatives of the Bureau of Land Management opened the week with a joint ceremony on the Columbia River.

I believe it is fitting that the Members of Congress take special note of National Wildlife Week because its theme "Multiple Use: Balanced Conservation Planning for the Future," expresses the intent of the Congress which passed the Multiple Use bill last year. I am proud that I introduced this legislation and am pleased that the National Wildlife Council and the various State sportmen's councils have shown their support of the multiple use concept by choosing the theme they did for National Wildlife Week.

Mr. Speaker, the National Wildlife Federation has prepared a booklet concerning multiple use which is interesting and constructive. One part I found particularly well worth reading and under leave to extend my remarks I would like to include it in the RECORD.

BALANCED CONSERVATION PLANNING FOR THE FUTURE

Multiple use of land and water resources is a product of a modern industrial civilization or society. To survive as a civilization it is important that none of the natural resources be despoiled or wasted.

Multiple use applied to the many different purposes man has found for the land and water resources over which he was given dominion. The application of improved technology and scientific know-how has brought the present generation the highest degree of civilization the world has ever known.

The objective of mutiple use is to conserve and wisely use the Nation's lands and waters in such manners that the greatest benefits in enjoyable living will result for the greatest numbers of people. The study of ancient history teaches that 19 of 21 civilizations perished from the face of the earth because of an inability to learn an existence cannot be maintained without the conservation of soil and water. To the end that this civilization will not become the 20th to so perish, each citizen should fully inform himself on the needs for conserving renewable natural resources.

Grass Is Green, Like Money

EXTENSION OF REMARKS
OF
HON. RALPH F. BEERMANN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. BEERMANN. Mr. Speaker, I have said on the floor of this House that the way out of the present farm dilemma does not lie in the way of more complex controls with fewer crops, but rather in a return to a system under which a farmer is free to plan his operation in line with what he can use and sell. In line with that view I want to offer an article written by a warm friend, Mr. Jim Wilson, of Polk, Nebr. Mr. Wilson to my knowledge, is no Harvard doctor of philosophy, but rather a man of practical approach. His knowledge of what is right for the farm comes from living and working on one. I submit his views for general consideration.

GRASS IS GREEN, LIKE MONEY

(By Jim Wilson, Wilson Seed Farm, Polk, Nebr.)

Twenty years ago, before mechanization, almost any small farmer could increase his income by feeding a few head of cattle. But how can a man with a pitchfork and a bushel basket compete today with the big commercial feedlots where one man pushes a button to feed 1,000 head, pushes another to dispose of the manure?

It's hard for small farmers with only a few head to mechanize. The profit per head is too small. If, as can happen, the profit margin is only $1 per head, a 70,000-head feedlot can still clear $70,000. The 30-head feeder can clear only $30.

Think it over. Maybe you're in the wrong end of the business to make money.

The profit's too small in cash grain farming, too, unless you have enough land to use big machinery efficiently. Let the big operator raise cash grain. You can't compete with him. You can't afford big machinery, and you're behind the eight ball with small.

Get into a line where mechanization isn't so important and big and small operators compete on more even terms. Produce meat on grass.

THE CHEAPEST MACHINE

In a North Carolina experiment, the cost of producing 100 pounds of total digestible nutrients (TDN) for livestock in the form of shelled corn was $1.77, alfalfa hay $1.35, improved pasture only 58 cents.

About all you need to start with is the grass, fence, the stock, and a rocking chair, whether you have 160 acres or 200,000. Dry or irrigated, it doesn't matter. Profit is roughly proportional in either case. Even the biggest ranches don't have much machinery compared to cash grain outfits. The animal itself is the machine—the cheapest machine in the world.

"But my land is worth $350 an acre," you say. "Can I compete with western ranchers on cheap land?"

DOLLARS AND SENSE

It takes 8 to 15 acres to support one animal unit for 150 days in the Nebraska sandhills, one of the most prosperous ranching areas in the world. Land currently costs $40 to $60 an acre there. Therefore it takes an investment of about $400 to $500 in land per animal unit in the sandhills.

A new University of Nebraska bulletin states, "An acre of well-managed irrigated pasture in Nebraska should support two to three animal units during a 150-day grazing season." At $350 an acre, therefore, it takes about $115 to $175 in land per animal unit on irrigated pasture. The savings on interest, taxes, etc., more than cover the cost of fertilizer and water. On crop-type dry land the investment in real estate per animal unit is somewhat higher, but many expenses are less.

And you're probably closer to market than most western ranchers.

CAN YOU AFFORD TO RAISE CORN?

How much money can you make per acre on grass? The 1959 University of Nebraska bulletin, Irrigated Pastures, states, "Good irrigated pastures in Nebraska should produce 500 to 800 pounds of beef (or 5,000 to 8,000 pounds of milk) per acre." Even at 22 cents a pound for beef, that's a gross of $110 to $175 per acre—equal to a 110 to 175 bushel corn crop at 1960 prices—with less expense.

A careful, talented, scientific operator with top-grade land can beat this. Bill Pierce, of Kearney, has had a grain-on-grass operation on 18 acres of improved irrigated pasture for the last 5 years. He turns 80 head of 400-pound calves onto grass late in April, with free-choice rolled corn and a little alfalfa to eat, and takes them off in November with an average gain of 400 to 500 pounds per head—32,000 pounds plus, or 1,800 pounds per acre, including the gain from the corn.

HOW NOT TO GO BROKE

At 22 cents a pound for the grain, including that from the corn, that's a gross of $7,040 plus, or $390 per acre. Since the corn is not measured, there is no way of figuring either the gross or net profit from the pasture separately, but obviously Pierce is not going broke very fast. And obviously, he doesn't just let his pasture and cattle take care of themselves.

As for dry land, the 1958 University of Nebraska bulletin, "Does it pay to improve your pastures?" says, "In the drouth years of 1954–55, an improved dryland warm-season-grass pasture near Lincoln under rotational grazing averaged 163 pounds of gain per acre." At 22 cents a pound, that's a gross of $35.86. How much did you dryland farmers gross on corn in 1954 and 1955? In 1959—admittedly a very good year—a Polk County farmer grazed one and one-half animal units per acre on a dryland intermediate wheatgrass pasture all summer.

Of course, you have your investment in livestock. But it's usually easier to get financing on livestock than on farm machinery.

HIGH COSTS AND HEADACHES

What does it cost to raise corn? About $50 to $60 an acre on irrigated land, experts say.

After your grass is established, about your only big operating expense is fertilizer—and water, if you irrigate. Few insect pests, no worry about hot winds or hail destroying an entire year's crop, no anxiety about flood damage, perhaps one-third to one-fourth the investment in machinery, and, if your land is rolling, no more poor crops raised with blood, sweat, and tears. In 5 years after starting the changeover, you should be doing all right.

Most of the foregoing figures are for pastures planted several years ago. Still better strains of grasses are available today. And better ones yet are coming. Keep up with the times. Plant the very best grass you can get. Don't just assume brome is best be-

cause you never heard of the others. Ask your SCS man about the best adapted varieties and strains for your area.

You don't plant squaw corn—don't plant "squaw" grass.

IT'S UP TO YOU

What kind of grass operation is best for small farmers? I don't know. I'm a seed producer, not a livestock man. But I have some ideas. If you're in milk, and making money, modernize, plant more and better pasture with the newest and best strains of grass, and stay in milk.

Whatever kind of operation you are in—milk, hogs, sheep, beef—improved grass and modern methods of pasture management will make you more money. But pasture management is a science—learn it. Don't just "monkey along."

Beef producers should consider two points:

1. The calf brings the highest price per pound of any beef animal. On a steady market, the price per pound goes down every time it changes hands after the first time. Each successive buyer has to make back that loss before he can start to make money. And each successive buyer usually has a higher cash investment per head in proportion to his profit. A comparatively small drop in the market won't hurt a producer of calves very much, but it can wipe out a small feeder.

2. Every time an animal changes hands, it costs money. The trucker gets some, the commission house or auctioneer gets some, and some evaporates in extra labor cost, shipping shrink, loss of appetite, etc. The longer you're able to keep an animal, all other things being equal, the more of these expenses you can convert into profit.

"GRAIN-ON-GRASS" BEEF

The man who is in position to produce beef from calf to finished product ready for slaughter, in a "grain-on-grass" operation, is in an enviable position.

I should think such a vertically integrated program, with a variety of grasses, now available, to produce green pasture up to 8 months of the year in this climate, would make a good, solid year-in-year-out business, after one got it going. The profit differential per acre between well-managed grass, and grain crops, is enough so that if a man was short on land he could well afford to buy all his grain for such an operation.

The important thing is to start making the changeover from cash grain to grass before you go broke on cash grain. It will take a few years. While you're getting a start, you may be harder up than you are now, so don't wait till your reserve of credit and cash is all gone.

Some of the best permanent grasses take a full year—maybe 2—to make pasture. (Plant with a grass drill—get a stand quick.) Start with a few acres and stock them, instead of buying new cash-grain machinery as your old wears out. Add more acres each year.

HOW MUCH DOES IT COST?

"The seed costs so much," you object.

Did you know that you can seed cropland to the finest permanent grass available for about $3 an acre with Government help?

See your ASC office. It will pay up to 80 percent of the cost of the seed, and $1 an acre for drilling.

But there's one kind of help that you need more than cash—technical help. If you try to get along without it, you'll be sorry from now on.

Go to your soil conservation office for the best free advice you can get on pasture planning, varieties and strains, seedbeds, planting, care and management. When it comes time to stock, your county agent can help you.

As with any good business, there's a lot to learn if you want to succeed. But won't you feel like more of a man to strike out for yourself and learn something new, than to keep on hiding behind an unworkable system of price supports for cash grain till it breaks down completely? Our great-grandfathers had the courage to learn a lot of new things when they left Sweden, or Poland, or Pennsylvania, to homestead in Nebraska.

Remember this: There has never been a chronic surplus of meat. A temporary surplus can always be marked down and sold to make way for next year's production. The demand for meat, unlike bread, depends on the price. And the cheapest way to produce meat is on grass.

The Dilemma To Come

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. FINDLEY. Mr. Speaker, the following editorial appeared in the Pike County (Ill.) Republican paper on March 8, and I would like to recommend it for the reading of all Members of Congress:

Ask not what your country can do for you—ask what you can do for your country.

These words from President Kennedy's inaugural address were surely the most inspiring in it. They have been praised by editorial writers and others as the most direct challenge to America in a long time. The ironic fact is, however, that one can hardly pick up a daily newspaper without reading of a new proposal from some branch of the new administration in Washington that will lay the hand of centralized government more heavily upon the people under the guise of "doing something" for the people—a direct contradiction of President Kennedy's noble challenge.

The time will come when the issue will be resolved and the words put to their true test. As John J. Lacey told a Farm Bureau audience last week in Pittsfield, the administration must face the dilemma of meeting its many promises of something for everybody while making good on President Kennedy's promise to protect the value of the dollar. Or will the tempting lure of inflation again seem more comforting than the stern alternative inherent in President Kennedy's stirring words?

Meanwhile, it is interesting to review the answers Gallup poll interviewers received to the question, "Can you yourself, at this time think of anything you could do for your country?"

A total of 63 percent of those interviewed were able to think of some way in which they could help the country.

The kinds of things people volunteered were many and varied. They included writing to their Congressman to let him know their views on issues they cared about. For others, it meant informing themselves better about the state of the Nation and the world. To a few, it meant being scrupulously honest in making out their Federal income tax return.

For many, it meant simply being a better citizen—being active in local affairs, obeying all laws, being honest in dealing with their fellow citizens.

According to the Gallup poll directors, since the founding of the public opinion survey institution in 1935, it has often found the public ready to make greater sacrifices than Government leaders have asked them to make.

It might be a good time to ask if the many welfare state proposals now coming out daily from Washington are truly in keeping with the desires of a people more aware than their leaders that a something-for-nothing philosophy of Government flowing unending from Washington may not be precisely what they want or are willing to pay for with dollars that will buy less and less.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 18, 1961.

Committee work exceeded House floor action this week. Legislation moves through committee hearings, executive sessions, amendment and redrafting before going to the Rules Committee for a place on the House Calendar.

A resolution was steamrollered through by a voice vote (Members not desiring a record vote) to increase each Member's staff by one person and the base pay of $3,000 per year (equals approximately $6,700). This should enable each Member to do a more thorough job. Here is tangible evidence of the growth of the Federal Government, and as it grows, so grows the workload of the Members of Congress. The office of the Fifth District of Texas (Dallas County) this week received 2,000 letters from within the district and more than twice that from other areas of Texas. One thousand to one thousand five hundred letters per week involve "casework," that is, Federal problems confronting citizens who then appeal to their Congressman. These require special attention and Government agency help before response. All letters must be answered. This workload is the nonpolitical daily effort, mostly unknown to the general public in appraising Congressional routine. Of course, the inaction of Texas in the past to redistrict doubles the Fifth District's volume of work.

Federal highways are in trouble again. The problem—not enough money to finish the program by 1972 as planned and $200 million more needed per year. How to solve this problem is the current subject of hearings by the Ways and Means Committee. At this time, the issue is in doubt. Possible solutions include: (1) stretch out the time period for completion of the 41,000-mile Interstate Highway System; (2) cut back various building programs; (3) raise the Federal gasoline tax; (4) raise the truckers' tax 75 percent; (5) take the money from the General Treasury (thus cutting the money available for other Federal Government costs).

Here's a bird's-eye view of the testimony thus far, President Kennedy:

"Our Federal pay-as-you-go highway program is in peril. It is a peril that justifies a special message because of the vital contribution this program makes to our security, our safety, and our economic growth. Revised cost estimates require additional authorization of $11.56 billion or $900 million per year. I am wholly opposed to either stretching out or cutting back our highway program." The President then outlined two

alternatives through the year 1972 of (1) a 1½-cent per gallon Federal gas tax on all motorists (adding one-half cent to the extension of the 1 cent due to expire July 1, making the total Federal taxes 4½ cents per gallon instead of 3 cents); or (2) continuation of the additional 1-cent gas tax plus an increase of the tax on trucks by upping diesel fuel 4 to 7 cents per gallon, trucks over 26,000 pounds use tax raised $1.50 per 1,000 pounds to $5, tires 8 to 10 cents per pound, inner tubes 9 to 10 cents per pound, retread rubber 3 to 10 cents per pound. Commerce Secretary Hodges, Treasury Department Head Dillon, and Budget Bureau Chief Bell then testified in support of the second alternative, which is President Kennedy's preference.

The American Association of State Highway Officials (AASHO) emphasized the need for the highways, but said, "we will not attempt to tell you how you should raise highway money at the Federal level." The diesel truck industry was strongly defended by Congressman WILSON of Indiana against the tax increase as an unequal distribution of the tax, putting diesels in an unfair competitive position, in short, a penalty on efficiency. The strongest protests came from the trucking industry as witness after witness vowed that such tax increase would force him out of business. At the least, employees would be laid off and reduced business produce less tax revenue to the Government. Further, that this cost could not be absorbed or passed on in higher prices but that other forms of transportation (railroads) would get the business. The Teamsters Union joined with management solidly to denounce the taxes as unfair and a death blow to the trucking industry.

So the outcome is still in doubt. Further hearings, executive sessions and redrafting of compromises must be accomplished. Problems troubling me include: (1) Why was there a $12 billion increase in highway cost, culminating in our present lack of revenue to finish the job? (2) Why do we not await the findings of the Illinois road tests before seeking a permanent solution? (3) Should we live beyond our means in Government spending? (4) Do the people want taxes raised on all motorists, either 1 cent or 1½ cents per gallon of gas, to finish the program by 1972? (5) How much of the expense should come from the General Treasury as a defense measure? (6) Hasn't "pay as we go" for motorists and truckers actually become "pay before we go" since taxes are in effect well before the highways are built? These and others, * * * one thing is sure, we're a long way from the answer.

Other important legislation pending in committees or waiting action in the Senate, or House includes a proposed increase in the minimum wage and extension of coverage of the act; a depressed areas bill, new farm legislation, Federal aid to education, establishing a Peace Corps, plus the regular appropriation bills. All of which points up the importance of my questionnaire this year. It is now being prepared and will be in the mail early next month. I hope you will make a special effort this session to let me know your thinking on the questions on which I am seeking your advice.

America Loses a Distinguished Gentleman

EXTENSION OF REMARKS
OF
HON. JAMES F. BATTIN
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. BATTIN. Mr. Speaker, Zales Nelson Ecton, a former U.S. Senator from Montana from 1946 to 1953, passed away in Bozeman, Mont., in early March 1961.

Senator Ecton was born in Iowa and moved to Gallatin County, Mont., as a boy where he attended public schools, as well as Montana State College. He later attended the University of Chicago Law School.

During World War I he served as a private in the infantry, and from 1921 to 1946 he was a successful rancher in the Treasure State.

He had a useful and worthwhile career in public life, having served in the Montana House of Representatives from 1933 to 1937 and in the State senate from 1937 to 1946.

Senator Ecton was well liked by the people of Montana and by the Republican Party, for he served as chairman of the Republican Central Committee from 1940 to 1944.

Zales was a good father, a good husband, and a good American. He believed in the rights and dignity of man and during his career in public life he fought to preserve our American system.

Though I did not know him well personally, I did know him by reputation, and I am sure that his wife and family will have pleasure in knowing in the years to come that he was revered, not only by the people of Montana, but by his colleagues and friends in the Congress of the United States.

My wife and I join in extending our deep sympathy to his wife, Vera, and to his daughter and grandchildren.

Put to the Test

EXTENSION OF REMARKS
OF
HON. JAMES HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

PUT TO THE TEST

The Federal Government, as we all know, has waded hip-deep into activities which used to be undertaken, when needed, by State and local governments.

This has had two inevitable consequences. First, it has made a substantial contribution to the gargantuan size of Federal spending, Federal budgets, and Federal taxes.

Second, and even more important, it has woefully weakened local independence, local responsibility, local pride in achievement. The general attitude becomes one of "Uncle Sam will take care of it—why should we worry?"

It is argued, of course, that only the Federal Government has the resources that are needed these days to cope with all kinds of local problems. But that argument fails, more often than not, when put to a test.

For instance, last year President Eisenhower vetoed a bill calling for expansion of Federal grants-in-aid for construction of sewage-treatment facilities, as a means of meeting the water pollution problem. He then called a National Conference on Water Pollution which was attended by 1,145 people. A poll was taken—and 70 percent of the delegates agreed that " we have no pollution problems that require any additional Federal controls. Enforcement is the primary concern of the State."

One of the burning needs of the time is to turn back to State and local governments the rights, responsibilities and obligations which belong to state and local governments. We'd save barrels of tax money. And beyond that we'd make huge savings in the precious coin of character and principle.

HUAC Upheld

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. SCHERER. Mr. Speaker, I am herewith inserting in the CONGRESSIONAL RECORD an excellent and thought-provoking article by Forrest Davis, the able Washington columnist for the Cincinnati Enquirer, with reference to the recent Supreme Court decisions in the Braden and Wilkinson cases.

The article follows:

SUPREME COURT AND CONGRESS UPHOLD HUAC

(By Forrest Davis)

WASHINGTON.—If one strings along with Alan Barth, Supreme Court Justice Hugo L. Black, Congressman James A. Roosevelt (Democrat, California), Carl Braden, and Frank Wilkinson, the House Un-American Activities Committee is a sorry and dangerous institution.

Mr. Barth is an editorialist on the Washington Post who lectures around the country against the HUAC and once wrote a book expressing similar misgivings about the FBI's smelling out of Soviet spies and domestic seditionists.

Mr. Justice Black, who learned about political conspiracy as an Alabama Kluxer, lapsed into a species of hysteria the other day when dissenting from the Court's 5-to-4 opinion (written and delivered by Cincinnati's Justice Potter Stewart) upholding the HUAC's privilege in citing Mr. Braden and Mr. Wilkinson for contempt of Congress. Said Mr. Justice Black, who reasoned that the committee was vindictively punishing the Messrs. Braden and Wilkinson for criticizing its activities:

"There are not many people * * * who will have the courage to speak out against such a formidable opponent. If the present trend continues, this already small number will necessarily dwindle as their ranks are thinned by the jails. Government by consent will disappear to be replaced by intimidation."

To which Justice Stewart, youngest on the bench as Justice Black is the oldest, coolly replied that he found no warrant for holding that critics of the committee were thereby immunized from asking questions authorized by a proper legislative intent.

The late President's son, JIMMY, leads the tiny cell in the House of Representatives disapproving of the Un-American Activities Committee. When, 2 days after the Supreme Court ruled favorably on the committee's findings against Braden and Wilkinson, the House adopted the HUAC's budget for the year, ROOSEVELT was joined by only five other Members. The pro-HUAC vote, recorded by rollcall on motion of Congressman CLARENCE J. BROWN, veteran Representative and eminent Cincinnati suburbanite, was 412 to 6.

This massive majority was a vote of confidence in the committee itself, of which Cincinnati Congressman GORDON F. SCHERER is the ranking minority member, as well as a notice to the active and vocal claque seeking

its abolition that the House of Representatives remains aroused to the dangers of the Communist fifth column in our midst. If the Congress is so convinced, can the mass opinion of the country be far behind?

Braden and Wilkinson were in Atlanta before and during a HUAC inquiry for the acknowledged purpose of arousing public sentiment against the committee and inducing witnesses to stand mute. Since both Braden, a former Cincinnati and Louisville newspaperman convicted of complicity in a phony, political bombing of a Negro's home in the latter city, and Wilkinson had been identified under oath as Communists by witnesses before congressional hearings, the committee quite reasonably asked if they had been sent to Atlanta by a Communist agency.

The court and the House have spoken but that will not persuade the progressive bourgeoisie who, detesting any exposure of the Communist conspiracy in the United States, affect to believe that congressional committees thus acting do so in violation of civil rights. An alert reading of the country's press will find more attention given the dissents of Justices Warren, Black, Douglas, and Brennan than Justice Stewart's cogent vindication of the historic right of Congress to inquire.

The heat of the dissents may be explained by the circumstance that, since 1959 and the addition of Justices Stewart and Whittaker to the bench, the Jacobin justices have lost their majority. For the time being the majority takes a temperate view of the court's power to enfeeble the other coordinate branches of the Government through an extreme reading of the rights of the citizen under the first amendment against Congress, the Executive and the society's preservation itself. The former majority's absolutist interpretation of the first amendment frequently served to safeguard certified Communist agents. Perhaps that was coincidental.

The Court's present tenor could, of course, be reversed by the appointments which in the exigencies of nature are likely to fall to President Kennedy. We may be certain that if, as, and when the elderly Justices Black and Frankfurter retire, the President will be under extreme pressure to replace them with justices sympathetic with the old majority.

As one reliably hears it, the campaign to relieve Communists from official scrutiny calls for abolition of the HUAC and the Senate Internal Security Subcommittee and the shelving of J. Edgar Hoover in that order as well as a redress of the Supreme Court's balance.

Five-Year Census

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to the following editorial which appeared in the Santa Paula (Calif.) Daily Chronicle of March 7, 1961:

FIVE-YEAR CENSUS

The many surprises of the 1960 census have stimulated a movement to have the census taken every 5 years instead of every 10. The main reason behind this plan is the practice of giving Federal aid to States and cities on a population basis. Representative JOHN LESINSKI, of Michigan, is a leading advocate of the change.

Allotments are made for public health, employment services, unemployment compensation, child welfare, some education programs, roads, agricultural extension, and other purposes. The States make grants to local communities for streets, highways, hospitals, libraries, and sewer, and waterworks, to name only a few.

The amount of each distribution depends on the last census figures for the community involved. A city such as Houston, Tex., which jumped from 596,000 in 1950 to 938,000 in 1960, or Phoenix, which showed 106,000 inhabitants in 1950 and 10 years later hit 430,000, has obviously been getting less than what it would have received had the last previous census been in 1955 instead of 1950. Many California cities have an interest in more frequent census surveys.

Private business also is vitally affected by out-of-date population figures. Marketing and advertising firms want recent population data in their attempts to locate new business outlets.

A 1965 census would not need to be as elaborate as the regular 10-year article. Its main purpose would be fulfilled if it simply gave more recent population figures. Despite its costs, a 5-year census seems to be worthwhile.

Millions Will Benefit From Project HOPE

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following feature story from the Tulsa, Okla., Junior Chamber of Commerce magazine Future, January 1961, entitled "Millions Will Benefit From Project HOPE":

Project HOPE—Health Opportunities for People Everywhere—becomes a part of the United States' people-to-people diplomacy as America shares its modern medical knowledge and skills with the newly developing countries. After dedication ceremonies in September, at which Legal Counsel Vic Levit represented the U.S. Junior Chamber of Commerce, the SS *Hope I*, the first of a fleet of hospital ships, sailed from the United States for 6- and 4-month stops in Indonesia and Vietnam.

The need for such a project is overwhelming. In much of southeast Asia there aren't nearly enough doctors. Indonesia, for example, has 1 doctor for every 71,000 people compared to 1 for 750 in this country. The available doctors are so busy they have no time to keep posted on latest information and techniques.

Because there are millions who need treatment the limited staff could help only a few. For these reasons HOPE is essentially a teaching program, although some treatment will be involved. The American members of the medical staff, which includes 15 physicians, 2 dentists, 25 nurses, and 30 auxiliary personnel, will work with groups of their local counterparts. Training will also be conducted through classroom lectures and discussions, movies and film strips. By concentrating on training, HOPE will upgrade the local medical people who can in turn teach others, thus spreading the impact of HOPE.

HOPE is a privately sponsored program supported by contributions from business and industry, labor unions, civic groups, and individuals. Estimated cost is about $3.5 million for a year's operation. At present, Propect HOPE is establishing local area committees in many States. The U.S. Junior Chamber of Commerce member chapters can play a vital role in acting as a stimulant for this organizational program. Further information can be obtained by writing the People to People Health Foundation, Inc., 1818 M Street NW., Washington 6, D.C.

Taxing Freedom of Expression

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. PELLY. Mr. Speaker, I have recently introduced a bill (H.R. 5573) in which I join many of my colleagues in the House, which proposes a much-needed clarification of congressional policy on the right of freedom of expression without undue tax restraints. These tax restraints have arisen as a result of arbitrary administrative rulings interpreting our tax laws so as to impose a prior restraint on the right of our constituents to present their views on legislative matters at any level of the Government. The administrative interpretations to which I refer are embodied in Internal Revenue Service regulations which attempt to deny a tax deduction for lawful business expenditures which relate to lobbying, the promotion or defeat of legislation, or "propaganda relating thereto."

These sweeping terms are not defined in these administrative rules which places business taxpayers in the position of proceeding at their peril in exercising their right of petition to their Government and in determining whether or not their expenditures for activities on expressing their views may not be deemed proper deductions for Federal income tax purposes. This rule applies even though the legislation to which the business taxpayer may express his views and reactions can have a substantial economic impact on his business or his right to stay in business.

The Supreme Court of the United States, in my opinion, has compounded the confusion in this area in a series of cases in which the Court contends that in denying tax deductions to a taxpayer for expressing his views on matters which would have seriously affected or destroyed his business are not allowable as a tax deduction because of a sharply defined national policy against such deductions. However, upon reading the cases which set forth this purported rule of law one finds that the basis for this so-called national policy is predicated upon administrative interpretations rather than upon duly considered congressional enactments. In my opinion, Mr. Speaker, this is a highly questionable rule of law which is predicated

upon an erroneous concept of what our national policy is and should be with respect to the tax status of business expenses for full expression of views on matters of vital economic importance.

To further demonstrate the confusion that exists in this area we find that for tax purposes there is a sharply defined national policy against the deduction for business purposes of such expenses. However, in a case decided by the U.S. Supreme Court just last month in connection with a determination of a violation of the Sherman Act, the Supreme Court noted:

> The right of petition is one of the freedoms protected by the Bill of Rights, and we cannot, of course, lightly impute to Congress an intent to invade these freedoms.

With this statement I would heartily concur and I would believe that my colleagues in the House would also heartily concur. The Supreme Court also noted in this same decision:

> The right of the people to inform their representatives in government of their desires with respect to the passage or enforcement of laws cannot properly be made to depend upon their intent in doing so. It is neither unusual nor illegal for people to seek action on law in the hope that they may bring about an advantage to themselves and a disadvantage to their competitors.

Thus our Supreme Court has created what to my mind is a double standard. For tax purposes the right of petition and presentation of views on matters governmental is restricted and impaired because of a purported sharply defined national policy. Yet the same Supreme Court with respect to an alleged violation of a punitive statute expressing the antitrust policy of the United States considers it the preservation of a basic freedom that under our system of government there is a right of the people to inform their representatives of their views on matters governmental. I cannot reconcile this double standard. I would doubt that my colleagues in the Congress of the United States could justify or reconcile such a double standard.

This then is the nature of the problem. The law demands an immediate clarification and the burden—the duty of clarification—is one of those responsibilities we accepted upon undertaking the solemn duty of representing those who chose to elect us to the high offices we now hold.

The bill which I have sponsored and which has been referred to the Committee on Ways and Means is an effective, realistic solution to the difficult legal dilemma now facing our taxpayers. I have no pride of authorship in this proposed legislation. I only heartily subscribe to the principles embodied in this bill. Who are the authors of this proposed legislation? Mr. Speaker, this bill to which I have put my name is very similar to the bill which was favorably reported and recommended by my distinguished colleagues on the Committee on Ways and Means during the second session of the last Congress, House Report 2077. At the time the Committee on Ways and Means favorably reported on this legislation during the last session of the Congress, the committee noted:

> It seemed to your committee that if an expenditure is ordinary and necessary to the conduct of a taxpayer's trade or business and is lawful, it is unfair for the deduction to be disallowed just because the expense is incurred to influence legislation.

Mr. Speaker, I believe that taxing the freedom of expression is to effectively impair one of the tenets of our form of government. With the ever-expanding scope of government—at all levels of government—it is more important than ever that we reconcile the effective impediments created by this legal situation and that we forthwith undertake to pass remedial legislation.

As I previously indicated, there are several proposals on this subject which have been introduced by many of my colleagues in the House from both sides of the aisle. This is not a partisan issue, it is a nonpartisan problem of fundamental importance and I urge that we undertake an immediate disposition. I earnestly solicit the support and cooperation of other Members of the House of Representatives and respectfully request that my colleagues on the Committee on Ways and Means immediately schedule this problem for discussion.

Mr. Speaker, an editorial which appeared in Advertising Age on March 6, 1961, points up the important issues involved in clarification by Congress of proper business expense for tax purposes. Under unanimous consent I include the editorial at this point:

AN IMPORTANT DECISION

The reversal by the U.S. Supreme Court of the judgments against Carl Byoir & Associates and 24 eastern railroads in the Pennsylvania trucking case is of major importance, not only to the public relations segment of business, but to advertising people as well.

The Court reached its decision unanimously, and as Advertising Age's reporter said, it wrapped lobbying in a "public interest" cloak of unprecedented grandeur, even though it sharply criticized the ethics of public relations operators on both sides of the railroad-truckers dispute.

The important point for our purposes is that the Court advanced in the strongest terms the opinion that representative government can't operate unless citizens can express their views freely, and that the Sherman antitrust act cannot be so construed as to act as a brake upon that freedom of expression.

Among other things, the Court's decision said:

"The right of the people to inform their representatives in government of their desires with respect to the passage or enforcement of laws cannot properly be made to depend upon their intent in doing so. It is neither unusual nor illegal for people to seek action on laws in the hope that they may bring about an advantage to themselves and a disadvantage to their competitors."

In the light of this and other language of the decision, it would appear difficult for the Internal Revenue Service or others to argue about the legality of advertising devoted to public interest messages, even though the point at issue in the recent advertising cases has not been action under the antitrust laws but in terms of allowances for taxes, determination of utility rates, etc. When the Supreme Court ruled on advertising cases not too long ago, it held that lobbying was not to be encouraged; now it seems to have changed its mind.

It is narrow legalism to argue that lobbying and discussing public issues are essential to the operation of our kind of society, and then, to restrain or hobble such discussion by penalizing it in terms of tax reprisals.

A Thorough Search Would Surely Find Negro Musicians Capable of Playing in the National Symphony Orchestra

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. POWELL. Mr. Speaker, the manager of the National Symphony Orchestra, Mr. Raymond F. Kohn, was quoted in the Washington, D.C., Afro-American on March 4, 1961 as follows:

> There cannot conceivably be a color line in the National Symphony.

Mr. Kohn then outlined to the reporter of the newspaper, Don Harewood, the procedure used for auditioning new talent. He said:

> We hold two types of auditions annually. First we notify the union (Local No. 161 of the American Federation of Musicians) that a vacancy or vacancies exist.
>
> If we are unable to find talent locally then our personnel director sends out a call to music schools, colleges. They are requested to recommend persons who it is felt can meet our qualifications.
>
> Sometimes even the orchestra members recommend people whom they know.
>
> There is one primary requisite for an applicant who desires an audition. He must have a repertoire.
>
> This means that the applicant must have some knowledge of the symphonic standards, i.e., Bach; Beethoven; Tschaikovsky, etc.

He added:

> Why, we even have a contest every year, the Merriweather-Post Contest, which is open to all.

If it is simply a matter of not being able to find a competent Negro musician, and not a matter of bias reinforced by hiring only through a Jim Crow local of the American Federation of Musicians, then there is a simple solution. That solution is to make a more thorough search.

Because I am confident that competent Negro musicians can be found who will add luster to the National Symphony Orchestra I hereby offer my own services in an effort to find a Negro instrumentalist for the orchestra.

The National Symphony Orchestra should represent to all the world our high standards and aspirations as a nation and as a people, and our part in and contribution to Western civilization.

The National Symphony Orchestra has represented this Nation on its tours abroad under the sponsorship of the Department of State and as part of the President's program for cultural exchange which is financed by taxes which are paid on a nonsegregated basis.

That the National Symphony Orchestra does not have a single Negro instrumentalist in its ranks despite the vast

contribution of the American Negro to our Nation's musical culture, a contribution which is universally acknowledged by people of all nations, is a matter to be deplored.

Top Government officials have shown deep concern in the case of the nonreferral of Negroes to employers and contractors working on Federal buildings or holding Federal contracts.

Surely, the fact that there has never, in the entire time that the National Symphony Orchestra has been in existence, been even one Negro employed by this musical organization should also be a matter of public concern.

The National Symphony Orchestra has been included in the budget for the first time, and Members of Congress will soon be asked to appropriate funds to it. These funds are small in amount, and far from what a city the size of Washington should be contributing to its orchestra if we are to judge by what other American cities contribute.

But, in any event, the National Symphony Orchestra and the Board of Commissioners of the District of Columbia should come to the Congress with clean hands and, especially, in view of the worldwide interest in what we as a people do about solving our own problems of bias and prejudice, they should make an honest attempt to end the longstanding bias of the National Symphony Orchestra against Negro musicians.

I include, as part of my remarks, the article from the Washington Afro-American to which I have referred:

NATIONAL SYMPHONY PLAYS WAY OUT OF TUNE ON HIRING POLICIES SAYS REPRESENTATIVE POWELL

(By Don Harewood)

The National Symphony Orchestra of Washington, D.C., has been accused of racial discrimination in its hiring policies by Representative ADAM CLAYTON POWELL.

Calling attention to the "undemocratic and employment policies persisted in by the orchestra," Representative POWELL introduced a bill, H.R. 4348 to establish a Commission on the Cultural Resources in the Nation's Capital, and to provide a comprehensive plan for the effective utilization of such resources without regard to race or color.

Exactly 8 days later, the Young Democratic Club of the District of Columbia likewise called for an end to the "whites only" hiring policy of the National Symphony Orchestra.

The National Symphony, however, has strongly denied any discrimination in its hiring policy.

In an interview with an AFRO reporter Mr. Raymond F. Kohn, manager of the National Symphony, was asked, "Is there any discrimination in your hiring or employment policies?"

Mr. Kohn declared, "There cannot conceivably be a color line in the National Symphony."

Mr. Kohn was also asked, "Have you ever hired personnel through Local No. 710 of the American Federation of Musicians?" (This is the segregated musicians' union for colored musicians in the District.)

Mr. Kohn exclaimed, "Do you know that I have never heard of local 710 until recently."

Mr. Kohn then outlined the procedure used for auditioning new talent. He said, "we hold two types of auditions annually. First, we notify the union (Local No. 161 of the American Federation of Musicians) that a vacancy or vacancies exist.

"If we are unable to find talent locally then our personnel director sends out a call to music schools, colleges. They are requested to recommend persons who it is felt can meet our qualifications.

"Sometimes even the orchestra members recommend people whom they know.

"There is one primary requisite for an applicant who desires an audition," he continued. "He must have a repertoire.

"This means that the applicant must have some knowledge of the symphonic standards, i.e., Bach; Beethoven; Tschaikovsky, etc."

He stated, "Why, we even have a contest every year, the Merriweather-Post contest, which is open to all."

Then, with a puzzled expression he asked, "Why hasn't local No. 710 made an inquiry of the National Symphony? Why have they not come forth?"

The Afro also contacted the president of local No. 161 of the American Federation of Musicians, a Mr. Kaufman.

This local, along with local No. 710, was mentioned in the resolution passed by the Young Democratic Club of the District of Columbia.

Mr. Kaufman said flatly that certain sections of the resolution had no basis in fact. "If a qualified colored musician came up he would be accepted," he told the Afro.

"We do have a contract with the National Symphony Orchestra which is not exclusive, and it is not restrictive since all hiring is done on the basis of qualification of the applicant," he said.

When asked whether or not a nonunion musician who applied for an audition would be allowed to join the union, Mr. Kaufman said "No."

Later, the question was put to him in this manner: "if a man who through his own initiative and aggressiveness, though not a union member, managed to secure employment with the National Symphony, would he then be permitted to join the union?

Mr. Kaufman said, "under those conditions we would accept him. But in the last 6 years not one colored person has made application for an audition."

This last statement, however, would appear to contradict information supplied by Howard Mitchell, music director and conductor of the National Symphony Orchestra.

Mr. Mitchell informed Mr. Kohn that he had auditioned a colored cellist in New York last year, but that he did not have a repertoire at that time and failed to qualify.

District residents remember Mr. Mitchell as the man who led the fight against the DAR which opened the way for colored performers to appear on the stage of Constitution Hall.

Mr. Mitchell also invited Dr. Warner Lawson to direct the National Symphony Orchestra in January 1955 and several times since.

In addition, he has appeared with the National Symphony Orchestra and the Howard University Choir on numerous occasions.

The Unification of Italy

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mrs. KELLY. Mr. Speaker, the liberation of Italy from the yoke of alien rulers and its unification in 1861 is one of the great events of 19th-century European history. It marked the culmination of the fight for freedom which the people of Italy had carried on for centuries against their foes. Until the historic and memorable year 1861, Italy was divided among her conquerors and lay prostrate at their feet. In the 1850's most of the country was under the Austrian monarchy, and all earlier efforts on the part of the people of Italy to free themselves from foreign domination had been unsuccessful. But when they renewed their war for freedom in 1859, they had France as their ally, and they were most ably led by three great Italians Victor Emmanuel, Cavour, and Garibaldi.

In the war Italy was victorious, and in the subsequent peace her freedom assured and independence recognized. By early 1861 all liberated provinces had joined hands, and by proclaiming Victor Emmanuel as their king they founded the Kingdom of Italy. That was exactly 100 years ago, the centenary of which is being celebrated throughout Italy and in all parts of the free world. I am indeed happy in joining this great centenary celebration on the 100th anniversary of the unification of Italy.

District 102 Raises Teachers' Pay; Denounces Federal Aid

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. MICHEL. Mr. Speaker, with all the controversy over pending legislation to provide Federal aid to education, I cannot help but take special note of an ordinary news item in the Pekin Times covering the activities of one of our local school boards in my district. School Board District No. 102 embodies the North Pekin and Marquette Heights area in Tazewell County, Ill.:

DISTRICT 102 RAISES TEACHERS' PAY; DENOUNCES FEDERAL AID

(By Edith Ladick)

MARQUETTE HEIGHTS.—School Board District 102 of North Pekin and Marquette Heights, at its meeting Thursday night, passed motions granting the superintendent of district 102, whose salary is for 12 months, a $500 increase in pay; the principal at Georgetowne Junior High School, whose salary is for 11 months, a $200 increase; and the principal at Marquette School, whose salary is for 10 months, a $400 increase. Jack O'Hara, education chairman, pointed out that the difference in the two principals' salary was due to an increase in the classroom load at Georgetowne, plus an intensification of the curriculum at Georgetowne.

A motion was also passed granting degree teachers a $15 increase; nondegree teachers, a $75 increase; and adding 3 more years' increments pay to degree teachers, who previously received increments only up to 11 years' service. Four teachers in the present school system will benefit from this extension.

The maximum pay for a degree teacher will be $5,850 and master degree teacher, $6,075.

Previous to the decision, Charles Kitchell and Mrs. Gebhardt, speaking in behalf of the teachers, stated that the general opinion of the teachers was that the increase in pay should be $200 across the board. They commented that the beginning salaries of the teachers in district 102 compared favorably with other school districts but the salaries of teachers with degrees fell behind. O'Hara stated that he would resist any more across the board increases.

He recommended encouraging the requirement that teachers not holding a degrees and who were under 60 years of age, continue their education toward a degree by attending summer school for one 6-week session each 3 years, or an extension course for 1 semester each 3 years in order to qualify for scheduled salary increases.

The board also answered two questionnaires from the Illinois Association of School Boards. One on State revenues which sought the board's opinion on various taxes. In summary of the answers, the board felt that the Retailers' Occupation and Use Tax is a proper method for supplementing the common school distributive fund in conjunction with present property taxes and that the property tax provides for State contributions and the State distributive fund provides for State contributions. The board members said they believed emphatically that the School Board Association had no business talking about the State of Illinois business and how it gets its revenue, but should confine itself to school business.

The second questionnaire dealt with Federal aid available, joint State and federally financed claims, and opinions on Federal aid. The board took a stand against any form of Federal aid, felt it led to Federal control, and felt no school in Illinois needed Federal aid. However, even though they disapproved of Federal aid for the hot lunch program, the board had to answer the question in the affirmative that they do receive this aid now.

Loans for Nonpublic Schools

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mrs. DWYER. Mr. Speaker, under leave granted to me this date to extend my remarks in the RECORD, I include by request the text of a resolution adopted by the Board of Chosen Freeholders of Union County, N.J., at a regular meeting held on March 16, 1961, which expresses the support of the Board for legislation authorizing a program of Federal loans to private and parochial schools.

The resolution follows:

Whereas the parochial schools of Union County, representing all major religious faiths, and private schools, contribute vastly to the educational welfare, cultural and financial betterment of the county; and

Whereas the parochial and private educational systems of the county are finding it increasingly difficult to finance its operations without assistance from sources other than those already contributing; and

Whereas there are before the U.S. Senate and House of Representatives, proposals that would, if enacted into law, allow for governmental loans to parochial and private school systems, that would permit new construction, expansion, and improvement to said school systems: Now, therefore, be it

Resolved, That this board of freeholders go on record favoring such loans, and be it further

Resolved, That forthwith Senators CASE and WILLIAMS, and Representative DWYER, be informed of the sentiments of this board.

Farm Bureau's Golden Anniversary

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. ROBISON. Mr. Speaker, due to the unfortunate death of my distinguished and respected colleague, the Honorable B. CARROLL REECE, of Tennessee, it has been necessary to cancel a special order that I had for today for the purpose of bringing to the attention of this body the fact that today, March 20, 1961, marks the 50th anniversary of the founding of the American Frm Bureau Federation. Under leave to extend my remarks, I herewith include the address that I had prepared to mark this occasion:

This is a momentous day in the history of agriculture in the United States.

On this day, 50 years ago, in Broome County, N.Y.—one of the four counties in the district I have the honor to represent—the idea that brought forth the great American Farm Bureau Federation was conceived.

Not a single Member of this Chamber today is unaware of the activities of this vast organization, the largest and the only nationwide federation of farmers in the United States. Its membership today is more than 1,600,000 farm families in all States of the Union except Alaska and, in addition, in Puerto Rico.

A half a century ago today, on March 20, 1911, a pioneer, John H. Barron, one of the first county agents in northern United States, went to work in Binghamton in Broome County to open an office for what then was the farm bureau of the Binghamton Chamber of Commerce. The word "bureau" had its inception in the fact that the Binghamton Chamber of Commerce had other bureaus—a traffic bureau, a manufacturers bureau, and several other subdivisions similarly named. Thus, the farm bureau.

Back of this activity by the Binghamton Chamber of Commerce was the interest of its secretary of that day, Byers H. Gitchell, who had become convinced his organization should have a department or division devoted to the promotion of the interests of agriculture in surrounding areas.

Mr. Gitchell was motivated by a belief that farming is basic and very closely interrelated with urban and suburban areas. His vision and his agitation bore fruit.

He was joined by, among others, George A. Cullen, who then was traffic manager and industrial agent for the Delaware, Lackawanna & Western Railroad, now the Erie Railroad.

The original operation of farm bureau was sponsored jointly by the chamber, the railroad, and the U.S. Department of Agriculture. At the time the New York State College of Agriculture was unable to contribute financially, but gave freely of advice and encouragement.

These were the horse-and-buggy days and Mr. Barron wheeled up and down the muddy roads of his district, acquainting himself with problems of farmers, helping, coordinating their interests and activities, giving farm demonstrations. When farmers began coming to his office, he appointed community leaders who then organized meetings in local farming communities. He organized study clubs.

From this sprung the largest farm organization in the Nation—representing three out of four organized farmers in the country.

Not long after Broome County became organized, other counties followed. Five more farm bureaus were organized in New York State in 1912. Thirteen more followed in 1913. Growth continued. By 1918, a total of 55 New York counties had farm bureaus.

Meanwhile, other areas of the county had become active. In middle 1912, Pettis County, Mo., organized a county group of farmers that was the forerunner there of the Missouri Farm Bureau Federation. In Illinois, the DeKalb County Soil Improvement Association was formed at about the same time.

By 1913, the Broome County Farm Improvement Association had been formed, taking over all of the farm activities previously centered within the chamber of commerce. The new organization took on the working name of the Broome County Farm Bureau. Friendly relations with the chamber continued, but henceforth farmers took over complete control of their affairs.

This pattern of greater local farm responsibility spread rapidly. The emergency of World War I, with its message of, "Food Will Win the War" echoed throughout the land, and agriculture took on a renewed importance. The farm bureaus of the day responded magnificently.

As the county farm bureau evolved, the question of control received much thought and attention. So long as State and Federal funds made up a large portion of financial support, there remained a question of control by the state college of agriculture.

The aim was to advance farm bureau to the point that county appropriations and farm bureau membership dues would make up a larger and larger share of the expenses involved.

It is a tribute to the men and women of a half a century ago that they had the vision, the spirit of freedom and the will to recognize that only an organization free from government could indeed be a true representative of the farmer.

It is interesting to note that by 1917—only 6 short years after an idea had been born in Broome County—a State federation of farm bureaus was born in New York State. By 1918, the State Federation of the New York Farm Bureau had four standing committees—one on legislation, one on organization, another on education, and a fourth on markets and transportation. Problems of that year were the sale of wool, labor, power ditchers, the shipment of wheat, and liberty loans.

In 1919 the New York State Farm Bureau Federation took the initiative and called together farm bureau representatives of 12 States to meet at Ithaca, the home of Cornell University. The purpose of that conference was to advance a proposal that a National Farm Bureau Federation be organized.

The stated purpose of that first 12-State meeting is interesting:

"1. To provide the Nation with a strong Farm Bureau organization thoroughly representative of agriculture which might speak for the farmers of the entire country.

"(2) To develop and carry forward a program which would reach the entire country and which would bring into action the strongest farmers of the country."

An outgrowth of that Ithaca meeting was the appointment of a committee of five to

push forward the idea of a national federation.

On November 13 and 14, in 1919, at Chicago, representatives of 31 States formed a temporary American Federation of Farm Bureaus. The original problems of a nationwide federation were obvious. Never before had all of the diverse elements of agriculture attempted to unite under one mantle.

Very properly, questions were deep and searching, but overshadowing all else was the real possibility of creating a great, new national farmers' organization on a basis different from anything which had been before. Here in their grasp delegates saw a degree of strength and solidarity never before possible. Here was a sleeping giant that might be awakened.

There were about 500 delegates at that first meeting in the Red Room of the LaSalle Hotel in Chicago. The atmosphere was tense, expectant.

After much discussion and not little argument, the delegates decided to form a nationwide organization to be called the American Farm Bureau Federation. The first president was James R. Howard, of Marshall County, Iowa, a tall, angular man who knew well the problems of agriculture. He had been born on the same farm he then operated.

Nothing better illustrates the vision of American farm families than the membership report of the first annual meeting of the American Farm Bureau Federation at Indianapolis in 1920. At that meeting, the secretary reported a paid-up, voluntary membership of more than 800,000.

Since those early days, there has been a tremendous growth in this great federation, all of it under the leadership of the illustrious presidents who followed Mr. Howard: Oscar E. Bradfute, of Ohio; Sam H. Thompson, of Illinois; Ed. O'Neal, of Alabama; Allan B. Kline, of Iowa; and the current president, the sixth president, Charles B. Shuman, of Illinois.

All of these men played vigorous roles in leading agriculture, in giving it a voice that must be heard even as the number of farmers declines.

Along the line there have been many outstanding State Farm Bureau presidents, among them the present president of my own New York State Farm Bureau, Donald F. Green, fruitgrower of Chazy, N.Y. Much of the progress of the entire Farm Bureau effort can be traced to State leaders like Mr. Green. I am sure other Members of this Chamber can point with equal pride to their own State farm bureau presidents as men who represent the good and the solid in agriculture of these United States.

Over the last half century, a great organization has come to life and has developed as an independent, voluntary—and I stress the word "voluntary"—federation of farm and ranch families associated to safeguard and promote their enlightened self-interest in a manner consistent with the general welfare.

It is an organization that is typically American. Members join and pay dues voluntarily to finance the Farm Bureau program. Members develop the policies and program through democratic process and majority decisions. Members have equal rights to make proposals, discuss, debate, and vote on issues. Members elect leaders from their own group.

Farm Bureau is local, national, and international in its scope and influence, and is nonpartisan, nonsectarian, and nonsecret in character. Its main offices are in Chicago and it has a Washington office. In addition, a foreign trade office has been opened in Rotterdam, the Netherlands, to promote the sale of American farm products overseas. This office is totally supported by membership dues.

Recently, the American Farm Bureau Federation has organized the Farm Bureau Trade Development Corporation to strengthen its private trade efforts. The Farm Bureau also has recently organized the American Agricultural Marketing Association, an organization designed to help farmers market their products.

Most of us here are familiar, I am sure, with the booklet of annual Farm Bureau policy resolutions. This booklet is the work of thousands upon thousands of farm families from nearly 2,700 counties in this Nation. Annually, these farm families start policy development at the county level. From there it moves up to the respective States and, finally, to the annual meeting in December of the American Farm Bureau Federation which regularly attracts more than 5,000 farm men, women, and young people. At this convention, the delegates, elected by farmers of their own States, thrash out issues, argue, give and take, much as we do here.

Finally, the policies emerge, hammered out in the most democratic way.

Perhaps the most succinct statement of the Farm Bureau position can be stated in the words of Mr. Shuman, the Illinois farmer who now heads this great organization:

"Our goal," he says, "is to serve the best interests of agriculture from an overall standpoint and to do so on a basis consistent with the national interest.

"A major objective of Farm Bureau policy is to create conditions which will make it possible for farmers to earn and get high per-family real incomes in a manner which will preserve freedom."

If we listen carefully to Mr. Shuman's words we easily will see that he doesn't mean to try to make farmers prosperous by the use of tax money. He believes, and strongly, that the way to real prosperity for agriculture is not the control route, but the avenue of decisions freely made in a free atmosphere without the shackles and chains of a Federal bureaucracy.

I have, with pride, traced the history of a great organization whose birth was in Broome County, N.Y. It was a noble idea. It is being well executed.

During next November, the New York State Farm Bureau will observe the 50th anniversary year by holding its annual meeting in Binghamton, in Broome County. This will bring together many farm leaders to observe a half century of solid progress. It is an event to which I am looking forward with great pleasure and pride.

Farm Plan Adds to Confusion

EXTENSION OF REMARKS

OF

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. ANDERSON of Illinois. Mr. Speaker, last week the President sent a farm message to the Congress. It was another example of this administration's attempts to persuade the Congress that it should abdicate its constitutional role as one of the coordinate branches of our Federal Government whose responsibility it is to legislate. The type of thinking that has produced this fantastic proposal that farm legislation is no longer within the province of the Congress is not far removed from the thinking of those who would like to see a Chief Executive rule by decree. Under the leave that was given to include extraneous matter I wish to insert at this point an editorial from the Rockford Morning Star of March 17, 1961. I think that it provides an excellent, short analysis of the compounded chaos that would result from the adoption of such a program. It also points up the fact that it would place the Congress in a purely negative and subservient role. The farm problem is our No. 1 domestic problem, and we should get on with the job of providing a solution. The President's farm message is not a solution but a demand that the Congress surrender its rightful responsibility.

The editorial follows:

FARM PLAN ADDS TO CONFUSION

President Kennedy's latest farm plan would greatly multiply the confusion and problems that government meddling has heaped on agriculture. The President, whose efforts to try to deal with the farm problem have been a series of starts and stops and jumps this way and that, has sent Congress a complicated program which could send segments of agriculture moving off in all directions and stumbling over each other.

On the surface, it may appear that the President would have the farmers write their own ticket and that would be it. But there is a good deal more to his proposal than that. Congress would step out of its management role in the Government farm program and delegate to the President and Secretary of Agriculture broad powers to deal directly with farmers in drawing up and putting into effect programs designed to raise farm income through more Federal subsidy and indenture the farm economy with more controls.

Under the Kennedy plan, farmer advisory committees would be created to work with Secretary of Agriculture Freeman in formulating separate programs for individual crops and for livestock. Once a program involving controls was drafted, it would be submitted to affected producers in a referendum. If approved by a two-thirds vote of those balloting, the program would be submitted to Congress. Unless rejected by either House within 60 days, the program would become effective for that segment of agriculture.

Congress could no longer write farm legislation. Its role would be merely to let stand or reject programs put together and approved by the adminstration and farm groups. The programs would include marketing quotas based on bushels, tons, or units of production; Government-financed price supports; deficiency payments; incentive payments; Government purchases of surpluses; and export subsidies. It can be assumed that the administration would see to it that all of these Government props were applied in large measure. President Kennedy and Secretary Freeman have made it clear that they aim to increase rather than decrease Federal controls, even though the President's task force on agriculture has advised curtailment of Government programs that tend to increase production of farm products.

The President's program would fractionalize farm production, breaking it down into groups which inevitably would be working against each other if the plan were made fully effective. The plan would reverse Government policy of trying to encourage diversification and rotation of crops and would benefit primarily the one-crop grower. A farmer producing several commodities might find himself enmeshed in a number of con-

flicting alliances under the various programs for individual segments of agriculture.

President Kennedy apparently doesn't believe the farmers meant it when they rejected the Democratic farm philosophy at the polls last November. He is telling Congress to leave the problem to him and he'll straighten it out—with a Secretary of Agriculture who admits that he knows little about farming or the farm problem.

The Will To Win Pays Dividends—Pollution Can Be Controlled

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. GOODLING. Mr. Speaker, everyone vitally interested in the conservation of our natural resources agrees pure water may well be one of the limiting factors in future economic growth. The annual lowering of the water table in many areas is causing serious concern among scientists.

It is becoming increasingly important that every available means of controlling pollution be employed. Unfortunately, not all segments of our economy cooperate to the fullest extent possible.

In my district of Pennsylvania the P. H. Glatfelter Paper Co. is one of the old established companies in the papermaking industry. Few industries require the amount of water that papermaking does and, by the same token, water used is left in a highly polluted stage. I have personal knowledge that over the years this company has expended huge sums to find an efficient and satisfactory method of controlling, not only water, but air pollution, as well.

In addition to that, the company has been responsible for the planting of millions of seedlings which not only assure a continuing wood supply but also serve as one of the better methods of conserving water.

Industry in general, and the papermaking industry in particular, should be interested in a news item which appeared in the Harrisburg, Pa., Sunday-Patriot-News, of March 19. It once again proves no barrier is unsurmountable if the will to win is the guiding factor. The Glatfelter Co. is to be commended for its contribution to the advancement of pollution control.

The article follows:

GLATFELTER OPERATING WASTE PLANT

SPRING GROVE.—The P. H. Glatfelter Co. has placed into operation a waste treatment plant to provide complete treatment of the mill's waste water, P. H. Glatfelter 3d, company president, revealed last night.

The new facilities, costing more than $1.5 million, will meet the requirements of the clean streams program.

According to Glatfelter, the company is a pioneer in the treatment of pulp and paper mill waste, having had in 1958 a plant to provide complete treatment for one-fourth of its mill waste.

Based on data obtained from the 1958 study, the company received from the State sanitary water board a permit to proceed with the expansion to complete treatment of the entire mill effluent.

The treatment processes resulting from these studies represent improvements over conventional methods and have proved to be of great interest to mills throughout the country that are faced with stream pollution problems, Glatfelter explained.

"The problem has been both gigantic and difficult. The plant discharges 10 million gallons of waste-containing waters daily, each daily discharge containing from 15 to 25 tons of solids," he said. Moreover, it is "oxygen-demanding" or organic waste, comparable in type and quantity to that which might come from the entire city of York.

The Jewish Memorial Hospital and Its New Development Program

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. ZELENKO. Mr. Speaker, in the district which I have the honor to represent is located the Jewish Memorial Hospital. This great institution dedicated to healing has never turned away anyone who has been ill or injured. It is a voluntary hospital supported by devoted humanitarians.

A long-treasured Jewish Memorial Hospital dream was brought several steps nearer to realization when Jesse H. Barkin, president of the hospital's board of trustees, released a public announcement on January 23, 1961 that Milton S. Heller has been named general chairman of a new development fund program that is already in action. The public announcement released to the press and to community, professional, and hospital publications and circularized to the medical staff, read as follows: Milton S. Heller, a director of the McCrory Corp. and Landers, Frary & Clark Co., and a partner in Heller Bros., has been named chairman of a $2 million development fund campaign to expand the bed facilities and other services of Jewish Memorial Hospital, a nonsectarian, voluntarily supported institution located at Broadway and 196th Street. Announcement of this appointment was made by Jesse H. Barkin, president of the hospital's board of trustees.

Mr. Heller, a trustee and vice president of the hospital, heads up a development fund campaign committee consisting of David Schwartz, chairman of the board of Jonathan Logan; Henry Kalman, of the R. & K. Dress Co.; Henry L. Schenk, president of the Trade Bank & Trust Co.; Marvin Kratter, of the Kratter Corp.; David Dawn, of Alice Stuart; and Drs. Walter Levy and Harry Wallerstein, of the hospital's medical board. Julius Israel, of Regal Knitwear Co., is chairman of special gifts.

Behind this announcement is the story of the earnest efforts by the board of trustees, the medical board, and the administration to evolve the ways and means that would enable the hospital, which has by now grown to the point where additional building is absolutely essential, to provide still more services and facilities for the use of the community. The founders of the hospital, back in 1905, and even those who later planned and brought to realization the present building, understandably could not foresee the growth of the institution that they had established. Nor could they forecast accurately the enormous expansion of the population of the areas that Jewish Memorial Hospital serves: Washington Heights, Inwood, Riverdale, and the Bronx. In terms of numbers, the estimated population of these communities totals approximately 300,000 people.

The result of this growth has been such that the hospital has for years had the recurring problem of how to enlarge its facilities to provide the necessary services called for by its growing importance in the community. After the research laboratory building was completed and other structural modifications made to keep up with the growing needs, there still remained the increasing need for more beds, more facilities, more hospital services.

For years, the board of trustees have been studying this problem. One plan after another was evolved, with each having to yield either because the requirements continued to grow or the costs seemed prohibitive. With every major step, approval was needed from city and State agencies. Consultations were held with architects and builders.

As a background to all of this effort, there was the ever-present phenomenon of steadily rising building and maintenance costs. In past years, a portion of the funds raised from the annual dinner and from the souvenir dinner journal could be set aside to be applied at a later date toward new construction. Today the steeply rising costs are such that the moneys now raised by the hospital barely cover the annual maintenance deficit.

During 1960 the board of trustees took the serious step of approving a building program that would take care of the hospital needs for the reasonable foreseeable future. Present plans, while not complete or definite, are designed to provide for: Forty-eight additional beds, four major operating rooms, anesthesia induction rooms, plaster and fracture operating room, cystoscopic X-ray operating suite, central supply and sterilization unit, new medical library and conference room, and an entire new intergrated maternity unit. Also four new nursery suites of 10 basinets each, a new suspect nursery, a 4-bed isolation nursery, a new formula preparation room, and a new circumcision room.

In addition there will be two patient-guest lounges, a doctor's rest and locker room, a doctor's conference lounge, two nurses' rest and locker rooms, and three

new treatment and examining rooms. The plans provide for new and enlarged clinics in rehabilitation medicine and mental health. Also included is an obstetrician's lounge and sleeping quarters and many other auxiliary service units.

The cost of these additions is now estimated to be in the $2 million range.

To raise these funds, the board thought it desirable to approach first its own trustees and medical staff. From these sources there was pledged a total of close to $300,000. However, the anticipated costs are such that it now becomes absolutely indispensable to go beyond the confines of the Jewish Memorial Hospital family. It becomes imperative to appeal to the communities for their philanthropic support.

The development fund will be used to increase the inpatient facilities of the hospital by 45 beds, enlarge and integrate its maternity unit, add operating rooms, expand the rehabilitation department, provide additional library space and increase the hospital's community and outpatient services particularly in its growing mental health and geriatric departments.

The development fund campaign is enlisting the community leadership of Washington Heights, Inwood, Riverdale, and the Bronx. These, among the most rapidly growing areas of New York City, are all served by Jewish Memorial Hospital as a community hospital.

Louis Miller is the hospital director. Seymour Ardam, formerly with the Albert Einstein College of Medicine, Yeshiva University, has been named as coordinator of the development fund campaign.

With this in mind, the development fund committee under the leadership of Milton S. Heller engaged a fundraiser and program coordinator. Seymour Ardam, the man selected for this important post, brings with him many years of experience with the Federation of Jewish Philanthropies, The United Jewish Appeal, and the Albert Einstein College of Medicine of Yeshiva University.

Along with the development fund committee of the board of trustees, a medical staff division of the development fund committee has been set up under the chairmanship of Drs. Harry Wallerstein and Walter Levy. Drs. Herman Cohen and Meyer Karsh of Riverdale; Drs. Milton Klein and Sol Schifrin of the Bronx; and Dr. Herbert Zerner of Washington Heights, will serve as cochairmen of their respective communities.

Also a general community division is being organized under the chairmanship of C. William Borchers, president of the North Side Savings Bank. Functional committees are now being set up in the Bronx, Riverdale and Washington Heights. Through the efforts of Mr. Borchers, chairmen for these communities have been appointed. They are: for the Bronx, District Attorney Isidore Dollinger; for Riverdale, Commissioner Francis J. Bloustein, vice chairman of the New York City Planning Commission; and for Washington Heights, Floyd Cramer, president of the Washington Heights Savings & Federal Loan Association.

Many prominent civic and industrial leaders have indicated their interest and support of the program by enlisting as members of the development fund committee. The manner in which these civic-minded leaders have responded to Mr. Borchers' request indicates that the public realizes the need for the development and growth of the hospital as an absolute necessity. The campaign promises to be hard and demanding, but its goals are also challenging and inspiring.

How Many Judges?

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. SCHERER. Mr. Speaker, shortly the House will be asked to pass legislation creating additional Federal judgships. I would like to call to the attention of the House an excellent editorial in the March 3 issue of the Cincinnati Enquirer, entitled "How Many Judges?"

Respect for the Federal judiciary must be one of the bedrocks of our National Government. We have seen in Cuba dictator Fidel Castro make laws to suit himself, and then displace judges until he found men willing to do his bidding.

The first real fracture of public confidence in the New Deal as administered by the late Franklin D. Roosevelt developed when he attempted, unsuccessfully, to "pack" the Supreme Court.

And in later years, various neopolitical decisions of the Federal judiciary have done much to erode general respect for the Nation's courts. The Democrats were in power for 20 years—virtually a generation—and during that time there was a sizable turnover in Federal judgeships. Democrats were not invariably chosen to fill vacancies, of course, but it was the exception when they were not. And in some conspicuous instances, the appointments went to individuals who were patently Democrats in their thinking, whatever political label they may have worn superficially.

This was not good for the country. It was a disservice to our scheme of balanced government.

And now it appears that the harm will be compounded, because the need for more judges to handle the increased workload of the Federal judiciary became acute during the Eisenhower administration—and a Democrat controlled Congress turned its back on the need until a member of the party could be installed in the White House to make the selections.

Originally, President Eisenhower asked for 40 additional judges. He even offered to name 20 Democrats and 20 Republicans. But Congress, in hopes of a Democratic victory last November, simply kicked the request around until adjournment.

Now President Kennedy has asked for 59 more judges. The Senate Judiciary Committee—which had trimmed the Eisenhower request to 25—said, "No, let's make it 69." The Senate itself said, "Let's make it 73." Meanwhile, an influential Member of the House predicts that by the time that body gets through with the bill, it will call for at least 100 more judges.

We hope the public shames these patronage grabbers, for that is what they are.

The need for additional judges is unquestioned. Yet each appointment represents a lifetime job paying $22,500 to $25,500, and in many States, if not most, the influential politicians—Members of Congress, Governors, or whatnot—will insist upon dictating the choices for the bench. President Kennedy may wish to be fair, as he was fair in the selection of his Cabinet, but he respects the ordinary rules of politics, and a President is scarcely in position to pick and choose the entire Federal judiciary personally. He can, however, hold down the number of appointments to reasonable—not political—proportions.

Pesticides, Chemicals, and Pollution

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of CONGRESSIONAL RECORD an address given by Mr. Clarence Cottam, director, Welder Wildlife Foundation, Sinton, Tex., on December 13, 1960, entitled "Pesticides, Chemicals, and Pollution:"

PESTICIDES, CHEMICALS, AND POLLUTION

(Address by Clarence Cottam, director, Welder Wildlife Foundation, Sinton, Tex.,[1] national conference on water pollution, Washington, D.C., December 13, 1960)

Water, soil, air, and sunlight are the four basic ingredients that make life on earth possible. Accordingly, life is curtailed or handicapped to the extent that any of these basic requirements or substances are made unuseable or unavailable. Because useable water is now in short supply and the demands increasing pollution abatement and clean waters are public necessities. In the past, water conservation and development mainly have been concerned with water volume. Dams, flood control, irrigation, and diversion structures have been installed to transport precious water from areas of abundance to areas of need. With our exploding population increases and constantly expanding industry, it becomes abundantly clear that more consideration must be given to water quality. Water needs can be met only by using the available supply over and over again. We must practice use without abuse. Pollution must be stopped.

CHEMICAL POLLUTANTS AND THE PESTICIDE INDUSTRY

More than half a million organic chemicals have been made and described [2] and new compounds are being developed almost daily. Most surface waters receive a large, variable and anonymous load of organic chemicals whose composition and probable effects are poorly known. Pollutants of soil, water and air are adversely affecting the environment in which our people must live. Pesticides, used with little concern for other values, for an ever increasing part of this complex chemical picture.

[1] Contribution No. 57, Welder Wildlife Foundation.

[2] To save space the 40 reference citations have been deleted.

The introduction of DDT and 2,4–D, in about 1943 to 1945, marked the beginning of a tremendous upsurge in the development of a bewildering array of chemical pesticides. More than 90,000 pesticide products and formulations are now registered under the Federal Insecticide, Fungicide and Rodenticide Act, and a fourfold increase is expected in the next dozen years. Furthermore, and contrary to the public interest and to most advertisements, most new pesticides are decidedly more toxic, generally more stable and less specific in effect than those of but a few years back.

We do not know the total production or consumption of all pesticides. The Stabilization Service of USDA shows that 574,213,000 pounds of technical material of just 15 major chemical pesticides of the 200+ basic control compounds now in use were produced or imported into the United States in 1958. A few other pesticides not listed above include: 2,801,572 pounds of synthetic pesticides; 2,545,565 pounds of organic phosphorus; 5+ million pounds of pryethrum products; 1,816,300 pounds of ryonia; $729,189 worth of rotenone; 93,160,000 pounds of fungicide, 28,346,000 pounds of pentachlorophenol wood preservative; 150,000,000 pounds of herbicides and other millions of pounds of rodenticides.

Well over 100 million acres in the United States are sprayed, dusted or otherwise treated with highly poisonous pesticides annually and at a consumer cost of well over $2 billion per year. Currently, nearly one-fifth of our croplands and millions of acres of forest and rangelands are treated from once to seven or eight times each year with the same or different pesticides in quantities of technical material of a few ounces to more than 20 pounds at each application. Pesticides usually are applied year after year to essentially the same farmland. It seems logical to assume that the potential hazard to wildlife, as well as to people, increases with the pesticide volume applied and the toxicity of the poisons used.

DO THESE CHEMICALS BECOME POLLUTANTS?

There is abundant proof that often there are immediate ill effects upon wildlife resulting from many of the eradication and control programs and that the soil is polluted with some of these toxicants for many years. There also is considerable evidence of serious side effects that are generally overlooked because of the delayed action when highly toxic, stable, and broad spectrum poisons are used in quantity. It should be obvious that the only reason for using any pesticide is that it is toxic to something. There is much evidence that some of these chemical poisons are getting into our water systems and causing considerable loss of wildlife resources. The more subtle, indirect, and long-range effects of these toxicants upon man and his wildlife resources are little known. They could be profoundly important. It is well known that trace elements in infinitesimal amounts can and often do exercise extraordinary influence on life, which seem out of all proportion to their size. "No one at this time can tell how much or how little of a carcinogen would be required to produce cancer in any human being, or how long it would take the cancer to develop." In general these chemicals are undesirable additions to food and water.

PESTICIDES AND WATER PROBLEMS

Pesticide compounds may enter our water supply through direct application to the water surface, by drifting onto the water surface from adjoining treated areas, or by being washed in from the watershed. Detergents, domestic and industrial pollutants have entered water courses and ground water aquifers by being washed into our streams from seepage, cesspools, absorption fields, oxidation ponds used in treating municipal sewage, ponds holding industrial or commercial wastes or by natural and induced infiltration from streams or channels receiving sewage and other waste products.

When large amounts of stable chemical poisons are broadcast over extensive acreages, it is virtually certain that some will get into our public water supplies. They are not readily detected in water. Detergents, known commonly as ABS (alkyl benzene sulfonate) have been found in ground water in concentrations even exceeding those found in surface waters. Studies are needed to determine the presence of pesticides in ground and surface water. More practical, economical and effective means of removing them are needed. Dangerous pesticides already have been found in the major U.S. rivers.

FISH KILLS

Highly toxic pollutants have been found in many smaller streams in nearly all parts of the country, which have resulted in extensive fish kills. Fish and their food organisms have been killed over considerable stretches of streams, and fish flesh has been tainted and made unusable by different pesticides. In the return to a questionnaire from 28 States, covering the 4 months from June through September of 1960, more than 200 reports of individual fish kills were recorded. The number of fish lost varied tremendously in the different instances of poisoning from "a few" to "5 million."

Agricultural poisons (pesticides) accounted for 38 percent of the cases of die off. Another 13.9 percent, undetermined, may largely have been caused by these poisons. Industrial pollution caused 27.7 percent of the loss, domestic sewage followed with 7.7 percent, mining wastes with 3 percent, miscellaneous or other causes 9.7 percent.

The severity or extent of die off was high in most cases of industrial and pesticide losses. In the agricultural or pesticide kills, 8 percent of the cases were not appraised as to severity. The kills of fish in local areas up to 19 miles of stream were listed as complete in 34.7 percent of the cases.[3] Heavy losses were recorded in 33.3 percent, moderate kills in 13.3 percent, and light kills in the remaining 10.7 percent of the cases.

PESTICIDE TOXICITY

While many chlorinated hydrocarbon pesticides were listed as being the cause of the fish kills, endrin is one of those most commonly listed. This is not surprising in view of the fact it is the most lethal pesticide to fish yet developed. Because of its high toxicity, it also is commonly used as a rodenticide and surprisingly too as a pesticide on vegetables and in orchards. Like most chlorinated hydrocarbons, it is a broad spectrum, stable, highly toxic poison. The infinitesimal amount of 0.6 p.p.b. or only 0.005 of a pound of endrin in 3 acres of water 1 foot deep (or 1 acre, 3 feet deep) is sufficient to kill 50 percent of the bluegills in a 96-hour period. Toxicity of the 10 most commonly used chlorinated hydrocarbons to fish tested to date, in descending order of potency, is as follows: Endrin, toxaphene, dieldrin, aldrin, DDT, heptachlor, chlordane, methoxychlor, lindane and BHC. There is some variation in the order of the effects these chemicals have upon birds and rodents, but BHC and methoxychlor are generally the least toxic to terrestrial warm-blooded vertebrates. Shrimp and other related invertebrates are highly susceptible to pesticides.

Runoff from treated areas often is highly toxic to fish. A sample of a domestic water from an orchard area in Pennsylvania was found to be lethal to fish in 4 hours. One pound of dieldrin per acre on a 20,000-acre tract in St. Lucia County, Fla., used to control sand flies, killed some 20 to 30 tons of fish. In New York State sevin, at 1¼ pounds per acre, was found to be devastating to all insect life, but it produced no noticeable direct ill effects upon fish or wildlife. Young and Nicholson found that there was a serious valleywide (TVA) fish kill in 15 streams in 8 counties of northern Alabama, caused by heavy use of toxaphene, DDT, BHC and aldrin to control the cotton boll weevil.

FOREST SPRAYS AND FISH

Spraying an extensive forest area against spruce budworm in the watershed of the Miramichi River in New Brunswick in 1956, at the rate of one-half pound of DDT per acre, produced a 91-percent kill of young salmon. Aquatic insects also were largely wiped out and some of these were not reestablished 16 months later. As expected, an alarmingly reduced adult Atlantic salmon run was noted in 1960 when the 1956 hatch returned to spawn in the Miramichi River system.

In June 1958, some 302,000 acres of northern Maine forest were sprayed with DDT at the rate of 1 pound per acre to control spruce budworms. Loss of trout was moderately heavy. Trout collected 3 months after spraying contained from 2.9 to 198 parts per million DDT. A significant growth decrease was noted in trout in sprayed areas a year following spraying. The population of brook trout was reduced considerably. The most serious effect was on the young of the year.

During mid-June 1957, some 155,000 acres of forest in Vancouver Island, British Columbia, were sprayed with 1 pound of DDT in 1 gallon of solvent per acre to control the blackheaded budworm. Steelhead salmon and trout were almost eliminated. The aquatic insect loss was extreme. Based on this study, it is evident that the safe concentration of this formulation is below 0.05 parts per million.

Spraying of 8,000 acres of forest area in Montana in the summers of 1956 and 1957 with 1 pound of DDT per acre against the spruce budworm showed variable results. In the early winter, 4 months after the area had been sprayed, fish in large numbers were found dying in Yellowstone River 90 miles downstream below the area treated. Some 600 dead and dying whitefish, brown trout, and suckers were noted in 300 yards of stream. DDT was found in these fish. It is interesting that this delayed mortality was most severe with the fall spawners—brown and brook trout and whitefish. The sucker mortality occurred just after spawning. It is apparent that the major loss occurred when the fish were in poor condition and under physiological stress.

THE CLEAR LAKE PROBLEM

That various organisms can store chlorinated hydrocarbons has been demonstrated at Clear Lake, northern California, where DDD was used to control pest midges. Large scale treatment started in the summer of 1949 and was repeated in 1954. In December 1954, about 100 western grebes were found dead and still more succumbed in March of 1955. In 1957, another DDD treatment was made to control the gnats. More grebes died in 1957. Chemical analysis revealed these contained 1,600 parts per million of DDD. Various fish were collected and chemically analyzed and their stored fat showed DDD ranging from 40 to 2,500 parts per million.

In 1958, a further loss of birds occurred. In the summer of 1960, a composite fat sample of 12 California gulls and 5 western grebes contained 2,134 and 1,465 parts per million, respectively, of DDD. These samples were collected 29 months after the last pesticide treatment at Clear Lake, again indicating the high levels of accumulation and the long residual life of this poison in birds. These birds were shot and appeared normal.

[3] A recent pesticide kill eliminated fish for some 200 miles downstream in a Texas river.

An interesting, and I believe profoundly important sidelight, is that although there were at least 30 pairs of summer breeding western grebes at Clear Lake in 1960, no young were produced and none are known to have been produced there since 1957. It is to be remembered that this lake, since the beginning of its recorded history, has been a favored nesting and production area for western grebes. Another note of interest is that plankton collected showed DDD at the rate of 5.3 parts per million.

That the pesticide poison tended to accumulate and concentrate over a considerable period of time, was shown by the fact that almost invariably the older fish contained much more DDD than did the younger individuals, and much more than was in the water. High mortality and reduced reproduction are evidenced from other studies in various States.

GROUND WATER CONTAMINATION

With the amount of chemicals being used, including pesticides and detergents, it seems inevitable that some of these materials ultimately would enter our water courses and even penetrate into the underground aquifers. A number of startling examples already are on record.

Montebello, Calif.: In June 1945, a small plant in Alhambra, Calif., began manufacturing 2,4-D. A batch of the raw material failed to react properly and the chemicals were dumped inadvertently into a sewer. Thence, this waste entered the Alhambra pumping station, passed through the tricities activated sludge sewage treatment plant and was discharged into a mile-long ditch. From here the contaminant traveled some 3 to 5 miles above ground, then seeped into the underground strata from which Montebello, a city of about 25,000 population, obtained its water supply. Within 17 days after the manufacture of the weedkiller started, taste and odor of a chemical used in the manufacture of 2,4-D, dichlorophenol, were noticed in the 11 wells supplying the city. The operation of the plant was stopped within 30 days, yet the taste and odor of dichlorophenol persisted for 4 to 5 years. This case shows the possible longtime effects from wastes even though they were unwisely discharged over a relatively short period.

South Platte River Basin near Henderson, Colo.: This represents another significant case in the serious pollution of underground water. In 1943, the Rocky Mountain Arsenal of the Chemical Corps started to manufacture warfare agents. It appears that sludge from the pond used at the arsenal between 1943 and 1955, to hold chemical waste effluents, is the source of the contamination. Phytotoxic substances in this waste included chlorates and phosphonates. It also appears that other waste substances in the discharge in the presence of air, water, and sunlight caused these waste materials to combine and form 2,4-D as none had been purposely manufactured. The 2,4-D obviously was synthesized in the waste mixture from precursors introduced from the plant operation. There may also be other contaminants.

The first farm crops to be affected were in 1951, indicating that it took 7 to 8 years for the contaminated underground water to travel approximately 3 miles. By 1958, contaminated water extended in an area of several square miles and seriously affected crop production, industry, and the people who had relied on the water for their own culinary purposes and for livestock. The 60-square mile area within this aquifer basin is yet only partly affected. How long this pollution of poisons will last and what total damage yet will result is unknown, but obviously it will be many years before the damage is corrected.

WELLS

The common frothing household detergent, ABS, gives convincing evidence that pollution in shallow ground water is common. Because ABS is not found in any natural substance, its presence in water is evidence of contamination. Frothing is said to occur in concentrations as low as sixtenths milligram per liter.

Housing developments wherein each dwelling is serviced by its individual well and sewage disposal system often invite pollution. Walton, of the Public Health Service, points out that 35 percent of 600 well waters analyzed from Suffolk County, Long Island, N.Y., contained ABS, and it is estimated that there are, or soon will be, some 17,000 ABS contaminated wells in that county. A survey of 54,000 private well waters in the vicinity of Minneapolis and St. Paul showed about 50 percent pollution. Studies from 976 well waters in 13 States showed that 36.6 percent of these contained ABS. There is reason to believe that similar pollution situations are developing in localized areas where stable and highly toxic pesticides have had heavy and extended use and where the soil is comparatively porous and the ground water table is shallow.

CONCLUSION

The enormous and ever growing quantity and kinds of extremely toxic, broad spectrum, stable chemicals used as pesticides throughout America give warning that an objective forward look is necessary. If our people are to receive protection as well as benefit from the mature and safe use of these needed pesticides, there must be more advanced planning and better coordination in the management and use of chemical controls. Dangerous and costly pollution of both surface and ground water with these poisons is inevitable unless effective steps are promptly taken. Because of the nature of the problem, more effective controls must be placed on the distribution and use of dangerous toxicants at the source. This, I believe should include more effective testing, registration, labeling, and distribution of poisons. I am convinced that we need a clearer declaration of national policy by the Congress and by many States regulating the use of pesticides in the broad public interest. More effective coordination must be obtained between agencies and interests directing control and those groups and agencies of State and Federal Government, as well as national and local interests, that are vitally affected by operational programs.

There is critical need for more adequate support of basic research. Many costly mistakes and controversies of the past have been kindled through a painful lack of facts on which to act. Sound research should precede an operational program of control and eradication. Safe limits of toxicants in water is an involved and long-term undertaking, and yet safe and clearly defined standards for water quality are needed. It is essential that public and private forces unite to support a coordinated program of research.

A few additional "needs" include: (1) To the extent possible, use toxicants that are selective that will give reasonable control of a particular pest and do the least damage to desirable forms of life. (2) Rely more on biological and cultural controls. (3) When chemical controls are necessary, use formulations, methods of application, time of treatment, and dosage that will be the least damaging to the biota. (4) Use toxicants that hydrolize promptly and those that can be utilized or broken down by organisms in the soil. (5) Use spot and not broadcast treatment wherever possible. (6) Determine toxicity of runoff and seepage water for different materials, dosages, and modes of pesticide application. (7) Determine the toxicity of the poisons to the various organisms in the environment. (8) Direct research toward side or indirect effects of various pesticides. (9) Develop more specific controls. (10) Study the total environment and its management so that control can be carried on more wisely.

Life Tenure of the Judges of the Court of Military Appeals

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. FOGARTY. Mr. Speaker, the grant of life tenure to the judges of the Court of Military Appeals will accord that tribunal the judicial position demanded by its important functions and its many and heavy responsibilities.

When the Uniform Code of Military Justice was approved by the House of Representatives in 1950, section 67 thereof provided that the judges of the Court of Military Appeals should hold office during good behavior. As it originally passed the House, the bill also contained a further provision to the effect that the court's judges were entitled to enjoy the same powers, privileges, and rights of retirement possessed by the judges of the several U.S. Courts of Appeals. By subsequent action of the Senate, the House's life tenure provision was removed and a term of 15 years was substituted therefor. This term scheme, originating in the Senate, ultimately found its way into the legislation signed by the President.

Title 28, section 451, United States Code, defines "a court of the United States" as "any court created by act of Congress the judges of which are entitled to hold office during good behavior." A similar definition of "a judge of the United States" is contained in this legislation. It would seem to follow, therefore, that a judge of the Court of Military Appeals is not "a judge of the United States," and that the tribunal itself is not "a court of the United States." Thus it will be seen that the Senate's alterations exercised a far-reaching effect on the nature and position of the Court of Military Appeals. Reference to some of the results of this action will be made at subsequent points in this memorandum.

The U.S. Court of Military Appeals heads a judicial system which currently administers approximately one-ninth of the criminal trials of the entire Nation. On the basis of prior experience, it may be predicted with certainty that under total mobilization the military system will administer approximately one-third of such trials. The jurisdiction of the Court of Military Appeals is concerned not with mere property rights, but with the lives and liberties of Americans—principally young Americans—from all walks of life, all segments of society, and

all sections of the land. It was the clear intent of Congress in enacting the Uniform Code to assimilate the administration of military justice as nearly as possible to that of the civilian community. All these factors argue strongly for a Court of Military Appeals which is firmly integrated into the Federal judicial system and which enjoys the authority and position of "a court of the United States."

Life tenure for the Court of Military Appeals will set at rest present doubts concerning the court's powers—and will enable it to perform all of the functions of a judicial tribunal.

As a result of changes in the Uniform Code of Military Justice effected after its initial adoption by the House, it is probable—as has been seen—that the Court of Military Appeals is not "a court of the United States." As a result, genuine doubt exists with respect to the body's power to punish for contempt, if necessary to subpena witnesses, to issue the several prerogative writs, and to perform other necessary judicial functions.

All these powers are enjoyed by "a court of the United States," and their exercise in proper cases by the Court of Military appeals is essential to its status as a Federal judicial tribunal with substantially final authority over the lives and liberties of literally hundreds of thousands of young men and women in the Armed Forces. It will be recalled that the Uniform Code provides for no appeal from the determinations of this court, with the result that—save as to jurisdictional questions—its dispositions are final. It is in every substantial sense a court of last resort in criminal cases, and should possess all of the authority of such a court.

The grant of life tenure to the judges of the Court of Military Appeals will free them from the danger of political and other pressures, regarded by many thoughtful persons as an inescapable peril under a term system.

This reason for a modification in the present tenure provision requires little elaboration. All Federal judges laboring under responsibilities even remotely comparable to those resting on members of the court under scrutiny hold office during good behavior. If, as has been said, a principal reason for this phenomenon lies in a desire to protect against clamor and the attempted use of influence—direct or the reverse—then it is applicable equally to the military system's highest judicial tribunal. In truth, it should be deemed to apply with even greater force—for in no other Federal court is the danger of pressure from organized blocs so great. Potential sources of this special danger are numerous and easily recognizable.

Nothing less than life tenure for the judges of the Court of Military Appeals is consistent with the overall intent of Congress as expressed in the Uniform Code of Military Justice.

It is manifest that, in enacting the Uniform Code, Congress intended to bring the administration of military criminal law into as complete accord as practicable with that obtaining in Federal civilian courts. Inescapable differences were recognized, of course—but it seems certain that the Congress was moved by no slightest purpose to approve their existence in the areas of quality and objectives. In other words, there can have been no wish to relegate to second-class citizenship the members of what is now predominantly a civilian—that is, a nonprofessional—Army, Navy, or Air Force.

The Federal criminal law applicable to nonmilitary people is, of course, administered and supervised by courts whose members enjoy life tenure—and thus have been placed in a climate favorable to the development of a proper independence and the highest sort of judicial integrity. Although the presence of minor differences cannot be denied, nothing in the nature of ultimate protections which are available to Mr. A can with safety be denied to Private B, Seaman C, or Airman D—if the basic objective of Congress in enacting the Uniform Code is to be supported and preserved.

This aim is demonstrated more specifically by the code's provision to the effect that the judges of the Court of Military Appeals shall enjoy the compensation of judges of the several U.S. courts of appeals. And the same legislation provides that if a judge of the former court is temporarily disabled, the vacancy thus created shall be filled by designation of a judge of one of the latter. These determinations would seem to indicate with force that Congress chose to assimilate the bench of the Court of Military Appeals to that of a U.S. court of appeals—the members of which, of course, hold office during good behavior.

Life tenure to judges of the Court of Military Appeals will provide for them retirement and survival-of-dependents benefits like those enjoyed by other judges of the Federal judiciary.

At present the judges of this bench are regarded as members of the Federal civil service, so far as retirement is concerned. Thus they are required personally to contribute toward such benefits—to the substantial reduction of their statutory compensation. If the court is to secure for the future personnel equal in professional capacity and standing to that from which other Federal judges are recruited, it is essential that the members of its bench enjoy similar treatment in this particular. This result would be accomplished by assuring to the Court of Military Appeals recognition as a court of the United States.

Sufficient time has elapsed since establishment of the U.S. Court of Military Appeals to permit reliable evaluation of its contributions to the administration of military law.

Oaths of office were taken by the court's judges in June 1951, and thus the tribunal has been in existence for almost 10 years. During this period it has processed more than 15,000 records of trial by court-martial—and its three members have published written opinions in approximately 1,700 cases. The court has now completed the 11th bound volume of its reported decisions.

In addition, numerous articles dealing with the court and its work have appeared in professional journals, and many of its opinions have been the subject of comment and scholarly evaluation in recent case sections of these same periodicals. In short, there is every reason to suppose that sufficient data are now available to enable the Congress to reach a sound conclusion concerning the quality of the court's personnel and product, and in general the value of its contribution to the military justice scene.

There can be no doubt that the Court of Military Appeals has justified its existence. And if it is worthy of continuation at all as a judicial tribunal of the United States, it fully merits the protections, the powers, and the position enjoyed by comparable Federal courts. It is certain that, insofar as clarification of its powers is desirable, this critical need should be met without delay—and the most effective and economical means for accomplishing this result lie in action according to the body status as a court of the United States. This, in turn, may be accomplished readily by granting life tenure to its judges.

Civilian Conservation Corps—Resolution of Legislature of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. DENT. Mr. Speaker, I call attention to the House to the following resolution by the Pennsylvania State Senate. It was introduced by Senator John J. Haluska, who has served better than a generation in that legislative body. His experience and knowledge of the economy of our State and our Nation qualifies him as both a sponsor and author of this important resolution.

This resolution will give each Member of this Congress food for thought and although we have been toying a great deal with related problems of unemployment, juvenile delinquency, camps, and training centers, it might be a good time for the Ways and Means Committee of this House to give serious consideration to the provisions contained in Senator Haluska's resolution:

Pennsylvania is proud of the many beautiful forests that dot our countryside. No other State can boast of such preserves, but without conservation some day our beautiful woodlands will be a barren area.

The same is true of our water supply. Today it is abundant but without care and conservation we might find ourselves faced with a shortage of water in the future.

A way to solve these problems would be to reestablish the Civilian Conservation Corps which worked so well during the thirties. The creation of this force would not only help our forests and water supply, but it would also aid in the curbing of juvenile delinquency, and the problems of unemployment which we face today; therefore be it

Resolved (the house concurring), That the General Assembly of Pennsylvania memorialize Congress to establish a Civilian Conservation Corps; and be it further

Resolved, That copies of this resolution be transmitted to the Presiding Officers of each House of the Congress of the United States and to each Senator and Representative from Pennsylvania in the Congress of the United States.

Elton B. Stephens Tells Story of How Birmingham Got Its First Big Hotel

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. HUDDLESTON. Mr. Speaker, I wish to insert in the CONGRESSIONAL RECORD the following account of the building of Birmingham's first big hotel. Mr. Elton B. Stephens, a civic leader in Birmingham, gave the account on his retirement as president of the Birmingham Downtown Improvement Association. The article appeared in the Birmingham News on March 13, 1961:

HOW BIRMINGHAM GOT ITS FIRST BIG HOTEL

This very hotel in which we are gathered is constructed not so much of brick and mortar as it is of vision and courage. Substance most needed today if we of this generation are to make the prefix "magic" once more valid as a descriptive adjective of Birmingham.

Let me briefly tell the story of this building, the Tutwiler, because it is significant. It strikes at the innate desire within us all to build, to create, and to perform something in our day and time worthy to be remembered.

This is, after all, our purpose, and perhaps this meeting which will see the election of new officers and board members is the proper time to reaffirm it.

We can draw inspiration from the past and from the Tutwiler because the situation faced by aggressive-minded citizens of the early 1900's is much the same as we face today. The erection of a million-dollar hotel then, is as big as our multimillion dollar plans of today.

NEEDED—A HOTEL TO DIRECT BOTH CAPITAL AND COMMERCE

George Gordon Crawford, then president of the Tennessee Coal, Iron & Railroad Co., realized that a city without adequate hotel facilities was a city not likely to encourage commerce and the influx of investment capital. He dreamed of a magnificent hotel for Birmingham—the best the South would have to offer. He visualized Birmingham, abundantly endowed by nature, as an industrial metropolis, giant among the cities of the Nation and the world.

The old adage "out of sight, out of mind" is a truism of long standing and it is not irregular that Birmingham's growth was to start with a hotel. Crawford wanted speculators, financiers, and the like to take a long hard look at Birmingham's potential during the day, and to enjoy a comfortable night's rest so they could look some more the following day.

First, Crawford contacted Harvey Woodward who had already built the Woodward office building on First Avenue. It was not difficult to sell Woodward on the hotel project. He, being a practical man, envisioned heavy traffic between his office and the new hotel. He also informed Crawford that he was willing to subscribe to second mortgage bonds.

Thus, with this optimistic start Crawford and Woodward enlisted the imaginative genius of our own Mr. Bob Jemison. Actually, I should say Bob volunteered, because in fact that's what he did. Moreover he took over the hardest job—that of raising money. How and where to get it apparently held no fright for him.

MAJOR TUTWILER HAD $1,850,000 AFTER HIS COMPANY'S SALE

Jemison quickly enrolled W. G. Harding, the president of the First National Bank, on the hotel project team, and learned from him that a great Birmingham pioneer, Maj. E. M. Tutwiler, had $1,850,000 in ready cash after selling his interest in the Tutwiler Coal, Iron & Coke Co.

Jemison caught the good major just before leaving for a South American vacation and got his verbal pledge to support the hotel project. On his return from South America, Bob met the major at a New Orleans dock, with affidavits and blue prints in hand, and convinced him on the spot to underwrite $500,000 in first mortgage bonds.

With first and second mortgage bonds secured, Jemison, Crawford, Harding, and Tutwiler turned their attention to the people of Birmingham, and began a street walking marathon unequaled to this day. Citizens were stopped in their tracks on street corners, and trolley stops. Business associates and merchants were taken to lunch. Before they were through, most responsible citizens of Birmingham had contributed something to the hotel project. Over $350,000 in preferred stock was sold by the happy, but footsore hotel promoters.

So construction was begun, and soon the Birmingham skyline was silhouetted by a magnificent new building.

(Would it be hard to conceive of ourselves going about a task with such drive, energy, and enthusiasm today?)

The Tutwiler story should have ended here for local gentry had accomplished a tremendous job, and had exemplified great community spirit. But it didn't, cruel fate intervened not once, but many times, and in many ways.

BUSINESS CONDITIONS GAVE THE LESSEE COLD FEET

Some of the trials and difficulties the hotel promoters and community endured before the hotel settled into solvency I will enumerate. As I go along, perhaps you may compare in your own mind the dogged courage of this generation with that of our own.

First, after an investment of $1 million the lessee withdrew his commitments. As originally agreed, he was to furnish the building, but economic conditions across the country were worsening and the $400,000 required to equip the building gave him a case of cold feet. Finally, after an exhaustive search a New York hotel chain agreed to operate the Tutwiler, but only on the condition that three upper floors be completed, a powerplant and laundry installed, and other details attended to. All these were to be completed after the hotel began making profits.

Now it was necessary to raise an additional $250,000, a problem as perplexing if it had been $2 million for, let me remind you, these were the days when the expression: "Buy a bale of cotton, 10 cents," was common.

Fortunately, a young attorney, Bew White, Sr., had just arrived from 6 years of experience with a New York law firm. He rallied to the aid of the hotel directors by outlining a plan that called for the underwriting of third mortgage bonds, with installment payments, which could serve as sound collateral if signed by responsible subscribers.

Needless to say this was a rather new idea back in 1913.

So once again the great street walking marathon started anew, and once again the people of Birmingham responded and absorbed the third mortgage bonds.

FIRST THE WAR, THEN ICE CREAM PARLOR DAYS

In June 1914, the hotel was opened to the public and the dream of its originators seemed fulfilled, but also in that year, the world was plunged into a world war making the operation of the hotel as originally anticipated, impossible. Then on January 29, 1919, prohibition struck, and the Tutwiler's elaborate bar which had realized most of the hotel's profit was, overnight, changed by law, into the world's fanciest milk and ice cream parlor.

The Nation's teetotalers had, it seemed, finally toppled the Tutwiler.

The New York hotel chain also developed cold feet and disposed of its lease rather unethically to Mr. Louis J. Dinkler of Atlanta.

Fortunately, Mr. Dinkler was a stouthearted person. He weathered a threatened $1 million foreclosure to the Metropolitan Life Isurance Co., and for a while sustained heavy financial loss.

This was, at last, the end of a seemingly endless succession of troubles.

Excuse my being poetic, but the Tutwiler stands today, as a monument to the pioneer citizens of our metropolitan community.

Hated Colonialist Termed Africa's Best Friend

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mrs. GRIFFITHS. Mr. Speaker, as Judd Arnett, of the Detroit Free Press, continued his tour of Africa with G. Mennen Williams, Assistant Secretary of State for Africa, his articles reflected an acute understanding of the problems, incidents, and people he was observing at firsthand. His dispatches displayed not only his ability to report facts, but also the ability to cut beneath the surface of the problems:

HATED COLONIALIST TERMED AFRICA'S BEST FRIEND

(By Judd Arnett)

DOULA, REPUBLIC OF CAMEROUN.—This is being written from the patio of a rather posh hotel. It would be easy to mistake this oasis for a tender tourist trap in Miami Beach or San Diego were it not for a few distinctive African touches.

For one thing, it is oppressively hot and muggy. At 9:30 a.m., the white man's lingering death has set in; clothes stained, and feel like wet burlap.

A few hundred yards away there is a swath of jungle, and yellow fever is brewed there. No place for Bwana, this.

Then, too, a large, dun-colored lizard just slithered up. Now he is flattened against a wedge of concrete, awaiting the unwary fly. He will eat the fly. Eventually something will eat the lizard. Then something will eat the something. Living off itself, Africa marches on.

How far it will march in the years ahead is anybody's guess, and opinions vary from the pessimistic (me) to the optimistic (the Honorable "Soapy" Williams).

Incidentally, at the moment the Governor is out shaking the hands of 600 students at College Joss. If they ever arrange things so he can run for public office out here, he will sweep all precincts.

Basically, my pessimism extends from the fact that I have taken a look at the remnants of African colonialism and find them good. In large part, I agree with what the British have done in east Africa and the French here.

This will set the dogooders clamoring for my pelt. But there is one highly important facet of this argument that stumps those who pant in favor of the rather tinny nationalism now prevalent; who, or what, fills the void left by the departing colonialists?

Yesterday we took to the bush, driving the jungle-bordered road that leads from Douala to Edea, an inland port served by a serpentine river straight out of the pages of "The African Queen."

In Edea, we toured the largest industrial complex in the Republic of Cameroun, an aluminum plant built 4 years ago with French capital. It has enjoyed financial success, partly, no doubt, because of cheap hydroelectric power and low-priced labor.

So—you may be saying—a sweatshop within the hotbox of equatorial Africa. True, by American standards, for the average wage is only about 30 cents an hour.

But by African standards, this was one of the brightest spots in what has otherwise seemed a grim economic picture, for the workers are well housed, well attended, and well schooled and the company (called ALUCAM) picks up the tabs.

Moreover, an effort is being made to upgrade African labor through training programs, and each year approximately 10 more natives advance to the management class, replacing Europeans.

As they go up the ladder, their pay and accommodations improve. This is capitalism at work—colonialism at its best. Africa could use a good deal more of it.

Later we visited the "Exploitation du Cameroun," a rubber plantation developed with painstaking skill with French capital. Again we found the Africans living far above the average level, with better housing and opportunities for education and advancement.

The question as this country joins the rest of Africa in the great, pulsating experiment of nationalism: How long will it be before the creators of the aluminum plant and the growers of rubber trees are sent packing, victims of this superb nonsense called Africa for Africans? Already, there are pressures against ALUCAM.

Throughout the Africa I have seen, many capital investments encouraged by colonialism have been withdrawn in the face of the wave of fervor against the white man.

Moreover, little new capital is coming in. In the Republic of Cameroun, for example, there has been no new American private investment of consequence this past year.

The departure of civil service workers, professional people, technicians is causing problems.

Some of us look upon Tanganyika as one of the more hopeful spots. If that sweet little country does not make out in the years to come, there is small hope for its less advanced neighbors.

Yet, Tanganyika has only one African lawyer, who does not practice. It has no qualified native doctors. It needs skilled help in every conceivable category. Yet despite its plight it is in better shape than its sister republics.

The trouble with Africa is that it is regressing as the colonialists retreat. It will take years for this continent to recover the economic footing it had when there was a welcome place for the whites.

Since private capital is understandably, discouraged, what is to take its place?

The answer is obvious. That's where you fit into the picture, dear American taxpayer. Your money must fill the void. You must run the risks of investment under the cloud of nationalism, with no assurance that your gifts, or loans, will earn you political fidelity in return.

You don't like the odds? Well, there are always the Russians. That's the fix we are in these days as the tempo of the cold war picks up on the Dark Continent.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (JAN. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Wiley-Dodd Interview on Communism

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. WILEY. Mr. President, communism continues to be the No. 1 threat to our security. For the future, we can expect that the growing power, economically, as well as militarily, of the Soviet bloc, will present an even greater threat, not only to the security of the United States, but to the survival of freedom in the world.

To cope with such broad-scope dangers, we need realistic policies at home and abroad.

Recently, I was privileged to discuss highlights of the Communist challenge—particularly as these relate to our internal security—with the distinguished vice chairman of the Senate Internal Security Subcommittee, the Honorable THOMAS J. DODD, in a radio-television program. I ask unanimous consent to have excerpts of the interview printed in the Appendix of the RECORD.

There being no objection, the excerpts were order to be printed in the RECORD, as follows:

WILEY-DODD URGE GREATER CITIZEN ACTION PROGRAM TO COMBAT COMMUNISM

Senator WILEY. The Nation—now and in the future—must keep alert to guard against threats to its security at home and abroad. On global and domestic fronts the Communists—deadly enemies of freedom—pursue their goal of world conquest. How? By aggression, subversion, sabotage, infiltration. What tactics do they use? All kinds: Open and secret, legal and illegal, ethical and unethical, humanitarian and geneocidal.

Confronted by this great, and growing, threat to our survival, we need a strong security system, internally and externally, to parry, and counter, the deadly thrusts of this enemy at the heart of America. In the face of a Red enemy, constantly probing for weak spots in our system, however, we need to further strengthen our internal security efforts, as well as to be better educated about, and armed against, overall Communist threats to our security.

At this time, we are privileged to welcome to the program the Honorable THOMAS DODD, vice chairman of the Internal Security Subcommittee of the U.S. Senate. Welcome, TOM.

Senator DODD. Thank you, Senator WILEY. I consider it a privilege to join you in a discussion of threats to our internal security. Only if the public is aware of, and alert to, these dangers, can we take the necessary steps to protect our Nation and way of life.

Senator WILEY. Is there any doubt in your mind that communism, at home and abroad, is the No. 1 threat to our security?

Senator DODD. None at all.

Senator WILEY. What about the U.S. Communist Party? According to estimates, it has a membership of about 25,000 members.

Senator DODD. In my judgment, that's an extremely rough estimate. The Reds, as you well know, operate in spy-like fashion. Consequently, it is extremely difficult to get a clear picture of the party and its activities. Organized in 1919, the Reds, working openly and secretly, have agitated for strikes, riots, social unrest, and demonstrations, such as the riots last year against the House Un-American Activities Committee hearings in San Francisco. In addition, they have engaged in espionage, sabotage, subversion, and other acts that threaten our security.

Senator WILEY. In your judgment, are U.S. Communists closely tied to the apron strings of Moscow?

Senator DODD. In any sound assessment, the Communist Party U.S.A. must be considered an arm of world communism. Allied with this increasingly powerful international ocnspiracy, it is especially dangerous.

Senator WILEY. You feel, then, that the U.S. Reds, ready to take orders from Moscow, would rise up against the United States, if they might be successful?

Senator DODD. Yes. The evidence was best presented by Gus Hall, the No. 1 U.S. Communist. When asked the question: "And are you willing to take up arms and overthrow the constituted authorities?" he answered: "When the time comes, yes."

In these five simple words lie the deadly promise of communism.

Senator WILEY. Recognizing this grave threat, we, naturally, need to keep our laws up to date for greater security.

Senator DODD. As a member and former chairman of the Senate Judiciary Committee, Senator, you have long exhibited a deep concern about the Red dangers; and have forthrightly supported efforts to strengthen our laws, law enforcement agencies and judicial system.

You well recall, of course, the acts of Congress dealing with the Communist menace? These include:

1. The Voorhis Act of 1940, requiring that any organization in the United States engaged in political activity and subject to foreign control would be required to register with the Attorney General of the United States.

2. The Smith Act of 1940, prohibiting the teaching and advocacy of overthrowing the Government by force or violence, and also membership in such an organization with knowledge of this purpose; and

3. The Internal Security Act of 1950, requiring that any Communist organization or front register its members, disclose its finances, and label its propaganda as Communist.

Senator WILEY. Through the years, also several States—and rightly so—have established special committees to investigate subversive activities and recommend necessary legislation. This helps, I believe, to focus public attention on—and more effectively deal with—the dangers of communism at home.

Senator DODD. I am seriously concerned, however, with a serious shortcoming in our efforts to deal legally with this danger to our security. For the most part, laws relating to internal security are based on past experience, rather than on anticipation of future problems. The Communists—on the other hand—are long-range conspirators, planning far into the future. Consequently, we cannot always be sure that legislation, in itself, will guarantee the internal security of the Nation.

Senator WILEY. That is true. Recognizing this situation, we must make greater efforts to gear our laws—including the updating of existing statutes, and the writing of new ones—to the future, not the past.

Senator DODD. In addition to Federal and State action, there is also a real need for alertness, and a willingness to act, at the local community level. The private citizen—individually, and through his civic, labor, religious, education, business, cultural, and other organizations can do much to thwart the aims of communism and strengthen our free system.

Senator WILEY. I agree. The expulsion from the CIO in 1949 and 1950, of 11 Communist-dominated unions, for example, represents one of the worst setbacks ever inflicted on the United States Communist Party.

YOUTH—MAJOR TARGET OF REDS

We must be alerted to the great effort of communism, also, to reach, and convert the youth—not only of the United States, but of the world.

Senator DODD. Very definitely, Senator WILEY. The successful Communist exploitation and manipulation of youth and student groups throughout the world today is a major challenge which free world forces must meet and defeat. Recent events clearly reveal that world communism has launched a massive campaign to capture and maneuver youth and student groups.

The vigor and vitality of such groups constitutes an explosive force. Channeled into proper outlets, it can accomplish immeasurable good for a peace-and-progress world. Maniulated into destructive channels, however, this force can create chaos. Overall, the capture of the youth of the world is a major goal of Communist strategy. We must therefore, take more effective measures to prevent our youth from being taken in by innocent-looking, but often dangerous, lures thrown out by the Reds.

Senator WILEY. Overall, an effective security system requires teamwork—and dedicated cooperation efforts—between citizens and their local, State, and Federal law-enforcement agencies.

Let me say, however, that I don't believe in witch hunts; or in creating a climate of fear in which people jump at shadows. To the contrary: I am confident that by effective, vigilant law enforcement—and maximum cooperation of our citizens—we can minimize the Communist threat to our internal security, and catch and punish violators of laws.

Now, TOM, do you have any recommendations for more effective "citizen action" to combat the menace of communism?

Senator DODD. As an individualist—like yourself, Senator WILEY—I naturally respect the rights of each citizen to interpret his civic, patriotic responsibility according to his own conscience.

Nevertheless, I believe there are definite steps which would, if taken, better enable us to cope with the Red menace. These include greater efforts to (1) educate our citizens to the true nature, dangers, and tactics of United States and international communism; (2) dedicate ourselves more completely to the ideas and ideals of freedom; (3) support efforts to further improve our free society; (4) exercise the right to vote—electing representatives who would enable us to progress in the right direction,

but also effectively fight against our enemies; (5) imbue in our citizens a great realization that we are in a battle of survival against communism; apathy could be fatal; and (6) strengthen our efforts to eliminate bigotry, prejudice, hate—all blights on our national integrity.

Senator WILEY. I concur wholeheartedly. As vice chairman of the Senate Internal Security Subcommittee, you are doing a vigorous, splendid job.

Now, as we discussed earlier, communism in this country cannot be isolated from the world conspiracy. Would you give us a brief look—from your vantage point—at the global horizons on which communism threatens the survival of freedom.

Senator DODD. Currently, there are an estimated 36 million Communists working in 86 countries around the world. Overall, they control about 1 billion people, and vast land and natural resources. Witness the activity of the Communists in Cuba, Laos, Africa, South America, and elsewhere on this globe. Day by day, the Reds are attempting to further expand and mobilize this empire into a machine to take over the world.

As a ranking minority member on both the Judiciary and Foreign Relations Committees, you, Senator WILEY, have had long experience in fighting this menace to freedom at home and abroad. How do you evaluate the situation?

Senator WILEY. From experience—and the facts of life in the 1960's—I can say this: Winning the battle against communism will not be easy. The challenge will require a total effort by our own people—and those of our allies. The actions will involve further strengthening our jet-missile-nuclear-space defense—to serve as a deterrent against would-be aggressors; bolstering the free world alliances—economically and politically, as well as militarily; stepping up our offensive on the ideological battlefront; finding realistic solutions to our economic problems to better enable our free enterprise system to meet the production-line challenge of the Communist system; and, above all, revitalizing in our citizens the patriotic, moral, and spiritual dedication to the cause of freedom.

Even with an all-out effort to combat communism, however, we can expect a long, difficult struggle.

Senator DODD. You're right, Senator WILEY. Failing to alert our people and dedicate the necessary resources to protecting freedom would spell grave dangers for our future. If we mobilize—in effort, spirit, and resources—however, I am confident that we can, and will, win the battle.

Senator WILEY. Now, TOM, I want to express my gratitude for your taking time out of your busy schedule to join me in a discussion of a topic of deep interest to my home folks in Wisconsin. Thank you very much.

Sugar

EXTENSION OF REMARKS
OF
HON. THOMAS G. MORRIS
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. MORRIS. Mr. Speaker, in pointing out some of the difficulties of our domestic sugar industry, I think the following facts and figures might be of interest. For example, the latest information available with regard to new producer data shows that in 1960 some 5,338 farmers requested 189,442 acres to grow sugar beets. However, only 1,243 participated in the allotted new acreage of 17,282. In other words, 23 percent of the applicants received 10 percent of the requested acreage. Even these figures do not show the true picture. Many farmers who would have liked to get into production did not ask for any acreage because from past experience only a small amount has been made available.

New producer data, 1960

State	Number of requests	Acres requested	Shares established	Acres established
California	794	41,609	51	1,279
Colorado	282	6,408	147	1,828
Idaho	845	14,896	147	798
Illinois	7	168	7	168
Iowa	4	220	4	165
Kansas	63	2,930	3	90
Michigan	257	3,607	257	3,607
Minnesota	887	54,780	39	1,372
Montana	113	2,846	54	809
Nebraska	218	6,172	103	1,368
Nevada	7	383	6	110
New Mexico	4	300	4	100
North Dakota	251	13,928	7	230
Ohio	116	1,873	116	1,773
Oregon	59	1,212	31	248
South Dakota	11	322	7	190

In contrast to the above where the domestic industry has been prevented from increasing their production, below are some figures which point out how our Government has encouraged the expansion of sugar producing areas outside of this country. I do not want to imply that I am opposed to some of the investments that are being made to improve production in these countries, but I do feel that our domestic producers should have at least an equal right to expand and grow in this important commodity.

EXPORT-IMPORT BANK

In 26 years they have issued 45 credits in the amount of $50,753, 192 to sugar production and processing.

PHILIPPINES

Nov. 22, 1957	$70,000

Mar. 28, 1957	$731,000

DEVELOPMENT LOAN FUND

Bolivia:

1959	2,500,000
1961	1,750,000

Haiti: Applications were considered and approved in 1960 for $3,000,000, however, this was canceled in 1961. Another application has been received in February of this year for $3,000,000.

Guatemala: An application has been received for $5,592,000. This has been referred to the Export-Import Bank.

INTERNATIONAL COOPERATION ADMINISTRATION

A large number of their loans are for general agriculture developments, and actual figures of support for sugar programs were not supplied. However, the following countries have had sugar developments of some sort involved in their programs.

Vietnam: Various training programs from 1955 to 1959.

Tunisia: 1959.

Indonesia: Technical production, experimental plots 1959.

Iran: June 1952 until March 1957—$635,000 to expand a plant. February 1953 until March 1956 $931,000 two plants.

Sudan: Survey in 1959.

Taiwan: Support to improve refining equipment 1952-1953, 1954, 1955.

INTER-AMERICAN DEVELOPMENT BANK

Bolivia in a $10 million global credit received $1,800,000 to increase by 50 percent a sugar processing plant.

Argentina has applied for a global credit of $800,000 to be used in sugar development.

Haiti has requested a global credit of $4 million and if approved, part of the money would go to double the production of an existing sugar plant.

Honduras has presented an application, part of which is to increase a sugar plant daily capacity by 40 percent.

INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

They have been making agriculture loans for several years, some of which have gone into sugar production. However, figures were not available showing actual support of sugar.

INTERNATIONAL FINANCE CORPORATION

Tanganyika: June 2, 1960, $2,800,000 for sugar development.

Maritime Transportation Challenge

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. BARTLETT. Mr. President, the Senate Committee on Interstate and Foreign Commerce has been conducting extensive hearings regarding maritime transportation to and from the so-called offshore areas—Alaska, Hawaii, Guam, and Puerto Rico. The committee has heard from local government representatives that high freight rates imperil economic development.

In his column printed in the Washington Evening Star for March 14, Mr. Constantine Brown called attention to the committee's hearings, and I ask unani-

mous consent to have the column printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

SHIPPING COSTS, FOREIGN IMPORTS—RATES BY U.S. LINES TERMED DAMAGING TO HAWAII, ALASKA, AND PUERTO RICO

(By Constantine Brown)

There are times when a seemingly dry subject presents some fascinating aspects.

The Senate Committee on Interstate and Foreign Commerce has begun hearings on freight rates between the mainland United States and the States of Alaska and Hawaii, and the Commonwealth of Puerto Rico. The hearings are the result of a series of understandably anguished protests from our two newest States and the Commonwealth.

The testimony has been startling, to say the least. Ocean freight rates between American mainland ports and Alaska, Hawaii, and Puerto Rico have skyrocketed in the last 10 years to a point where they approach the prohibitive.

With such zooming, stratospheric rates in effect, it is now as cheap to ship an automobile from London, Hamburg, or Le Havre to Honolulu as it is to ship an American-made car from San Francisco to Honolulu.

It is cheaper to ship canned seafood such as tuna, crab, oysters, and other fisheries products from Yokohama to New York than from Maine to New York.

Pineapples from Formosa can be shipped by freighter to San Francisco or Seattle or Los Angeles cheaper than from Honolulu to the same cities, or even to east coast ports; and pineapples happen to be a major Hawaiian crop.

The results of such a curious situation are, quite naturally, not encouraging to American industry. European automobiles are taking the lead over American, for example, in all three areas involved. Why buy an American car and pay half its value just to get it shipped? And this situation becomes all the more ironic when it is a case of shipping from one American port to another American port.

In Alaska, haircuts cost about $3, a quart of milk about 45 cents. No, haircuts are not shipped, but the barber has, like his customers, the soaring cost of living to contend with. There is a popular story, once considered an exaggerated joke, that the smallest coin in regular use in Alaska is the quarter-dollar. This is a joke no longer.

The challenge of imports, seriously considered at the present time by the new Kennedy administration, is most certainly affected by this business of prohibitive freight rates. If it remains cheaper by far to import from foreign countries, then people in Hawaii and Alaska and Puerto Rico will import foreign goods, and so, to a surprisingly great extent, will people in the mainland States.

Witnesses at the hearings have stressed that the low cost of labor in Japan or France or Germany has little to do with the great advantage enjoyed by exporters in those nations. A major factor is shipping. American-flag lines simply have jacked their rates to a point where there is no comparison with rates charged for oversea (European and Asiatic) voyages.

Of course, the American shipping companies will have their innings, too. They will certainly testify to the vastly higher labor costs they are required to bear under United States maritime laws and union labor demands. They also have to provide much more in the way of creature comforts, safety precautions, facilities for recreation and similar amenities than are required by foreign-flag vessels and shipping companies.

But the Alaskans and Hawaiians and Puerto Ricans insist with facts and figures to back them up that this factor does not nearly begin to justify the soaring freight rates between American ports.

A weekly English-language newspaper in Puerto Rico, the tabloid Island Times, publishes regularly a comparison list of prices for staple groceries, fruits, and vegetables, meats and similar foodstuffs. Price tags in San Juan and Ponce supermarkets are listed side by side with prices in effect the same day in New York, Boston, Miami. The difference is startling, particularly when one considers the average income of Puerto Ricans.

Minimum Wage

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BOYKIN. Mr. Speaker, in the past few weeks, I have received hundreds of letters and telegrams in connection with the pending bill to increase the minimum wage and to extend the coverage of the Fair Labor Standards Act.

Under leave to extend my remarks in the RECORD, I include a very informative letter from Mr. Charles A. Miller, Jr., of Thomas & Miller Lumber Co., of Linden, Ala., in which letter he sets forth facts and figures on his present operating costs and on his costs which would result from increasing the minimum wage in his plant. You will note Mr. Miller's conclusion that the only alternative his company would have to reduce the cost of lumber would be to decrease the stumpage price; that inasmuch as a great majority of timber is still in the hands of small landowners, this would decrease the landowner's income at a time when most everyone else is receiving an increase; and that it is doubtful that the timber owner would sell his timber cheaper if wages were increased. Mr. Miller's conclusion is that they will not be able to absorb either the $4.19 or the $6.98 per thousand increase in the cost of lumber, and that if the minimum wage is increased and business conditions do not improve materially, they will be forced to curtail their operations and add to unemployment.

I also include a statement by Mr. Price Paschal, president of the Price Paschal Lumber Co. of Brandon, Miss., before the Subcommittee on Labor Standards of the House Education and Labor Committee. Mr. Paschal represented the Forest Industries Committee of the Mississippi Manufacturers Association.

THOMAS & MILLER LUMBER CO.,
Linden, Ala., February 24, 1961.

Hon. FRANK BOYKIN,
House of Representatives,
Washington, D.C.

DEAR MR. BOYKIN: I am familiar with your opinion that you do not favor the principle of Federal wage legislation and that you also oppose an increase in the minimum wage.

However, you may not fully realize the effect an increase would have on our particular business. It is urgent that the increase be defeated if our business is to remain solvent and to contribute to the economic well-being of our employees, the community, and also the owners.

Our company is engaged in all phases relative to the manufacture of lumber—logging, manufacturing, sales, and trucking of finished product to consumers. We employ an average of 80 men including salaried and skilled personnel. (This group would also be entitled to the minimum increase or more in order to be fair.) Due to present conditions our operation is marginal, but we have not laid off any men.

Using our 1959 operating and cost report the following would be the results of increasing the minimum wage in our plant.

Payroll increase: 15 cents per hour would cost $24,960 per year; 25 cents per hour would cost $41,600 per year.

Increased cost expressed as percentage of sales—$606,960: 15 cents per hour, equivalent to 4.1 percent of sales; 25 cents per hour, equivalent to 6.9 percent of sales.

In the lumber industry it is generally agreed that in an operation of our size, a minimum profit of 10 percent of sales (before Federal taxes) is necessary in order to stay in business. At present our profit is not equal to the 6.9 percent of sales that a 25-cent per hour increase will cost.

INCREASED COST CONVERTED INTO COST PER THOUSAND FEET OF LUMBER

Direct labor cost in our operation is $27.92 per thousand feet lumber manufactured. Of this $11.37 is logging and hauling and $16.55 is manufacturing.

	Per thousand
15 cents per hour would increase logging cost	$1.71
15 cents per hour would increase manufacturing cost	2.48
Total	4.19
25 cents per hour would increase logging cost	2.84
25 cents per hour would increase manufacturing cost	4.14
Total	6.98

COMPARISON WITH INCREASE IN 1956

In 1956 when wages were increased, lumber prices did not advance to take care of cost. Consequently the mills were forced to absorb the difference. To help offset labor costs, most mills have added labor saving machinery and reworked their plants to increase efficiency. At the present time, further installation of labor saving machinery and improvements would be approaching the law of diminishing returns and would not be profitable.

In 1961, prices are below the 1956 level. Lumber prices are controlled by law of supply and demand and the price of competitive materials. We cannot increase the price of lumber and be assured of selling it. If and when conditions improve, it is my opinion that lumber prices will not advance much above 1959 price level.

DECREASE STUMPAGE PRICES ONLY ALTERNATIVE—SMALL LAND OWNERS HURT

As I see it the only alternative we have to reduce cost of lumber would be to decrease the stumpage price. Inasmuch as a great majority of timber is still in the hands of small land owners, this would decrease his income at a time when most everyone else is receiving an increase.

In my opinion, it is doubtful that the owner would sell his timber cheaper if wages were increased.

Conclusion

We will not be able to absorb either the $4.19 or $6.98 per thousand increase in cost

of lumber. If minimum wages is increased and conditions did not improve materially, we would be forced to curtail our operation and add to unemployment.

We know that in the past you have always helped the lumber industry with their problems and we know we can count on you to do all possible to help defeat any increase in minimum wage.

Yours very truly,

THOMAS & MILLER LUMBER CO.,
By CHAS. A. MILLER, Jr.

STATEMENT OF FOREST INDUSTRIES COMMITTEE, OF THE MISSISSIPPI MANUFACTURERS ASSOCIATION, BY PRICE PASCHAL, PRESIDENT, PRICE PASCHAL LUMBER CO., BRANDON, MISS., TO THE HOUSE EDUCATION AND WELFARE COMMITTEE, SUBCOMMITTEE ON LABOR STANDARDS

My major objective in this statement is to point out to the committee and to the Members of Congress some of the harmful effects an increase in the minimum hourly wage would have on our industry and on the economy of our State and Nation.

I am considered a medium-sized operator in the manufacturing of southern pine lumber. We buy logs from independent loggers; also, we buy small tracts of timber and have this timber cut and logged to our mill by contract loggers.

During the past 5 years we have completely rebuilt and modernized our plant and we had to borrow $150,000 to do it. We did this so we can produce lumber at the lowest possible direct cost. Even with this modernization accomplished, my company showed a net loss last year of $900 on a sales volume of approximately $1 million. It is easy to see what any increase in our direct labor costs would do to us. Multiply this effect by the many hundreds of lumber mills similar to ours in the South and you have a picture of what will happen to our economy.

The lumber industry cannot absorb an increase in direct labor costs at this time or at any time in the foreseeable future. Instead of increasing, the average price of lumber has declined from $78.40 in January of 1960, to $69.23 in January of 1961. These figures were arrived at by an average of the selling prices of several of our neighboring lumber mills.

I would like to establish a few economic facts about our situation to bear out my claim that any increase in the minimum wage would actually put many of these mills out of business and create an alarming addition to the already acute unemployment situation.

1. We cannot pass on to the consumer this additional cost because of the many substitute building materials, both foreign and domestic. We point out as evidence of this what has happened in the steel industry.

2. We provide direct employment for 155 persons in our small community. If we were to go out of business it is easy to see that these people would be added to the unemployment rolls since there is no other industry to absorb them.

3. New claims of unemployment compensation in our State for the 6-month period of August 1960 to January 1961, were up 42.1 percent from the same period of the year before.

One further point I wish to mention regards the 12-man exemption on logging and pulpwood harvesting.

If an effort is made to eliminate the 12-man exemption on logging and pulpwood harvesting, our problem will be magnified even more.

The elimination of the 12-man exemption would work a hardship on the small logging contractor, pulpwood contractor, and the men they employ. If it rains, the woods are too wet to log and harvest pulpwood, so they lay off or only make a few hours some weeks. During the weeks they can log, they may work more than 40 hours, thus stabilizing their total annual earnings. To keep the records necessary to comply with the rules of this law would be practically impossible.

I point out to you gentlemen that the lumber and forest products industry is the major contributor to the economy of this State.

I urge you, therefore, to postpone any action on the minimum wage because of the serious effect it would have on our economy and industry.

Albert Schweitzer: Man and Prophet

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mrs. SULLIVAN. Mr. Speaker, on the 15th of January 1961, at the National Episcopal Cathedral in Washington, D.C., there was celebrated, in most impressive manner, the 86th anniversary of the birthday of one of the greatest humanitarians of this age, Dr. Albert Schweitzer. His great talents as a musician, physician, author, missionary, and humanist have been dedicated to, and brought into play for, the betterment of mankind. In the far country of French Africa his services in establishing and operating a hospital for the natives, and in his Christian leadership there, his energies have been brought into a most helpful and efficient focus.

The principal feature of the ceremonies at the cathedral was the address given by Dr. Hermann Hagedorn, well-known author and biographer of Dr. Schweitzer, Theodore Roosevelt, and other notable characters. In November 1958, in my capacity as chairman of the Panama Canal Subcommittee—of the House Merchant Marine and Fisheries Committee—I spent several days on the isthmus. This was during a week-long celebration—in the Canal Zone—of the 100th anniversary of the birth of Theodore Roosevelt who, as President, did so much to bring about the construction of the Panama Canal. The commemorative programs put on there were of an outstanding character, and of varied character. The principal addresses delivered were those of Dr. Hagedorn—an intimate friend of the Theodore Roosevelt family—and Maurice H. Thatcher, former Member of this body, and the sole surviving member of the Isthmian Canal Commission.

Under leave accorded I include, as a part of these remarks, the splendidly interpretive address of Dr. Hagedorn on Dr. Schweitzer:

ALBERT SCHWEITZER: MAN AND PROPHET

(Address by Hermann Hagedorn, at the National Episcopal Cathedral, on Mount St. Albans, Washington, D.C., Jan. 15, 1961)

In his poem, "The Man Against the Sky," Edwin Arlington Robinson paints a bare hill, at sunset, with a solitary figure, mysteriously looming "Against the glory of a world on fire."

The picture has meaning for us on this 86th anniversary of Albert Schweitzer's birth.

How large he looms against the sunset, this doctor in the African jungle; this man of faith, rooted in renunciation; this carpenter and handyman, in whom scholarship, music and a powerful and original mind are joined to abounding love and prophetic vision.

What does he say to us, this benign sage, with the rumpled hair and walrus moustache, too human to be a saint, too saintly to be measurable in purely human terms? What does he say, this benevolent despot of a kingdom of healing in a sick and turbulent continuent; this friend of man, who suffers with his patients, and, to a degree, dies with any who die; this philosopher—in thought, so poised between earth and heaven; in expression, so direct, so lucid; this child of fortune, rich in divers gifts, in whom the wisdom of this world and the next have combined to create, not a man in conflict with himself, but one of those rare, integrated personalities that are among the chief graces of any culture, any age? To us in our complacency, our idolatry; our money-centered and life-heedless living; to us in our morally cancerous and spiritually illiterate society—what is it that he says?

He speaks of the struggle for truth, of the dignity of the individual; and of the glory of the self, lost and found in selfless giving; of the use of the philosophic mind not to build speculative skyscrapers in the empyrean, but foursquare houses to live in, richly, on the solid earth. He speaks of Jesus, "who comes to us," he says, "as One unknown," and reveals himself to those, be they "wise or simple," who obey Him. Most persistently, through the years, he speaks of the decay of civilization, and of that which alone can restore it, the human spirit.

A single purpose runs through all Albert Schweitzer's thinking and living—to lay a foundation for a change of heart in the individual and in society, in government and in the relations of nations; a change from self-serving to self-giving, from the expedient to the God guided; from life bruising and life destroying to life renewing, life upbuilding; from a civilization, dying, because it has lost its moral standards, to a civilization that can blossom and bear fruit because it faces and avows the inhumanity and corruption of its past, and is prepared to make such restitution as may be possible.

Mark well that purpose—change in the individual and in society—for it is implicit in all that Albert Schweitzer has uttered, in all that he has done.

The decay of world civilization has haunted him for 60 years. It began, he says, on the day, almost a century and a half ago, when the German philosopher, Hegel, wrote the words, "What is reasonable is real, and what is real is reasonable." The world translated the phrase into the philosophy and public policy of expediency, out of which have come two World Wars and the rejection of that humanitarian liberalism which, to Dr. Schweitzer, is the very essence of what to him spells civilization. Did the 18th century first recognize, on a wide scale, compassion as the essence of the civilized mind? The 19th extended this recognition into ever new areas, blind though that century was in the industrial field. What of the century in which our lives are set? Torture, practiced again as not in centuries, with new, hitherto undreamed of devices added, not only to torment the body but to poison or destroy the personality and the mind. Everywhere, callousness to injustice and brutality which, 40 or 50 years ago, would have brought cries

of protest from every civilized throat; glorification of moneygetting, exploitation of sex for profit; corruption in government, corruption in private life; immorality and even perversion in high places; weapons of warfare, infinite in horror; slaughter a commonplace of the day's news; slaughter on the highways; slaughter in war; slaughter in building a new social order. Albert Schweitzer's answer is reverence for life; each living creature sacred; reverence for life which recognizes as evil that which "annihilates, hampers or hinders life"; and as good that which saves life and helps it attain its highest development in body and spirit.

"If I am a thinking being," Albert Schweitzer tells us, "I must regard other life than my own with equal reverence." But the contempt for life that he sees on every side decries thinking. He is appalled by the tendency to conformity, the subjection to slogans, the readiness even of the scholarly mind to accept the idea that thinking is unavailing in the complexity of the modern world.

"Renunciation of thinking," he cries, "is an admission of spiritual bankruptcy." There are forces in the world, moreover, he warns, deliberately cultivating the skeptical attitude of mind, convinced that "when men renounce the hope at arriving at truth by themselves, they will end by accepting as truth that which is forced upon them by authority and propaganda."

If you want to keep the flame of freedom burning in the world, Dr. Schweitzer tells us, revitalize in men the willingness to suffer the lonely vigil and the hardship of independent thinking; thinking infused with love, he adds; love that is made real in service to another. "Love," he declares, "is reason at its highest." It is in reverence for life that love and reason join.

Love and reason have combined in Albert Schweitzer to release forces which have entered deep into the spiritual fabric of the free world.

Love and reason joined to make a hospital, in the "heart of darkness," a beacon light, for an even darker world.

Love and reason stood with the watchman on the ramparts, crying, night and day, his warning of a crumbling civilization. They rode with the knight of the grail, as he sought the sacred cup, in the faith that he might find sustenance for mankind, sweeter and more lifegiving than the wine turned vinegar of materialism and expediency. Love, from one side, and reason from the other, built the bridge, intellectually acceptable, from man's affirmation of life and will to live to his recognition, hitherto merely intuitive, that civilizaton, to survive, demands an ethical foundation. The term resounds like organ music in a church. What it means, in terms of Mr. Everyman, is less ethereal. The foundation of civilization is honesty, it is purity; it is—and we use the word hesitatingly, since it has been so misused—it is love of each for all.

Without these, developed to a high degree in each individual, Dr. Schweitzer tells us, there is no civilization; only a shell, ready, at a touch, to crumble to dust.

Thinker and man of action, fused and made one by compassion; physician, humanitarian, philosopher, prophet, Albert Schweitzer stands, at 86, tireless in thought and service against the flaming background of a world politically and morally in chaos.

Here is greatness, by any standard. But, behold, a paradox. The greatness is visible to millions today where it might not have been visible, on so wide a scale, for decades or generations, except for an act of renunciation on his part of every prospect of the world's acclaim.

Let us, in this great cathedral, on this wintry Sunday in 1961, turn the clock back, 65 years, to another Sunday in an Alsatian parsonage, and recall the familiar story of Spring and bird song and church bells, ringing in the Whitsuntide. The pastor's son, stretched out in bed, tells himself that life is unbelievably good. He has a happy home; a study body and a vigorous mind; studies that excite him; and a future, obviously. A wave of gratitude sweeps through him. But a voice, deeper than conscience, sobers in exultation. "Such happiness," it whispers, "is not a free gift. It must be paid for."

The thought is not new to him. It has lain on his heart for months, but he has evaded asking the crucial question. He asks it now. "How shall I pay?"

The answer is clear. Let him give himself to his philosophical and theological studies until he is thirty; to the teaching and preaching for which he is preparing himself, and to the music that is the deepest expression of his spirit; but, thereafter, he shall give himself to the immediate service of mankind.

It is a heavy price, a hard summons?

He will pay the price, he says to himself; he will respond to the summons.

It is a noble resolve, but it is not unique. Hundreds of young men and women, in those middle Eighteen Nineties, made no less selfless, no less earnest, resolves, when they were 21. Hundreds of us here, in this cathedral, in high moments, made such resolves; and let their brightness fade into the light of common day.

Albert Schweitzer does not let his resolve languish. Nine years pass, happily and too quickly. The young man is a professor of philosophy, assistant pastor in one of Strasbourg's leading churches, an organist with a growing reputation, the outstanding biographer of Johann Sebastian Bach, a theologian whose views of the Jesus of history have set a worldwide controversy raging. He is, by common consent, one of the coming men of Europe.

But success has not dimmed the brightness of his resolve, or led him to question the validity of the summons that came to him. He asks only what form the "immediate service," to which he has committed himself, shall take.

Simply, and yet mysteriously, he receives his answer. The most neglected and primitive of African tribes needs a physician. A physician? He is a philosopher, a teacher, a preacher, a historian, a musician. Must he then go back to school—not for 1 year or 2 or 3, but for 7?

The summons is clear. It is a physician that is needed.

So be it.

We stand here in a cloud of mystery, the mystery of God and man, when man lays his life without reserve in God's hand. That Whitsuntide decision, that summons, heard and responded to, with no taint of self-conscious sacrifice; that unwavering resolve, that acceptance of unanticipated implications, what was the fruitage, what the consequences?

We recall the pain of the renunciation when the dedicated teacher faces the fact that he shall teach no more, the impassioned musician recognizes that he shall play the organ no more; the individualist, who, for years—even through his period of medical study—has paid his own way, teaching and preaching, proud of his dependence on no man, knows that he shall be financially independent no more; rather a mendicant, begging, hat in hand, for 10 marks here, a hundred marks there, for his hospital, and his own and his wife's subsistence.

Twenty years pass. The doctor has built his hospital, built it by back-breaking labor and tireless self-giving. He has won over the shy, mistrustful, superstitious natives, established himself as a growing factor of hope and healing in an unhappy, suffering land. He has won friends in Europe and America, and recognition in everwidening circles of humanitarian concern.

It is the early 1930's. The doctor is back in Europe on a visit. The man who, with a heavy heart, gave up teaching in a single university, is called to lecture in a dozen of the world's most venerable institutions of learning. The musician who, in agony of spirit, gave up the organ, is asked to give recitals all over Europe; the man who gave up his financial independence to become a mendicant, finds himself earning, by lectures and concerts, enough money to cover not only his own needs and his family's, but a large part of his hospital's.

Yet this is only a part—and not the most evocative or mysterious—of the story of one who lost his life only to find it in a new dimension. What was the deeper and the wider fruitage?

His jungle hospital is part of it, obviously, though, indeed, not the most significant. The range of consequences goes beyond the thousands of jungle-lives, experiencing the life-giving touch of a man with God in his heart and healing in his finger-tips. In the great world beyond the seas, dimly, yet with ever-deepening clarity and power, appears, through the mist of the commonplace, that rare and precious thing, the image of a life that lifts men's hearts, kindles their imaginations and gives their lives new depths of meaning, new horizons, a compelling challenge; perhaps, by God's grace, a new direction. The picture of the doctor of philosophy, the doctor of theology, the doctor of music, putting aside the prospect of fame and honors and wealth and ease to serve the most neglected of Africa's peoples, becomes a part of the imperishable folklore of the western world. A new force has entered into the thinking and living of civilized mankind as the legend of Albert Schweitzer enters into men's consciousness.

We catch our breath, seeing the ripples going out in everwidening circles from this life, thrown, without reserve, into the seas of God. Wherever men read, they read the story; they hear it from a thousand pulpits, they see it on the screen. Who shall number those who have been touched by it to new perceptivity; perhaps, new vision, new hope, new levels of resolve? Were they to gather in one place, how vast would have to be the plain on which they met, how limitless the horizon. And how diverse would be the character of that multitude.

Among them would be not only the eager young idealists, with torches lifted, moving in review before the venerable Nobel prize winner in Oslo, but hard-headed American businessmen, sending shiploads of medicines and medical supplies as their gift to an African hospital; not only men of vision and action creating "little Lambarénes" in remote Caribbean and Southeast Asian valleys, but cynical newspapermen, greeting a celebrity on his arrival in New York and feeling his unpretentious greatness piercing the veneer of their sophistication.

The abundance of the fruitage of this man's life that we can see, and have seen, is only a token of an immeasurable harvest. Who shall say what powers this great creative example has awakened in men's hearts, what powers it may awaken as his story is told, his words are read, down the years, the generations, the centuries; what "adventurers of self-sacrifice," his spirit may enlist, men and women, boys and girls, "for whom"—in his words—"there is no quenching of the irrational fire?"

We stand in awe not before a man but before the consequences of one man's high-hearted resolve and unremitting fulfillment; before the miracle of the life, lost to itself, and found alive and at work in the hearts of millions.

What shall we say of the power of a single life so to shake mankind? "Give me the right place on which to rest a lever," cried

Archimedes, "and I will move the world." Is the life, lost and found, the fulcrum on which the lever rests?

We ask the question, conscious that it may cast a light into the darkness of the struggle in which mankind seems condemned, for generations, perhaps, to live.

Cold war, hot war, submission, defiance, mutual annihilation?

In the face of the appalling alternatives, there come moments when we recognize that our antiphonal strivings with our opponents forever the new weapon, ever the answering defense, are childish and irrelevant, and that the assurance which we so feverishly seek is not to be found in terms of destruction, agony and death.

Happy, in such dark hours, are they who, like the prophet Elisha, see shining armies covering the mountainsides—men and women, wholly committed to God, and united in a force, inspired and impelled by the ideology which Washington and Franklin, Hamilton and Jefferson built a nation on—acceptance of moral standards that have no escape clauses, and obedience to the guidance of God in the struggle for true freedom. William Penn's words have a shattering significance today: "Men must choose to be governed by God or they condemn themselves to be ruled by tyrants."

"A moral renascence is our only hope," says Albert Schweitzer, and a distinguished Washington scientist pinpoints the instant need: not only guided missiles but "God-guided men."

For dedicated and God-committed fighters are needed in the warfare that is rocking the world. Again and again, the doctor has stated the issue of the struggle. It is moral standards against expediency. It is reverence for life against contempt for life. It is man as a child of God against man as a cog in a machine.

A quarter century ago, the philosopher of Reverence for Life could still feel that he could let his creative conception make its own way; but not today. Through the philosophic exposition of his Nobel Peace Prize address strides the embattled prophet, calling to the spirit of man, as Isaiah called to it, calling to each individual; calling to each one of us, here in this cathedral.

He calls to us to see the realities of the world in which we are privileged—or condemned—to live: the realities of our national life, the realities of our personal living—the dishonesty, the impurity and the irresponsibility; the sentimentalism and, with it, the inhumanity—the ambition, the bitterness, the jealousy, the hate; many of them, perhaps, in my own heart; many of them, perhaps, in yours. He calls to us to achieve the cleansed world we pray for, by achieving, in our own lives, that honesty in seeing ourselves as we are, that change of direction and motivation, that about-face in purpose and action, which is basic to the survival of freedom, the survival, even perhaps, of mankind.

It is in this perspective that we see Albert Schweitzer's conception of reverence for life in its ultimate dimensions: Reverence for the soul of man, the soul of the community, the soul of the Nation. As such it stands in eternal opposition to everybody and everything seeking to decry faith in God, to decry the sacredness of the individual; stands in opposition to those who deny those absolute moral standards which bind human society into a cohesive and healthy body so that all its members may function at their highest potential; stands in opposition to every effort to break down those standards in the individual and in society; against every effort, finally, to frustrate the transformation, in Dr. Schweitzer's words, of the "modern state" into the "civilized state."

We know that civilization may be destroyed in a day. We know, too, that, even if the world be spared the catastrophe of war, our civilization will not, in a day, be cleansed and made whole. But, in the confusion and the perils of our time.

"One truth stands firm," Albert Schweitzer tells us. "All that happens in world history depends on the human spirit. If that spirit is strong, it creates world history; if it is weak, it suffers world history. The question is, Shall we make world history, or shall we merely passively suffer it?"

The query is addressed to you, and to me.

We have celebrated the birthday of a great man, rejoiced in his commitment to God, and his service to his fellow men. But, in the world in which we are living, admiration for even so great and good a man is not enough. Awe of his image in sculpture and stained glass here in this cathedral is not enough. Goodness in you and me, seeking to imitate his, is not enough. There was a time when I myself lived under the illusion that I was a good man and by my imagined goodness paid my debt to society. I have learned that, in this world of ideas in conflict, this was invisible, it is not enough to be what men call "good." A good man without a philosophy, a passion and a plan, will, in his sentimentalism, his woolly-headedness, his blurred vision of moral realities, be taken into camp by the enemy, and betray his county.

The world today is a world of battlefields between the forces of Christ and the forces of anti-Christ. One of these battlefields is Washington. One may be even Mount St. Albans. Each of us will know where the battleline crosses his own heart.

May each of us be sure on which side he is fighting. I speak it as a prayer. Amen.

A White Elephant

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter to the editor of the Salt Lake Tribune of March 18, 1961, signed by Harry Magnus, president, District 22, United Mine Workers, Price, Utah, entitled "A White Elephant."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A WHITE ELEPHANT

EDITOR, TRIBUNE:

E. C. Schlender, secretary, Snake River Power Association, Burley, Idaho, is critical of the position contained in a brochure sent out by the Utah Power and Light Co.

It might surprise Mr. Schlender to know that there are many citizens who agree and who are of the opinion that the Burns Creek project is certainly a white elephant, a $50-million white elephant. All the people in America are required to pay taxes to give a privileged few certain benefits. We can understand Representative HARDING'S criticism of this brochure as the privileged few are the constituents that Representative HARDING of Idaho represents.

There is far too much government in competition with private enterprises today, and in reading the Utah Power and Light Co.'s brochure it can be noted that this company is not in opposition with sound reclamation programs.

Burns Creek is a Federal project whose primary function is to generate electric power. Insistence on passage of such legislation will certainly jeopardize true reclamation projects.

It is not a storage project as E. C. Schlender attempts to have readers believe. Previous storage facilities already exist that were constructed as hold-over storage on the upper Snake River and hold 4 million acre-feet of water.

The thing that the people of Idaho should think about is that projects such as Burns Creek should not be contemplated or constructed as they endanger true reclamation projects.

HARRY MAGNUS,
President, District 22,
United Mine Workers, Price, Utah.

Welcome to Archbishop

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Thursday, March 16, 1961, which welcomes to Wilkes-Barre His Grace—Vladiko—Archbishop Dmitri, bishop of Philadelphia and the eastern Pennsylvania area of the Russian Orthodox Church, who recently transferred his seat to the Holy Resurrection Russian Orthodox Cathedral in the north end section of Wilkes-Barre. I, too, welcome the archbishop to Wilkes-Barre and trust that he will have a long and most satisfying tenure at his new station.

The aforementioned editorial follows:

[From the Wilkes-Barre Times-Leader, March 16, 1961]

WELCOME TO ARCHBISHOP

It is a privilege to welcome to Wilkes-Barre His Grace—(Vladiko)—Archbishop Dmitri, bishop of Philadelphia and the eastern Pennsylvania area of the Russian Orthodox Church, who has transferred his seat to the Holy Resurrection Russian Orthodox Cathedral in the North End and established permanent residence in one of the two rectories the parish maintains. Wilkes-Barre has been singularly honored.

Holy Resurrection Cathedral is regarded as the mother of orthodoxy in the Eastern United States and when the status of the edifice was changed in 1950 this newspaper said editorially:

"It would not be surprising in a short time if the local cathedral becomes the seat of a bishop, thus adding to the city's prestige."

That has come to pass after a decade. Thus Wilkes-Barre not only took its place with New York, Pittsburgh, San Francisco, Chicago, and Cleveland when Holy Resurrection was singled out from 340 parishes in America, but it has come into new distinction as a focal point for this denomination.

The presence of His Grace will make possible special services at the cathedral weekly, as well as on special occasions when he will pontificate at divine liturgy and other cere-

monies. The pastor, the Reverend George Pawlush, will continue in charge of the parish and perform his own functions as well.

Archbishop Dmitri, a distinguished churchman, was consecrated in 1942 and installed as bishop of Rovno in western Russia. Later, he was transferred to the diocese of Dniepropetrovsk, consisting of more than 400 parishes and a variety of institutions. He also was abbot of the monastery at Zhirovski and an instructor in the theological seminary at Chenyakhovsk.

Coming to America in 1948, he was assigned to New England and 7 years ago was advanced to Philadelphia, one of the most important dioceses in America. He maintained residence in Cassville, N.J., until yesterday.

A dedicated spiritual leader, an outstanding preacher, a noted scholar, Archbishop Dmitri will enhance the local scene with his presence as he administers to the needs of the 52 parishes under his jurisdiction.

Mrs. Clara B. Gonzales: A Dedicated Public Servant

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. ANDERSON. Mr. President, in his inaugural address, President Kennedy sounded a call to duty to the entire Nation. "Ask not what your country can do for you; ask what you can do for your country," was the challenge to all of us.

The story of Mrs. Clara B. Gonzales should serve as a bright example of a dedicated public servant who has for the past 37 years been "doing" for her country. She is the resident principal on the Zuni Indian Reservation in western New Mexico. Tonight she will be one of the 10 recipients of the National Civil Service League's prized Career Service Awards at a dinner in Washington. She is the first woman in the Department of the Interior to receive this award and the first person in the Bureau of Indian Affairs to do so.

As a master teacher and an able administrator, Mrs. Gonzales has served the Nation in the field of education for more than 37 years. Responsible for the overall administration and supervision of the educational activities of the Zuni Indian Agency, she works unselfishly to provide the educational ingredients which will develop each child to his utmost potential.

She has been highly successful in inspiring Zuni devotion to education. When Mrs. Gonzales came to the Zuni Pueblo, very few of its members were in school. Now, largely because of her efforts, the percentage in schools and institutions of higher learning exceeds that of non-Indian communities on the periphery of the village.

The Indian people do not hesitate to bring their problems to Mrs. Gonzales, so confident are they of her understanding and help. She has taken every opportunity to help them broaden their horizons. The Zuni people, as well as her coworkers, have a deep regard for Mrs. Gonzales because throughout her career the Zuni Pueblo has been her classroom; and the understanding, love, and affection for the Zuni people have been her basic textbook.

Born in Paulina, La., Mrs. Gonzales was educated at Southwest Louisiana Institute, Louisiana State University, Peabody College, Loyola University, and the University of Southern California. She lives in Zuni, N. Mex., and is active in many civic affairs. She has cooperated in organizing and sponsoring 4–H Clubs, is local chairman for the American Red Cross, president of Epsilon Sigma Alpha, and is a member of the New Mexico Education Association and the American Association of School Administrators.

Mr. President, I ask unanimous consent that an editorial entitled "For Service to Government," published in the Washington Post of today, March 21, 1961, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR SERVICE TO GOVERNMENT

"Human talent," said Senator HENRY M. JACKSON recently, "is our most precious resource." The remark is especially applicable to the presentation of the National Civil Service League's Career Service Awards tonight. The 10 recipients of these awards have been chosen from a large group of nominees on the basis of their competence, efficiency, character, and continuity of service. They are especially outstanding among the thousands of men and women who devote their lives to the service of the Government.

The award winners are John D. Jernegan, Ambassador to Iraq; Sherman Kent, Assistant Director for National Estimates in the Central Intelligence Agency; Robert M. Macy, Chief of the Budget Bureau's International Division; Ralph S. Roberts, Departmental Management Officer for the State Department; Ralph G. H. Siu, Technical Director of Research and Development in the Department of the Army; Harry Wexler, Director of the Weather Bureau's Office of Meteorological Research; Manuel F. Cohen, Director of the Division of Corporation Finance of the Securities and Exchange Commission; Max Golden, General Counsel of the U.S. Air Force; Clara B. Gonzales, Reservation Principal, Bureau of Indian Affairs; and Fay W. Hunter, Regional Director in the Department of Health, Education, and Welfare.

To these nine men and one woman Government has been a passion as well as a career. They exemplify the best tradition of public service. We join with Secretary of Commerce Hodges and the National Civil Service League in saluting them both for their achievements and for the inspiration they offer to the new crop of civil service employees who plan to make Government a career.

B. Carroll Reece of Tennessee

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. VAN ZANDT. Mr. Speaker, I was shocked and grieved on Sunday evening when I learned of the death of my good friend, B. CARROLL REECE.

Years ago when I was commander in chief of the Veterans of Foreign Wars of the United States it was my privilege to meet and become acquainted with the gentleman from Tennessee, whom I learned to know as a quiet, kindly man but at the same time a dedicated individual and a very capable legislator.

CARROLL REECE was not only a great American but an outstanding soldier, having served his country in the U.S. Army during World War I. As a young lieutenant, he commanded the 3d Battalion of the 122d Infantry Regiment in France and was decorated with the Distinguished Service Cross and the Distinguished Service Medal for bravery in action against the enemy. In addition, he was awarded a Purple Heart, having been wounded in action, and finally the French Government decorated him with the Croix de Guerre.

In 1920 our late colleague was first elected to the House of Representatives and from that time until his death he could always be found among those striving to make America a better place to live, as well as protecting his country against our enemies without and within.

As a Member of the House of Representatives, he authored much important legislation, including the resolution creating the House Committee on Veterans' Affairs as well as the bill which helped to establish the Army Air Corps.

CARROLL, as he was commonly known, loved his favorite game of politics and many of us recall when he resigned his seat in the House of Representatives to serve the Republican Party as its national chairman for the period from 1946 to 1949. Under his keen and able direction, the Republican Party captured control of the Congress in 1946. From the time of his reelection to the House until his death, his interest in his party was always a subject of conversation with his many friends.

I mourn his great loss and offer my heartfelt condolences to Mrs. Reece and their daughter, as I pray to God for His blessing and deliverance to everlasting life.

Agriculture in Wonderland

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Salt Lake Deseret News of March 17, 1961, entitled "Agriculture in Wonderland."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AGRICULTURE IN WONDERLAND

Any similarity between President Kennedy's new write-it-yourself agriculture program and what some critics have termed the "Alice-in-Wonderland" approach to solving the farm problem is far from coincidental.

The first hint that something is amiss with the Kennedy farm plan comes with the President's admission that "We cannot expect to solve the farm problem in a day or in a year, or perhaps even in this administration." This amounts to a frank confession that now he has come up against the harsh realities of the farm problem—and what appears simple when you're on the outside looking in, may turn out to be much more complex once you become more fully acquainted with the problem and have direct responsibility for solving it.

The second indication of weakness in the President's farm plan is its failure to provide specific suggestions for reducing wheat and feed grain surpluses, which constitute $7.8 billion of the Government's $9.4 billion farm surplus stockpile.

The salient features of the Kennedy farm plan include:

It would authorize Brannan-plan-type income payments to farmers who sell crops at free market prices. This makes the Kennedy plan subject to the same criticisms applied to the Brannan plan—namely, that it would be either costly to the taxpayers since farmers might greatly increase their outputs to get maximum payments, or would involve strict production controls that might amount to regimentation.

It would authorize farmers themselves to draft and adopt, subject to congressional veto, a sweeping new series of crop-by-crop farm marketing control programs.

Here's how this aspect of the Kennedy plan, which is its central feature, would work, in theory at least. Taking cotton as an example, the Secretary of Agriculture would arrange the election of a grower committee which would then propose a plan under which each grower would get a quota entitling him to market a fixed number of bales of cotton. The grower would sell his crop at open market prices, with a Government compensatory payment covering the difference between the market price and whatever support level the committee recommended. Congress could veto the growers' recommendations but not revise them.

The defects of this proposal become apparent when one tries to apply it to another segment of the economy. Suppose the same marketing arrangement were applied to the homebuilding industry. The homebuilders would get together and recommend their own prices. Conceivably they might decide the "support level price" for a home that previously sold for $25,000 ought to be advanced to $45,000. But the market price of the home, determined by supply and demand, probably would remain at $25,000. So the Government would make up the difference—with taxpayers' money.

This example, of course, is farfetched. But that's just the point. The laws of economics aren't repealed simply by switching from building to farming, and what would result in higher prices and higher taxes in one instance would surely produce the same results in another.

Furthermore, the Kennedy plan assumes that a grower committee would be able to agree on a marketing plan. But farmers are not all of one mind—the prime example being the American Farm Bureau Federation, which opposes price supports, and the National Farmers Union, which favors high rigid price supports. The Kennedy plan also would deprive Congress of its responsibility for drafting legislation dealing with each commodity. And if that isn't enough, a similar proposal was defeated by Congress last year.

By proposing that farmers write their own program, President Kennedy evidently realizes that the long-range solution to the farm problem is to get the Government out of agriculture. But he's going about it the wrong way.

Communications and Medicine—Address by Gen. David Sarnoff

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. HILL. Mr. President, the 1961 National Health Forum was held at the Waldorf-Astoria Hotel in New York on March 14–16 and its theme was "Better Communications for Better Health." On March 16 the forum was address by Gen. David Sarnoff, chairman of the board, Radio Corp. of America, on "Communications and Medicine."

There is no person who speaks from greater experience or with greater authority on the development, the use, and the tremendous potentialities of electronics than General Sarnoff. Last year he served as a member of the Committee of Consultants on Medical Research set up by the Senate Committee on Appropriations and made many fine contributions to the devoted and outstanding work of the Committee of Consultants.

As we know, General Sarnoff is a man of great accomplishments and of great vision. His address to the National Health Forum is not only most informative but it is a challenge to all who would advance the cause of medicine, protect and strengthen the health of our people and help build the peace of the world and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMUNICATIONS AND MEDICINE

(Address by David Sarnoff, chairman of the board, Radio Corp. of America, at National Health Forum, New York, March 16, 1961)

It is a novel and challenging experience to attempt a layman's diagnosis of a subject relating to medicine, and to do so before a group of medical experts. In approaching it, I recall the comment of a British nobleman, Lord Rochester. "Before I got married," he said, "I had six theories about bringing up children. Now I have six children and no theories."

Well, I have advanced from three children to eight grandchildren, and, being a less prudent man than Lord Rochester, I still have several theories left. Primarily, the relate to electronics, where the main function is the communication of information, and some bear on the subject assigned to me this morning—"Communications and Medicine."

I believe that electronics offers as many avenues for advance in medical communications as it has, over the years, for communications in other fields. The very theme of your National Health Forum, "Better Communication for Better Health," suggests that you, too, sense this need for rapport between your ancient art and science of medicine and our young one of electronics.

COMMUNICATIONS: THE BROAD PROBLEM

How do we meet this need?

First, I think, by an understanding of a problem that has become basic to almost every area of human endeavor. It is the problem of progress—the accelerated, diversified, omnibus type of 20th-century progress.

Since 1900, there has been more scientific and technological progress than in all the previous centuries of recorded history. The present tempo of that progress is accelerating daily. Discoveries of science that once would have required several lifetimes to develop are now compressed into a few years—sometimes even months. It took half a century to move from mechanical office machines to modern computers; but it took less than a decade to increase the speed of these computers a thousandfold. It took 40 years—from the Wright Brothers to the Second World War—to push flying speeds up to 500 miles an hour; but less than 15 years to go from 500 miles to the 18,000 miles an hour at which mademade satellites now circle the globe.

How profoundly the world has altered in these 15 years. A hermit emerging today from a 1946 refuge would never have heard of earth and solar satellites or atomic reactors. Automation would be an alien word. He would never have flown in a jet plane, had his laundry washed with a synthetic detergent, or seen the inside of a glass-walled building. He would never have watched color television, or listened to stereophonic music.

This vast spawning of new products and services, and new information about them, has created a classic dilemma. Is a great quantity of new information truly useful if it does not reach those who are trained to use it? There was more than levity in the recent comment of a Harvard librarian that if new books continued to arrive at the present rate, it will not be long before the books crowd the students off the campus.

Even the weatherman suffers from an information surplus. The RCA-built Tiros weather satellite was designed to provide information that could lead to greater precision in the much maligned art of forecasting. It did just that. In the 3 months between its orbiting and the end of its operating life, Tiros I produced over 22,000 pictures of the earth's cloud cover. But the Weather Bureau—submerged in these informational riches—had to hire four new specialists just to index and classify the pictures.

Before the war, when anyone talked about electronics, he was talking about a single product, radio. With a good background in radio, a man could do his job with reasonable competence. Today, electronics encompasses a dozen different businesses, and the executive must have a working knowledge of each. It is not unusual at RCA to start the day with a meeting about space vehicles, shift to a study of the market potential for new automation devices, then move to a discussion of electroluminescent lighting for the home—and finally wind up with a chart report on the decibels of teenage sound that greeted the latest Elvis Presley recording.

COMMUNICATIONS IN MEDICINE

The thrust of invention and development has placed us all in an informational pressure cooker, and nowhere is this fact more clinically apparent than in the field of medicine. I am told by a doctor friend that 7 out of 10 prescriptions written today are for items unknown to medicine before World War II. The communications problems that result are more serious here than in any other area, since human health and life itself are involved.

Viewed statistically, information covering new medical developments is contained in an estimated 8,000 medical journals and bulletins that appear annually, about half of them in the United States alone. Stretched end-to-end, their 11 million pages would extend from New York to Denver.

To keep up with developments published in these journals, a physician would have to read the equivalent of one book every hour. If Harvard is threatened with a loss of students, you doctors are threatened with a loss of patients. Soon, you will be too busy reading to see them.

This is a fundamental problem in the logistics of communications. On the one side, a mounting flow of fresh material on methods, techniques, and drugs; on the other, the harried physician to whom this information must be funneled over and around the obstacle of his rapidly diminishing time.

The communications methods standard in the world of medicine—journal articles, conventions and symposiums, medical newspapers, and house organs, and detailing—have served well in the past. But the past is not always an infallible guide to the future. Today, I find widespread agreement among my medical friends that your science moves ahead too rapidly for the older communications techniques to cope with its advances.

This was a key point in the report of the U.S. Senate's Special Committee of Consultants on Medical Research, on which I was privileged to serve during the last session of Congress. The committee's report said in part: "The enormous problems of handling the rapidly increasing flow of new information in the literature, of codifying it, and making it readily accessible, urgently cry out for solution * * *."

My theories on the solution of this formidable problem relate to the application of new electronic techniques in three broad areas.

THROUGH RADIO: A MEDICAL JOURNAL OF THE AIR

The first is medical radio.

As some of you know, RCA has done exploratory work in this area. We are convinced, on the basis of intensive studies, that radio can be an effective method of keeping the doctor better informed about significant developments in medicine.

It is possible to set up a closed-circuit radio network that would link 100,000 to 200,000 doctors' offices, hospitals, and medical schools in the principal metropolitan centers of the United States. At specified times during the day, this network could carry medical news, reports of scientific assemblies, discussions of medical economics, and medico-legal topics, and reports on research activities.

In short, it could be a comprehensive medical journal of the air, with the scientific integrity of its program content insured by an Editorial Advisory Council serving as both a source of material and a critic of scripts.

Such a private network is possible through the imaginative use of what is known as FM multiplexing. This is a relatively new form of communications permitting two or more programs to be sent by the same transmitter along the same frequency. In principle, a multiplex system is not dissimilar to the message-carrying complex within the human being where trillions of interconnected cells coordinate messages traveling from one part of the body to another.

The multiplex signal could be heard only by those receivers designed for and tuned to the frequency of the network station. It is thus possible to crossbreed a mass communications technique with the privacy of a telephone line.

For the doctor, such a system would: Sharply reduce lag time between the scientist's laboratory discovery and its bedside application; provide postgraduate medical courses by a faculty of the Nation's foremost specialists; provide up-to-the-minute news on significant developments across the entire spectrum of medical science; remove the specialist from the isolation to which the pressures of current medical practice drive him, and give him awareness of developments in all medical fields.

Above all, the radio network would give the doctor more information more quickly and more conveniently than any other means. In his own office, with no more than 50 or 60 minutes of daily listening, he could stay abreast of the unending march of medical advance.

THROUGH TV: A MEDICAL SCHOOL OF THE WORLD

A second way to enlist electronics in medicine is through television, particularly color television.

Since the first "on camera" surgery at Johns Hopkins in 1947, television has proven effective in training physicians, surgeons, dentists, and specialists in many other fields. Today, more than 25 medical schools find television indispensable for various aspects of their teaching programs.

As for the future, you can preview it today at the Walter Reed Army Medical Center in Washington. The most extensive color television system of its kind ever devised—a system comparable to that of a major commercial network—is in regular use.

A color TV microscope camera system allows for enlarged color reproduction on a television screen of minute biological material. It enables many doctors to observe simultaneously micro-organisms or tissue sections, it obsoletes the stand-in-line wait for the microscope.

At Walter Reed, a surgeon can send from the operating room to the pathology laboratory, through a pneumatic tube, tissues removed during surgery. The pathologist can examine and analyze the tissue and determine whether a malignancy exists. Then, through closed-circuit television, he can transmit to the operating room a microscopic view of the tissue, in natural color, and discuss it with the surgeon.

This is a clinical and diagnostic use of television. A broader informational application comes through films made of live color programs and furnished to Army doctors stationed at remote posts around the world. Any military installation with a standard motion picture projector can take advantage of lectures, demonstrations and courses given by specialists at Walter Reed.

Eventually, lectures and demonstrations by front-rank specialists will be available to every physician in his own office. A compact, inexpensive television-tape player, now under development, will reproduce television pictures and sound from magnetic tape over any television receiver. When the player reaches the market, taped versions of refresher courses will be mailed the physician to play through his own television set at his convenience.

In terms of international communications, electronic hardware is already available for manmade satellites that will serve as relays for worldwide medical television. Ultimately, such a system will permit round-table discussions between medical experts anywhere on the globe. It can bring together scientists, teachers, demonstrators and students into one vast audience—truly a medical school of the world.

Worldwide television will permit thousands of physicians to sit in on diagnosis and consultation sessions among specialists of many nationalities. Heart specialists in London will be able to examine a patient, display on the television screen his X-rays and cardiograms, and discuss a diagnosis with specialists in New York, Berlin, Paris, Rome, Tokyo, or other parts of the world.

And through instantaneous electronic translation techniques, which are now in development, the barrier of language difference—as real to the doctor as to the statesman—will be finally surmounted.

THROUGH COMPUTERS: A MEDICAL CLEARINGHOUSE

A third way electronics can move against medical communications problems is with computing techniques.

Every physician, every medical researcher, every hospital struggles today with mountains of data requiring classification, analysis, and storage for immediate retrieval. More and more of that burden can be shifted to modern electronic data processing equipment, with tremendous economies in time and gains in precision. Electronic performance provides in seconds the kind of statistical and probability findings that, with conventional methods, take days or even weeks of onerous work.

No more requirement is more fundamental to the research scientist than knowing what has been done in his immediate area and in related areas. Lacking this knowledge, he can grope aimlessly, duplicating the work of others to a wasteful extent. In industry, such duplication costs an estimated billion dollars a year, and the toll is comparable in other fields.

Medical knowledge is increasing so rapidly that it has far outstripped the storage capacity of any single human brain. But computers enable us to store accumulated knowledge compactly, update it continuously, recall it instantly.

Through a blend of electronic computation and communication techniques, it would be possible to establish a national medical clearinghouse which could serve as a central repository for all the latest medical information. By a combination of communications circuits, every major hospital and medical school in the country could be tied into this clearinghouse.

If a doctor in a San Francisco hospital sought the source of information on a particular subject, he would simply dial a number. Instantly, a relevant bibliography would flash on a televisionlike screen before him. Then, when he made his choice of a particular article, he could dial again and get a microfilm version of the article on his screen.

Another service of great value to the physician would be rapid access to the medical history of any person seeking treatment. Now, the relevant data are so scattered in doctors' offices, hospitals, insurance company files and elsewhere that an individual's medical background has to be reestablished on every occasion through time-consuming questioning and examination. With a centralized electronic file of health records, the physician could simply dial the identifying code number of his patient and obtain an up-to-date report.

In the presence of so many leaders of the medical profession, I should like to offer this suggestion: That the American Medical Association, in concert with representatives of the electronics industry, create a joint group to consider the feasibility of a National medical clearinghouse; and if it is deemed feasible, to decide the soundest way of bringing it to fruition. In such a venture, I am certain that the electronics industry would cooperate wholeheartedly. Speaking for my own organization, I assure you that our experts,' experienced in many fields of communications, would be pleased to assist such a group in its studies.

I realize, of course, that there are numerous details to be analyzed in any proposal of such magnitude. But I trust that the concept itself has sufficient promise to justify its careful pursuit. There is no technical reason why a medical clearinghouse, once established on a national scale, could not be expanded gradually to embrace the entire world.

MEDICAL KNOWLEDGE FOR DEVELOPING NATIONS

At various times, centers like Rome, Berlin, Vienna, Edinburgh, and London have claimed the distinction of being the "Medi-

cal Capital of the World." Today, few question that the center of medical learning has shifted from Europe to the United States.

To insure our continued preeminence, we must ceaselessly strive to increase our medical knowledge and to improve its dissemination. I believe that electronics can aid immeasurably by permitting the doctor to hear more—through radio; to see more—through television; to find information more quickly—through computing techniques.

It can also, as it has in the past, offer medical science a wide range of new tools for research, diagnosis and treatment. As an example, one of the newest developments is a transistorized low-frequency amplifier, sensitive enough to detect skin potentials due to cardiac action. The unit, developed by a research team under Dr. V. K. Zworykin, occupies less than one-half cubic inch of space. By variation of the light intensities, it can reproduce and electrocardiogram containing far more information than is provided today by conventional methods.

But in medicine, to a unique degree, your place on history's canvas is likely to be fixed primarily by your success in meeting the needs of other peoples. As Arnold Toynbee has said: "Our age will be well remembered * * * because it is the first generation since the dawn of history in which mankind dared to believe it practical to make the benefits of civilization available to the whole human race."

What high marks history would accord our two professions if we were to combine our medical knowledge and communications skills for the mastery of disease among the developing areas of Asia and Africa—and wherever such assistance may be needed. You in medicine have the necessary information; we in electronics have the necessary means for conveying it.

The more closely we work together, the more effectively we can contribute to better health for all mankind. This is our common objective, and its achievement would make this world a happier place in which to live.

Tribute to Carroll Reece

SPEECH
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. MICHEL. Mr. Speaker, all of us are saddened today as we pay tribute to our departed colleague, CARROLL REECE. I cannot help but recall my days in school when I first heard and read about CARROLL REECE as a most distinguished Member of this House and as a former chairman of our Republican National Committee.

It was a memorable day for me when I came to Washington for the first time and had the privilege of meeting CARROLL. I remember so distinctly how disarming he was and how much time he was willing to give me in conversation on the occasion of our first meeting. Subsequently, after I was elected to Congress, there were many more opportunities for me to talk with CARROLL and counsel with him. His was always a wise and considered judgment, and I know of no one who was so gifted with the ability to see the good in people rather than their faults. He was always quick with a quip or an anecdote if the occasion called for it, and likewise he could be so forceful and stirring if need be.

I will never forget one of my first public appearances here in Washington after being elected to Congress and sharing the speaking honors with CARROLL. My remarks for the occasion were so inadequate, while his were so profound and appropriate. Nevertheless, he asked me to come to Tennessee to make several speeches there, and regardless of where it may have been in the State of Tennessee everyone knew and spoke most highly of CARROLL. While I respected him from the very first meeting, I learned to love him as well. He had such a vast reservoir of experience and I learned much from him.

We will miss CARROLL so much on the floor of this House, and I would want his wife and family to know this heavy burden of sorrow is being borne and shared by a host of us who have come to know CARROLL REECE as a dear friend. This House loses one of its most fearless and yet gentle Members, and the country suffers the loss of a great soldier and patriot.

Needs of the Nation and of the World

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. KEFAUVER. Mr. President, one of the most fruitful results of President Kennedy's inaugural address has been a great stirring of public discussion concerning the needs of the Nation and of the world and how they might be met.

In an eloquent, imaginative, and hopeful article, Mr. Edward J. Meeman, the distinguished editor of the Memphis Press-Scimitar, identifies many of these needs and exhorts all manner of men to rise to the challenges of our critical times.

I ask unanimous consent that his article, published in the Press-Scimitar on March 9, appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOK AT ALL THESE JOBS THAT HAVE TO BE DONE—THE POWER TO DO THEM IS IN US

(By Edward J. Meeman)

President Kennedy's inaugural address gave hope to the world. One of its many challenging, inspiring, and encouraging statements was this:

"Let us begin anew."

In using those words he was specifically making a request "to those nations who would make themselves our adversary" to "begin anew the quest for peace before the dark powers of destruction unleashed by science engulf all humanity in planned or accidental self-destruction."

We need to "begin anew" in negotiation.

We need to begin anew in more than negotiations.

We need to begin anew in building the unity and strength of the free world; beginning anew by taking measures which are positive and good in themselves and not a mere negative reaction to the threat of communism, as have been most of the measures we have taken in the past.

We need not only to strengthen the economic and cultural aspects of NATO through the coming Atlantic Conventon.

We need also to study the great possibilities in the recently formed Organization for Economic Cooperation and Development (OECD). This embraces not only the United States and Canada but free nations of Europe not included in NATO. Freer trade could come through this organization which is wider than NATO, more inclusive than the "Inner Six" or the "Outer Seven" groups of European nations from which the United States is shut out. It holds the hope that the burden of aid to developing countries which is now largely borne by the United States will be spread among other free nations, our allies, who have now become prosperous.

We need a new attitude in, if not a complete reorganization of, the United Nations. The U.N. was formed under the wartime psychology and illusion that the future threat to peace would come from a possible resurgence of fascism. The fact was that fascism was only a reaction to, and an imitation of, communism, and when we destroyed fascism, there still stood communism, our original and relentless enemy, determined now, as always, to "bury us" (as they keep telling us, in plain words), a more formidable foe than ever.

We should recognize that our economic system, capitalism or private ownership, is not decadent, as Marxists say, but it is suffering from arrested development. The logic of capitalism always required that all members of society directly benefit from profits. To have a unified society all capitalists should also be workers and all workers should be capitalists. We should end the class conflict now by the universal adoption of profit sharing.

It will require a new kind of man to do all this that must be done. The people we see around us, functioning as we see them functioning, are not equal to this. But we do not need to import supermen from other planets. Man as we know him, if he develops his higher nature and lives in that nature, can do it. He needs only to awaken to what he really is, the child of God, perfect expression of His very being.

In our time man has unlocked the powers of the universe, awful powers that President Kennedy could only describe as "the dark powers of destruction unleashed by science" because mankind has done only half the job of scientific discovery. There are matching powers of control in the divinity which is in man. God offers us the key to them in the quiet of meditation.

It is certain that man can become as reliable, as unerring, as perfect in performance, as the machines and devices which he has made. It is as certain that he can as that he must.

This orderly universe is so constituted that the existence of a need is balanced by the existence of what will supply that need.

This great crisis requires an answer as great as the crisis.

The call comes to every man to give that answer.

It comes to the president of the corporation and to the janitor who sweeps out his office.

It comes to high official and to the workingman whose vote put him there.

It comes to the housewife. It comes to the student.

The call is to the greedy to become generous. The self-indulgent to become sacrificial. The unreliable to become reliable. The lazy, the useless to go to work. The shiftless to become self-supporting. The waster to become thrifty. The drunk to become sober.

The fanatic to become tolerant. The jealous, the envious, the hating, to become loving. The unfaithful to become loyal. The weak to become strong.

The doubter to believe—"Be not afraid, only believe." "All things are possible to him that believeth."

"Every day is a new beginning,
Every morn is the world made new
Yesterday's errors and yesterday's sinning
Are gone with the sunshine and gone with the dew."

The new beginning is imperative for the human race and every member of it. It is as possible as it is imperative.

The new beginning begins with you. It begins with me.

Atomic hell on earth? Or heaven?
Choose ye this day.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1961

Mr. HALPERN. Mr. Speaker, on March 3, 1961, a tribute was paid to Bulgarian Liberation Day. At this time I was inadvertently prevented from participating. But in view of the importance of this commemoration I would like to include in this RECORD my statement on this subject.

For the past 83 years March 3 has been commemorated by the the entire Bulgarian people, irrespective of political persuasion, as the Bulgarian Liberation Day. The Act of San Stefano, signed on this day by the imperial Russian Government and the Ottoman Empire, restored the independent Bulgarian State and ended a 500-year foreign oppression of the Bulgarian people.

The liberation of Bulgaria followed a long self-sacrificing struggle for freedom led by such gallant patriots like George Rakovski, Vasil Levski, and Christo Botev, and was immediately preceded by a national uprising which won the sympathy of the world and the indignation of all humanity, led by William Gladston, against the outrageous atrocities committed by the much stronger oppressors. Yet this uprising made European intervention unavoidable and Bulgaria was liberated.

In their long history the Bulgarians have made a humble but important contribution to European civilization and have withstood their right to independence and freedom against powerful empires and foreign cultural influences. The Byzantine Empire, with illustrious culture and military might, failed to subdue and assimilate the Bulgarian nation. The Ottoman Empire crumbled after a five-century rule in the Balkans, but the Bulgarian people survived. March 3 opened the way for the Bulgarian people to join again the community of European nations.

The first Bulgarian Empire, which lasted from 861 to 1018 A.D., became the cradle of the Slavic civilization. It was here that the work of the apostles of the Slavs, Sts. Cyril and Methodius, the first Slavic alphabet, found a fertile soil and developed into a powerful literary tradition continuing up to this day in Russia, Bulgaria, Ukraine, Serbia and Byelorussia. This literary tradition began in Bulgaria in the ninth century, was originally based on the Old-Bulgarian language, and subsequently spread throughout the eastern Slavic world to form the basis of the national cultures of the Slavic nations.

It was in Bulgaria that the ancient Christian civilization, represented by Byzantium, was converted into a Slavic-Byzantine civilization, a kind of cultural revolution which reflected the spirit of freedom and independence manifested many a time by the Bulgarians.

The Bulgarian exiles abroad, loyal to the national tradition of freedom and independence, joined in various groups to support the struggle of the Bulgarian people for freedom from communism and independence from Soviet domination. The Bulgarian National Front of America, representing the patriotic younger generations in Bulgarian politics, is on the forefront of this struggle.

In 1954 the Bulgarian National Front of America organized the first solemn celebration of the Bulgarian Liberation Day in New York. Ever since this day became the national holiday of American Bulgarians and a uninterrupted tradition in commemoration of those who have given their lives for the liberation of Bulgaria from Ottoman subjugation, those who have fallen in the struggle against Communist oppression and in salutation to those who continue their struggle for freedom in Bulgaria.

Inflation and Trade

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Wall Street Journal of March 16, 1961, entitled "Inflation and Trade."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INFLATION AND TRADE

The resurgence of West European industry is by this time an old story. But the competitive impact on the United States may be entering a new and more difficult stage.

As our Mr. Malabre wrote from London the other day, the Europeans are driving harder than ever for increased exports. They are tailoring their products more to foreign tastes; they are boosting advertising. But beyond that, more of them are raising capacity of their already new and efficient plants beyond levels sufficient to satisfy home markets, so they have to export more. There is also mutual lowering of tariff barriers within the six-nation Common Market and the seven-nation European Free Trade Area. And the prospect that there will be some sort of reciprocity between the two groups.

Certainly for the United States, already suffering balance of payments troubles and a gold outflow, the situation is not one to be passed over lightly. U.S. exports have been a relatively strong point in the payments situation. But already the Europeans can often underprice us, both at home and abroad. Here are all the ingredients for trade war.

It is often easier to say what must not be done, than what is to be done. But if higher U.S. tariffs are ever the answer, this is plainly not the time, however persistent the protectionist chant. We already suffer price disadvantages, and are likely to suffer worse ones as the Europeans lower tariffs to each other. Raising tariffs here would almost certainly bring retaliatory action abroad, worsening our competitive price situation.

Nor will the exhortations from Washington to "get out and sell" prove much of an answer. U.S. companies that are in a competitive position to sell will certainly do so without being told. And the less they are interferred with the more successfully they will sell abroad. No master plan to boost exports is likely to help unless it is grants of dollars abroad and that not only would aggravate the balance of payments, it also would spur domestic inflation. And inflation has been a main cause of our competitive price disadvantage.

By the signs up to now we are headed for still more inflation. The administration has put forth plans which call for spending, unestimated but surely massive, for social welfare, housing, and education. It has called for spending for aid to Latin America. And if anything is certain it is certain that there will be calls for more such spending to meet our responsibilities.

Yet all of this increases inflationary pressures. The prospects are for a truly serious unbalancing of the Federal budget, the creation of more credit, and an upward push on prices and wages. To be sure, the individual U.S. businessman will battle higher costs; he has to or cut his own throat. But can either business or labor hold back on price and wage increases when deficit financing makes the wheel of inflation spin faster?

So, as European factories push harder, U.S. factories will face more of a disadvantage—unless inflation is stopped.

If it is stopped, there are factors then working in our favor. U.S. made goods still are the criterion of quality and status in most parts of the globe. There are inflationary factors at work in Europe, and a push for higher wages, which tend to raise their costs. As wages and costs in the United States stabilized under prudent monetary policy, our relative disadvantages would shrink and could in time become advantages.

But that is only if inflation is brought to a halt at home. And so long as we think our responsibilities require us to spend more than we have, inflation is what we will have, and a weakening stance in this new and difficult era of competition.

National Watch Inspection Month

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I would like

to include in the RECORD a resolution recognizing that March is National Watch Inspection Month.

Following is the text of the resolution submitted by the National Watchmakers Association:

Whereas the master watchmaker has dedicated himself to such science and renders untold benefit to his fellow citizens in the practice of such craft; and

Whereas the unique skill of the master watchmaker plays so vital a role in the highly complex field of mechanical instrumentation which now is of utmost importance to the security of our Nation and our free world; and

Whereas the American Watchmakers Institute has designated, throughout our Nation, the month of March 1961 as a time to emphasize the highly technical accomplishments achieved in its chosen field of service:

Now, therefore, March 1961 is proclaimed as National Watch Inspection Month and all are urged to join in congratulations to the master watchmakers for continued achievement and outstanding service.

Eighteen Years Late but Blimp Pilot Cited for Attack on German Sub—Rosendahl States Act Is Unparalleled in History of Navy

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. AUCHINCLOSS. Mr. Speaker, I appreciate the permission granted me to insert in the CONGRESSIONAL RECORD an article reporting the recognition of valiant service rendered by a blimp pilot and his crew in an attack on a German submarine 18 years after it had happened. The citation was given to Comdr. John Jan, of 6 years' service in the Navy and a resident of Toms River, N.J. He was pilot and navigator of the airship, K–74, and the incident took place on January 18, 1943. This outstanding feat was dug out of the records by Rear Adm. Charles E. Rosendahl, retired, a brave and most distinguished Navy man whom I think we all recognize as an authority on blimps and the essential part they play in the defense of our country.

I am particularly pleased to have this matter included in the RECORD at this time because of the recent plan on the part of some in the Navy Department to eliminate blimps from our line of defense and seriously curtail the activities at the Lakehurst Naval Air Station, in Ocean County, N.J. This proposed action is vigorously opposed by Admiral Rosendahl and others and I hope that before anything is decided on that a thorough and careful investigation about the whole problem may be made by the appropriate committee in Congress.

I am pleased to include with these brief remarks an article appearing in the New Jersey Courier of Toms River, N.J., on February 23, 1961, telling about the recognition of these brave men and the circumstances connected with their achievement:

EIGHTEEN YEARS LATE BUT BLIMP PILOT CITED FOR ATTACK ON GERMAN SUB—ROSENDAHL STATES ACT IS UNPARALLELED IN HISTORY OF NAVY

LAKEHURST.—Recognition of a blimp's attack on a surfaced German submarine has come. But the citation to Lt. Comdr. John Jan, 41, of Toms River, was presented last Friday, 18 years after the event, by Rear Adm. Charles E. Rosendahl (retired), of Toms River.

It was signed by Secretary of the Navy William B. Frank, who served under President Dwight D. Eisenhower.

Commander Jan, then 22 years old, was pilot and navigator of the airship, the K–74, of nonrigid design. Jan had been in the Navy 6 years when the incident took place on the evening of July 18, 1943, and the following day, July 19.

The efforts of the crew, two officers and eight enlisted men, may have gone unrecognized forever if Rosendahl hadn't discovered a record of the incident while reading captured German logs of submarine operations.

TO RECEIVE DISTINGUISHED FLYING CROSS

The feat almost brought about a general court martial for the skipper of the blimp, Nelson G. Grills, now an Indianapolis lawyer, then a Navy lieutenant. Separated from the service with the rank of commander, Grills will be presented with the Distinguished Flying Cross in the near future.

Said Rosendahl at ceremonies February 17: "It proves that airships can render outstanding service and the acts of the men aboard the K–74 against U–boat 134 is unparalleled in naval history.

"It also proves that American servicemen will never run from the enemy under any circumstances, that our servicemen stand ready to defend the country at any time," he added.

The citation to Jan pointed out "courage, skill and devotion to duty in the face of hostile gunfire were in keeping with the highest tradition of the U.S. Naval Service."

The fight with the surfaced sub was the first in history. And how much damage the lighter than air ship inflicted on the sub was not known until Rosendahl checked the log last year.

Records were found in Germany but the submarine itself was sunk by British aircraft 2 weeks after the fight with the blimp.

The sub was located off the Florida coast after operation reports listed no enemy ships in the area. Radar discovered the sub as a blip on its screen. The U-boat was located on the surface but its crew did not detect the blimp until it was 250 yards away and was visable to the eye on the clear moonlit night.

The crew of the sub opened fire with deckguns, sending shells through the helium filled envelope of the airship. When the blimp was 100 yards overhead shells from a larger deckgun found their target.

ON TARGET

But crewmen on the blimp threw round after round of machinegun shells at the sub damaging its ballast tank and conning tower. Bombs straddled the sub as she pulled away in an effort to submerged.

Losing helium, the blimp plunged into the water, and was abandoned by the 10 men who were clad in life jackets. An inflatable boat could not be salvaged as men went into the water.

Grills, however, returned to the partially submerged car of the blimp to destroy classified gear and records.

Nine of the ten men were rescued the following day, July 19, 1943. One, Isador F. Stassel was lost as rescue planes approached the men. He was presumed to have been the victim of a shark.

After the skirmish with the blimp the sub's skipper sent a message to Berlin. In it he told of the surprise of the attack and damage inflicted to his craft. It was forced to head back to Germany instead of reaching Havana, its destination. Two weeks later the U–134 was the victim of English bombers.

When reports of the actions of the officers and crew of the blimp hit Washington, it created a furor. Criticism was thrown at Grills for what Navy brass called the loss of equipment through unnecessary actions. They said Grills should have averted contact with the sub.

But Rosendahl, at Lakehurst in charge of the base, knew differently. Somehow, he had a feeling no Navy man would run away from a fight.

And so it required 18 years for this to be proved true. Navy officers here said Rosendahl was responsible for bringing out true facts and proof that the sub had been damaged.

Even though the admiral is retired, he hasn't lost his love for airships. And talk of them brings a smile to his face.

They piped him aboard the station last Friday as officers and men stood at attention. The complement of men were at parade rest as he spoke in a clear voice despite a cold that had him weakened somewhat.

He left in the same fashion he entered the auditorium. His stature was erect, his steps firm, his eyes straight ahead. He returned each salute from officers, noncoms and enlisted men.

He dined with Capt. Marion H. Eppes, station commander, and other officers at the Officers Club.

He talked about airships. He'll continue to talk airships.

"We still don't have as good an antisub defense as we need. The Navy knows it and is giving it major consideration," Rosendahl pointed out as he drank milk.

He declared airships still have their place in defensive tactics despite subs powered by atomic energy. Sonar, a sound detecting device, keeps the subs under water and can detect atomic-powered ones.

Aid to Education—Contribution of a Fair and Enlightened Press

EXTENSION OF REMARKS
OF
HON. HUGH L. CAREY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. CAREY. Mr. Speaker, under unanimous consent to extent my remarks in the RECORD and to add extraneous matter, I commend the chairman and the members of the Committee on Education and Labor for the manner in which hearings are being conducted on H.R. 4970, the Federal aid to education bill. The atmosphere of full and frank discussion on a question which has provoked widespread controversy among the public and the press should prove measurably helpful in reaching a fair solution to this question. I submit that it is beyond contradiction that a child's hunger for knowledge in our times merits our charitable consideration on an equal basis with his need for bread. To satisfy that hunger on the basis of the need, regardless of creed, to provide the aids to wisdom with which to build new hori-

zons disdaining considerations of color or geographical location may well be the challenge that decides the place in history of the 87th Congress. It is my opinion that this great body possesses all the ingenuity and skill required to open the doors of opportunity for optimum education to every American child. Parents and children alike look to us in this hour.

I believe the gentlemen of the press are rendering a service of the highest order beyond partisanship and employing clear perspective in discussing all facets of this problem. I submit for the consideration of my colleagues two pertinent discussions of this question which appeared in our New York City newspapers. While I am in substantial agreement with certain major conclusions of both writers below, I differ on some others and present them only as exemplary indications of the unbiased treatment which our journalists are according the merits of this controversy. I trust it will serve as an inspiration to us in the final deliberations of this bill.

The two articles follow:

[From the New York Herald Tribune of Mar. 21, 1961]

TODAY IN NATIONAL AFFAIRS—FALLACIES REVEALED IN RIFT OVER U.S. SCHOOL AID BILL

(By David Lawrence)

WASHINGTON, March 20.—Some fallacies are being spread around in connection with the program of Federal aid to education now pending in Congress.

Fallacy No. 1 is that, if the main bill were to include any loans for construction of parochial schools at the elementary or secondary level, this could jeopardize the operation of the whole law, when passed, because of doubt about constitutionality.

The fact is, however, that Congress for many years has inserted in various laws a section, usually at the end, which says that if any provision is held unconstitutional by the courts, this does not affect the validity of any other provision. It is known as a "separability clause."

Fallacy No. 2 is that Federal funds are not being loaned to any church schools today for construction purposes because it would be unconstitutional to do so. Here, however, is an excerpt from a news dispatch which appeared a few days ago in "The Catholic Week," the diocese newspaper in Alabama, under the dateline of Cullman, Ala.:

U.S. HOUSING LOAN CITED

"A $400,000 loan has been issued to Sacred Heart College in Cullman, Ala., for construction and expansion, according to Mother Mary Susan Sevier, president of the college. The Housing and Home Finance Agency of the U.S. Department of Health, Education, and Welfare approved the loan in February.

"Founded in 1940 by the Benedictine Sisters of Cullman, Sacred Heart College was the natural outgrowth of the educational institution founded in 1904 by the sisters. Sacred Heart College is the only Catholic women's college in the three-State area of Alabama-Mississippi-Georgia. The college has trained faculty members who staff 14 elementary schools, 3 high schools, and 1 college. All are Catholic schools in the Mobile-Birmingham diocese.

"Sacred Heart College has also educated a large number of teachers in public schools in the State, especially in Cullman County."

SCHOOL LEVEL DIFFERENCES

Fallacy No. 3 is that there is a constitutional difference between aid at the elementary and secondary level, as distinguished from the college level, the argument being that attendance at elementary and secondary schools is compulsory, while attendance at sectarian institutions at the college level is voluntary.

Actually, there is no law anywhere that compels any child's attendance at a public school, either at the elementary or the secondary level. What is set forth in State laws is that children shall get an education for a stated period at an accredited school. Parochial schools are accredited—that is, they satisfy the education standards set by a State school board—and this is all that is required of any Protestant or Catholic school or of any other private school. Most States send an inspector at least once a year to each parochial and private school to make sure that the State standards are being met.

The Federal Government, on the other hand, does not participate in any way in so-called compulsory education at the elementary or secondary school level.

BILL BARS U.S. CONTROL

In the bill introduced in behalf of the Kennedy administration by Representative THOMPSON of New Jersey, Democrat, dealing with funds for construction and teachers' salaries, there is this provision:

"In the administration of this title, no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the policy determination, personnel, curriculum, program of instruction, or the administration or operation of any school or school system."

This makes it plainly a bill by which the Federal Government is to provide educational facilities but is not to take any part itself in what is taught.

STATES RETAIN CONTROL

If the parochial schools at the elementary and secondary levels should receive funds for construction of physical facilities from the Federal Government, the schools would be under no obligation to alter their courses of study in any manner whatsoever. They would continue to look to State authorities for recognition of their graduation certificates and diplomas as fulfilling the requirements of a standard educational program.

There may be good reasons why the Federal Government should let the States take care of all school problems, including funds for construction and any other educational facilities, but the moment the Congress begins appropriating money for education, the argument is made that, under the Constitution, it cannot permit any discrimination as between different kinds of religious schools or colleges, or impose any handicap on those parochial or private schools which satisfy State requirements in the field of general education.

[From the New York Daily News of Mar. 20, 1961]

U.S. AID TO EDUCATION

President Kennedy unquestionably opened a king-size can of worms when he sent his message to Congress urging billions' worth of Federal aid to education.

The President's program falls into two parts: (1) about $3.3 billion to be dealt out over a 5-year period for undergraduate scholarships and college building operations; and (2) some $2.3 billion to go in a 3-year period as gifts to States for building public schools and/or fattening teachers' salaries.

Shortly after the President made these proposals, the executive board of the National Catholic Welfare Conference served public notice that the Roman Catholic Church in the United States (though assertedly without trying to pressure Members of Congress) would oppose the Kennedy program unless it were amended to provide for long-term, low-interest construction and repair loans to private schools.

That means schools and colleges run by religious groups, mainly. The Catholic Church operates most of these.

The President, a Catholic, finds himself in opposition to the Catholic clergy, to the embarrassment of many Catholics and the delight of numerous anti-Catholics.

What's the best way out of this affair, which obviously is worrying the President as well as a lot of other people?

For one thing, many Americans doubt that there is any need for Federal aid to school and college construction, and are convinced that classroom shortages on both levels have been greatly exaggerated.

For another, it seems a safe bet that, should the Government begin helping to pay teachers' salaries, Federal bureaucrats sooner or later (probably sooner) would move in and take to telling the teachers what and what not to teach. Who pays the piper calls the tune.

SCHOLARSHIPS OR DEDUCTIONS

Maybe the best way out is to forget about all the Federal aid the President proposes, except the scholarships.

Government scholarships might safely be awarded, in large numbers and generous amounts, so long as the Government refrained from telling the winners what to study on their Federal money. Should the Government prescribe the courses to be taken, it would be aping the Soviet Government.

These scholarships ought to go, we believe, to youngsters of promise and proved ability, regardless of creed, race, politics or other considerations of that nature.

Or wouldn't it be still better just to forget all about U.S. Government handouts of the taxpayers' money, and amend the Federal income tax laws so that parents could deduct the costs of educating their children at any and all schools and colleges?

That way, the cash could be spent directly on education, without a horde of Government bureaucrats taking a cut as they passed the money from the taxpayers to schools, colleges or students.

Anyhow, let's have plenty more debate on this complex subject before Congress does anything about Federal aid to education.

The Story of the White House China

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. THOMPSON of New Jersey. Mr. Speaker, the world-famous fine china used in the White House by all Presidents since 1917 is manufactured in Trenton, N.J.

In a letter dated March 6, 1961, Robert J. Sullivan, vice president of Lenox, Inc., points out that—

Lenox china is not only the top American fine china, it has a worldwide reputation. In these days of intense discussions about foreign products, it is heartening to realize that no American, including the President, who wants the finest available china, has to go beyond our shores.

Mr. Sullivan goes on to say that—

There is another reason why we feel your colleagues should know the Lenox story at this time. Our Nation is undergoing an economic recession and as we well know,

the Trenton area in particular has been hard hit. But our company plants continue to operate at full capacity, maintaining regular employment and serving as an anchor to the economic stability of their communities. We are able to do this, we believe, because we continue the same high level of quality established by our founder, Walter Scott Lenox, a native of Trenton, who entered business in 1889. The business growth of Lenox is the story of a great American functioning in the finest American tradition. We hear talk these days that Americans have lowered their standards. Yet the present success of Lenox is accounted for because the quality of the product appeals to the American families who purchase our fine china.

I include, as part of my remarks, the letter from Mr. Sullivan together with a short account of the china used by our Presidents:

LENNOX, INC.,
Trenton, N.J., March 6, 1961.

The Honorable FRANK THOMPSON,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN THOMPSON: Because of the great interest of the American people in President and Mrs. Kennedy's move into the White House, it occurs to me that you might want to remind your colleagues about the fine china service which has been a particular pride of the White House since 1917. As you know, the fine china used by our Presidents since that time is a product of Lenox, manufactured here in Trenton.

Lenox china is not only the top American fine china, it has a worldwide reputation. In these days of intense discussions about foreign products, it is heartening to realize that no American, including the President, who wants the finest available china has to go beyond our shores.

There is another reason why we feel your colleagues should know the Lenox story at this time. Our Nation is undergoing an economic recession and as we well know, the Trenton area in particular has been hard hit. But our company plants continue to operate at full capacity, maintaining regular employment and serving as an anchor to the economic stability of their communities. We are able to do this, we believe, because we continue the same high level of quality established by our founder, Walter Scott Lenox, a native of Trenton, who entered business in 1889. The business growth of Lenox is the story of a great American functioning in the finest American tradition. We hear talk these days that Americans have lowered their standards. Yet the present success of Lenox is accounted for because the quality of the products appeals to the American families who purchase our fine china.

I am enclosing some background material on the presidential china which I believe will be of interest to your colleagues.

Sincerely,

ROBERT J. SULLIVAN,
Vice President.

THE STORY OF THE WHITE HOUSE CHINA

Because of a Presidential command, the American public was awakened to the fact that fine china need not cross an ocean to grace the finest American dinner tables.

The President, Woodrow Wilson. The command, commission American artisans to fashion a fine china service suitable for the tables of the White House. The result, President and Mrs. Kennedy have a china service second to none in the world.

The commission went to Walter Scott Lenox in 1917, a Trenton, N.J. potter who had a lifelong dream of producing fine china that would rival that of European manufacturers. He had been creating fine china of a high quality for a number of years, but the Presidential commission gave his art the recognition needed to place his ware in the front ranks of American products.

Lenox's first Presidential china amazed Washington society. In 1826, Congress passed a statute requiring that, wherever possible, all the furnishings and equipment for the President's home be American made, yet from 1826 until 1917, European china was used in the White House. The service Lenox created for the White House was decorated in cobalt blue with an outer border of etched gold, an inner gold rim with 48 stars surrounded the Presidential seal. Washingtonians were delighted that an American potter was able to meet the stringent specifications of the White House, thus demonstrating American creativity. Although thousands of meals were served in the White House in the first 8 years of its use, only four pieces of the Wilson service were broken.

The service now in use by President Kennedy was originally made under the Truman administration; it is etched with gold and teal green to match the then newly decorated White House official State Dining Room. The White House still uses another Lenox service. The service bears the gold Tudor rose and plume design of the Roosevelt family coat of arms encircling the Presidential seal. This dinnerware is used for an especially large party when the First Family of the country finds it needs additional pieces to complement its dinnerware.

The Presidential Mansion was not the limit of Lenox's command performances. The Royal Family of Saudi Arabia commissioned the company to create a service befitting the regal furnishings of an Arabian palace. The result was a service fashioned of embossed 24-karat gold bordered by rich maroon, a sumptuous, truly royal dinner set.

Over the years the Presidents of Mexico, Venezuela, Cuba, and Ecuador commissioned magnificent Lenox services which bore the seals of their countries. When their Majesties King George VI and Queen Elizabeth visited the United States in 1939, they dined on china created by Lenox especially for this historic occasion.

State Governors have been one of the largest groups requesting special services by Lenox china. New Jersey is so proud of the international respect earned by the Trenton firm, that it has sent Lenox services as gifts to the Governors of every State.

Lenox china has been used in our American embassies throughout the world.

It is important to note that not in every case has a command performance been ordered by the head of a state or the internationally famous. Museums too have paid tribute to the company. One of the fabulous command performance services was commissioned for special exhibit in the Metropolitan Museum of Art in New York City. Since they wanted the finest example of the potter's art they called on Lenox to create breathtakingly beautiful service plates—$18,000 a dozen—which still amaze connoisseurs everywhere.

In another country, rich in the tradition of fine china, Lenox occupies an honored and unique place. The famed ceramic museum in Sevres, France, exhibits a lovely coffee set by Lenox, the only American china so honored.

The experience of Lenox shows that Americans are still interested in high quality, and that American business is not lowering its standards. The success of Lenox is based on American principles. There is only one grade of china manufactured, whether it is for the American President, or the American housewife. Differences in price are dependent only on the amount and type of decoration on the plate. The fine china itself is the same that graces famous tables the world over.

The Rule of Law in Outer Space

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid article entitled "The Rule of Law in Outer Space," written by Prof. John Cobb Cooper, legal adviser, International Air Transport Association, which appeared in the American Bar Association Journal of January 1961. The important subject and field of law in outer space is one of a most challenging nature, and which is addressing itself to keen and objective minds in all parts of the world, and particularly in the legal profession. The expression of the views of men like Professor Cooper on this important subject is a marked contribution toward discussion and the ultimate establishment of an International Code of Law in the field of outer space.

Prof. John Cobb Cooper practiced law in Jacksonville, Fla.—1911–34—except service on active duty as U.S. Naval Reserve officer 1917–19; president, Florida State Bar Association, 1931; chairman U.S. delegation International Civil Aviation Law Conference, Rome 1933; vice president, Pan American Airways 1934–45; one of the legal advisers to U.S. delegation Chicago Conference on International Civil Aviation 1944; chairman of one of drafting committees; member Institute for Advanced Study, Princeton, 1945–51; first director Institute International Air Law, McGill University, 1951–55; first administrator American Bar Foundation, 1955; legal adviser International Air Transport Association since 1946; Annual Award Fellows American Bar Foundation for Research in Law and Government, 1959; member Organizing Committees International Academy of Astronautics and International Institute of Space Law, 1959; fellow American Bar Foundation, American Academy of Arts and Sciences; member Phi Beta Kappa; American Institute Aerospace Sciences; American Rocket Society; American Law Institute, et cetera. Princeton A.B. 1909; McGill University LL.M. 1951; Princeton LL.D. 1960; Author "The Right To Fly," 1947; and many magazine articles; coeditor "Sources of Our Liberties" 1959.

THE RULE OF LAW IN OUTER SPACE

(By John C. Cooper, legal adviser, International Air Transport Association)

(NOTE.—Professor Cooper discusses four problems that will have to be solved if the rule of law between states is to be extended to outer space. He warns that failure to solve these problems may mean disaster.)

The rule of law between states must be extended to outer space. Otherwise the world faces chaos and disaster. Peace may be at stake.

As Past President Rhyne of the American Bar Association said in his address on "World Peace Through Law" at the 1958 annual meeting:

"We live at the turning point in the history of civilization * * * As we listen to the roar of current history it is absolutely clear that mankind—men and nations and races—must learn to live together or else see civilization as we know it perish in the senseless devastation of war. The atomic and hydrogen bombs, the ICBM's, the sputniks, the Explorers, and Vanguards, have attuned the world to an overwhelming desire for peace * * *."

The United Nations, as recently as December 1959, declared that the "use of outer space should be only for the betterment of mankind and to the benefit of states irrespective of their economic or scientific development." But little action has followed.

President Eisenhower, in his address to the General Assembly of the United Nations in September 1960 warned the world, saying:

"Another problem confronting us involves outer space. The emergence of this new world poses a vital issue: Will outer space be preserved for peaceful use and developed for the benefit of all mankind? Or will it become another focus for the arms race—and thus an area of dangerous and sterile competition? The choice is urgent. It is ours to make * * *.

"National vested interests have not yet been developed in space or in celestial bodies. Barriers to agreement are now lower than they will ever be again.

"The opportunity may be fleeting. Before many years have passed, the point of no return may be behind us * * *.

"We must not lose the chance we still have to control the future of outer space.

"I propose that:

"1. We agree that celestial bodies are not subject to national appropriation by any claims of sovereignty.

"2. We agree that the nations of the world shall not engage in warlike activities on these bodies.

"3. We agree, subject to appropriate verification, that no nation will put into orbit or station in outer space weapons of mass destruction. All launchings of spacecraft should be verified in advance by the United Nations.

"4. We press forward with a program of international cooperation for constructive peaceful uses of outer space under the United Nations. Better weather forecasting, improved worldwide communications, and more effective exploration not only of outer space but of our own earth—these are but a few of the benefits of such cooperation."

Law, as a rule of human conduct, and international law, as a rule of the conduct of states, require certainty of application and clarity of subject matter. If President Eisenhower's proposals as to outer space are to be made effective, and if also the rule of law is to be there fully enforced, certain basic problems must be resolved. What is the area termed "outer space"? What is its legal status; that is, may a powerful state seize and control it, or is it free for the use of all states equally? What is the legal status of the satellites of other spacecraft used in outer space, particularly is the launching state responsible for their international good conduct as the state of the flag is for its ships and aircraft? Has the state over which such a spacecraft is put in orbit or is stationed any effective rights of self-protection and self-defense? These are fundamental questions. Until they are answered by international agreement President Eisenhower's detailed proposals may not fully protect our future.

1. WHAT IS MEANT BY THE TERM "OUTER SPACE"?

The term "outer space," when used in a legal or political sense, is comparatively new. The term "airspace" has long been used. But unfortunately neither term has been legally defined.

The term "airspace" appears in article I of the Paris Convention of 1919. This provides that the "high contracting parties recognize that every power has complete and exclusive sovereignty over the airspace above its territory." The United States assisted actively in drafting this convention during the Paris Peace Conference and later signed but did not ratify it. We did, however, ratify the similar Havana Convention of 1928, and the Chicago Convention of 1944, which is now in effect. The latter provides that the contracting states recognize that every state has complete and exclusive sovereignty over the airspace above its territory. This treaty provision is therefore part of our law of the land. It can only mean that we have acknowledged the sovereignty of every other state—whether a party to the convention or not—as to the airspace over its lands and waters. This carries with it the right of exclusion of foreign aircraft, as the Aeronautical Commission of the Paris Conference agreed in 1919 on the motion of the U.S. delegate, Admiral Knapp.

Should the airspace referred to in the Chicago Convention be construed to extend as far upward as the slightest traces of atmospheric gases are found, then any state may arbitrarily veto the flight of satellites above it, no matter how peaceful may be their use. But this I do not believe to be sound.

The most recent data generally available indicate that at least one or two satellites have been as close to the earth as 100 miles, or a little less, at the perigee (lower limit) of orbit. A well-known astronomer has stated that studies of meteors entering the earth's atmosphere show that the atmosphere below 70 miles, approximately, is too dense for a satellite to pursue an orbit. It would, therefore, appear that it may be possible for a satellite to be put in orbit at least once around the earth at some minimum altitude between 70 and 100 miles above us.

Distinguished scientists have expressed the following views:

a. At the surface of the earth the air consists of about 78 percent molecular nitrogen, 20 percent molecular oxygen, and small quantities of argon, carbon dioxide, and water vapor.

b. At 50 miles altitude the temperature has dropped sharply, the atmospheric density is only about one one-millionth of the surface density, and not sufficient to contribute in any appreciable degree to the aerodynamic lift of aircraft.

c. At 100 miles or less, the temperature has increased up to 2,000° F. or more, the atmosphereic density has further decreased to one one-billionth of the surface density, the oxygen molecules have already broken down into separate oxygen atoms.

This extremely thin gaseous combination of a few nitrogen molecules, oxygen atoms, and perhaps particles of other gases, has little if any resemblance to the substance, ordinarily called air, which we breathe and which is needed to support the flight of aircraft as envisaged when the Paris and Chicago Conventions accepted the principle of airspace sovereignty.

If the lower boundary of outer space is fixed by international agreement as the lowest altitude above the earth's surface at which an artificial satellite may be put in orbit around the earth, we should then have much more than a mere theoretical boundary. Below this boundary most objects moving from outer space toward the earth would be destroyed by heat from atmospheric friction. Above the boundary satellite flight would be practical.

Before Sputnik I was launched, I suggested to the American Society of International Law a new convention: First, reaffirming absolute sovereignty of the subjacent state up to the height at which aircraft could be operated; then further extending limited sovereignty upward to 300 miles above the earth's surface; then accepting the principle that all space above should be free for passage.

In 1957, a few weeks after Sputnik I was launched, I published a memorandum in which I pointed out that my 1956 suggestion was based on earlier and widely accepted scientific opinion to the effect that somewhere not far below 300 miles the atmosphere had sufficient density to prevent free satellite flight, but that Sputnik I had proved this premise to be unsound. My primary view has always been that the airspace does not extend to the area in which a satellite may be put in orbit around the earth.

Any careful analysis of President Eisenhower's proposals to the United Nations will disclose that he dealt with outer space as an area in which satellites might be put in orbit. If international agreement is reached so as to define outer space as the area whose lower or inner boundary is the lowest altitude above the earth's surface at which an artificial satellite may be put in orbit at least once around the earth, the rule of law could then be applied without difficulty in a reasonably definite geographic area. As President Eisenhower said, "Barriers to agreement are now lower than they will ever be again." The Foreign Relations Committee of the U.S. Senate, in its June 25, 1960, report on "Events Relating to the Summit Conference," has joined in urging speedy action. It said:

"Finally, the U–2 incident has pointed up the need for international agreement on the question of how high sovereignty extends skyward. This question is certain to become more acute in the future as aircraft fly at higher altitudes and as space satellites, many of them equipped with cameras or other devices, become more common. It is a question full of difficulties and one which demands the full attention and consideration of the United Nations as well as of the individual nations themselves."

2. WHAT IS OR SHOULD BE THE LEGAL STATUS OF OUTER SPACE?

It is quite impossible to apply international legal principles in a satisfactory manner in any geographic area whose legal status is unknown. Today the legal status of outer space is as vague and uncertain as was the legal status of the high seas in the centuries before Grotius, in the Mare Liberum, focused attention on the need of the world to accept the doctrine of the freedom of the seas. Years after that historic event, a great American jurist, Mr. Justice Story, said in the case of the *Marianna Flora*—1826:

"Upon the ocean, then, in time of peace, all possess an entire equality. It is the common highway of all, appropriated to the use of all; and no one can vindicate to himself a superior prerogative there. Every ship sails there with the unquestionable right of pursuing her own lawful business without interruption; but whatever may be that business, she is bound to pursue it in such a manner as not to violate the rights of others."

The legal status of outer space should be fixed along these lines by international agreement. Certain jurists have argued that the failure of States to protest present satellite flights indicates an acceptance of this status of outer space without further agreement. Others have insisted that it is not possible logically to consider the extension of sovereignty into outer space. The Ad Hoc Committee of the United Nations on the Peaceful Uses of Outer Space, appointed under a 1958 resolution, stated in its 1959 report that the launching and flights of space vehicles, on the premises of the permissibility of such flights, may have initiated "the recognition or establishment of a generally accepted rule to the effect that, in principle, outer space is, on conditions of equality, freely available

for exploration and use by all in accordance with existing or future international law or agreements".

But we must deal with hard facts. A well-known American lawyer and air law lecturer, the late Arnold W. Knauth, pointed out in an address in Buenos Aires on August 24, 1960, that only about 35 months had then passed since sputnik I was launched, and since that time there had been, perhaps, less than 50 launchings of other satellites and perhaps a hundred attempts, but that these launchings and attempts at launchings are not adequate to formulate and create any customary law in space.

My own view has also long been that no general customary international law exists covering the legal status of outer space. It must never be forgotten that the Chicago Convention goes no further than declaring that each state has sovereignty in the airspace over its lands and waters. Nowhere does that convention, nor any other international agreement of which I am aware, state that claims of sovereignty of a state must be limited to its airspace. Jurists may urge doubts as to the right of states to claim sovereignty in areas beyond the airspace, but there is no international agreement to that effect, nor am I aware of any formal and binding declaration of any state waiving any rights to claim sovereignty beyond the airspace, even to the far reaches of outer space.

The situation can be rectified only by a new international agreement. This might declare that no state has, or can have, sovereignty over outer space, or any part thereof, or any celestial bodies therein, and could at the same time make unlawful, as recommended by President Eisenhower, the orbiting or stationing in outer space of weapons of mass destruction, and that all launchings of spacecraft should be verified in advance by the United Nations. Thus the rule of law could be made effective in a reasonably definite area whose legal status has been determined.

3. WHAT IS THE LEGAL STATUS OF SATELLITES AND FUTURE SPACE CRAFT?

In the law of the sea the legal status of the waters used and the vessels employed has long been settled. The high seas are free for the use of all. Territorial waters, bays, harbors, and rivers have certain varying national characteristics. Vessels employed are said to have the "nationality" of the state of the flag. Under the law of the air, as exemplified in the Chicago convention, the legal status of the airspace has been fixed, and it was agreed, as in the precedessor Paris convention of 1919, that aircraft should have nationality.

The meaning of this term "nationality," as applied to ships and to aircraft, is quite well known. It symbolizes the acceptance of a rule of international law which states that a special relationship exists between a particular state and the transport instrumentality which has the "nationality" of that state. The effect of this special relationship is that the state of the flag is responsible for the international good conduct of its vessels and its aircraft when in use beyond national territory. And reciprocally, that state has the right, as against other states to see to it that its national vessels and aircraft are accorded the privileges and rights to which they are legally entitled when away from home. This is a rule of public law and not of private law. It does not make the state of the flag responsible for such things as debts incurred in the operation of the vessel or the aircraft, but it does make the state of the flag responsible if such vessel or aircraft violates a rule of international law affecting the rights of other states. International law writers have often pointed out that on the high seas, uncontrolled by any national sovereignty, chaos would be the rule but for the fact that the principle of nationality of vessels has for centuries been accepted into maritime law, and that with this concept international order may be maintained.

It is interesting historically to note that the necessity of balloons having this quality of "nationality" was suggested in one of the earliest air law discussions. Fauchille's major thesis in 1902 and 1903 was that the air was free. But as a very able international lawyer, he accepted the fact that chaos might result if the instrumentalities in flight did not have the nationality of some particular state.

A few years later the problem was discussed at length at the 1910 conference called by the French Government. While the conference did not, for very different reasons, conclude a convention to regulate flight, no serious contention was ever made later against the application to aircraft of the maritime principle of "nationality." In fact this principle was widely recognized in the conduct of states between 1910 and the signature of the Paris Convention of 1919. For example, neutral states, such as the Netherlands, Switzerland and the Scandinavian countries enacted and enforced rules during World War I which outlawed the flight of foreign aircraft over their territories. At the close of the war the nationality of aircraft was recognized in the Paris Convention, as it has been in every subsequent convention regulating air navigation, including the Chicago Convention of 1944. But the gravest doubt exists as to whether satellites and other flight instrumentalities, which can operate freely only in outer space, are "aircraft" within the present rules of international law dealing with required "nationality." If outer space is to be free for the use of all, the logic of Fauchille must again be applied. Every type of flight instrumentality usable in outer space must have the nationality of a state of the international community. Normally, this would be the launching state, which would thereby become responsible for the behavior of the satellite, or other space craft, so far as rules of international law are concerned.

The complicated functions which satellites are already performing illustrate this need. If the rule of law is to be effective in outer space, international regulations must be recognized and enforced, dealing, for example, with frequencies permitted to be used by radio equipment on a satellite. If it is admitted that a satellite has the "nationality" of the launching state, then that state can be held responsible without question if the satellite used unauthorized frequencies and thereby creates jamming or other types of international radio interference. This is but one example. Also reciprocally, when future control of outer space flight internationally has become effective, as it must, each state will have the right to protest against the interference with the flight of its satellites or other space craft, provided they are following authorized and internationally agreed patterns.

In the absence of the application of the requirement of flight instrumentality nationality, chaos and conflict will be inevitable in outer space.

4. WHAT ARE OR SHOULD BE THE RIGHTS OF SELF-PROTECTION?

This question poses a most serious problem. Whether the legal status of outer space be left undetermined as at present, or whether it be fixed by international agreement as an area in which no state may claim sovereignty, the right of every state in the international community to act for its individual self-protection or self-defense must be fully acknowledged and carefully preserved. This is part of the rule of law between states.

As early as 1804 Chief Justice Marshall said in the celebrated case of *Church* v. *Hubbart:* "The authority of a nation within its own territory is absolute and exclusive. But its power to secure itself from injury may certainly be exercised beyond the limits of its territory." This statement still stands in our jurisprudence. It would be directly applicable to the right of a subjacent state to "secure itself from injury" in outer space beyond its territorial airspace.

In 1837, Daniel Webster, as Secretary of State, said during consideration of the celebrated Caroline case, that the necessity which justifies acts of self-defense outside national territory is "confined to cases in which the necessity of that self-defense is instant, overwhelming, and leaving no choice of means, and no moment for deliberation". This statement was cited with approval in the Nuremberg cases after World War II. However, I would point out that no emergency could leave less chance for deliberation than a threat from outer space.

Perhaps the most important analysis of the problem made in the United States is found in an address delivered in 1914 by the late Elihu Root speaking as president of the American Society of International Law. In discussing the "right of self-protection" as "a right recognized by international law" he said (8 A.J.I.L.–6): "The right is a necessary corollary of independent sovereignty. It is well understood that the exercise of the right of self-protection may and frequently does extend in its effect beyond the limits of the territorial jurisdiction of the state exercising it." Later, in the same address, in a much-quoted phrase he insisted upon "the right of every sovereign state to protect itself by preventing a condition of affairs in which it will be too late to protect itself."

May I point out that this principle of the right of a state to act for its self-protection outside its national territory has already been applied in connection with aircraft flight. In 1950 the United States and Canada established air defense identification zones around parts of their respective shores. Admittedly the airspace over the high seas is not territorial space and enjoys the same international status as the high seas themselves. Yet the United States and Canada did not hesitate to establish regulations to prevent unidentified aircraft approaching their shores from the seas. The U.S. regulation, for example, requires that foreign aircraft approaching our shores must report their presence and identification when not less than 1 hour or more than 2 hours average cruising distance via the most direct route to the shore. This is a clear application of the right of self-preservation and self-defense applicable outside national territory and within international flight space. It would seem that the same right exists for subjacent states to act in outer space above national territorial airspace to the extent deemed necessary for the protection and defense of the lands below.

Certainly any future agreement for international regulation of outer space flight, or control of outer space, must preserve such national rights of self-protection and self-defense. It is submitted that nothing in the United Nations Charter is opposed to this view. While article 51 deals solely with the right of individual or collective self-defense if an armed attack occurs against a member of the United Nations, it is my firm belief that this does not take away already-existing international law rights of self-protection which have long been supported as part of the international law applicable to all states. In any event, as suggested earlier, such rights should be specifically preserved in any convention dealing with the legal status of outer space.

CONCLUSION

Four fundamental problems have been stated and tentative answers suggested.

First, that the boundaries of outer space must be fixed and that the important lower boundary should be at a point above the surface of the earth where it is possible to put a satellite in orbit at least once round the earth.

Second, that the legal status of outer space must be fixed and that this could best be done by accepting a status similar to that of the high seas, thus permitting its equal use by all and denying to any state the right to assert sovereignty over outer space or any celestial bodies therein.

Third, that the legal status of satellites and of other spacecraft used in outer space must be determined, and that this status should be that of "nationality" of the launching state, or other agreed state, otherwise chaos will result.

Fourth, that the international law right of a state to take action in outer space for its self-protection and self-defense must be preserved and acknowledged, even though no state has a right to claim sovereignty therein.

It is suggested that these four fundamental questions of outer space law stated demand urgent international settlement. It is also suggested that the solutions here put forward, when taken together, would provide a reasonable and practical foundation for the future application of the rule of law in outer space.

Hon. B. Carroll Reece

SPEECH
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. PHILBIN. Mr. Speaker, I was greatly shocked and very deeply grieved by the passing of our dear friend, beloved and esteemed colleague, Congressman CARROLL REECE, of Tennessee.

Few, if any, of the men I have met in or out of the public service, in my journey through life, could compare with him, and none could excell, this noble son of Tennessee.

In his basic integrity, he was as rugged and solid as the hills of his beloved, native State, and in his broad, active mind, only noble thoughts found lodgement. In his alert brain, great ability moved this proud Tennessan into many orbits of constructive interest and action for his district, State and country.

In his great heart, there abided feelings of brotherhood, tolerance and compassion for all men, especially for those who were less favored and less fortunate in coping with the vicissitudes of life.

A man of vital and sterling patriotism, who demonstrated on the battlefields in one of the Nation's greatest wars, his superb courage, his personal bravery, his complete fearlessness of danger, and his consuming love of country. CARROLL REECE was truly in the vanguard of great fighting heroes.

While he was a most highly decorated soldier and received many plaudits and honors throughout his career that might have changed the outlook of one less rugged and real.

CARROLL REECE was known for his humility, his modesty and his down-to-earth personality a man who never lost the common touch.

A successful businessman of genius and foresight, he well understood the financial business and economic problems of the Nation, and was greatly concerned about them. But he never swerved from his fundamental purpose of serving his country in the broadest sense with all his heart. When he passed on, this House lost one of its greatest, most distinguished, most famous Members, and those of us who knew and loved him lost one of our dearest, most loyal friends.

Obviously, it will not be possible to fill the great void which has been left by the untimely passing of this great American. The memory of his beaming personality, genial nature, high exploits and splendid contributions to the Nation and people of America will long be remembered here and wherever the name of CARROLL REECE is known.

He was truly one of God's noble men, one of America's first citizens, and his name will go down in history honored and revered for his heroism, his magnificent, unselfish service, his noble character and his greatness of heart.

I express my deepest and most heartfelt sympathy to his devoted, gracious wife, his loving daughter and all of his family, his friends and constituents for the irreparable loss which they have sustained. With a sad heart, indeed, I join them in mourning his passing and extend to them from the very bottom of my heart sincerest condolences and prayers that the Good Lord may lighten their heavy burden of sorrow and out of the consciousness of his great life, good works, and generous heart, bring them assuaging comfort and resignation.

The memory of CARROLL REECE will long live in these halls and in this Nation. It is my devout prayer that he may find peace, rest and eternal reward in his heavenly home.

A Kentuckian Writes About America's Folk Heritage in 1961

EXTENSION OF REMARKS
OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21, 1961

Mr. COOPER. Mr. President, in Berea, Ky., there is published a quarterly magazine, Mountain Life and Work, which is the official voice of the Council of the Southern Mountains, Inc. Reflecting the cultural patterns of the region, the magazine frequently carries articles on the folk traditions of the southern Appalachian area. In the winter quarterly, out this month, a most significant article goes beyond the regional sphere to explore the preservation of our folk heritage as a movement of national importance. The article, "Folk Songs and Dances, U.S.A.: The Changing Scene," is written by Sarah Gertrude Knott, a Kentuckian, who founded the National Folk Festival and who will direct the Silver Anniversary National Folk Festival in Washington this coming May.

Miss Knott, national director of the National Folk Festival Association, is recognized nationally and internationally for her great contribution toward the preservation of our cultural heritage. On many occasions, Miss Knott has been invited by folklore specialists and festival societies of other nations, as well as the governments themselves, to visit them and to bring the story of America's awakening to its rich cultural heritage.

I am also happy to know that the board of directors of the National Folk Festival Association, the producer and sponsor of the National Folk Festival here in Washington, has elected as its president, Dr. Lawrence G. Derthick of the National Education Association and until recently the Commissioner of Education in the Department of Health, Education, and Welfare. The educational significance of the work to which Miss Knott has dedicated her career is indelibly underscored in the selection of Dr. Derthick to this position of honor.

I am sure that Members of the Senate will want to read this article from Mountain Life and Work for the great information it provides about the status of folk traditions in the United States. For that purpose, I ask unanimous consent to have Miss Knott's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOLK SONGS AND DANCES, U.S.A.: THE CHANGING SCENE

(By Sarah Gertrude Knott, director, National Folk Festival Association)

John Henry, the legendary steel drivin' man, struggling against the on-marching civilization heralded by the new-fangled steam engine, had nothing on our folk festival leaders of today. They too are faced with the problems of transition and change, and these problems are intensified because there are diversities of views among the leaders themselves. Some feel that the newer groups are introducing alien patterns which dilute the purity of traditional American folk expression; others welcome the infusion of the new with the old in the belief that folklore, in its authentic aspect, is a manifestation of the contemporary scene, a reflection of the life of a people, never static, ever developing, and embracing an admixture of the modern with the traditional.

There are two special divisions of those interested in folklore today: The scholar, whose interest is academic and related to the fields of anthropology, history or literature, and the folk festival leader, who may be termed the "practitioner," using folk expression in folk festivals and other form of active presentation for artistic and recreational purposes. There should be no sharp line of demarcation between the two. They should go hand in hand, but under present conditions it is not always possible for them to have complete unity of thought and action because many scholars are impatient with the trend of some leaders toward modernization, deploring what they look upon as a lack of authenticity, while there are not a few practitioners who have little under-

standing of the cultural implications of their medium, presenting it merely as a means of recreation without attention to its value as recognized folklore.

Presentation of folk festivals is not the sole function of the practitioner. In communities all over the country there are informal gatherings of folksingers and dancers who get together under the inspiration of a leader for the pure joy of participation. They need no spectator audiences.

Up to about 25 years ago, when the National Folk Festival was established as an annual event, the scholar dominated the field of folklore. A few scattered folk festivals existed, but their scope was limited and they exerted little influence outside their own narrow areas. Seldom did they present folksongs, music or dances which were not indigenous to the communities where the events were held.

The National Folk Festival, instituted in St. Louis in 1934, was the first effort to demonstrate folksong, music, and dance as they existed all over the country. It drew from 14 States for its participants. No attempt was made to exemplify the folk expressions of the late immigrant groups, for in the concept of most scholars and festival leaders they had not attained the status of American folklore. However, the national was a significant step in the presentation of a broad cross section of our lively folk arts.

The folklore of most countries passes through three stages. There is the early stage when it is in its purest form, untouched and unchanged by any outside influences. Then there is the intermediate stage when it has been weakened by outside influences but retains sufficient vitality that it can be be revived. In its final stage it has lost so much of its fundamental content and substance that the roots are dead and revival is impossible.

We are in the late part of the second stage today, as far as most of our folk music and dances are concerned. Many of the folk legacies known to our pioneer forefathers have already been lost. There is left, however, enough that is still vital among both old and new American groups that with proper planning and coordinated effort on the part of those concerned with the scholarly aspects of folk expression and those whose interest is in its actual use, our democratic country might well become one of the richest folklore reservoirs left in a world of rapid and accelerating change.

Among the scholars who collect, record and classify folk material and the festival leaders, as well as teachers, recreational directors and other popularizers, three distinct lines of thought may be found today. First, there is the purist who believes that any presentation of folk expression should be rigidly limited to its traditional form. Seldom does a folk festival measure up to the standard of the purist but he exerts a powerful influence in setting a goal toward which the festival leader should aspire. The folk music and dance movement is the better for his existence. He gives purpose and helps to avoid the danger that the folk festival might degenerate into a mere popular show.

Second, there is the for-fun-only practitioner whose singers and dancers have no regard for tradition and seek only recreation. This leader has no qualms about changing and adapting folk songs and dances and often does not hesitate to introduce new elements which change their original character. His is not usually an inherited art; he is likely not to have any appreciation of the history of folk music and dance or of the cultural and educational values of his media. Nevertheless, if this leader does no more than lighten the load and relieve the tension of modern life, he has served a very real purpose and may incidentally awaken interest in authentic folklore. Who can say whether these innovations may not to some degree take root to become a part of the accepted folklore of tomorrow?

The third type of leader is the middle grounder who finds most satisfaction in the traditional forms, who appreciatively understands their substance and spirit, but accepts the inevitability of change and development. He knows that the folk expressions of a people are not static, but are the living, pulsing outpourings of the life of a nation, growing with it. Still, he realizes that unless songs, dances, and music have certain indefinable characteristics—perhaps "legitimate descent" would be descriptive—which link them with the established culture of a people; unless they genuinely reflect the spirit and background of the race or nation which created them, they cannot last, and cannot truly be classified as folklore. Thus, the aim of the middle grounder is to preserve the traditional while accepting the inevitability of growth.

The folk festival movement in the United States, as represented by the majority of the groups which bring dancers and singers to the National Folk Festival each spring, has adopted the middle ground philosophy. The National, itself, has bent and bowed to the changing times because it is felt that it would be shortsighted and unrealistic to ignore what is going on today. Nevertheless, effort is made to hold as nearly as possible to the authentic in basic folk expression and to avoid hasty acceptance of what may prove to be mere fads of the moment.

Up to the end of World War II, the development of folk festivals and the teaching of folk songs and dances for artistic and recreational purposes was gradual. Local, and even State and regional festivals were small. Objectives seemed clear, but when peace came and the long tension was lifted, widespread enthusiasm and popularization burst into unparalleled activity in many States.

For the last 10 years, especially, it has been more difficult to keep emphasis where it belongs; to make folk music and dance reflect the history of this country and the heartthrobs of our own people; it has been more difficult to avoid having folk festivals become an indiscriminate hodgepodge, reflective of many nations but not genuinely expressive of our own. Standardization has been consciously encouraged by many groups; recordings of music have pushed "live" musicians further into the background; country music floods television and radio, often replacing the traditional and confusing the picture, even in some of the areas where some of the richest treasures of inherited song and dance are still available and ready for use.

Time is running out for much of our indigenous and early American folk song and dance. A great deal of our American Indian music and dance along with early customs, are now known only to a rapidly dying older generation. Yet, there still remains enough upon which revival can be built, and there is some current adaptation of older songs and dances in newer versions which retain the old patterns. The same is true of the Spanish-American legacies of the Southwest which reach back over 400 years. These colorful songs and dances are now seldom heard or seen except at fiestatime. The rich cultural treasures of Old Spain are being stamped out in the rush toward industrialization and unless a determined effort is made to revive them as a part of the everyday life of younger Spanish-Americans they will soon become no more than a legend. What a pity to allow these ties with our Latin neighbors to the south to wither away at a time when communism is making every effort to separate us.

The gay French dances of the Acadians of Louisiana are almost gone, and the singers of the Acadian patois or standard French, grow fewer. The younger Acadian does not seem to cherish the lore of his bloodline as did his fathers but there are still enough of the elders left, remembering the songs and dances of their people, and still speaking the language, to restore the old cultural wealth, if only interest can be aroused.

The southern Appalachians were once the treasure house of Anglo-Saxon folklore. When Cecil Sharp, the English musician and student of English folk music and dance, roamed the area between 1914 and 1918, he collected hundreds of British ballads and folk songs handed down through the generations since covered-wagon days, some of them forgotten in his native land, from whence they came. However, country music flourishes in that region today, influenced largely by the Grand Old Opry which originally featured genuine folk music. When the National Folk Festival was held in Nashville in 1959 George Boswell, of Clarksville, Tenn., had recently completed his collection of 700 songs made during the preceding 10 years in Tennessee and Kentucky, with the blessing of the Tennessee Folklore Society. This society did not approve of country music, yet it did nothing to encourage of the folk songs and music which Mr. Boswell had collected.

Even in the national, held in the heart of the area where Boswell did his research, few native singers came to the surface. The Ozark Jubilee in Springfield, Mo., has encouraged the newer music—and songmaking, but there has been little comparable stimulation given the continuation of the inherited songs, the indigenous dances or the musical instruments long known in the Ozarks.

Among the traditional singers, British ballads and folk songs and our indigenous music which, in the main, sprang from them, have been the most popular, but they are gradually and surely passing. Many of the country singers and instrumentalists know and like this music but find so little general encouragement that it would be almost an innovation which they hesitate to venture. Here we encounter an anomaly: the use of folk music is waning in rural areas where it first sank its roots in American soil, whereas in New York, Philadelphia, Washington, D.C., and other urban centers up and down the Eastern Seaboard there is a strong and growing interest. Younger singers are learning authentic folk music and are making creditable attempts to present it with genuine strength and beauty to audiences who become more and more appreciative. So vital is this reawakening that when the 24th annual national was held in Washington in 1960, there were more of these singers from the cities, anxious to present such music, than could be used.

Emphasis has not, however, entirely shifted, for many pockets of genuine folk tradition can be found today in the still somewhat isolated sections where there is a continued need for community participation. In such states as Tennessee, Kentucky, Georgia, Alabama, Mississippi, the Carolinas, and even in Texas, there are thousands of sacred harp singers who use the "shape note" style, singing the notes first, and then the words. Groups still meet each week for the "singing school" which is, for many, their chief recreational and religious outlet. There are many other evidences of surviving folk heritages of the Negro, the German, the Irish, Scottish, and other groups, in much their original form, but there are also many indications of change. To an increasing degree they are starting to reflect the spirit of today, as the older folk traditions told the story of yesterday.

The most widespread folk activity in the United States today is the American square dance, the distinctively national dance of our country. Up to about 15 or 20 years or the

front room, or in small halls with neighbors only. Often this was to the tune of a lone fiddler. The caller usually gave his directions from within the square; his calls were spontaneous; the dancers followed in informal style, with their individual steps, and with leeway in interpreting the calls, which differed in various regions. Today, do-si-do and other figures used in the large State, area, or national square dance gatherings, are standardized. Californians can dance with New Yorkers, Floridians, or Minnesotans at the giant square dance festivals, and the calls are familiar to all. The participants are often married couples who cross the country at the slightest excuse, simply for the joy of dancing together.

Square dance records have been distributed nationally and many callers have, as a consequence, become famous from coast to coast. Their individual styles and distinctive calls become known to dancers all over the country, and when they call at national dances, the participants follow easily. These men have become important men in their field, and they command high fees as they travel about, serving the needs of an estimated 4 million square dancers the country over.

One of the most profound changes in the folklore scene results from the influence of the newer immigrants. The earlier programs of the National Folk Festival centered upon the traditional songs, dances, music and customs of the American Indian, the English, Spanish, Irish, Scottish, French, German, and Negro, representing the early cultures, and the song and music of such indigenous occupational groups as the lumberjack, miner, cowboy, canalman, and sailor. Today there is, perhaps, more emphasis placed upon the folk dances of newer Americans than upon those of the older settlers. These newer groups are keenly aware of the value of folk activity in binding themselves together, in maintaining esprit de corps and national identity and spirit. The National Folk Festival recognizes this as a situation in being, and, perforce, stresses the folk expressions of these late immigrant groups almost to the same extent as those of the earlier ones. This is also true of the State and regional festivals the country over.

No longer does the National present merely the folk music, song and dance of the early ethnic groups. A typical festival would now also include those of the Hungarian, the Yugo-Slav, the Lithuanian, Pole, Italian, Greek, Norwegian and many others. However, emphasis is still centered upon the earlier groups.

The influx of new ethnic groups following World War I awakened us to new and rich cultures. First recognition of these new values was given just prior and after World War I, by International Institutes, whose festivals in New York, St. Paul, Buffalo, and other large cities initiated their presentation in the form of songs, dances, and music of our newer immigrants, making our newcomers feel at home, and incorporating their cultures with ours. Further recognition of the newer groups was given by the State folk dance federation festivals which followed the lead of California, the first State federation. Today in festivals all over the country, folk dancers swing and sway to the rhythms of many lands.

The extent to which these newer transplantations will affect our existing folk expression is not yet clear. It is evident that our general cultural pattern was established before the emergence of the newest immigrants from overseas, and that it is perhaps too soon to claim some of these cultural imports as a definite part of American folklore. What will happen to the wealth of folk treasures recently brought here; whether they will persist in their present form; whether they will take on new characteristics under the pressure toward Americanization; whether they will be frozen into a standardized formality as a result of the sudden increase in the number of professional dance instructors who teach them; these are anyone's guess. One thing is certain: as of this moment the indigenous and early folk expressions and the creations based upon them, predominate in every State.

Few bonds unite a people as does a common appreciation of its folklore. The United States is one of the few countries which has failed to recognize this fact. In one country after another we find a ministry of culture or some equivalent authority. One of Hitler's potent unifying was the attention to folk music and folk festivals which gave the Germans a vivid reminder of their national heritage. Today, Soviet Russia does the same. In our struggle to maintain military and economic superiority in a divided world we spare no effort or expense to defend our position against outside attack. Should we not give thought to the fostering of pride in our cultural heritage as a bulwark against propaganda attack? We need not encourage a Chauvinistic nationalism, but we may strengthen our belief in the ideals of our country through the unifying influence of a common culture understood and beloved by all our people.

There is no agency of our Government which provides material aid in the advancement of the folk activity movement, nor has any appreciable aid been given by any private agency or foundation. It is hoped that this situation will soon change. It is to be admitted that there has been lack of coordination among the many folk festival associations scattered across the country and that there has not been a national organization qualified to speak and act for folk festival groups on a national basis. The hesitancy of the Government or private agencies to subsidize or otherwise assist the movement may be understood in the light of that fact.

The National Folk Festival Association is now preparing to campaign for national recognition of the importance of folk expression in the life of our people, and to attempt to enlist the aid of government and private sources in welding together our varied cultural groups through a common understanding and appreciation of our rich folk heritage. If this movement succeeds it will do much to give the folk activity movement the position of dignity and respect similar movements enjoy in other countries.

Commonsense

EXTENSION OF REMARKS
OF
HON. JAMES E. BROMWELL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BROMWELL. Mr. Speaker, citizens weary of seeking to discover some public benefit in every bill passed here will be refreshed by the note of commonsense expressed in the Cedar Rapids, Iowa, Gazette on March 15 in an editorial entitled, "Round and Round We Go," which I herewith submit in full:

ROUND AND ROUND WE GO

The government giveth and the government taketh away, if we may be allowed to paraphrase a far more elevated quotation with no intention of irreverence.

The administration is all set to increase farm income by $1 to $1½ billion through higher price supports and payments on diverted acreage. At the same time it is pushing for higher wages, which will be passed along through greater labor costs in the form of higher prices for things needed for production and living on the farm.

The net result is likely to be that farmers may handle more dollars, but their net income will not be improved nearly as much as they hope. As a primary producer at the end of the line, both selling and buying, the farmer is very likely to end up lowman again.

High costs probably have as much to do with the farmers' unsatisfactory economic situation as low prices. Since 1947 gross farm sales have gone up $3.5 billion. But in the same period farm costs have increased $9.2 billion, resulting in a $5.7 billion decrease in net farm income.

Labor Department figures show that factory worker productivity has gone up 35 percent since 1947, while factory wages have increased 77 percent. Labor costs of manufactured items have increased about 42 percent in the period.

Meanwhile productivity of farmworkers has increased 50 percent, but net income per worker has gone up only 5 percent. That increase is in dollars, not purchasing power. The farmer's purchasing power has decreased 20 percent in the 14 years.

Government payments, then, are likely to be largely offset by increased costs as the result of nonfarm Government programs. If the farm program is successful in actually cutting total production, higher prices in the market may result in some gains. But higher prices will bring pressure for wage increases, which will again absorb the farmers' gains.

What's that story about the dog chasing its tail?

Maj. Gen. Winston P. Wilson, Commander of the Air Guard

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. FULBRIGHT. Mr. President, on Sunday, March 12, 1961, there appeared in the Arkansas Democrat an article by Maurice Moore, the Democrat State editor, about one of Arkansas' outstanding citizens, Maj. Gen. Winston P. Wilson, the commander of the Air National Guard.

I have known "Wimpy" Wilson for many years, and have followed his distinguished career with justifiable pride. General Wilson's service to the Nation has been in the finest tradition of those who serve our Armed Forces. Through dedication and complete devotion to duty he has risen through the ranks to the position of chief of the Nation's Air National Guard. He has served in this high post since 1953. His career is an outstanding example to the people of the Nation, to the men of our armed services, and particularly to the youth of the country.

I wish to take this opportunity to commend General Wilson for his outstanding service to the country.

I ask unanimous consent that the article to which I have referred be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAJ. GEN. WINSTON P. WILSON, COMMANDER OF THE AIR GUARD

(By Maurice Moore)

Once upon a time a 15-year-old Arkansas boy played hookey from Sunday School, took $5 he had earned working in a grocery store and used it to pay for a 3-minute airplane ride over Little Rock.

His father called him foolish.

His mother was too stunned to say anything.

This was his first time in the air.

Today 49-year-old Maj. Gen. Winston P. Wilson is deputy commander of the National Guard Bureau and head of the Air National Guard.

Under his command he has 72,000 airmen, 134 bases and 2,600 aircraft, including 2,100 jets.

He has 11,000 hours of flying time, including 5,000 in military service.

He travels hundreds of thousands of miles each year—mostly by air—to check on the Air Guard's farflung operations.

His father, W. P. Wilson, now 80, no longer thinks he's foolish. His mother, now 78, is no longer stunned. They are proud of his accomplishments in the air age.

His associates call him a born executive. They substantiate this by pointing to the fact that for 13 of his 16 years of active duty he has been attached to the Pentagon in various capacities.

Winston P. Wilson was born in Arkadelphia November 11, 1911. His background is all Arkansas. He was reared in Little Rock and played high school football under Earl Quigley as a substitute guard and center. He was a regular at Hendrix College in Conway.

To his Arkansas friends and his higher echelon associates in the military, he is known as Wimpy. But the nickname didn't come because of any resemblance to the hamburger-eating chum of Popeye of cartoon fame.

In high school he was called Win—the shortened version of his first name. One day on the football practice field, Coach Quigley yelled for Win P. Wilson. His schoolmates followed through. They called him Wimpy.

Now Wimpy Wilson's name is synonymous with the Air Guard. He has been its commanding officer since January 1954, when he succeeded a fellow Arkansan, the late Maj. Gen. Earl T. Ricks of Hot Springs. He had served as acting chief since July 1953, when Ricks became ill.

In recognition of his service, Wilson was renamed to a second 4-year term as Air Guard chief in 1959. It expires in May 1963 and he's hoping he'll be reappointed again. He isn't thinking about retirement.

When he does decide to call it quits, he's coming home to Arkansas. Take it from him, "There's no better place."

In fact, he's still an Arkansas businessman—a silent partner in the Eldridge hardware and plumbing firm in Forrest City.

But right now, his main concern is seeing that America keeps its Guard up.

He started his military career in 1929 by enlisting as an airplane mechanic in the 154th Observation Squadron of the Arkansas National Guard. He attended Little Rock Junior College and graduated from Hendrix College in 1934.

Wilson joined the Soil Conservation Service and drew assignments in Conway and Forrest City. While he studied how to improve terra firma, his heart was in the air. He received his CAA pilot's license in 1936 and earned his commercial pilot's license in 1940. The same year he was commissioned a second lieutenant and received the rating of junior aircraft observer after finishing a 9-month cadet observer training course offered by the 154th Observation Squadron.

The 154th Squadron was ordered to active duty in September 1940, and a year later Wilson was promoted to first lieutenant in the Army Air Corps.

When Pearl Harbor came he and the 154th went to Eglin Field, Fla. He flew antisubmarine patrols as an aircraft observer until February 1942. And in May 1943 he was rated as a pilot.

He had a varied wartime career. His duties included assignments as chief of the Tactical Reconnaissance Branch of the Army Air Force; commanding officer of the 16th Photo Squadron, which concentrated on photographic mapping and charting missions in the continental United States, Alaska, and South America.

Wilson also served in Hollandia, New Guinea, the Philippines and Tokyo. In 1945 he was promoted to lieutenant colonel. Upon separation from active duty, he rejoined the Arkansas Air National Guard and commanded the 154th Fighter Squadron based at Adams Field in Little Rock.

When the Korean war broke out, he was ordered back to active duty and assigned to the National Guard Bureau in September 1950.

His promotion to full colonel came the following year while he was chief of staff under General Ricks. When he assumed command of the Air Guard, he was made a brigadier general.

Wilson takes a great amount of pride in the guard's combat readiness.

"We are training under the same standards as our active duty counterparts," he declared in an interview recently in Stuttgart. He had interrupted preinaugural activities to fly there to make a chamber of commerce address.

"Guard planes are standing at the ready; they can be airborne within 5 minutes. It is a great satisfaction to see the efficiency and professionalism of these men. They are dedicated volunteers.

"We are not allowing ourselves to become missilebound," he declared. "Since we are involved in a number of mutual security agreements around the globe, we must be prepared to step in at any trouble spot to stop an aggressor.

"Further, we must possess the capability of fighting and winning in such cases, so that a local war will not automatically become a general war. Here is where the National Guard plays a vital role."

Wilson explained:

"We (the guard) have atomic capable missiles to be sure—in both the Army and the Air Guard—but we are also flying supersonic jet fighters and big, 4-engine transports; and we maintain 21 infantry divisions and 6 armored divisions which, while capable of waging atomic war, are prepared to slug it out on the beaches and in the mud, the way they have always done.

"It is a heavy burden of responsibility, maintaining such a military force at the peak of readiness. It requires a considerable sum of money, unrelenting effort, and perhaps most important of all, a sense of patience and dedication unparalleled in our history."

Wimpy Wilson has come a long way since that 3-minute plane ride over Little Rock in 1926, but he admits "It was one of the biggest thrills of my life."

A Tribute to St. Patrick

SPEECH

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. GALLAGHER. Mr. Speaker, the story of St. Patrick is the story of captive peoples everywhere, throughout the history of mankind. Moreover, it stands as a symbol of hope to all the captive peoples of the present day. For Patrick was not simply a local hero with the ability to cope with local problems. Indeed, his problems were those of civilization, itself, and his solutions applicable not only to Ireland, but to nations of every description, in every time and place.

Carried into slavery in his youth, Patrick was transported to Ireland around 400 A.D., and was not to retain his liberty for 6 long years. In the time that elapsed this saintly man gave no though to revenge, for that was far from being his nature. Instead, as a Christian, he came to understand the heathen weakness of his Irish captors, and determined that some day he would come among them as a Christian teacher, to spread the Gospel to those so sorely in need.

Escaping his bonds, he fled to France, where he entered upon the study of missionary work, and in the year 432 he returned to Ireland in the role of a bishop.

History and tradition record many wondrous acts by St. Patrick during his service in Ireland. Three hundred and sixty churches are said to have been built under his auspices, and 12,000 people baptised at his own hand. As an able administrator he knew no peer, and in the time that he stayed in Ireland he was to ordain so many priests and convert so many heathen that the Druid religion—the religion of his persecutors—was shocked out of existence in the land.

Through fables and folk tales we are told that he did many wondrous things to win the confidence of the people. It is said that he drove the snakes and toads from Ireland, for instance; that in contests with the Druid priests he was known to have performed many miracles; that he was able to confound his enemies by bringing darkness upon them, and that at his death, the sun shone steadily for 12 days.

Be that as it may, there is no denying the persevering and noble qualities of the man, who entered the land of his captivity to bring the love of Christ to those who knew it not; to spread the light of Christianity among those that had dwelt for years in veritable darkness.

Nor can anyone with knowledge of the Irish people fail to consider the fact that they radiate a Christian spirit unsurpassed by any other nation on earth today.

In the period embracing Patrick's lifetime, Ireland was but a conglomeration of municipalities ruled over by a score of self-designated kings. By singling them out, one by one, Patrick managed to win over most of the kings to the Christian cause. His knowledge of the Irish language was of course a great benefit to him in all his undertakings among the Irish people; and his experience of 6 years in the country had given him an insight into the character of the people that he could probably not have learned as well in any other way.

In such a manner did Patrick profit by his captivity and in time was able to turn against his captors the forces of righteousness. So it has ever been in the case of captive peoples, and so it is again today.

The spirit of Patrick radiates today beyond the confines of Ireland and beyond the Irish in other lands, to serve as a promise of truth and justice to all who are denied those rights in their own country.

As a symbolic enemy of slavery, St. Patrick looms larger today than ever before; and, as always, the slave master trembles at the sound of his name.

Truly, St. Patrick will stand as a hero of mankind, so long as Christianity prevails.

Proposed Merger of the Atlantic Coast Line Railroad and Seaboard Air Line Railroad

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21, 1961

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the House of Representatives of the Georgia State Legislature, "opposing the merger of the Atlantic Coast Line Railroad and the Seaboard Air Line Railroad, and for other purposes."

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION BY THE GEORGIA LEGISLATURE OPPOSING THE MERGER OF THE ATLANTIC COAST LINE RAILROAD AND THE SEABOARD AIR LINE RAILROAD; AND FOR OTHER PURPOSES

Whereas there is now pending before the Interstate Commerce Commission, Finance Docket No. 21215, relative to the proposed merger of the Atlantic Coast Line Railroad and the Seaboard Air Line Railroad; and

Whereas such a merger would tend to create a monopoly and greatly lessen competition, thereby having a disastrous effect on the small railroads which are now operating at a loss; and

Whereas such a merger would have a direct effect on 2,770 miles of railroad lines, and would indirectly involve an additional 1,400 miles; and

Whereas such a merger would deprive many communities of this State of any rail service whatsoever, since it is the avowed purpose to abandon many miles of track within the State of Georgia; and

Whereas if lines were abolished it would seriously affect the counties and municipalities involved, since it would remove a large source of taxation therefrom, upon which political subdivisions are now dependent to a large degree; and

Whereas it would create a loss of approximately $20 million in payrolls by virtue of workers' jobs being abolished or workers being transferred to out of State positions; and

Whereas innumerable municipal, county, civic, and other organizations have opposed this merger: Now, therefore, be it

Resolved by the house of representatives, That this body hereby goes on record as opposing the merger of the Atlantic Coast Line Railroad and the Seaboard Air Line Railroad, and respectfully requests that the application for such merger be denied; be it further

Resolved, That the clerk of the house is hereby instructed to transmit a copy of this resolution to each member of the Interstate Commerce Commission, and to each Member of the Georgia congressional delegation.

Proposed Resolution of Student Council, Lafayette College

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

PROPOSED RESOLUTION OF THE STUDENT COUNCIL COMMITTEE INVESTIGATING "METHODS USED BY THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE"

We urge the Lafayette student council to reaffirm and support the resolution and mandate passed by the National Student Congress of the U.S. National Student Association concerning the investigations of the House Un-American Activities Committee. That resolution condemned the Committee's method of investigation of alleged subversive activities in the teaching profession and in other areas of our society. We urge Council to likewise condemn the Committee's methods. The abrogation of individual freedoms under the Constitution, the consequent disintegration of national integrity, are reasons why we support the revision or subsequent abolition of the House Committee through means available to the judicial and legislative portions of the Federal Government.

The committee, since its inception in 1938, has existed through a congressional mandate which, at best, is ambiguous in its definition of the term "un-American." We acknowledge the right and necessity of Congress to obtain information from various areas for the purposes of regulatory or remedial legislation. The House Un-American Activities Committee, however, has led to very little actual legislation through its information-gathering hearings, despite voluminous reports to the contrary. The vagueness of the term "un-American" has made difficult any precise definition of the committee's powers or areas of investigation. In the past decade their investigations have mainly sought to discover and expose individuals and organizations whose words or activities may be labeled "subversive."

If the efforts of the committee were directed solely toward obtaining information, we might have no cause for condemnation. However, the information obtained and the legislation enacted scarcely warrant the expenditures which make the committee one of the most expensive subsidized by the House of Representatives (last year receiving $327,000).

Therefore, we feel that, for the following reasons, the House Un-American Activities Committee should be condemned:

1. Its stated purpose to investigate subversive activities has led, in an atmosphere inspiring "guilt by association," to the attachment of suspicion to any witness called before the committee, in other words, has led to the idea of "guilt by subpena" which has often resulted in economic or social sanctions being applied to the witness. This, when article I of the Constitution prohibits such infliction of punishment by legislative acts without judicial trial, i.e., bills of attainder.

2. The committee attracts undue publicity to its hearings. Chances of any significant information being brought to light are reduced in a hearing atmosphere more like that of a courtroom, in which the purpose of examination seems more like exposure than information. Often the committee rehears in public hearings what it has already discovered in closed session. We feel the public hearings serve no legislative purpose, not when they attach the stigma of guilt to the guiltless and guilty alike. In the words of Congressman JAMES ROOSEVELT, the committee judges, yet "is not subject to the restraints of fairness and impartiality which we impose upon our judiciary."

3. If the committee shall continue to interpret its mandate as a directive to expose subversive activities for the purpose of national security, then, we feel, it has outlived its usefulness. National security can be maintained more effectively and efficiently by the existing agencies whose employees are specially trained for police and counterespionage work. We have some reason to believe that the committee actually weakens the national security when its inquisitorial methods undermine faith in freedom, the basis of our democratic society, by transforming government by consent to government by intimidation.

4. The committee has interpreted its mandate, we feel, so that it may exercise moral judgment on the witnesses it calls. Furthermore, it employs a logic which does not permit any shadings of human opinion or behavior. One is either for the committee or against it; if one is against the committee, he is a Communist or a Communist dupe and, as such, should be exposed and persecuted. The committee has created an atmosphere of fear which endangers the progress of intellectual inquiry and exchange of those ideas which are made available only through personal associations with individuals of diverse and sometimes unpopular opinions. The future freedom of our free society depends ultimately, we feel, upon the exchange of such adverse and diverse opinions.

We urge that student council condemn the House Un-American Activities Committee for the above-mentioned reasons and support proposals for its revision (to avoid further violations of intellectual and constitutional freedoms) or abolition.

Press Release From Gov. John B. Swainson, of Michigan

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into

the Appendix of the CONGRESSIONAL RECORD a release from the office of the distinguished and able Governor of the State of Michigan, the Honorable John B. Swainson.

The release dated March 2, 1961, sets forth how another industry is being located in Michigan and the reason therefor.

I think that reading this statement may do much to calm the fears of the carybabies who constantly bemoan the industrial fate of Michigan and the opportunities in that great and wonderful State of which I am so proud.

I hope this will help in some way to dissolve the pall of gloom which has surrounded some of those in and outside of our great State.

The release follows:

Governor Swainson today announced that the Chamberlain Metal Products Co., of Chicago, manufacturer of golf carts, will be moved to Benzie County and will be in production by April 1.

The Illinois firm was purchased by George Petritz, of Beulah; Don Parker, of Frankfort; and Joseph Zarish, of Deerfield, Ill. The company makes Ko-Lap-Si Karts and Kaddie Karts.

The Governor said:

"This is one of the dramatic chapters in Michigan's industrial development. Petritz and Parker wanted a new industry for Benzie County so, together with Zarish, they bought one and will move it to Michigan. Their confidence in Michigan's industrial potential and their deep love for northern Michigan is a real inspiration to all the people of our State.

"It was through the efforts of Ray Weigle, Cadillac industrialist and one of our fine Michigan industrial ambassadors, that the Chamberlain plant was brought to the attention of Petritz and Parker. Throughout the campaign to obtain a new industry for Benzie County, there has been outstanding cooperation."

In informing Governor Swainson of the new industry, Petritz said:

"We are happy to bring in an industry affiliated with the rapidly expanding leisure field. We expect it will make an important contribution to employment in the area within the next 3 years. There is no place in the world I would rather live than in northern Michigan. That's a big reason why we are sincerely interested in the industrial development of this area.

"I am convinced that fairly treated personnel in Michigan reflects the healthy attitude that means so much to an industry's balance sheet. Personnel attitudes in our part of Michigan are so healthy as to more than offset the logistics of our location. Michigan has an outstanding highway system that means much to the economy of the north country.

"There is great ingenuity and interest in the service industries in the north country and light industry presents a great opportunity for that area. If more management people knew what can be done there, we would have an inundation of industry.

"We have never been let down by other industries in our area. Whenever we needed some assistance, we were able to get it. The Michigan Economic Development Department, the industrial ambassadors, Benzie County Industrial Commission, the State savings bank at Frankfort and others have been most helpful to us."

Petritz told the Governor he and his associates are pursuing an aggressive policy to seek employment for the Chicago workers who will be displaced by the removal of the Chamberlain plant to Michigan. Initial employment at the Frankfort plant will be from 15 to 20 with an increase to near 40 by the first of next year expected.

Petritz, who came to Michigan in 1947, started the Petritz frozen pie company which is now subsidiary of the Pet Milk Co. and the largest manufacturing industry in Benzie County. He was a Michigan Week regional chairman in 1958. Parker came to Michigan last year.

Petritz is president of the new company, Parker is vice president and general manager, and Zarish is vice president of marketing, and treasurer.

In a letter to the president of the company, Governor Swainson wrote:

"DEAR MR. PETRITZ: Please accept for yourself, Don Parker, and Joseph Zarish my sincere congratulations on the purchase of the Chamberlain Metal Products Co. and its removal to Michigan. This is a wonderful expression of confidence in Michigan's industrial future. The people of your community will benefit directly from this decision and all the people of Michigan will gain inspiration.

"Your action is particularly gratifying in that you have put into action your deep interest in northern Michigan, and have set an example which all of us could follow with great advantage to our State.

"In this new undertaking I wish you great success.

"With sincere best wishes."

The Plight of the New York, New Haven & Hartford Railroad

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21, 1961

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, at the conclusion of these remarks about the situation confronting the New Haven Railroad, two editorials, one from the Hartford Courant of March 19, entitled "Relief, Yes—Bankruptcy, Yes," and the second from the Deep River New Era of March 16, entitled "Bankruptcy Is Best."

Mr. President, the New Haven Railroad is vital to the economic life of Connecticut and all New England and the New York metropolitan area. It can and must be saved in order that the essential services it provides to commuters and to business and industry in the area may continue.

The State of Connecticut has granted tax relief estimated at $1.2 million a year as its contribution to preserving railroad services. Similar action is being considered by New York, Massachusetts, and Rhode Island.

The Subcommittee on Housing of the Senate Committee on Banking and Currency currently is considering S. 345, introduced by the distinguished junior Senator from New Jersey [Mr. WILLIAMS] and cosponsored by myself and 16 other Senators. If enacted, this bill would enable the Administrator of the Housing and Home Finance Agency to assist States and local governments in planning and providing for necessary community facilities to preserve and improve essential mass transportation services. The bill would authorize a $250 million revolving loan fund, through which States and localities could finance purchases of new equipment and facilities for use in mass transportation service, and provides $75 million in grants for planning improvements in such service.

Such governmental aid is essential for the future of the New Haven Railroad, and other hard-pressed commuter roads, but the question arises whether such aid alone can insure successful operations.

In the case of the New Haven, I have reluctantly come to the conclusion that a change in management and a reduction in heavy fixed charges such as can be brought about only by court-appointed trustees in Federal receivership proceedings, must be made if tax relief and other governmental assistance are to be effective.

Mr. President, the New Haven Railroad is bleeding to death. There now appears to be only one chance of saving its life, and that is to apply the tourniquet of bankruptcy.

After many months of worrying and studying over the New Haven situation, I conclude that the only way credit can ever be restored is through drastic reorganization. Without new sources of credit, this railroad will soon collapse.

If the other three States—New York, Massachusetts, and Rhode Island—follow Connecticut's lead in giving tax relief; if the Federal Government provides assistance such as is contemplated in S. 345; if competent operating management can be provided, and fixed charges reduced by the appointment of trustees in bankruptcy, the New Haven Railroad can be saved. Governmental assistance alone will not do it, I am convinced.

The New Haven must be relieved at once of its heavy fixed charges, over $6 million a year. This relief, added to what the States and the Federal Government may provide, will make possible an operating profit and a restoration of credit to buy or lease some new equipment, renovate old equipment and work toward efficient and safe operations which are essential in the public interest.

The New Haven, I repeat, must be saved. But, Mr. President, I conclude it cannot be saved without the discipline that only trustees in bankruptcy can provide.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Hartford Courant, Mar. 19, 1961]

RELIEF, YES—BANKRUPTCY, YES

There is nothing wrong with the tax relief for the New Haven Railroad voted last week by both parties in both houses of the general assembly. There is everything wrong with thinking that such relief is enough to nurse the railroad back to health.

Governor Dempsey has notified New York, Massachusetts, and Rhode Island of Connecticut's action. We must hope that they will take like action. But necessary as tax relief is, it does not get to the root of the New Haven's troubles. It is, indeed, a pity that two amendments to the relief measure offered in the house were voted down over-

whelmingly. They should have been passed overwhelmingly.

First was the proposal of Representative Nicholas B. Eddy, of New Hartford, who would have conditioned tax relief upon bankruptcy and reorganization under new management. Less important but equally to the point was the amendment by Richard W. Sheehan, of West Hartford. He wanted to see to it that no official of the railroad got any salary increase as long as the line was living off State relief. As it is, the only assurance the State has under the measure passed is a proviso that the road must meet service and maintenance standards yet to be established by the public utilities commission.

Mr. Eddy believes that, even with tax relief, the road will still go broke. It probably will. For while it is possible that tax relief will enable the New Haven to go on as now, half alive and giving half service, the picture is not good. Connecticut's relief is estimated at $1.2 million a year. But in hardly more than 5 years the railroad has already borrowed $31 million that had to be guaranteed by the ICC. A while back Massachusetts gave the road almost $1 million to keep the old Colony Railroad to Cape Cod running. And New York has already cut the road's New York property tax from $1.7 million to less than half a million, with more to come. Is all this going to be enough, when each time the road has been given help it has had to come back for more?

This thing cannot get better without reorganization. For the present fiscal and management structure is unsound. President Alpert, who has presided over more of the decay begun under his predecessors, will be still left in charge after all four States have extended more relief. He now argues that if the road goes bankrupt "Nobody is going to get paid for anything," including the tax gatherers. Others warn that if there is bankruptcy the trains will stop running. All this is nonsense. It didn't happen the last time there was bankruptcy. That time service got better, maintenance was improved, and new equipment was bought.

Apart from its overall disadvantages in the automobile age, which the New Haven shares with other American railroads, the basic trouble is this: neither management nor common stockholders nor preferred stockholders have a personal interest in the health of the railroad as such. To them it is just a source of money; or potential money. The only ones who have an incentive to build the road back into modernity and health are the first-mortgage holders. As long as nothing is done but apply the poultices of tax relief to the railroad sores running, these bondholders are powerless.

If the road can benefit from the fresh start that can come only through bankruptcy, the normal procedure will be for the first mortgage holders to form a protective committee. They can then work with the court, to do again much as was done the last time the New Haven went through bankruptcy. A professionally competent and dedicated management can get to work on a program of revival, instead of merely trying to beg help to hold an ailing fiscal structure together.

We have had just the opposite of this kind of dedicated professional management since 1947, when a healthy railroad came out of bankruptcy to be turned over to the managements that have ridden it downhill ever since. It seems to have been considered by stockholders and by management as a goose that, if squeezed hard enough, would lay golden eggs. None of them have had a personal interest in maintaining and modernizing and improving the road as a vital member of the State's economy, as the livelihood of its employees, and as a necessity for Connecticut citizens and Connecticut industry.

It is true that the railroad has had hard luck in recent years. It has never recovered from the blow of the 1955 floods. It also is up against that revolutionary change in our way of life that has come with the automobile, a change whose economic impact we have been slow to understand and slower to do anything about. The American railroads' need for subsidy like that long since given to their competitors is now receiving a partial answer in the relief being granted by the States. But the New Haven's greatest need is to be put under the control of those who have a personal stake in its success as a railroad.

If there is bankruptcy, if the first-mortgage bondholders form their committee, there will be prominent in the picture those who have something to conserve and to build up. The success of the railroad, its recovery and improvement, will mean something to them. Private enterprise is not something in which you make a killing from an enterprise, or get a fat living from while it is bleeding to death. Private enterprise requires making something, or doing something, that is useful, in hope of reward. And that is just what the New Haven doesn't have now, and will not have until in one way or another it is forced into reorganization.

[From the Deep River New Era, Mar. 16, 1961]

BANKRUPTCY IS BEST

Is bankruptcy the best—perhaps the only—way to save the New Haven Railroad?

President George Alpert of the railroad says "No." The New Haven can cure itself, he holds, if it gets the tax relief, Federal loans, and other aid it seeks. Gov. John Dempsey, a Democrat, and Edwin H. May, Republican State chairman, seem to agree.

But both the New England Council and a study committee of the Interstate Commerce Commission see bankruptcy as the only hope. And such distinguished Republicans as U.S. Senator PRESCOTT BUSH and John Alsop have concurred.

Who is right? The editor of the New Era, after carefully weighing the pros and cons, must side with the New England Council and those who now look upon bankruptcy as the best solution to a sorry mess.

Many of us here in the Lower Connecticut Valley tend to shrug off the railroad problem, because we do not see it as a problem that bears importantly on our everyday lives. True, we have a passenger station at Old Saybrook that serves as our rail link with the outside world and many of our people would be inconvenienced, at least, if the trains stopped running tomorrow.

Moreover, many of the necessities of life—from furnishings for our homes to the clothes we wear and the food we eat—come to us by train. But ours are not basically "bedroom towns" for New York or any other large city, and because of this we look upon the railroad problem mainly as a commuter problem which in our State means a Fairfield County problem.

The real problem, however, goes far deeper than that. The railroads, in our case the New Haven, have been pleading poverty for years, a plea that has now resulted in a bill before our general assembly to repeal the gross earnings tax. The bill has wide bipartisan support, and if it is successful, the railroad's tax in Connecticut will be reduced by more than a million dollars a year.

At the same time, however, our State budget is expected to be up sharply as demands for more State aid to education, more highway funds, more facilitits for higher education and the mentally ill, more pay for State employees, etc., increase. Obviously, with State spending to be higher and State income, from the railroad at least, to be lower, someone is going to have to make up the difference, and you know who it will be—John Q. Taxpayer.

So, you see, the railroad problem is our problem after all, even though we don't live in Fairfield County and don't use the train daily to commute.

Who is to blame for the present plight of the railroads? Government? Yes, to some extent. It seems to the editor of the New Era that the railroads have a legitimate complaint against government when their officials point out that the industry is required to carry an unfair load of the tax burden, as compared to their competitive transportation industries, such as the airlines and the bus and trucking companies.

In most cases, local, State and Federal tax funds are spent to build airport facilities, which are then leased or rented to the airlines at a fraction of what it would cost the airlines to build their own facilities privately and pay taxes on them.

Bus and truck lines have largely the same advantages. They roll over highways built with taxpayers' money and pay a comparatively small amount for the use of those highways in license fees and tolls. Even American shipping firms receive large subsidies from the Federal Government on the theory that the Government may someday need to employ these ships as troop carriers in case of another war or threat of war.

Railroads, on the other hand, must buy their own land, build their own terminals, lay their own track—and pay heavy taxes on all their property every year.

From this viewpoint, it can readily be seen that the railroads are forced to carry a far heavier taxload than the competing industries. But the present plight of the railroads is not entirely the Government's doing; far from it. Management and the labor unions are not helping the situation.

Not only has the management of the railroads shifted, to a large extent, from born and bred railroadmen into the hands of lawyers, financiers, and stock manipulators, but the salaries, expenses and other extras that many of these men take out of the railroads are completely unjustified in view of current economic conditions in the industry.

For instance, the Associated Press in Boston last week reported that records show the New Haven paid more than $500,000 during the last three years to President Alpert and members of his family. Previously, PUC records had shown that more than 30 New Haven executives were in the $15,000 a year and over salary bracket.

Salaries such as these might be justified if the New Haven were a booming industry, reporting healthy annual earnings and showing a respectable net profit from operations. But such salaries are indeed difficult to reconcile with the pleas of poverty that come almost daily from these same well-fed officials.

Would it really be fair to ask taxpayers earning perhaps $4,000 or $6,000 a year to pay a higher State tax in order to provide tax relief to a utility that, despite all its cries of woe, can still afford to pay so much to so many?

As for the railroad labor unions, they are equally guilty of greasing the rails on which the industry is rapidly plunging to economic ruin.

Instead of facing up to the problem, recognizing the difficult competitive position the railroads are in, and liberalizing work rules so that the industry might have a fighting chance of scrambling back onto its economic feet, the unions have continued to insist on their costly work practices and seniority rules that have added considerably to the miseries the industry finds itself in today. And they have been responsible for adding a new word—"featherbedding"—to the American vocabulary.

Just one example of how work rules help to strangle the railroads: Too many of the conductors on our trains today are sarcastic old codgers who act as though they're doing you a big favor by telling you in which direction the dining car is located. The editor of the New Era doesn't have occasion to travel by rail too often, but he had the misfortune of running into two such characters on one short train trip to Boston.

On the other hand, in many thousands of miles of air travel in the last few years, your editor has yet to encounter a single discourteous stewardess. The airline stewardesses are trained to be polite, helpful and completely charming at all times and they seldom, if ever, forget their training.

Your editor does not see how a million dollars of tax relief—or $10 million, for that matter—can save the New Haven Railroad under the present management and with present labor practices. Such funds, at best, would only serve to perpetuate the present wasteful, inefficient system a little while longer—until this money also vanishes down the drain.

Bankruptcy, to be sure, would not be a cure-all. But it would at least be the first step toward a complete top to bottom reorganization of the railroad. At this point, nothing less will do.

Fifteenth Anniversary of the Three Combat Arms of the U.S. Air Force

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. CUNNINGHAM. Mr. Speaker, this is a significant anniversary for our defense forces. Fifteen years ago today the three combat arms of the U.S. Air Force were created—the Strategic Air Command, Tactical Air Command, and Air Defense Command.

These mighty air forces constitute the striking arms of the Air Force. They have done their job for these 15 years. They have kept the peace for America.

I am proud to represent the men and women at the Headquarters of the Strategic Air Command, located in Offutt Air Force Base, near Omaha. This highly mobile organization has recently put into effect the latest of a long series of operational steps designed to keep the striking power of SAC at its peak. I refer to the Airborne Command Post, a specially equipped KC–135 jet plane in which there is at all times a group of SAC officers and airmen capable of directing SAC's worldwide striking force should enemy attack ever destroy ground headquarters.

The airborne command post has now been in operation for over a month. There is always a general officer on board in addition to other staff officers and airmen. There is instant communications with SAC bases, higher Air Force headquarters, the joint war room in Washington, and the North American Air Defense Command in Colorado.

I include two articles in connection with this 15th anniversary. First there are excerpts from an article which appeared last week in Air Pulse, the weekly paper for personnel at Offutt Air Force Base. This describes the Airborne Command Post. Also I include an article prepared by SAC headquarters in connection with this 15th anniversary of SAC, TAC and ADC.

[From Air Pulse]

COMMAND POST: FIRST 30 DAYS

An airborne command post—complete with communications equipment and manned by an experienced team of controllers—is now in the air at all times to assume direction of the SAC force in the event the underground command post and its alternates are lost.

Five KC–135 jet Stratotankers from the 34th Air Refueling Squadron at Offutt have been specially modified to serve as aerial "headquarters" for the command in wartime. Though these planes retain their refueling capability, their force control assignment would take top priority if SAC is required to counter an attack on the United States.

One of the five aircraft is kept in the air around the clock, and it does not land until its replacement is airborne with its replacement staff of controllers.

General officers from throughout the command come to Offutt to serve their turn as airborne emergency actions officer. His staff includes a senior controller (colonel), duty controller (major), communications duty officer (usually a captain), an airman controller (tech sergeant or above) and two radio operators.

While airborne, ultra high frequency and single side band radio gear is used to establish and maintain contact with the SAC underground, alternate SAC command posts, the U.S. Air Force Command Post at Washington, D.C., the joint war room, also in Washington, and the North American Air Defense Command in Colorado.

With the loss of the SAC underground and its alternate control centers, the airborne command post can immediately assume direction of the SAC bomber-missile force and execution of the command's emergency war orders under authority of the President.

FIFTEENTH ANNIVERSARY OF SAC, TAC, AND ADC

Tuesday, March 21, 1961, will come and go as just another day for SAC, TAC, and ADC.

Crews of long-range jet bombers will be on 24-hour alert, ready to give a lethal reply to Communist attack on this country. Giant Atlas intercontinental ballistic missiles and their launch crews will stand by to deal their own pulverizing blows to the Red heartland.

Sleek jet fighter bombers, bristling with firepower, will be geared for action. Massive air transport planes will be prepared to carry troops to the front, wherever it may be.

Rocket-armed jet interceptors will patrol the skies over the North American Continent, waiting to repel Soviet bombers. At lonely outposts along the Arctic rim and far at sea, radar observers will watch their scopes for the "blips" that may signal danger.

And support personnel, whose essential jobs lack the glamor of their combat companions, will keep the machinery running at a smooth, steady hum. They will make sure that the Air Force can go to war, and win, under any terms the Communists dictate.

Despite the look of routine, Tuesday, March 21, 1961, will be an anniversary. It will be the 15th for deterrence—the military concept of keeping the peace by letting your enemy know every day that attack on this Nation or its allies will result in his own destruction.

The greatest portion of America's counterforce wallop—and, consequently, its deterrent strength—rests with three Air Force combat arms, Strategic, Tactical, and Air Defense Commands. Their creation on March 21, 1946, marked the beginning of this country's best guarantee of peace. The fact that the Communists have not attacked during the last 15 years points to the success of SAC, TAC, and ADC.

Separately, the commands have been groomed to handle any type of conflict. Together, their power and readiness for war pose the greatest obstacle now facing the Red military planners.

SAC is the long-range force. Its fleet of 2,000 bombers and rapidly growing missile inventory comprise 90 percent of the free world's total striking power, as measured in TNT equivalents. From more than 70 bases across the world, SAC B–47, B–52, and B–58 jet bombers are keyed for immediate nuclear counterattack. About one-third of the SAC force is on 15-minute ground alert at all times, with aircraft fueled and loaded and crews within scant yards of their planes.

SAC missile crews pull alert duty, too, at bases in the United States. Their nuclear-armed weapons can be trigged under Presidential order and reach targets half a world away in 30 minutes or less.

TAC's limited war force can deter aggression or cut down an enemy at any spot in the world. Composite Air Strike Forces, composed of fighter bomber, reconnaissance, refueling and transport aircraft, can move within a few hours to any hot spot on the globe. The effectiveness of these strike units as a deterrent was proved in 1958 when they were used to contain Communist moves in Lebanon and Quemoy. Composite Air Strike Forces can assist ground forces by airlifting crack troops to the heart of a conflict.

ADC—as the Air Force component in the joint United States-Canadian North American Air Defense Command, operates a fleet of deadly fighters and interceptor missiles from a network of bases across the country. The command's SAGE (semiautomatic ground environment) computers can direct fighters and missiles against invading aircraft quickly and accurately.

ADC personnel also man defense radar systems spread along the Far North perimeter and points in both the Atlantic and Pacific Oceans. These systems would give the first notice of imminent attack on North America, providing the vital time needed to launch SAC's alert force and ADC's defensive units.

The three Air Force combat commands have a staggering job. There is no relaxaction, no time to catch up in a modern nuclear war. That's why March 21, 1961, must be a business-as-usual day in the Air Force—with no time off for celebration of a very special anniversary.

National Defense Scholarships for Higher Education

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. MULTER. Mr. Speaker, on January 3, 1961, I introduced H.R. 805, to provide for a college scholarship program.

Last week the Special Subcommittee on Education of the House Education and Labor Committee held hearings on the subject.

The following is my statement before that subcommittee:

STATEMENT OF HON. ABRAHAM J. MULTER, CONGRESSMAN OF NEW YORK, BEFORE THE SPECIAL SUBCOMMITTEE ON EDUCATION OF THE HOUSE EDUCATION AND LABOR COMMITTEE, MARCH 17, 1961

Mr. MULTER. Mr. Chairman, I am pleased to have this opportunity to present a statement on behalf of my bill, H.R. 805, to amend the National Defense Education Act of 1958 to provide for national defense scholarships for college and university study. In my opinion, the enactment of this bill and the establishment of scholarships would provide the very much needed measure of assistance for many thousands of our capable young people who desire to go on to college or university study but for whom the cost of attending college is beyond their family income possibilities.

You are undoubtedly familar with the various reports indicating the cost of attending college. More recent information such as that reported by the U.S. Office of Education indicates that the mean total current expenditure for publicly controlled institutions—1960–61—is $1,300; for privately controlled institutions the estimate is $2,100. These estimates include expenditures for tuition and required fees, room rent and board, clothing and other current needs. If we consider the tuition costs alone of colleges and universities, we may observe that the increase for publicly controlled institutions since 1949–50 is around 86 percent while for privately controlled institutions the percentage increase is 91 percent. The estimated expenditures in 1960–61 for students in public colleges for room rent and board alone totals about $434 with tuition and fees totaling $225. This leaves the average student very limited funds for clothing, books, transportation and other expenditures. I would like to insert a table showing college costs based upon the U.S. Office of Education information. [See charts.]

There are many persons who argue against a program of Federal scholarships for assistance to capable and deserving high school graduates. They argue that if a student has motivation toward college he will be able to make it somehow. Others speak of the possibility of students working their way through college. I would agree with the fact that there are certainly rewarding benefits to the student who is able to work his way through college. I would agree also that a large number of capable students lack adequate motivation from home and school which would direct them toward college or university study. It is interesting to note, however, the following comment in a report by the U.S. Office of Education on the retention and withdrawal of college students:

"* * * No single reason for discontinuance could be identified as most important, although the inference that the financial factor predominated is supported by its high rating importance in combination with other high ranking factors having financial implications such as enlisting for military service by men and taking a full-time job by women. Significantly greater importance was assigned to the financial factor by students who transferred to less expensive institutions or dropped out after the first year than by dropouts from the institution of first registration during the first year." [1]

This study also gives some attention to the general income range of families of students who continue their studies to graduate. It reported:

"* * * The median annual income of parents of nongraduating students was $437 less than that of parents whose children graduated. * * * the chances are 97 to 100 that the dropouts during or at the end of the first registration period would have a during the remainder or at the end of the first school year." [2]

I would like to call attention to table 3 which presents a breakdown of major sources of student incomes for higher education, 1952–53. Scholarships were reported to contribute only 4.8 percent of the total student income. The mean amount of scholarships received by students totaled about $310. Other sources of student income such as family financial support, and the term-time and summer earnings of the students themselves contributed significantly larger percentage totals to the source of income. Yet when we give close attention to the matter, we are able to see that there are few families within the income range which can contribute substantially to the college education of more than one child. Moreover, the summer earnings and term-time earnings of students are seriously curtailed by the ability of the student to find employment in off-campus businesses which usually pay considerably higher wages than most on-campus employment affords.

Let us consider the question of student earnings more closely. The Office of Education reported that in 1952–53 the mean amount earned by students in term-time earnings and summer employment was $413 and $395 respectively. The earnings of women students was considerably below those of the male students and totaled about one-half the amount of the male students' earnings. W. Bradford Craig, in his book "How to Finance a College Education" has reported:

"Students, as a group, financed from their own earnings over one-fourth of their budgets during a recent year. Most of the moneys lower median family income than dropouts came from earnings during the school year, the remainder from summer employment. More than a third of all students who attend college earned some money during vacations; the average amount of such earnings was $395. A still larger proportion worked part time while attending college. Three-fifths of all students—two-thirds of the men and one-half of the women—earned money during the school year. Their average earnings were $468 and $265 respectively." [3]

Indeed, resourcefulness and willingness to work to meet the cost of attending college reflects the high value which many of our young people place upon a college education. On the other hand, I would raise several questions: (1) How many of our institutions of higher education are located in communities which offer off-campus employment to young men and women in terms sufficient to enable them to meet the majority of their costs of attending college? (2) How many of our best students pursuing studies such as the exact sciences are able to meet the physical and mental demands of a full schedule with lecture and laboratory courses while, at the same time, working a sufficient number of hours to make significant earnings? In this time of the history of our Nation, when we are stressing the value of an education and emphasizing excellence in all endeavor I would question seriously those who maintain that student scholarship aid is not needed to help individuals in the plight such as I have just pointed out.

We know, of course, that the National Defense Education Act of 1958, which my bill, H.R. 805, would amend to include scholarships, established under title II, a national student loan program. This program has been enthusiastically hailed by students, parents, and administrators of institutions of higher education as a positive step forward in meeting student financial needs. I join with those who praise the success of the student loan program. I fully acknowledge that for a large number of students a college loan adequately meets their needs. For an equally large number of students, however, the possibility of a loan debt to be repaid upon completion of college studies is forbidding.

In some instances, students are pursuing a course of study which will continue into graduate study before they are adequately prepared to make a significant contribution to the field. We well know that the specialization of today requires college and graduate study in many fields, but especially in areas such as mathematics, science, and modern foreign language. Moreover, many students have elected areas of study which require considerable preparation but which afford very small returns upon this educational investment. Teaching, unfortunately, is still one of the professional areas which pays low salaries in comparison with the required preparation and study. Since the NDEA contains a forgiveness clause for individuals teaching in public elementary or secondary schools, I should perhaps have used some other professional area for my example, but I think the point is clearly made. There are other circumstances, of course, such as an individual's obligation in many instances to contribute a substantial part to the family support upon completion of college studies, or the responsibilities he may wish to take for a family of his own—all of which remove the use of a loan for higher education from the realm of possibility of many capable students.

I have mentioned the value of an education in these times of modern technology and complications in human relationships both within and without our Nation. Also, I have spoken of the need for emphasis upon excellence in all endeavor. Both of these factors, in my opinion figure very highly in the total consideration of the need for scholarship assistance to larger members of our young people.

The value of an education cannot, of course, be evaluated in terms of dollars and cents. Yet, we know that there is abundant evidence to support the fact that the well-educated worker enjoys measurable advantages over the worker with little formal education. He earns more; he suffers less from unemployment; he is more likely to find work in high prestige occupations and he returns a greater proportion of his earnings to those things which afford a cultural uplift for the total community. Everyone familiar with the direction and trends of the Nation's manpower needs is well aware of the shift toward the employment of those persons with greater levels of formal education and training. A recent study showing incomes according to years of school completed by persons 14 years or more of age indicates that men and women with college training are enjoying a substantially higher median income than those with lesser education. It has been pointed out, for example that in 1959, professional and technical workers had completed an average of 16.2 school years and had an average family income of $7,788. Proprietors and managers, exclusive of farmers, had completed 12.4 school years and the family income for this group was $7,012. Clerical and sales workers had completed 12.5 years of school: the median family income of clerical workers was $5,692; that of sales workers was $6,268. Skilled workers had completed 11 years of school and had a median family income of $6,018. Semiskilled workers had completed 9.9 years of school and had a median family income of $5,157. Unskilled workers had completed 8.6 years of school, and the median family income of this group was $4,089.

Education increases the personal income of the individual. Increases in our national income and product register the collective impact of the producing and earning ability of a better educated people.[4]

Moreover, in these times when we are very much concerned with unemployment we must give serious attention to the relation-

---

Footnotes at end of speech.

ships between education and unemployment. As one report indicates: Unemployment of workers is closely related to the amount of education the workers have had. The relationship is, of course, inverse. In March 1959, 8.5 percent of the workers in the labor force with less than high-school-graduation were unemployed, compared with 4.8 percent of the high-school-graduates and 2.4 percent of workers with some college experience.[5]

President Kennedy has recently called attention to the need for the reeducation of many individuals who are now contributing to the total unemployment scene of the Nation.

But the value of an education and the demands of the day which call for greater numbers of persons with high degrees of skills, training, and education cannot be understood in terms of the financial picture alone. We must, of course, consider the needs within the Nation for an increasingly more educated populace if we would continue to provide in America, an example for the free world as to how an educated people move freedom forward. Speaking of education as our ultimate weapon, Mr. Neil McElroy has said:

"Our recognition of the university as a major source of our national vitality affirms a dependence that has long characterized free societies. From the days of the Greek philosophers, democracies have known that their effectiveness depended on citizen knowledge. Representative government in its own interest has built or has encouraged the building of educational institutions to spur the individual to test his own capacities—and to help him understand his responsibilities to the community as a whole.

"So we come to this inescapable conclusion: that education is and will be—the key to success or failure for each of [the] competing ideologies.

"If our educational system functions at or near its optimum, our Nation will thrive and grow. If we allow that system to fail to achieve its potential, we must expect to decline as a free society."[6]

Higher education in America will suffer a serious blow if we do not act now to provide financial assistance in the form of national scholarships to the many capable students who need such aid for college and university study. Moreover, without an adequate Federal scholarship program to meet the needs of large numbers of our high-school graduates, such as I propose in H.R. 805, we will be failing to live up to the goal of providing for every individual, regardless of economic condition, the maximum opportunity to study and to develop to his maximum potential.

I have taken time to comment in great detail upon many of the phases of the present-day demand for higher education for larger numbers of capable persons. I consider such considerations to be essential if we would realistically evaluate the national need for a scholarship program, and if we would enact such a scholarship proposal which will accomplish a meaningful mission. I certainly do not consider that the proposed bill, H.R. 805, will suddenly transform all uninspired students into eager applicants for college or university study. What I do propose is the establishment of national defense scholarships for persons determined by State commissions to be in need of financial assistance to continue education at an institution of higher education.

H.R. 805 is not a complicated bill. There is no barrage of mumbo-jumbo. It would establish national defense scholarships through an amendment to the already established and enthusiastically received National Defense Education Act. In the main the bill would provide for scholarships of $500 to students during each academic year for 4 years. There is a provision which allows students in special need, as reviewed by the State commissions, to receive an additional amount not to exceed $500 per academic year.

As I have indicated, persons receiving scholarships would be selected by State commissions on the basis of objective tests and other measures of aptitude and ability to pursue study leading to a bachelor's degree successfully. In keeping with the specialized national needs for individuals in science, mathematics, or modern foreign languages, which is the general frame of reference of the NDEA, the bill would provide for special consideration of those with superior capacity or preparation in these areas.

The proposal is not overpowering in its appropriations of allotments. It would authorize that there be appropriated for the fiscal year ending June 30, 1961, and for each of the 2 succeeding fiscal years the sum of $17,500,000. Allotments to the States are to be in the ratio of the State's population between the ages of 18 and 21 and the total population of all the States between such ages. What I am proposing is assistance to individuals which leads ultimately to the total welfare of the Nation. In view of the many ramifications of problems in costs and expenses of higher education today, and the need for a more highly educated citizenry, I hope that this committee will favorably report H.R. 805.

I hope the committee will amend my bill so as to have it cover students in colleges which require 5 years instead of 4 years of attendance for certain of the sciences and engineering courses, as well as medical and dental students who have successfully completed their premedical or predental collegiate work.

TABLE 1.—*Major items of students' mean current expenditures: 1952–53 actual and 1960–61 estimated expenditures*[7]

Major item	Publicly controlled institutions		Privately controlled institutions	
	1952–53[1]	1960–61	1952–53[1]	1960–61
Mean total current expenditure	$1,120	$1,300	$1,674	$2,100
Tuition and required fees	151	225	546	863
Room rent	102	116	146	165
Board (regular meals)	270	318	301	354
Clothing (including footwear)	130	135	149	155
All other current expenditures	467	506	532	563

[1] Data for 1952–53 are computed from tables 3 and 4 of "Costs of Attending College" by Ernest V. Hollis and Associates: Bulletin 1957, No. 9, Office of Education, U.S. Department of Health, Education, and Welfare. Estimates for 1960–61 are based on the U.S. Department of Labor, Bureau of Labor Statistics, consumer price indexes and the increase in mean institutional fees since 1953.

TABLE 2.—*Comparison of the mean annual tuition and required fees of 196 representative colleges and universities: 1949–50 and 1959–60*[8]

Type of institutions	Number of institutions	Mean tuition and required fees		Increase	
		1949–50[1]	1959–60[2]	Amount	Percent
All institutions	196	$249	$464	$215	86
Publicly controlled	120	112	194	82	73
Privately controlled	76	465	890	425	91
Publicly controlled:					
Universities	69	138	240	102	74
Liberal arts colleges	19	80	129	49	61
Teachers colleges	17	89	171	82	92
Technological institutes	5	142	221	79	56
Junior colleges	10	18	30	12	67
Privately controlled:					
Universities	57	457	885	428	94
Liberal arts colleges	14	439	810	371	85
Technological institutes	5	626	1,148	522	83

Centennial Anniversary of the Unity of Italy, 1861–1961

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. RODINO. Mr. Speaker, 100 years ago this month the Italian Risorgimento—the dream of Dante and Garibaldi—was at long last accomplished.

Last Thursday I was honored to be one of those present at the stirring observance of this momentous event which took place in the State Department auditorium.

Gathered to honor the state of Italy, as well as to pay tribute to Italian-American friendship, were the President of the United States, the Vice President, the Speaker, and numerous other Members of Congress and prominent U.S. officials. Among those representing Italy were the Italian Ambassador, H. E. Manlio Brosio, and Prof. Gaetano Martino, the chief of the Italian mission to the United States.

Keynote of this centennial ceremony was the great and indestructible bond which exists between the United States and the State of Italy. On this historic occasion we saw a rededication to our traditional ties, to our mutual respect for each other's culture and civilization, and to our united effort for the survival of freedom.

Mr. Speaker, under unanimous consent, I wish to insert at this point in the RECORD the speech of the President of the United States; the messages sent by the Honorable Giovanni Gronchi, the President of the Republic of Italy, and the Honorable Amintore Fanfani, President of the Council of Ministers of the Republic of Italy; the address of the Honorable Gaetano Martino; and the opening remarks of Representative Anfuso, chairman of the American Honorary Committee for the Centennial Celebration:

REMARKS OF THE PRESIDENT OF THE UNITED STATES AT THE CENTENNIAL CELEBRATION OF THE 100TH ANNIVERSARY OF ITALIAN UNIFICATION, NEW STATE DEPARTMENT AUDITORIUM, WASHINGTON, D.C., MARCH 16, 1961

Congressman Anfuso, Your Excellency, the Vice President, Mr. Speaker, Ambassador Dr. Gaetano, Mr. Secretary, Senator Pastore, distinguished Members of Congress, ambassadors, and ladies and gentlemen, many of us who are here today are not Italian by blood or by birth, but I think that we all have a more than passing interest in this anniversary. All of us, in a large sense, are beneficiaries of the Italian experience.

It is an extraordinary fact in history that so much of what we are, and so much of what we believe had its origin in this rather small spear of land stretching into the Mediterranean. All in a great sense that we fight to preserve today had its origins in Italy, and earlier than that in Greece. So that it is an honor as President of the United States to participate in this most important occasion in the life of a friendly country, the Republic of Italy.

In addition, it is one of the strange facts of history, that this country of ours, which is important to Western civilization, was opened up first by a daring feat of navigation of an Italian, Christopher Columbus. And yet this country was nearly a century old when modern Italy began.

So we have the old and the new bound together and inextricably linked—Italy and the United States, past, present, and we believe, future.

The Risorgimento which gave birth to modern Italy, like the American Revolution which led to the birth of our country, was the reawakening of the most deeply held ideals of Western civilization: The desire for freedom, for protection of the rights of the individual.

As the doctor said, the state exists for the protection of those rights, and those rights do not come to us because of the generosity of the state. This concept which originated in Greece and in Italy I think has been a most important factor in the development of our own country here in the United States.

And it is a source of satisfaction to us that those who built modern Italy, received part of their inspiration from our experience here in the United States—as we had earlier received part of our inspiration from an older Italy. For although modern Italy is only a century old, the culture and the history of the Italian Peninsula stretches back over two milleniums. From the banks of the Tiber rose Western civilization as we know it, a civilization whose traditions and spiritual values gave great significance to Western life as we find it in Western Europe and in the Atlantic Community.

And to this historic role of Italian civilization has been added the strengthening in the life of this country of millions of Italians who came here to build their homes and who have been valued citizens—and many of their most distinguished citizens sit on this platform today.

These ancient ties between the people of Italy and the people of the United States have never been stronger than they are today, and have never been in greater peril. The story of postwar Italy is a story of determination and of courage in the face of a huge and difficult task. The Italian people have rebuilt a war-torn economy and nation, and played a vital part in developing the economic integration of western Europe.

Surely, the most inspiring experience of the postwar era: Italy has advanced the welfare of her own people, bringing them hope for a better life, and she has played a significant role in the defense of the West.

As we come to this great anniversary in 1961, we realize that once again new and powerful forces have arisen which challenge the concepts upon which Italy and the United States have been founded. If we are to meet this new challenge, we—Italy and the United States—must demonstrate to our own people and to a watching world, as we sit on a most conspicuous stage, that men acting in the tradition of Massini and Cavour and Garibaldi and Lincoln and Washington, can best bring man a richer and fuller life.

This is the task of the new Risorgimento, a new reawakening of man's ancient aspirations for freedom and for progress, until the torch lit in ancient Torino one century ago guides the struggle of men everywhere—in Italy, in the United States, in the world around us.

MESSAGE BY THE HONORABLE GIOVANNI GRONCHI, PRESIDENT OF THE REPUBLIC OF ITALY

To the CHAIRMAN,
American Honorary Committee for the Italian Centennial, Washington, D.C.

MR. CHAIRMAN: I am happy to address, through your courtesy, the good wishes and greetings of the Italian people, as well as my own, to the American Committee for the Italian Centennial and to all those—Americans and Italians—who have participated with such spontaneous enthusiasm in the celebration on American soil of this day which has such lofty significance for the history of my country.

I address my gratitude particularly to the President of the United States, who has consented to attend these ceremonies, as well as to the Members of Congress, the Governors, the mayors, the educational and cultural institutions, the public and private officials, to the numerous committees from all over America who joined in commemorating our anniversary.

The great American Nation, which has such a high sense of liberty, recognized in the events that 100 years ago led to the unity of the Italian people the selfsame yearning for independence which led to the birth of the United States.

Thus, the tribute being paid in America to our Risorgimento, whose anniversary is being celebrated throughout Italy with great solomnity, is a new expression of the spirit which increasingly binds the peoples of our two countries in their determination to enhance, both now and in the future, the values of a free civilization. At the same time, these observances which unit Americans and Italians underscore those sentiments of confident friendship which opened the doors many years ago in the constructive contributions of Italians to life in the United States.

Please accept, Mr. Chairman, the gratitude of the Italian people and of myself and kindly convey it to all those who in response to the committee's appeal are today celebrating this joyful anniversary of our national unity.

GRONCHI.

MESSAGE BY THE HONORABLE AMINTORE FANFANI, PRESIDENT OF THE COUNCIL OF MINISTERS OF THE REPUBLIC OF ITALY

To the CHAIRMAN,
American Honorary Committee for the Italian Centennial, Washington, D.C.

MR. CHAIRMAN: We, in Italy, are deeply moved by the thought that on March 16 the centennial of the unification of Italy will be observed in the city of Washington for the first time in a foreign country.

It is highly significant that the United States, whose own history is based upon the respect of freedom and a sense of independence, so promptly realized the import of that long and hard struggle which led to Italian unity 100 years ago, through strife and suffering, through the deep beliefs of our people, the sacrifice and martyrdom of the brave, the able and patient efforts of our leaders.

I believe the reason for this understanding lies in the similarity of historic events, in the common struggle for the same goals and in the active participation of Americans and Italians in the development of both countries. All this stirred in the hearts of the people of the United States the memory of the years when the new Italy was born and a friendship was started, which never died.

The warm American participation in the observance of our centennial adds to the many ties already existing between our two countries a new bond which strengthens their determination to persist in the defense of the common ideals of the two nations.

I am therefore extremely happy to convey the greetings and the appreciation of the Italian Government, as well as my personal thanks, to you, Mr. Chairman, to the American Committee for the Italian Centennial and to all those—Americans and Italians—who joined in the observance of this solemn anniversary in your country.

I wish particularly to extend my grateful respects to the President of the United States, who graciously consented to honor

the ceremony with his presence, to the diplomatic corps, the Members of Congress, the Governors, the mayors, the various institutions, committees, and personalities that in Washington and all over America are celebrating our centennial.

I am happy to express my heartfelt thanks and those of the Italian Government to them all.

A. FANFANI.

ADDRESS OF PROF. GAETANO MARTINO, CHIEF OF THE ITALIAN MISSION TO THE UNITED STATES

Mr. President, Mr. Chairman, honored guests, ladies, and gentlemen, I am greatly honored to speak of the political birth of my country as a modern nation in a ceremony made so solemn by the participation of the President of the United States of America. I wish to assure you, Mr. President, that your presence here will be profoundly felt by all Italians and will increase their love for your country. They admire the United States as the country where human endeavor has brought its most important contribution to the civil and moral progress of the peoples and where the greatest effort is being made to guarantee the continuity of that progress in the uncertain and perilous present. No doubt, Mr. President, this ceremony—attended by the highest representatives of the American Nation—will contribute to the deepening and strengthening of friendly relations between the United States and Italy.

One hundred years ago in Turin the Kingdom of Italy was proclaimed in the first Parliament elected by the majority of the Italians. That proclamation marked the birth of the Italian state which included in its political structure, shaped on democratic patterns, all Italians, living on the soil of Italy.

It is true that the Venetian region was still under Austrian domination, and that the new nation was born without its capital which could only be Rome. But already in 1861 the liberation of the Venetian region and the annexation of Rome appeared inevitable as events were soon to show. The first occurred in 1866 and Rome was annexed in 1870. Our final war of independence in 1915–18, which was part of the First World War, made it possible at last to restore to the Italian family the peoples of Italian language, culture and spirit still remaining under Austrian domination.

What we call "Risorgimento" is the political movement which through revolutions and wars led Italy to the conquest of its national freedom and independence. It cannot be understood historically without recalling that it stemmed from that great fountainhead of ideals, sentiments and moral values which were the substance of the "age of enlightenment" of the 18th century.

The moral and political forces which emerged from the enlightenment stimulated the fundamental historical events of the American and French Revolutions, and of the Italian and European Risorgimento. After a silence of more than a century, Italy once again took its place in the cultural life of the 18th century Europe and celebrated its spiritual resurgence which was to become a political rebirth as Napoleon's victories brought to our land the wind of liberty. The immediate comparison with the more modern and civilized forms of life adopted by the French and partially introduced into Italy made the Italians feel the full impact of their centuries-old ills. They were the ills of poverty, ignorance, fear, the servility of the weak, the corruption and abuse of power of the rulers.

The problem of national independence could then be stated in terms that were no longer theoretical but which held a promise of solution since the old refractory and absolutist nations had demonstrated their complete backwardness and inefficiency in the face of the French conquests.

On the concrete political ground there were two ways to free and unify our nation: through a popular uprising which, following the American and French examples could have ousted the princes from their creaking thrones and defeat Austria; or through an action undertaken by one of the states of the peninsula having sufficient power and prestige to enable it to achieve the same results. Only the state of Piedmont could do this.

The first path was chosen by Mazzini, the second by Cavour.

Giusseppe Mazzini maintained that independence must be the fruit of revolt—not a gift from above—and that therefore Italian unity must be achieved exclusively by popular revolutionary forces. Inspired by the same ideals as your Founding Fathers. Mazzini held that national states can be founded only on the people, by the people and for the people. He affirmed the preeminence of the duty of human solidarity in domestic affairs as well as in the international life of the peoples. He thus intimately linked the destiny of resurgent Italy with that of a resurgent Europe by founding the two associations known as young Italy and young Europe. Mazzini conceived the Italian problem as one aspect of the general European problem. Old Europe and old Italy were to die together. In their place the new Europe and the new Italy were to rise together. The constitutional formula of "United States of Europe" which, like your own, at that time was disseminated throughout Europe in the works of the French Victor Hugo and Michel Chevalier, the German Johannes Sartorious, the English Richard Cobden, found in Mazzini the staunchest supporter. The European ideal was transformed into political action.

With the crushing of the European revolution, a new political situation developed in Italy. In it Camillo Benso di Cavour directed the movement of the Risorgimento toward final achievement, with his genius and daring. After having accomplished a widespread reform of political, social, and administrative life of the Piedmont, and after having placed it in vanguard of civil progress which attracted the surprise and admiration of Europe, Cavour distinguished himself by engaging in the liveliest of diplomatic activity. Dealing with the great powers with skill he succeeded in securing for Piedmont a leading role on the European scene, by forming alliances now with France, now with England. If he was able to bring an end to Austrian domination of Lombardy by securing the aid of France, it was with tacit English solidarity that the "Piemonte" and the "Lombardo"—the two ships carrying the thousand from Scoglio di Quarto to the Sicilian coast—could slip quietly through Mediterranean waters.

However, despite the fact that he worked with the instruments of crude politics which do not admit sentimentalism, he remained steadily loyal to those moral values and principles of the enlightenment redeveloped and reinvigorated in the new century. It was his firm conviction that the unity of his country must benefit not only Italians but all of humanity. His conscience was the conscience of the most cultured and civilized Europe and he looked upon its unity as the inevitable future of a Christian Europe. Few political leaders possessed his conception of rational freedom: only Jefferson, Lincoln, Gladstone could be cited as supporters of the same liberal ideals. These ideals inspired also his suggested solution of the problem of the church-state relations through the ingenious formula of "a free church in a free state." It gave Italy a long period of religious peace while it enhanced the spiritual force of the church.

I cannot refrain from mentioning two other outstanding leaders to whom Italy owes its unity: Giuseppe Garibaldi and Victor Emmanuel the Second. The name of Garibaldi has been always celebrated not only in Italy, but in the Americas where he lived and fought for many years. It was mainly Garibaldi's daring that evoked the sympathy and support of public opinion in Europe and America for our national cause. He fought for all the oppressed against all oppressors. The generosity of his actions earned him a place among the champions of human ideals. Your poets and ours unanimously greeted him as the new Washington and glorified his name. It gives us pleasure to think of him at the moment when, concluding his victorious campaign, he handed over to Victor Emmanuel the Second the half of Italy he had liberated. Refusing to accept honor and gains he returned with his poncho and red shirt to his native island to cultivate the bleak earth. He had presented the King with a generous gift; the hands receiving it were equally generous. Victor Emmanuel the II had also given fully of himself and his kingdom to Italy. He had kept his selfless pledge in the darkest and most difficult hours.

The ideals of the apostles of our national unity are now once more, lighting our path after the tragedy of a war brought on by a minority which had seized power by violence and deceit.

We have perfected the institutions that guarantee freedom. We have increased the opportunities and means to give everyone security. We have rebuilt everything that was destroyed: we have created an atmosphere of industriousness in our country. Nevertheless, we are more sensitive to what remains to be done than to what we have accomplished.

The unification of Italy, as I said, is only a phase of the broader historical and political cycle whose philosophy centered on the enlightenment and on its unshakable faith in the rights of man. These rights—as you, Mr. President, wisely said in your inaugural address—do not derive from the State, but from God's hands, and the State can and must only guarantee them against all attempts of subversion.

That historical cycle is now far from being concluded. We have precise duties in the process of its completion. Italy's duties can be outlined both in the domestic and the international field. In the area of domestic policy we are pledged to restore confidence and hope in the millions of our fellow citizens who still believe that justice should be sought outside the democratic system. We must win them back to democracy and eliminate the reasons which can explain—though not justify—their present attitude, a cause of concern for us all. These reasons are connected with certain conditions of poverty which time thus far has not permitted us to remove, as well as with the survival of habits acquired during the many centuries of our painful serfdom. To discharge this duty of redemption and civil education the model used by Cavour is still valid. It suggests application of the policy of the juste milieu, the right middle of the road, which proved so fruitful not only in our country, but in yours as well.

On the international scene, it is our duty to move ahead, with renewed vigor along the path pointed out by Mazzini. In the last 15 years Italy, not only participated in all organizations dedicated to the pursuit of world peace, but kept itself in the forefront of the struggle for the unification of Europe. As Foreign Minister of my country, I had myself the privilege of playing a role, which was not minor, in the creation of the two new European communities: The Economic Community and Euratom. But we are still far from our goal. It is therefore urgent and vital to speed up our movement for unity, closely coordinating our efforts with those aimed at the achievement of the Atlantic unity. A unified Europe is

only a part of that broader unity of the Atlantic world which started taking shape in the fields of culture and ideals three centuries ago and which substantiated our common conception of the world centered on conscience and ethics. This unity took political shape in 1949, when the Atlantic Alliance was built. Thence a new Risorgimento started: We all have a leading role in this rebirth, you Americans and we Europeans, as keepers and bearers of the message of the "Age of Enlightenment."

Mr. President, ladies and gentlemen, we must further strengthen the ties of our unity. This is necessary not only to face the challenge of our common enemies, but principally to enrich and guard the spiritual and moral patrimony handed down to us by our forefathers, which we want to pass on to our children. Only by tightening our bonds we will be able to make our future worthy of our past. Only by uniting more closely can we secure the triumph of our ideals and allow our peoples to dedicate themselves in full serenity to deeds of peace: only thus can we fulfill the wish expressed by your poet, John Whittier, in some of his verses addressed to our reborn Italy:

"Fold the flags of war, and lay its sword and spear to rust away, and sow its ghastly fields with flowers."

REMARKS BY CONGRESSMAN VICTOR L. ANFUSO, ITALIAN CENTENNIAL CELEBRATION, MARCH 16, 1961

It is a great honor for me to have been singled out by my colleagues on the American Honorary Committee to be the chairman of this historic event. It is my pleasure to welcome you.

It is of particular significance for me, since I came to this country as an immigrant from Italy at the tender age of 9. Little did I dream then that some day this immigrant boy would preside at a celebration of this sort in Washington, where the President and other great leaders of this Nation would gather to pay tribute to my ancestral homeland on the centennial anniversary of its unification as a single, strong nation.

I am deeply grateful this morning, as never before, to this wonderful country of ours for the unlimited opportunities which I and millions of other Americans of Italian extraction have received. This is a feeling which only immigrants and the children of immigrants can fully appreciate.

The President of the United States has played a significant role in these celebrations. I have had the honor and the privilege to know the President ever since I first came to Congress in January 1951, when I served with him in the House of Representatives. I remember the kindly guidance he gave me then—and I shall never forget his encouraging assistance on several projects which I proposed to the Congress in those days.

This association continued also after he had moved over to the U.S. Senate, and it is best exemplified by the fact that after I had introduced the resolution on the centennial observance of Italian unification and brought it to the attention of Mr. Kennedy, he immediately introduced it in the Senate. May I quote just a brief remark made by Mr. Kennedy at the time he introduced the resolution on July 13, 1959, when he said:

"The concurrent resolution expresses our pleasure in receiving the invitation (to participate in the observance) and testifies to our admiration for the contributions this great nation has made to our common ideals of freedom and independence. It is fitting and proper that we recognize in this fashion the progress and achievements of the people of Italy during the past century."

During this entire decade that I have been privileged to know Mr. Kennedy, I have always found him to be an admirer of Italy and of its achievements in the annals of culture and civilization. Likewise, he has a keen appreciation of the contributions of Americans of Italian descent toward the upbuilding of America and its way of life.

It is to a certain extent an irony of history that, as Italy was reborn as a united nation, the United States was on the threshhold of facing its greatest test for survival. As the guns were stilled in Italy, and Garibaldi was going back to his beloved island of Caprera with a bag of bean seeds on his shoulder, the guns of Fort Sumter on this side of the Atlantic were rumbling. Italy's Risorgimento, which means rebirth as a nation, was being accomplished.

And speaking of Garibaldi, I take particular pleasure in greeting here this morning the grandson of that great patriot, Gen. Ezio Garibaldi, and also his granddaughter, Mrs. Giuseppina Ziluca. May I ask them to take a bow.

Today there exist strong bonds of friendship between the United States and Italy. The bonds joining our two nations are, in my estimation, stronger and deeper than those resulting from a military pact or an economic program. They are the bonds of faith and confidence in one another, of mutual respect and understanding between two great peoples, of genuine friendship and reciprocal contributions.

The bridge of understanding between the people of the United States and the people of Italy was not constructed overnight. It is a process which is at least as old as the United States, and in fact goes back to our earliest days when small but significant numbers of Italians joined the waves of early explorers and settlers who came to these shores. They and succeeding generations of Italian immigrants, who settled in this land, have made lasting contributions to our American heritage over the long centuries. The imprint of their contributions on American life and civilization is visible all around us.

We live in a crucial time in the annals of human affairs which requires utmost unity in the ranks of the free nations. The future survival of democratic America and of the whole free world depends, in large measure, on reinforcing our bonds of cooperation with nations like Italy, and on the creation of working partnerships with such nations in every endeavor which could serve the best interests of mankind.

It is not for me to spell out in detail how this partnership between our two nations is to be created, nor is this the time and the place to do so. Suffice it merely to indicate that we have the beginnings of it in several ways: the fact that Italy has been willing to give as much as she receives; the fact that Italy has made available to us areas for the establishment of military bases; Italy's significant role in NATO; Italy's strategic position in the Mediterranean in relation to Europe, Africa, and the Middle East; and Italy's ancestral ties in Latin America.

Our partnership can be extended and deepened in other ways through many new ideas and bold action. Instead of working alone in certain areas, where our help has been misunderstood, let us invite the participation of partnership nations like Italy—if such participation will bring about better understanding and more fruitful results. The possibilities are unlimited. This, too, may in time prove to be a "new frontier" in our international relations.

It is, therefore, only fitting and proper that we choose this occasion to rededicate ourselves to the same ideals which triumphed over a hundred years ago. In this era of the "New Frontier," let us, in the words of our beloved President, pray that the future years will prove to be the years when the tide came in—when America, together with a strong and united Italy and a free world, moved forward again.

The Cooperative in Our Free-Enterprise System

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following remarks of John C. Satterfield before the 32d annual meeting of the National Council of Farmer Cooperatives at New Orleans, La., on January 10, 1961.

Mr. Satterfield is president-elect of the American Bar Association and is senior member of the firm of Satterfield, Shell, Williams & Buford, Jackson and Yazoo City, Miss.

The remarks of Mr. Satterfield follow:

THE COOPERATIVE IN OUR FREE-ENTERPRISE SYSTEM

In the free enterprise economy which is ours in the United States of America today, the cooperative is a potent factor in retarding the rapid march of this country toward socialism and a Government-manipulated economy. It is both surprising and alarming to observe the criticism of cooperatives by businessmen and business organizations who are blinded to the service which is now being rendered by cooperatives to the free-enterprise system. This service has been a material factor in support of capitalistic free enterprise in the United States for more than 50 years.

This discussion will be limited to farmer cooperatives, except insofar as a broad picture of the cooperative field in its widest sense is necessary to understand the basic principles and issues involved in the consideration of the place of cooperatives in the free enterprise system of today. A brief history of the development of cooperative effort will aid in recognizing that from the very first cooperatives have been an essential part of our economy.

HISTORICAL OUTLINE

Although cooperative enterprise has been called unique in recent hearings before congressional committees, the actual practice of cooperative enterprise by agricultural and industrial workers goes back for many centuries. This type of enterprise originated with the guilds of the Middle Ages which were cooperative efforts of the early industrial employees to alleviate the conditions under which they worked.[1] Thereafter, cooperative enterprise continued on the Continent and in Great Britain in many forms until the birth of the modern cooperative business organization through the Rochdale Equitable Pioneers' Society in Rochdale, England, in 1844. In the meanwhile, there was a parallel but entirely separate development of cooperative enterprise in America dating back to the earliest colonial days.[2] Pioneers cooperated in clearing land, building homes, constructing roads. There were community husking bees, log rollings, threshing rings, beef and cheese rings, and many other cooperative activities. These were informal, but gradually definite organizations developed. As early as 1780 farmers organized societies to purchase purebred cattle and to make community drives of livestock to distant markets.

Gradually as the farmers' production expanded and the farmers' markets increased and became more distant, co-operative tech-

---

Footnote at end of speech.

niques were developed both in the marketing of agricultural products and the purchase of supplies. Formal organization developed, one of the first being the associated or cooperative dairying at Goshen, Conn. about 1810. These gradually spread to the Midwest as illustrated by the organization of dairying cooperatives by Wisconsin farmers in 1841. During the next 50 years various types of cooperative enterprise spread throughout the entire United States, the principles of cooperative organization and operation gradually emerging by trial and error. Similar movements developed separately in Europe led by the Scandinavian countries. By 1860, cooperative organizations existed in most of the agricultural areas of this country, and in 1865 Michigan passed, what is regarded, as the first statute recognizing the cooperative method of selling farm products and purchasing farm supplies.

When we search for the first formal organization embodying the modern district cooperative features, we find that the modern cooperative probably had its origin in the group of 28 weavers who banded together in Rochdale, England, in 1844, to overcome the desperate straits they were in as a result of a combination of high prices and low wages in their industry. It is said these weavers pooled about $140 as their initial capital and formed the first consumer cooperative. When the Rochdale weavers formed the Rochdale Equitable Pioneers' Society, they formulated seven basic principles of cooperative endeavor; open membership; democratic control on the principle of "one member—one vote," limited interest on capital; trading on the basis of cash; patronage refunds; political and religious neutrality, and promotion of education.[3] However, it has long been recognized that all seven of the Rochdale principles need not be present for an organization to be properly considered a cooperative.

The National Grange, officially known as "The Order of Patrons of Husbandry," was founded in 1867, and in 1874 the Grange sent one of its officers to Europe to study the cooperative enterprises which had developed there. An early writer on cooperation says, "The great contribution of the National Grange was the formulation and distribution in 1875 of a set of rules for the organization of cooperative stores. These rules were based on those of the 28 weavers of Rochdale." By 1876 the National Grange had established more than 20,000 local Granges and in 26 states local Granges practiced selling and buying for members on a cooperative basis.

The Federal Government and all of the States repeatedly have recognized the value of farmer cooperatives to our free-enterprise economic system. Basic Federal legislative recognition of the desirability of encouraging farmer cooperatives includes the exemption from Federal income tax in 1913,[4] the protection of such cooperatives from the provisions of the Clayton Act in 1914,[5] the authorization of organization of cooperatives as against certain provisions of the antitrust laws by the Capper-Volstead Act in 1922,[6] and the creation of the Federal Farm Board, predecessor to the Farm Credit Administration, in 1929.[7] Each of our 50 States has authorized the organization of cooperatives under special statutes, most of which contain features designed to encourage agricultural producers to form cooperatives.

Since the turn of the century the importance of farmer cooperatives to the agricultural economy of the United States has increased rapidly. The number of farmer cooperatives has increased from 3,099 in 1915 to the alltime high of 12,000 in 1930 with a gradual decline, following the reduction in the number of farms and farmers, to 9,731 in 1957–58, the latest year for which figures are available.[8] The number of memberships in farmer cooperatives has increased from 651,186 in 1915 to 7,485,779 in 1957–58.[9] In the year 1915 the business done by farmer cooperatives amounted to $310,313,000. During the 1957–58 season, the gross value of farm products marketed, farm supplies handled, and receipts for services performed by cooperatives amounted to approximately $14 billion, and the total net volume, after eliminating duplication resulting from interassociation business, amounted to almost $10.7 billion.

Although farmer cooperatives are of vital importance to the farmers of the United States, their effect upon the national business picture is often grossly exaggerated by critics. While directly comparative figures are not available, when the total net volume of farmer cooperative business for the crop season ending in 1958, which amounted to $10.7 billion, is compared with the gross national product for the year 1958, which amounted to $450 billion, farmer cooperatives accounted for less than 2½ percent of the total business done.

COOPERATIVE DEFINED

Having covered the development of the cooperative movement from colonial times to this date, we should define the word "cooperative," differentiate between the various types of cooperatives, and consider the place of the farmer cooperative in our free-enterprise capitalistic economy.

Throughout the years cooperatives have been variously defined.[10] Many Federal and State statutes limit their application to organizations which meet the particular criteria set up in such statutes. These statutes have tended to complicate the definition of the term. It seems to me that a simple and proper definition of a cooperative under the decisions of our courts may be the following:

A cooperative is a legal entity organized and operated for the purpose of furnishing at cost goods or services to its patrons or to its patron members (or patron stockholders).

With reference to the type of legal entity utilized for the doing of business, cooperatives may be classified as follows:

1. Cooperatives organized under special statutes enacted for that purpose.

2. Cooperatives organized under general corporate laws which embody the above cooperative principle in their charter, bylaws, or patron contracts.

3. Partnerships, unincorporated associations or other recognized legal entities which embody the above cooperative principle in their articles or basic contracts and agreements.

COOPERATIVES IN THE FREE-ENTERPRISE SYSTEM

In considering the place of cooperatives in our present economy we must keep in mind use of the cooperative principle by many varied types of business. With reference to the nature or type of services or goods furnished, cooperatives may be classified as follows:

1. Cooperatives organized for the purpose of providing financial aid to their members at cost, such as credit unions; mutual building and loan associations; health, accident, medical care and compensation companies; and mutual life insurance companies.

2. Cooperatives organized for the purpose of furnishing services at cost, such as the marketing and processing of agricultural products; the rendition of public utility functions such as electric, water and telephone service; and the rendition of various types of service to members such as the services furnished to about 1,000 newspapers by the Associated Press and to 74 railroads by the Railway Express Agency; services of trade associations and the like.

3. Cooperatives organized for the furnishing of goods at cost such as manufacturing, purchasing, and consumer cooperatives, and wholesale buying groups.

We are not interested in the many forms of urban and general business cooperatives included in this enumeration. Farmer cooperatives are faced with enough problems of their own without our attempting to discuss the problems of other types of cooperatives. So long as human nature is human, problems will arise along the edges of legitimate enterprise. Misuse will exist. Undue advantages will be taken. We are here concerned only with farmer cooperatives, and those farmer cooperatives which are organized and operated in accordance with law and within the scope of proper cooperative principles.

Under our constitutional form of government the unalienable rights of life, liberty and pursuit of happiness necessarily carry with them the rights of individuals to do business as they see fit within the framework of our Federal and State constitutions and statutes. An individual, a parnership, an association, a conventional corporation and a cooperative fit into our free-enterprise system, one as well as the other. During 31 years of the practice of law, which has included meeting annually for many years with lawyers from every State in the Union, I have never heard advanced any legal basis of criticism of persons who choose to do business in the form of a cooperative whether organized under special State laws, under the general corporate law or in any other legally permissible form.

The position of the farmer cooperatives in our free enterprise was well stated by the National Association of Manufacturers[11] as follows:

"A 'cooperative' is a form of business enterprise that enables a group of individuals, partnerships, or corporations, to combine together for the purpose of producing or buying or selling a commodity or service. City consumers have gotten together to buy goods and sell them. Businessmen have formed mutual fire insurance companies. Individuals join together to buy life insurance through a mutual insurance company or merchandise through a mutual wholesale purchasing association. People who save money put their funds in a mutual savings banks. Farmers join together to buy goods they use in production or to sell the things they grow. All of these are 'cooperatives.' They are also legitimate forms of private enterprise."

Recent hearings before congressional committees point up the fact that the cooperative movement is frequently and vehemently attacked by industrialists, wholesalers and retailers alike. These persons lose sight of the fact that the formation and operation of cooperatives represent the only logical manner in which the farmer can deal with the soaring costs of his operations as compared to the slight increase in his gross income over the years. The only other solution to this problem would draw the Federal Government into greater control of every element of farming operations until agriculture would constitute a wholly Government-manipulated phase of our economic system. This solution is certainly not consistent with free enterprise.

One of the most powerful tools which the farmer may use to free himself of the economic pressures now being brought to bear upon him is the proper use of his farmer cooperatives. In this way, the farmer is able to fight the impending possibility of closer Government control of his operations by managing his own business affairs, and theregy increasing his profits.

This is the free-enterprise system in action. It is a true manifestation of the principle that business will flourish toward proper ends, within a fully legitimate economic framework. The farmer cooperative is not only an example of the free-enterprise sys-

Footnotes at end of speech.

tem in action; it is a necessary barrier to the flowing tide of governmental domination and possible eventual elimination of the free-enterprise system altogether.

TAXABILITY AND THE PATRONAGE REFUND

When the attacks upon farmer cooperatives are analyzed, it is found in almost every instance that the actual reason motivating the attacker is the competition which is given to the business of such person by cooperatives. These attacks are concentrated upon what the attackers believe to be the Achilles' heel of cooperatives—the payment of patronage refunds at the end of the fiscal year as a means of adjusting to actual cost the consideration received for goods or services furnished by the cooperative.

The so-called tax advantage which permits cooperatives to exclude patronage refunds from their income is available to every business man in the United States. This was pointed out by Joseph G. Knapp in "Are Cooperatives Good Business?", which appeared in the Harvard Business Review for January-February 1957, as follows:

"The cooperative operation does not result in the formation of net income by the cooperative subject to tax. Should any firm elect to forgo the making of income and operate according to cooperative principles on a cost-of-service basis, it likewise would have little or no net income subject to tax. Any business can enter into a contractual agreement with those that it serves to return to them savings resulting from their patronage and free itself from income tax on those amounts. In other words, our tax laws at the present time provide no general advantages to cooperatives that are not available to any other organization which elects to operate so as not to accumulate income."

The criticism of the taxation of cooperatives must be considered in the light of the recognized principles of law applicable to the payment of patronage refunds and the exclusion thereof from the income of nonexempt cooperatives legally obligated to pay them.

(a) A taxpayer is free to choose the type of organization or form in which he will cast his business activities to achieve a desired business or tax result. He is not required to adopt or continue with that form of organization which results in the maximum tax upon business income.

(b) When a legally enforcible obligation exists to refund to stockholder-patrons (sometimes referred to as member-patrons) the margin between the cost of the goods or services furnished and the amount received by the cooperative, it does not constitute income to the cooperative. Such margins properly calculated, allocated and paid to such patrons are excludable from the taxable income of the cooperative as a matter of constitutional and legal right regardless of any statute or Treasury regulation.

(c) This exclusion is enforced by the courts on the grounds that: (1) under the preexisting legal obligation, the margins never become the property of the cooperative and are not a part of its income, (2) money received by one in a business transaction which he has no right to retain cannot be said to be a gain or profit to him, (3) patronage refunds are distributions of money belonging to the patrons rather than distributions of income of the cooperative, (4) while held by the cooperative the funds are in its hands as agent or trustee for its patrons to whom it is legally obligated to repay the same, and (5) patronage refunds are in reality discounts or rebates paid under a preexisting legal obligation and are just as allowable as any other discount upon the purchase price of any commodity.

(d) It is immaterial whether the cooperative is organized under a special cooperative statute or under the general corporation statutes; the test is the existence of a legally enforcible obligation to pay patronage refunds which existed during the period such refunds were earned. The obligation may be created by the charter, bylaws, or separate contract.

(e) If the board of directors of such a nonexempt cooperative has the discretion under the contract to utilize a limited portion of such margins for the payment of common stock dividends, the amount which may be thus diverted within the fixed limits will not be excluded. It is held that the legally enforcible obligation to pay patronage refunds is destroyed to the extent that such discretion to divert exists.

(f) Such a corporation is required to pay regular corporate income taxes upon net margins or profits derived from nonstockholder patrons when such persons are not entitled to patronage refunds upon their purchases.

The whole argument against cooperatives overlooks the fact that under our constitutional form of government the unalienable rights of life, liberty, and the pursuit of happiness necessarily carry with them the right of individuals to do business as they see fit within the framework of our Federal and State constitutions and statutes. An individual proprietorship, a partnership, a conventional corporation, or a cooperative fits into our free-enterprise system, one as well as another. The courts repeatedly have rejected the criticism of corporate forms and corporate contracts which minimize taxes. The burden of the argument is that cooperatives should be condemned because they choose to do business in a manner which prevents the patron's savings from becoming part of the corporate funds and corporate income so that such funds are not taxable to the corporation.

One of the recent cases decided by the court of appeals of the fifth circuit which reiterates this rule is that of *Friedlander Corp.* v. *Commissioner* (216 F. 2d 757 (5th Cir. 1954)), in which the court held as follows:

"A taxpayer is free to choose the type of organization or form in which he will cast his business activities to achieve a desired business or tax result. He is not required to adopt or continue with that form of organization which results in the maximum tax upon business income. *Meldrum & Fewsmith, Inc.* (20 T.C. 790), *Moline Properties, Inc.* v. *Commissioner* (319 U.S. 436, 63 S. Ct. 1132, 87 L. Ed. 1499). Furthermore, if a taxpayer actually carries on business in the form chosen, the tax collector may not deprive him of the incidental tax benefits flowing therefrom, unless it first be found to be a fiction or a sham * * * *Polak's Frutal Works, Inc.* (21 T.C. 973)."

The Court of Appeals for the 7th Circuit cited cases from the Supreme Court of the United States and the Courts of Appeal for the 3d Circuit, the 5th Circuit, the 6th Circuit, the 7th Circuit, the 9th Circuit and the 10th Circuit in announcing the same rule in the case of *Stearns Magnetic Mfg. Co.* v. *Commissioner*, 208 F. 2d. 849 (7th Cir. 1954).[12]

The basic fallacy of the argument against the exclusion of patronage refunds is illustrated by the statement in a recent article appearing in the Harvard Business Review, November-December 1960 issue in which the author, Prof. Harry G. Guthmann, stated his basic premise as follows:

"Like other businesses, cooperatives have had varying prosperity. If successful, cooperatives may choose to distribute a part or all of their net income as patronage dividends rather than as stockholders' dividends. That is their right. But if this patronage distribution is from net income of the same economic nature as that on which their competitors are taxed where is the equity here? Tax treatment should be similar and business survival should not be determined by tax favoritism."

The fact is that the profits of the conventional business corporation belong to the corporation and not to its individual stockholders, may be retained or distributed in the discretion of the directors and are properly a part of the corporation's taxable income. Exactly the opposite is true of the margins between the amount received by a cooperative from its patrons and the cost of the goods or services furnished to its patrons or patron-stockholders. These margins belong to the patrons (or patron-stockholders), do not become the property of the cooperative and as a matter of constitutional and legal right, cannot be taxed to the cooperative as a part of its income. They are of an entirely different nature from the profits of a conventional business corporation. As statements to this effect have been challenged in recent congressional hearings and the country has been flooded by propaganda to the contrary, I shall quote some of the court decisions which establish the fact beyond successful contradiction.

The most complete discussion of all of the various phases of the exclusion of patronage refunds by cooperatives and corporations in the nature of cooperatives by any court is found in *Farmers Cooperative Co.* v. *Birmingham*, 86 F. Supp. 201 (ND Iowa 1949).[13] This case contains 37 pages and is a more detailed discussion than we have found in any law journal article or any legal source other than a complete text. Several of the basic principles involved here are announced by that court as follows:

"In the case of *Saenger* v. *Commissioner* (5 Cir. 1934, 69 F. 2d 613, 633), the U.S. Court of Appeals for the Fifth Circuit stated, 'If compensation paid to one is paid to him as the agent or servant in fact, not in fiction, of another, that income is taxable, not to the servant or agent as earner, but to its real earner, the principal (Cit.).' The court cites in support of that statement cases dealing with community property or family partnership relations. The Mississippi Supreme Court in *State* v. *Morgan Gin Co.* (1939, 186 Miss. 66, 189 So. 817), used the theory advanced in the Saenger case to uphold a cooperative's exclusion of patronage dividends from its income subject to State income tax. Though no patronage dividends were involved, the U.S. Supreme Court in *Commissioner of Internal Revenue* v. *Wilcox* (1946, 327 U.S. 404, 66 S. Ct. 546, 90 L. Ed. 752, 166 A.R.L. 884), stated that in order for receipts to constitute taxable income to a taxpayer there must be (1) the presence of a claim or right to such receipts, and (2) the absence of a definite, unconditional obligation to pay the same to another.

"In *Johnson* v. *Staple Cotton Cooperative Association* (1926, 142 Miss. 312, 107 So. 2), it was held that the cooperative marketing contract between the association and a member created the relation of principal and agent, the association being a sales agency operating for the benefit of the members.

"The exclusion of patronage dividends for Federal income tax purposes has not been placed upon the ground that cooperatives are special creatures of statute under the tax laws, but is justified rather upon the theory that patronage dividends are in reality rebates on purchases or deferred payments on sale, allocated or distributed pursuant to a preexisting obligation of the cooperative, and thus do not constitute taxable income to the cooperative. *Cooperative Oil Assn.* v. *Commissioner* (9 Cir. 1940, 115 F. 2d 666), *Midland Cooperative Wholesale* v. *Commissioner* (1941, 44 B.T.A. 824)."

A recent case decided by the Tax Court is that of *Producers Gin, Inc.* v. *Commissioner*

Footnotes at end of speech.

(18 TCM 369 (1959)), in which that court held as follows:

"So construed, the agreement would meet the requirements for a nontaxable cooperative to the extent of member sales of cottonseed. *Pomeroy Cooperative Grain Co.*, 31 T.C. 684 (Dec. 31, 1958) Dec. 23, 302. There was a preexisting legal obligation: the members' cotton never became the property of the cooperative, and no nonmember business accrued to the advantage of the members. And that the corporation was not organized as a cooperative is not fatal. *Eugene Fruit Growers Association, supra; United Cooperatives, Inc.*, 4 T.C. 93 (Dec. 14, 145). The profits in question never belonged to petitioner and did not become a part of its income. *Clover Farm Stores Corporation*, 17 T.C. 1265 (Dec. 20, 977)."

A case decided by the Supreme Court of Mississippi in 1939 has been cited as authority by the Tax Court and several courts of appeal in connection with the exclusion of patronage refunds. This is the case of *State of Mississippi* v. *Morgan Gin Co.* (189 So. 187 (Miss. 1939)), in which the court held as follows:

"Money received by one in a business transaction which he has no right to retain, but, under the stipulations of the transaction, must return to the one from whom it was received could hardly be said to be a gain or profit to him. The word "income" is broad enough to include all that comes in, but its specific meaning must be determined by the intent of the party or parties employing it to be determined by the context, the subject being dealt with, and the character of the person or persons employing it (31 C.J. 397). In taxing statutes, as usually construed, it 'imports an actual gain; * * * indicates increase of wealth in hand.' *Bingham* v. *Long* (249 Mass. 79, 144 N.E. 77, 33 A.L.R. 809). When so interpreted, it must here be held not to include things received by the taxpayer in a business transaction which he has no right to retain, but must return to the one from whom it was received. When one receives money in a business transaction which he has no right to retain but must return, his income from the business is neither increased nor diminished thereby; it remains as it would have been had he not received the money at all."

The final case we shall take from the Tax Court on this issue is that of *Colony Farms Cooperative Dairy Inc.* v. *Commissioner*, 17 T.C. 688 (1951), in which the court held as follows:

"This problem is not new, and has often been before the courts. The accepted rule is that if the cooperative receives these earnings under an existing legal obligation to distribute them to its members, such earnings are not income of the cooperative and consequently are to be excluded in the computation of its gross income."

Finally the true nature of patronage refunds is clearly discussed by the Court of Appeals of the Seventh Circuit in the case of *Uniform Printing & Supply Co.* v. *Commissioner* (88 F. 2d 75, 109 A.L.R. 966), which was decided on February 4, 1937, as follows:

"Had the taxpayer given a customer (whether stockholder or outsider) a discount promptly after filling the order, no one would call it a dividend. If a rebate were given promptly upon the customer's business reaching a certain volume, the same conclusion as to its character would follow. To make cost estimates and adjust them at or near the end of year returning the excess payment to the customer should not change the reasoning which leads to this conclusion. Nor should the fact that the customer is a stockholder materially affect the result.

"Perhaps a single refund coming at the end of each year would lessen the irresistibility of the inferences, but the conclusion would still fit the facts better than one founded on a dividend assumption. It is true the taxpayer is not a nonprofit corporation in a legal sense. It is subject to a tax upon the profits by it made. Nevertheless, net profits in its case must depend upon the facts. Payment to the customers, who are also taxpayers, of sums called refunds upon the volume of business transacted and in no way dependent upon stock ownership, is the determinative factor.

"Considering all the facts we conclude that the payments in issue were made as refunds rather than as dividends to stockholding customers."

Tax favoritism, tax advantage, or tax discrimination in favor of cooperatives does not exist. Every individual proprietor, every partnership, every corporation in the United States may enter into patronage contracts under which patronage refunds (or delayed discounts) are deductible or excludable from taxable income of the business. Two wrongs do not make a right. It is a weak and fallacious argument to say that because there is double taxation of corporate income and corporate dividends, there should be double taxation of patronage refunds.

It appears to me that the attacks made upon the exclusion of patronage refunds from cooperative taxable income are actually a tempest in a teapot. The reason is simply that, if Congress should enact and the courts should uphold a statute preventing the exclusion of true patronage refunds from the income of cooperatives, all cooperatives would simply proceed to do business at cost by reduction of the original price charged for their services or goods. This is, of course, an over-simplification for I recognize the resulting inconveniences and difficulties in obtaining sufficient working capital, in obtaining funds for capital reserves in the use of assessments or compulsory capital contributions. For most cooperatives, these difficulties would not be insurmountable. In fact, many cooperatives, particularly those which furnish services, those of an industrial nature and those dealing with commodities were the prices do not fluctuate rapidly, would need only to cease to follow their policy of following the market and actually sell goods or render services at or at about cost. Frequently, the results would be far more objectionable to competitors than the exclusion of patronage refunds.

THE COOPERATIVE IN THE FORM OF A GENERAL BUSINESS CORPORATION

Turning to some of the problems within the cooperative field, a basic difficulty of cooperatives has been that of attracting capital to finance organization and operations. One of the manifestations of the cooperative movement that well may appear in increasing proportions during the coming years is the cooperative set up in the form of a general business corporation. In many instances this type of cooperative is much preferable to the ones set up according to the State statutes for the establishment of cooperatives. As we approach this new era of the cooperative's place in the free-enterprise system, it would be well for us to give careful consideration to the cooperative in the nature of a general business corporation and its importance to the cooperative movement.

Great flexibility is provided by the use of the general corporate form in organizing a cooperative. I have formed cooperatives under the general laws of several States. It is my understanding that there are many States in which the general corporate organization has never been used for the formation of a cooperative. Nevertheless, I see no legal reason why the general corporate form could not be utilized for the organization and operation of a cooperative in any State in the Union.

Harking back to the Rochdale principles of 1844, one of these was that of "one member—one vote." This has been followed in most of the special statutes authorizing the organization of cooperatives, although it is sometimes varied to permit limited multiple voting, or voting power related to amount of patronage as to some or all corporate matters. Some of the Federal and State statutes providing special benefits to cooperatives embody the "one member—one vote" principle as one of the tests of statutory qualification. Nevertheless, this is not one of the tests set up by the courts in determining the cooperative nature of a business. This element has proved to be one of the inhibiting factors in the attraction of substantial investments to provide working capital and other proper reserves.

Laying aside historical significance and theory, consideration of the hard facts of present-day financing and business reveal the following advantages arising from the flexibility of use of general corporation laws for the organization of cooperatives:

1. Under the general corporate form, the cooperative would not have the status of an exempt cooperative under the Federal income tax law. Nevertheless its charter and bylaws may carry a legally enforceable obligation to handle its business at cost and to refund its patron stockholders the difference between the amount received and the actual cost of doing business. This will entitle the corporation to exclude from its gross income all patronage refunds paid or payable under the rules similar to those applicable to cooperatives organized as nonexempt cooperatives under special State statutes. However, under the general corporate form there is no maximum upon the amount of fixed dividends which may be payable upon the different forms of stock. On the other hand, as is true of all entities of a cooperative nature which are not exempt cooperatives, the dividends upon capital stock may be paid only with tax paid money and hence should be held to as low a percentage as possible. Nevertheless, it may be necessary to provide for a higher percentage of return in the form of dividends in order to obtain working capital.

2. The use of this form results in the ability to authorize the issuance of all forms of corporate stock permissible under the general statutes. This may include preferred stock of all kinds, with limited dividends cumulative or non-cumulative as desired. Dividends may be limited to any percentage of par value which may be desired, with or without a callable feature. Such preferred stock may have no voting power (under most State statutes) or may have noting power equal to that of the common stock. Payment of dividends may be given preference over the payment of patronage refunds in order to make the investment more attractive.

3. The extent of the participation in the management of the corporation by various classifications of stockholders may be varied. This is sometimes material in maintaining compliance with special definitions contained in Federal or State statutes. As an illustration, common voting stock may be divided into classes such as class A common stock with a par value of $5 per share (20 votes for each $100 invested), class B common stock with a par value of $100 per share (1 vote for each $100 invested) and class C common stock with a par value of 10 cents per share (1,000 votes for each $100 invested). Again we are dealing with the hard facts of modern business as distinguished from the theory of "democratic control, one member—one vote."

4. Under this form of organization different classes of common stock may perform different functions in the allocation to its stockholders of the services or goods furnished to the corporation. The charter or bylaws may provide preferred patronage rights with each class of stock whereby each is permitted to

purchase a named quantity of the products of the corporation or a fixed amount measured by the market price thereof. Thus, the extent of a stockholder's right to receive goods or services furnished by the corporation would be proportionate to his investment in stock. This also may be varied as to particular products. For instance, if a manufacturing cooperative manufactures anhydrous ammonia, ammonium nitrate and mixed fertilizer, it may have three classes of stock. Class A stock would carry with it preferred patronage rights for the purchase of anhydrous ammonia only. Class B stock would carry with it preferred patronage rights for the purchase of ammonium nitrate only. Class C stock would carry with it preferred patronage rights for the purchase of mixed fertilizer only. Thus, in one corporate organization, the stockholder may in effect invest in the different manufacturing enterprises carried on by such corporation.

5. In addition to the issuance of varied forms of capital stock the cooperative organized under general corporate statutes may issue bonds or certificates of indebtedness with any preferential features desired, with or without security but, of course, subject to Federal and State regulation when sold on an interstate basis and subject to State regulation when sold on an intrastate basis. These certificates of indebtedness or bonds are unlimited as to form and content as are similar obligations of general corporations formed under general laws. Under proper charter or bylaw provisions, payment of such certificates or bonds may be given preference over payment of patronage refunds in cash.

6. In addition to ordinary certificates of indebtedness, charter or bylaws may authorize the issuance of what are sometimes caled "certificates of participation." These are actually certificates of indebtedness carrying with them preferred patronage rights to purchase fixed amounts of the products of the corporation. They differ from stock in every particular that certificates of indebtedness differ therefrom, the interest payable upon the certificates of participation are deductible as a part of the cost of doing business, and yet the certificates may carry with them preferred patronage rights to the same extent as stock. This means that holders of certificates of participation will have no vote in the business of the company but will be patrons on the same basis as stockholders, will have preferred patronage rights and will receive patronage refunds at the end of the fiscal accounting period. This carries with it the advantage to the investor of an agreed contractual payment of interest, with all the rights of stock ownership except voting, and carries the advantage to the corporation that the return in the form of interest paid upon these certificates is deductible as a cost of doing business.

7. Another illustration of the flexibility of the use of the general corporate form is that the preferred stock, the certificates of participation and certificates of indebtedness may be callable or not as provided in charter or bylaws or as provided in the trust indenture under which the certificates are issued.

8. Another flexible feature of the use of the general corporate form is the ability of the corporation to enter into contracts with nonmembers or nonstockholders whereby such persons will receive patronage refunds. There is no requirement that the corporation pay patronage refunds to nonstockholder patrons on the same basis as stockholder-patrons, nor is there any requirement that nonstockholder patrons be treated with complete uniformity. The freedom of contract inherent in general corporate entities is present.

9. By the use of general corporate form the charter or bylaws may contain restrictions upon the purchase or transfer of stock. In most States, it may be provided that stock may be transferred to or held only by agricultural producers or some other class of persons. The provisions setting up preferred patronage rights also may restrict the use of such rights in such a way as to prevent the effective transfer of the stock contrary to the policy of the company. For instance, it may be provided that all preferred patronage rights will cease when the stockholder ceases to be an actual agricultural producer or that the preferred patronage rights will be no greater than the amount of the production of the company actually used by the stockholder on his own property. Through these means the agricultural integrity of the corporation may be preserved, for, if the common stock dividend rate is low, the major advantage of ownership is the use of the right to purchase the products or services of the corporation through the preferred patronage rights.

10. Under the general corporate form the original corporation in its charter may permit the organization of any number or type of subsidiaries. These may be wholly or partially owned and controlled by the parent corporation. They may be used as adjuncts to the business of the parent corporation or for an entirely separate purpose.

There are a number of disadvantages to the general corporate form which are readily discernible and which should be taken into consideration prior to making the determination to set up a cooperative in the form of a general business corporation. These include, of course, the fact that the entity is subject to all of the regulatory statutes affecting general corporations such as blue sky laws, the Federal security acts, the antitrust laws without limitation, and certain relatively small corporate taxes from which cooperatives in some States are exempt such as franchise taxes, privilege taxes, fees paid in connection with compliance with blue sky laws, etc.

CONCLUSION

Now, more than ever before, the farmer is faced with the choice between protecting himself by way of his farmer cooperative or by giving in to complete Government control. The situation grows more serious daily. Now is the time for a new farmer cooperative movement, one much more vast than has ever before been contemplated. Now is the time that the choice must be made as to whether the farmer can take care of himself or whether he must be protected, and thereby regulated, directed, and restrained by an all-powerful Federal Government.

Now is the time for the farmer and for his farm cooperative to take inventory of their present situation. Now is the time for new ideas. Now is the time for a new cooperative movement—a sound business program which will allow the farmer to both benefit and protect himself in the years ahead.

[12] The following is a quotation from the case of *Stearns Magnetic Mfg. Co.* v. *Commissioner*, 208 F. 2d 849 (7th Cir. 1954):

"Individuals who own all the capital stock of a corporation are not by reason of that relationship disqualified from contracting with the corporate entity. An agreement between a corporation and its sole stockholder is valid and enforceable, if the arrangement is fair and reasonable, judged by the standards of a transaction entered into by parties dealing at arm's length. This is recognized by the Bureau of Internal Revenue in official rulings, O.D. 440 C. B. Webb Press Co., Ltd., 3 B.T.A. 247, and by the courts of review. *Comm. of Internal Revenue* v. *Thomas Flexible Coupling Co.*, 3 Cir., 198 F. 2d 350; *A. & A. Tool & Supply Co.* v. *Comm. of Internal Revenue*, 10 Cir., 182 F. 2d 300; *J. H. Robinson Truck Lines* v. *Comm. of Internal Revenue*, 5 Cir., 183 F. 2d 730. * * *

"* * * A taxpayer is free to adopt any form of legal organization for the conduct of his financial affairs he may choose; he may convert from the corporate setup to that of a partnership or vice versa. Though his motive in so doing is to reduce taxes, the conversion must be accorded recognition unless it is such a sham, such a change in form only, without substance, as to require that it be disregarded for tax purposes. *Gregory* v. *Helvering*, 293 U.S. 465, 55 S. Ct. 266, 79 L. Ed. 596; *Comm. of Internal Revenue* v. *Tower*, 327 U.S. 280, 66 S. Ct. 532, 90 L. Ed. 670; *Twin Oaks Co.* v. *Comm. of Internal Revenue*, 9 Cir., 183 F. 2d 385. If the parties deal fairly with one another, it matters not whether their aim be, as the second circuit said, 'to avoid taxes or to regenerate the world.' *Chisholm* v. *Comm. of Internal Revenue*, 2 Cir., 79 F. 2d 14, 15. To quote again from that circuit, from *Helevring* v. *Gregory*, 2 Cir., 69 F. 2d 809, 810, a transaction does not lose its immunity 'because it is actuated by a desire to avoid, or, if one choose, to evade, taxation. Anyone may so arrange his affairs that his taxes shall be as low as possible; he is not bound to choose that pattern which will best pay the Treasury; there is not even a patriotic duty to increase one's taxes.' See also *Tilden Inc.* v. *Comm. of Internal Revenue*, 5 Cir., 19 F. 2d 704; *Comm. of Internal Revenue* v. *Clark*, 7 Cir., 202 F. 2d 94; *Chamberlin* v. *Comm. of Internal Revenue*, 6 Cir., 207 F. 2d 463 at page 468."

[1] The following is an additional quotation from the case of *Farmers Cooperative Co.* v. *Birmingham*, 86 F. Supp. 201 (ND Iowa 1949):

"In a number of cases the Tax Court has recognized that a 'liability' may exist by virtue of State statutes, articles of incorporation, bylaws, or other agreements, on the part of the cooperative to its patrons for that amount of its net earnings over which the directors have no discretionary powers of appropriation. Exclusion of such amounts from the gross income of the cooperative organizations concerned has been consistently allowed on the theory that this 'liability' is a contractual obligation on the part of the cooperative to its members and the declaration or payment of the patronage dividends is a mere recognition of this obligation. In *United Cooperatives, Inc.* v. *Commissioner*, 1944, 4 T.C. 93, the bylaws of petitioner provided that all net income other than certain reserves and an 8 percent stock dividend (in the directors' discretion) should be distributed to patrons. The Tax Court allowed an exclusion for that amount of the net earnings remaining after deduction of those sums which the directors were either obligated or had the discretion to distribute. In holding that a legal obligation existed only to the extent of those amounts over which the directors had no discretion the Court stated, 4 T.C., page 106, 'However, this practice of excluding patronage dividends from gross income has been limited to those cases in which the right of patrons to such dividends arises by reason of the corporation charter, or bylaws, or some other contract, and does not depend upon some corporate action taken subsequent to its receipt of the money later so distributed, such as the action of the corporation's officers or directors.' See also, *Midland Cooperative Wholesale* v. *Commissioner, supra; Valparaiso Grain & Lumber Co.* v. *Commissioner*, 1941, 44 B.T.A. 125; *Farmers' Union Cooperative Association* v. *Commissioner*, 1928, 13 B.T.A.; *969 Anamosa Farmers Creamery Co.* v. *Commissioner*, 1928, 13 B.T.A. 907; *Home Builders Shipping Association* v. *Commissioner*, 1927, 8 B.T.A. 903; *Western Colo. Producers Cooperative* v. *Commissioner*, 1943, T.C.M. P.H. par. 43, 107; *Farmers Union Coop. Exchange* v. *Commissioner*, (1944) T.C.M. P.H. par. 44, 384. To the same effect see Hulbert, Legal Phases of Cooperative Associations; supra at p. 266 and House Report 1888, supra at p. 16. * * *

"A strong case supporting the theory that where an obligation to distribute net earnings to patrons exists the cooperative does not own its net proceeds but only holds them as agent or trustee for its members is *San Joaquin Valley Poultry Producers' Association* v. *Commissioner*, 9 Cir., 1943, 136 F. 2d 382. Petitioner was organized as a nonprofit cooperative association incorporated under the Agricultural Code of California. Its bylaws provided (136 F. 2d page 384 footnote 11) that 'The "net proceeds" shall be such funds as are derived from overcharges on sales and as are left after all expenses shall have been paid, or provided for, all at the discretion of the directors. The "net proceeds" resulting from the operation of the business, if any, shall belong to the members . . . and shall be prorated to them in proportion to the amount of business each member has transacted with (petitioner). . . .' The directors had established three reserve funds with part of the net proceeds of the business and in holding that these reserve funds were not the property of the petitioner and thus were excludable from its gross income the Court stated, 136 F. 2d page 385, that, 'The sums so placed in these reserves . . . never became the property of petitioner, but were and are the property of the members (cit.). . . . The fact that the sums were not payable to the members on demand, or at any fixed time, does not alter the fact that they were their property and not petitioner's. Petitioner held them, not as owner, but as agent or trustee for the members (cit.). Since none of the sums ever belonged to petitioner, they could not be, and were not, income of petitioner.'"

Opinions on Domestic and International Situations as They Confront Us

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. THOMPSON of Louisiana. Mr. Speaker, it is seldom that a Member of Congress receives a communication from a constituent so well phrased and displaying such fundamental thought as one I received from Mr. Blair F. Reed, of Lake Charles, La. The problems that today confront us, as well as the great minds of the executive department, will be hard to surmount; however, I do hope that the thinking of our constituents everywhere will be spurred on to the point that all of our people will have an insight as to the potential dangers with which we are faced because of foreign ideologists.

I address to you the comments of Mr. Reed, who has spent considerable time overseas and, no doubt, many, many hours cogitating the dramatic changes over the world. It can very well be that our future course of action will possibly not follow exactly along the lines suggested by Mr. Reed; however, his views are fundamental and worthy of the perusal of the Members of this body:

LAKE CHARLES, LA., *March 15, 1961.*

Hon. T. A. THOMPSON,
House of Representatives,
Washington, D.C.

SIR: I deem it my duty to express my opinions of a few domestic and international situations as they confront us at this time.

Peace Corps: President Kennedy and all concerned with the Peace Corps should be aided as much as possible in the development of their idea. I should like to bring out the point that the youths sent abroad will not be dealing with amateurs from the Communist schools. There exists a host of imponderables in dealing with the economic and ideological development of underdeveloped nations. Taking into account the dedication and training of the competition, caution is in order. A liberal sprinkling of adult (mature) partcipation should be encouraged until the difficulties can be envisioned and a proper training program instigated to counter the obstacles. Do not think that our youths will not be harassed and intimidated by imported and local Communists. One minor error can be broadened into an international propaganda tool for the opposition. The stakes are very high and our very survival hinges on the small nations either accepting or rejecting our efforts.

I was in India for about 19 months during World War II and I worked in the civilian personnel office at Kalukunda, India, both hiring natives and making up a payroll. The people may be uneducated, but they are gifted with an innate sense to take advantage of every opportunity for betterment and exploit it to the limit of yours and their endurance. Excruciating circumstances can be limited in accordance with your foresight and adaptability to quick change, if in order. The civilian owner of the labor pool was an out-and-out hard-shelled Communist and if you didn't watch him, you'd be "had." I witnessed a whole village being burned by Communits agitators near Dacca. All brought about by their fanning the flames of hatred between the Moslems and Hindus. Religious views are very important when dealing with most African and Asian peoples. If not taken into account, you can be stymied. In India, and Africa, also, I would imagine, when a person presents you with a problem you can be sure he got his advice from somewhere else. He either paid for his advice or got it from some religious source. Your immediate problem is to probe the individual and locate the source of his utterances. To deal with the individual is a long and tedious proposition and with some tact, you and the intermediate can get together. I enclose a letter from a professional "intermediate." Would you please return the letter to me; it has sentimental significance.

Limited aggression: Now that massive retaliation has reached proportions where use of the force means suicide for both sides, limited local aggressions must be taken into consideration. If not, we could be nibbled to death. But, to allow the retaliatory forces to deteriorate would be the end for us, also. The U.S.S.R. could be tempted to make a first strike blow to accomplish their purpose. Even though they may not succeed, it would be our stupidity that allowed the temptation to develop. Taking into consideration that we will be unable to accurately pinpoint the source of Soviet missiles, I believe, we should develop a manned reconnaissance or bomber force to get in and locate the hardened installations. They will have to be of the supersonic variety, though. When missiles approach mobile feasibility that will have to be a must. We can only approach the problem of resisting local aggressive operations when we have a reliable deterrent facing the Sino-Soviet conspiracy. They may decide to resort to limited war as a means of weakening our resistance to their world domination ideology. Even to wage war in a free nation, destroying personal property, cities and human lives all will contribute to a weakening of our position along the Communist periphery. If they pull out completely or we negotiate for a peaceful settlement, allowing them to occupy even part of their gains, they've scored a point in resisting future intents by the helpless smaller nations.

As I mentioned before, we could be nibbled to death. The period from 1962 to 1967 will probably exhibit to the world just how much we want to protect our constitutional ideals. I fear that if we must stick to strictly budgetary limits, our cause will be lost. Russia intends to rule the world in space as Britain ruled the seas in past decades. If they accomplish their objective, it will be no laughing matter for the world. Not too far in the future, China will develop atomic weapons, aided by the U.S.S.R., then we are in for trouble. Don't bet any money that a serious rift will develop between Peking and Moscow, to our advantage. It amounts to no more than discussions between Democrats and Republicans. Their discussions are about the size of the club to clout us with. You'll never live to see the day that China invades Russian territory; that myth was dreamed up by American journalists and aided by astute persons who hope someone else will solve our dilemma.

I suggest that you members of our Government get together and decide what to do when China is admitted to the U.N. Just as sure as I am about the sun rising tomorrow, China will get into the U.N. We could tie in a deal with Communists over Berlin. Something is better than nothing.

You better develop a program to enlighten the American public when the full impact of Russian industrial development is felt. If not, the whole thing will spread confusion like Sputnik I. I leave you with thoughts of the effects of mutual massive retaliation, Communist ground forces, air power, and industrial potential. Something's going to pop soon.

Yours very truly,

BLAIR E. REED.

Major League Baseball for San Juan, P.R.

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. CELLER. Mr. Speaker, last week, I sent a letter to Commissioner of Baseball Ford C. Frick proposing that organized baseball give consideration to the establishment of a major league baseball franchise in San Juan, P.R.

I proposed that San Juan either be added as one of the new franchises in the two major leagues or that it be part of a new third major league. Aside from the advantage this would create for baseball in general, I know of no better way to enhance Latin American cordial relations than to establish firmly in one of our neighboring countries to the south of us a new baseball team embraced within either of our big leagues. This may be difficult of achievement but it is not impossible.

I also mentioned some of the many talented baseball players in our present major league teams who have come from Puerto Rico and indicated that the distance between Puerto Rico and many of the existing cities in the major leagues is no longer a serious factor in view of this jet-propelled age.

The text of my letter is as follows:

MARCH 16, 1961.

DEAR COMMISSIONER FRICK: A most interesting proposal has been suggested to me recently that I wish to call to your attention. This proposal has my heartiest endorsement.

The proposal is to accord a major league baseball franchise to the Latin American city of San Juan, P.R. Aside from the advantage this would create for baseball in general, I know of no better way to enhance Latin American cordial relations than to establish firmly in one of our neighboring countries to the south of us a new baseball team embraced within either of our big leagues. This may be difficult of achievement but it is not impossible. Baseball in Puerto Rico is a most popular sport. Evidence of the intense joy that Puerto Ricans derive from baseball may be seen any weekend at the Yankee Stadium, where great numbers of Puerto Ricans, residents of the city of New York, are cheering on their favorites.

Puerto Rico has supplied many talented baseball players to our present league teams. To mention some outstanding in the sport, we have: Hi Bithorn, Chicago Cubs; Luis Rodriquez Olmo, Dodgers; Luis Canena Marquez, Pirates; Carlos Bernier, Pirates; Ruben Gomez, Giants; Roberto Clemente, Pirates; Vic Power, Cleveland; Nino Escalera, Cincinnati; Orlando Cepeda, Giants; Jose A. Pagan, Giants; Terin Pizarro, Milwaukee. Luis Tite Arroyo is probably one of the mainstays of the Yankee pitching staff.

The distance between Puerto Rico and many of the larger cities may no longer be deemed a factor in this jet propelled age. Puerto Rico has a huge baseball-hungry population. It is also a warm weather city where baseball may be played the year round.

I am informed that a number of public spirited Puerto Ricans would be willing to join a group of Americans to finance such a team in Puerto Rico and I am advised that the Puerto Rican Government has been approached on this matter, and its Administrator of Parks, Senor Monagas, made the following statement:

"This Department (Commonwealth of Puerto Rico, Public Parks and Recreation Administration) will provide, (if assurances by either major league is given that a franchise will issue to a San Juan club) for the use by the new major league San Juan Club, a stadium with a seating capacity of not less than 50,000 persons.

Each of the two major baseball leagues has already expanded as a result of public pressure from 8 to 10 teams in as many cities. These four new cities are all in the continental U.S.A. I am also informed that telegraphic advices were given to you and Messrs. Giles and Cronin, National and American League baseball presidents, under date of November 29, 1960, that San Juan would welcome officially a franchise in either league.

I would even heighten my baseball sights. I would envisage the possibility of a team in Tokyo, Japan, or in Mexico City, Mexico. Baseball has inspired the youth of Japan and Mexico and teams have been organized all over those countries. I also refer to Panama, Venezuela, Nicaragua—all of which have many baseball teams. I omit Cuba because of persent conditions there, though there is great reservoir of baseball talent in Cuba. It is interesting to note that even Dictator Castro realizes the importance of baseball by expressing his willingness to grant exit permits to Cuban major league players to enable them to participate in organized baseball in the United States during the coming season.

One of the best ways to create amity and accord and understanding between the countries is by mutual sport contests.

If, for any reason, a new San Juan team could not be fitted into the regular playing schedule of the big leagues, it might be well to ponder a third league of cities partly in and partly out of continental United States.

As was stated to me in a memorandum submitted to me by Mr. M. A. Krisel to show the interplay of sports in general and baseball in particular and their influences upon the various languages of the world, I quote Prof. Mario Pei, in his "The Story of Language," page 165:

"Sports and games penetrate the language to the same extent that they are penetrated by it. The English tongue is replete with sporting terminology which has overrun its bank ('hit-and-run drivers,' 'to pinch hit for someone,' 'to hit below the belt,' 'to jump the gun,' 'to be on the inside track,' 'to be in the chips,' 'to be behind the eight-ball,' 'it isn't cricket,' 'according to Hoyle'), 'Trump' and 'ten-ace,' 'pawn' and 'checkmate' have international figurative currency. Baseball and its terminology have probably done more to bring the meaning of the American way of life home to the Europeans, Latin Americans and Japanese than any form of direct cultural propaganda. Beisbol and jonron ('home run') are as familiar to the Mexicans as their native corrida and matador, and Latin American crowds have learned to cry 'Maten al arbitro' with the same gusto with which Yankee Stadium fans shout, 'Kill the umpire'."

Sincerely yours,

EMANUEL CELLER,
Chairman.

"Whenever a Nation Values Anything More Than Its Freedom, It Will Lose Its Freedom—If It Is Comfort and Money That the Nation Values More Than Its Freedom, It Will Lose Them Also"

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BOYKIN. Mr. Speaker, on February 27 of this year, in Pittsburgh, Pa., the vice commander of the Air Materiel Command, Lt. Gen. William F. McKee, addressed the Association of Stock Exchange Firms, and under leave to extend my remarks, in the RECORD, I include General McKee's speech, which contains much valuable information concerning the progress of our efforts to gain and maintain general air supremacy:

I am honored to speak to a group like this, composed, as it is, of men of wide and various business and industrial interests.

Representing one of our military services, I am here—in a sense—as a member of a great partnership speaking with a large number of his partners. The partnership I refer to is a partnership in the most important enterprise of our time—the preservation of our way of life by the deterrence of war. It is a partnership between our Armed Forces and the great industrial arsenal of free enterprise.

My experience since 1953 as vice commander of the U.S. Air Force Air Materiel Command has brought home to me many lessons. One of the most important has been how greatly the military and industry depend upon each other and how successful both are when they work together as a team.

Under the National Security Act of 1947, the Army Air Forces became a separate service—the U.S. Air Force. The functions assigned to the Air Force are many and varied. The principal job assignment in time of war would be—and I quote—"to gain and maintain general air supremacy."

This is a large order when you take into account the potential space involved and the rapid progress of science and technology, resulting in constantly changing weapon systems.

The space involved is all the area extending outward from the surface of the earth—the indivisible operational medium which the Air Force refers to as aerospace. This term is used because no one can say—except arbitrarily—where air ends and space begins.

In discussing our aerospace achievements, let me take you back to a remarkable 24-hour period on January 31 and February 1 of this year. It happens that January 31 was the third anniversary of the launching by the Army of the United States first earth

satellite. The great strides that have been made in 2 years are illustrated by the events in this 24-hour period.

On January 31, a research and development satellite was placed into orbit by the Air Force from the Navy's Point Arguello Base in California. On the same day there were two successful firings by the Air Force of a Bomarc-B interceptor missile from Eglin Air Force Base in Florida. And the world's most highly publicized chimpanzee—a little fellow named "Ham"—took a 420-mile ride through space and was picked up at sea little the worse for his adventure. "Ham" was propelled by the Army-developed Redstone rocket fired by the National Aeronautics and Space Administration from Cape Canaveral. This is a preliminary to placing a man into orbit.

The next day another event occurred that is sure of a place in our history books. This was the first free launching of a Minuteman missile. The launching was a spectacular success. I think that here the Minuteman program deserves a little discussion.

The Minuteman is an intercontinental ballistic missile propelled by solid fuel. It is capable of instant readiness and does not require the maze of complicated equipment that is necessary with its predecessors.

The Minuteman also has the advantage of economy; it costs 75 percent less than the ICBM's that came before it. It can be placed in hardened sites underground or deployed around the Nation's railway network on missile trains. And it will be ready to go if and when the alarm sounds. The Minuteman is a most significant addition to our aerospace capability, our power to deter war or to win war should it be forced upon us.

I would like at this point to discuss briefly the Air Force ballistic missile program. Development of the intercontintental range Atlas, Titan and Minuteman and the intermediate range Thor called for the greatest marshalling of men, money, materials, and scientific endeavor in the history of our Nation.

A fact that many do not realize is that the larger proportion of the national investment and effort in these programs is not in the missiles themselves, but in the ground environment—the construction of sites as well as the maintenance and test equipment which support the missiles.

Incidentally, the job of managing the activation of missile sites happens to be the responsibility of the Air Materiel Command. I am happy to report that a great deal of progress is being made.

These sites involve an enormous construction job. It is estimated that currently approved programs will use enough structural steel to build 26 Empire State buildings; enough concrete for seven Pentagons; enough air conditioning for 29,000 six-room homes; enough paving material for 400 miles of two-lane highways; and enough power to supply a city of 250,000 people.

Progress in the development of unmanned vehicles such as ballistic missiles and earth satellites has been great; but we should not overlook the significant advances being made also in manned aircraft. Performance which literally will take man out of this world has been made possible by greatly increased thrust, improved metals and new techniques in airplane design and construction.

A striking example is the X-15 research rocketcraft, which on the 7th day of this month attained a speed of 2,275 miles an hour. Last year it reached an altitude of more than 25 miles. This is faster and higher than man has ever gone before in controlled flight.

The X-15 is not intended to achieve space orbit, but the program has produced a vast amount of useful data, qualifying it as a significant step toward manned space operations. The next step, the first Air Force development program aimed directly at a manned space system, is the Dyna-Soar.

Eventually, if we are successful, the Dyna-Soar will be fired over the Atlantic from Florida to land in California, covering a distance of 22,000 miles in some 90 minutes. It will also have the capability to go into orbit and to return.

The advantages of manned aircraft and missiles will be combined for the first time in the Dyna-Soar. It will make use of the boost-glide principle, attaining its initial high speeds and altitudes from a large rocket booster. Then, operating on aerodynamic principles, the pilot will control it to a normal landing at a speed less than that of some of our current combat aircraft.

And speaking of combat aircraft, the Air Force is working on the next big advance in this field—the B-70—which we consider an essential rung in the ladder to the future. This aircraft will have a normal cruise speed of three times the speed of sound—about 2,000 miles an hour.

Such a speed is hard to comprehend; it is just a number until translated. An Air Force project officer in the B-70 program recently translated it something like this:

He prepared a flight plan for a hypothetical B-70 bomber and crew returning from London to their home base at March Air Force Base in California. The plan called for takeoff at London at 7:30 a.m. At that hour, the sun would be about 20° above the horizon. The bomber climbs to cruising altitude, which changes the sky picture. The horizon drops away and the sun appears to climb rapidly to the zenith.

But here a strange thing happens—relative to the aircraft, the sun stands still, and then begins to set. If the crew looks backward as they fly their great circle route, they witness the amazing spectacle of the sun setting in the east. Four hours after takeoff the B-70 touches down at March Air Force Base. After debriefing and another breakfast, each crew member arrives home in ample time to enjoy the second sunrise of that day with his family. The time of the flight is 4 hours; the time of the sun's transit is 8 hours.

Perhaps at this point you are thinking that we really don't need the B-70, now that we have intercontinental and intermediate range ballistic missiles. Maybe missiles can do it all and this is an attractive thought if you're not too interested in the facts. But the fact is that machines do not fight wars.

Wars are fought by men using machines; and the application of human intelligence will always be necessary in combat. We must have systems with men in them for what pilots call "eyeball contact." Only human intelligence can find hardened and concealed targets or find and destroy mobile forces that can be used against us. Manned aircraft will have its place in aerospace military operations, I think, for a long time to come.

When, more than 3 years ago, the Russians launched the first earth satellite, Sputnik I, the propaganda effect was terrific. The United States, so it was said, had suddenly become a second rate power; the Russians had taken the lead in science. The picture has changed since then—or, rather, it has come into better perspective.

Let's look at the record. The Russians launched the first satellite, but since that event the United States has launched many more than they have and we have a long lead in the number of satellites still in orbit.

And there is more to this than superiority in numbers. Our satellites are more varied in scope, have longer lives, and more importantly, send back critical information.

We have learned the most about conditions in space—cosmic radiation, cloud formations, the earth's shape and heat balance. We are the first to experiment with the use of space for weather forecasting, global communications and precise marine navigation.

Following a somewhat limited path of scientific investigation, the Russians developed a big booster quite early. This gave them a leg up and they have exploited it to the utmost. Their ability to launch heavier payloads has given them an edge in so-called spectaculars, the more dramatic exploits.

Please do not misunderstand me. I am not trying to discount or belittle the Russians' space achievements. For example, there is their recent firing of a space vehicle from an orbiting sputnik with Venus as its goal. This accomplishment certainly has the utmost scientific significance.

It is easy to understand the importance to scientific progress of the knowledge we are gaining from our ventures into space. But some may wonder about the military application. How can earth satellites add to our own military capability?

Let me give you a somewhat simplified answer. By our policy and by our historic record, we are a nonaggressor nation. We have no intention of making use of the ancient art of leaping upon an enemy from ambush. Our Communist adversaries aren't bothered by any such scruples. And they know quite well the advantage that surprise gives to an aggressor.

Consequently, we have the problem—which the Communists do not have—of finding and using every means available to obtain the earliest possible warning of an attack. We must speed up our decision-making and command procedures. We must secure our own counterforce systems against destruction and be able to launch them without delay. Timing is all important.

Satellite systems are capable of giving us the immediate warning and the rapid communications needed. By stationing these sentinels in space—the natural environment of missiles—we can attain the speed, range and freedom of action which are characteristic of the weapons that may be sent to destroy us.

The Air Force is already well advanced in this program. There are, for example, the Midas satellites which are being developed to constitute an early warning system. The name comes from the initial letters of Missile Detection Alarm System. Circling the globe at great height, Midas would detect flights of hostile ICBM's shortly after launching. Thus, we would have up to the maximum of about a half an hour to prepare for the attack.

The Air Force placed the first experimental Midas satellite into orbit in May of last year. As the system is perfected, others will go into orbit in the months ahead.

The subject of space exploration and investigation is one about which many volumes can be—and have been—written. I have tried merely to give you a broad outline of what the Air Force is doing in this field and why. The significance of these efforts from the standpoint of our security cannot be overemphasized.

At the beginning of these remarks, I made the statement that the most important enterprise of our time is the preservation of our way of life by the deterrence of war. A most vital part of war deterrence is the aerospace capability the Air Force has built—is maintaining—and will continue to build.

In his inaugural address, President Kennedy said, and I quote: "Only when our arms are sufficient beyond doubt can we be certain beyond doubt that they will never be employed."

The President repeated that statement in his state of the Union address, in which he also asserted, and I quote: "* * * If we are to keep the peace, we need an invulnerable missile force powerful enough to deter any

aggressor from even threatening an attack that he would know could not destroy enough of our forces to prevent his own destruction."

Thus, the Commander in Chief of our Armed Forces has made it clear that we must possess a true deterrent to war.

It happens that "deterrence" is a word about which there is a great deal of misunderstanding.

However, it is a term whose interpretation by the Air Force should be understood by every American. It should be understood that to possess a true deterrent we must have the ability and the will to prevail.

Some may wonder why I emphasize the world prevail. If deterrence succeeds and there is no war, why do we need the strength to win?

The true meaning of deterrence gives the answer. Deterrence is the effect produced in the minds of potential enemies when they understand the enormous striking power of our military forces and when they understand that it is our national will and intention to use this striking force swiftly and decisively if the need should arise.

The conclusion is obvious: power that cannot prevail will not deter. The Air Force concept is that a true deterrent requires forces capable of destroying an aggressor's military power to the point that he no longer has the ability to wage war.

This is what is meant by "counterforce"—a force that can win. The purpose of military power remains what it has always been—to destroy the military power of the enemy if that becomes necessary.

There are some who contend that a lessening of our defenses would be viewed as a good-will gesture, a sort of proof of America's desire for peace. I think they are mistaken. One of the hard lessons that history teaches is this: peace must be enforced; and weakness never enforced anything.

There is another hard lesson that history teaches and I would like to leave this with you as a closing thought. It is also a lesson in irony and comes in two parts. First, whenever a nation values anything more than its freedom, it will lose its freedom. The second and ironical part of the lesson is this: if it is comfort and money that the Nation values more than its freedom, it will lose them also.

President's Podium: To the Student Body of Compton High School

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention and the attention of all of my distinguished colleagues the following article which appeared in the Compton Chimes for February 10, 1961, this being the official publication of the students of Compton High School, which splendid high school is located in Compton, Los Angeles County, which is in the great 23d Congressional District which I represent. This article is written by the associated student body president, Wilbert Wade, and I am sure that all who read it will be inspired. The article follows:

PRESIDENT'S PODIUM: TO THE STUDENT BODY OF COMPTON HIGH SCHOOL

(By Wilbert Wade)

Today I am starting out on my long journey as your student body president. This journey will not be as easy as we would think. But I knew this before I ran for this highest of honors which was given to me by you, the student body.

This will not be a lonesome journey because I have all of you to walk it with me. With your cooperation we can go on to greater heights together. To do this we must work together and not against one another. Cooperate and this will be the most historical, outstanding and rewarding semester in the history of Compton High School.

We have what it takes to make our school a workshop of democracy. I want you to understand that I am not trying to wave the flag in your face, but we all have our responsibility to our school and Nation.

We are in grave times, whether we want to accept it or not. What we do in high school will determine whether there will be a United States for our children to live in. We are not too young to start thinking about this. If we want our country and our posterity to survive, we must start applying ourselves to the task.

We are born in a world of blood, sweat and tears. We must not let the efforts of our parents be in vain. Too many have died so that our generation might live under a free democracy for us to fail.

Let's do our school work and support every activity. I'm not perfect myself and I have resolved to do my part too. If I can do it, certainly you can. The days of the "goof off" are over. Let's shed our blood, sweat and tears (participation, responsibility and cooperation), to finish this journey together.

Congressman Kirwan's St. Patrick's Day Party

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BOLAND. Mr. Speaker, one of the gaiest and outstanding social fetes held in Washington during the congressional session is the annual tribute to the Irish under the auspices of our beloved colleagues, the gentleman from Ohio, the Honorable MICHAEL J. KIRWAN.

The congressional St. Patrick's Day party was held last week at the National Press Club and I am sure my colleagues will enjoy reading the following account of the event, written by the correspondent of the Baltimore Sun for last Sunday's editions:

THAT'S WASHINGTON

WASHINGTON.—Representative MICHAEL J. KIRWAN, Democrat, of Ohio, threw his annual St. Paddy's Day stag soiree at the National Press Club Wednesday night. The honored guest was President Kennedy, whose ties with the Old Sod are only three generations and 3,000 miles removed.

It may be said on no great authority that KIRWAN'S party had all the earmarks of a good old Irish bash. The band was loud and brassy, and the participants and the room were filled to overflowing.

AT BALCONY TABLE

It was so full, in fact, that they put the President at a table on a balcony overlooking the dance floor and stage where the latterday Irish thrush, Carmel Quinn, regaled one and all with the likes of "Mick McGilligan's Ball," and "Danny Boy."

Mr. Kennedy told Miss Quinn that "Danny Boy" is his favorite Irish song. It is also the theme song of that Armenian comedian Danny Thomas.

Some of the words to "Mick McGilligan's, etc." seemed downright apt in view of the number of "Irish" jammed into the Press Club ballroom. Part of it goes, "And they had to peel the paper off the wall" to get all the Irishmen into Mick McGilligan's ball. Unqualified experts estimated the crowd at between 400 and 500. It might have been.

The President strode into the ballroom to be confronted by an old friend, House Speaker RAYBURN.

"Good evening, Mr. O'Kennedy," he said. My name is O'Rayburn."

With that cordial beginning, Mr. Kennedy made his way through the crowd shaking hands like the election was yet to come. He stayed about half an hour, leaving his seat while Miss Quinn was still ringing the rafters with raucous and sentimental Irish ballads. Ah, 'twas a grand night, as the program said, "we have come a long way in the span of a single lifetime."

The KIRWAN affair is an annual event held by Members of Congress and their guests. Mr. Kennedy was described to the partygoers as an "Irishman of note." But unlike the other Irishmen gathered there, he refused to don the green paper hat, though he did stick a proffered green carnation in his lapel.

Hanging over the entry was the traditional sign in Gaelic: Cead mile failte—"a hundred thousand welcomes."

KIRWAN started giving these parties 8 years ago. The first was for a group of about 15 people. This one, he declared happily, "got way out of bound."

French Government Honors New Jersey Merchant

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. OSMERS. Mr. Speaker, one of the leading merchants in the New York metropolitan area is Frank W. Packard, who heads the Packard-Bamberger retail complex in northern New Jersey. It has been a privilege to have him as my personal friend for many years.

During his career, Mr. Packard has established a wide reputation for originality, competence, and great success in retailing. Some years ago, he began merchandising French wines in New Jersey in a modest way, based on the quality of the wines he offered.

At the present time, through his eleven Packard-Bamberger liquor stores, more than $5 million worth of French wines are sold annually. As a result of this amazing achievement, the French Government recently awarded him the Ordre du Merite Agricole at a very impressive ceremony here in Washington.

Recognition such as this to an outstanding American businessman is very helpful in furthering international goodwill, both abroad and here at home. The Newark Evening News of February

17 has a brief description of the award presentation to my good friend, Frank Packard. Under unanimous consent, I include it in the Appendix of the RECORD:

FRENCH HONOR FOR NEW JERSEY WINE MERCHANT

WASHINGTON.—The French, as everyone knows, regard wine as a dietary staple. So does Frank W. Packard, of New York and Hackensack, and as a result he wears today the Ordre du Merite Agricole of the French Government.

"You all know the importance we French attach to the fermented juice of the grape," said Olivier Manet, counselor of the French Embassy here in presenting the medal.

"We regard it with a reverence that approaches veneration."

Then he told why Packard, who sells $5 million worth of French wines annually in his 11 Packard Bamberger liquor stores in northern New Jersey, was getting the medal.

Because Packard introduced French wines to New Jersey 25 years ago; because of the work he did during World War II in the distribution of military rations to Europe and to Africa; because he was a friend to France whose work had benefited French winegrowers and the French economy.

Packard, who is in his fifties, said he was very humble in accepting the award, the only way he could express his great love for France, he said, was to quote the English poet who stood on the shores of Calais and expressed the lines that begin:

"Dearest ally, let us be true to one another * * *."

According to French authorities present at the award luncheon yesterday at the Fairfax Hotel, the Ordre du Merite Agricole is not commonly awarded to other than French agriculturists. It is given to people who have done much for French agriculture—"anything to do with the soil, or the products of the soil."

After the medal presentation, the small party repaired to a luncheon—four courses and four wines.

Teaching Slovak in Our Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM W. SCRANTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. SCRANTON. Mr. Speaker, part of the recent general increase in interest in education has been reflected in growing concern over the teaching of foreign languages. One of my constituents, Mr. William D. Gombar, Throop, Pa., presently connected with the Pennsylvania Department of Public Instruction as a secondary education specialist and world cultures consultant, has written an article which presents a new viewpoint on foreign language instruction which is worthy of consideration wherever it applies in the United States.

This article appeared in the Slovak Catholic Sokol, Passaic, N.J., the Slovenska Obrana, Scranton, Pa., and other Slovak newspapers and publications across the country, as follows:

EDUCATOR ADVOCATES STUDY OF SLOVAK IN HIGH SCHOOLS

(By William D. Gombar)

"Each school system may determine the number of class hours, the number of years, as well as the language or languages to be included in the curriculum." This extract comes from the graduation requirements as outlined in the official school code in Pennsylvania.

The chief purpose of studying a foreign language is the mastery of the language as a means of communication. In the past our traditional language courses—French and Spanish—have proved in many cases to be sterile. The grammar approach, if it didn't sour a majority of students on the language and those it represented, produced very little in the way of communication skill. Wasted motion, misspent time and money were the products of the foreign language offerings in many of our high schools.

Now with the modern foreign language lab replacing the old-fashioned way of language learning, competency in a language is being reached. And with World Cultures, a mandated Pennsylvania course with its implication of insight into the people, their beliefs, traditions, and aspirations, we should reevaluate the language situation in our high schools and in addition seriously consider the objectives inherent in the World Cultures mission.

The Slovaks have a heritage of which the present generation has been unfortunately deprived. A generation ago the picture was different. There was a greater awareness of and a deeper respect for the enviable culture from which our parents developed. This was manifested in the activities in the family, in the church, in the community, indeed in the state that fired the spirit of Slovaks all over. It was manifested in the sound of the language.

Today this is lost. Today our young generation knows very little of the language of their parents. This tool of communication, that helps one understand a culture more thoroughly, has been denied the Slovak-American youth. When you recall that our forefathers suffered and shed blood for principles that included, most emphatically, a recognition of the Slovak language, then we must face the fact we owe our martyr ancestors a lot more than we're giving them. For generations the Slovaks have fought for the right to keep the language alive, to sustain the language by various means including instituting its study in the schools of their country, establishing chairs in Slovak at universities. These were inherent rights petitioned for by our ancestors as far back as 100 years ago and for which they were willing to lay down their lives.

They subjected themselves to intolerable abuses, political humiliation, perpetual depression because they believed, among other things, their mother tongue should be recognized, should be used. The denial of those rights and the futility of the plight during the 50 years that preceded World War I, sent nearly ¾ of a million emigrants to the United States, emigrants whose offspring today are inhabiting our public and private schools. These public schools have the legal right to offer Slovak as a course of study. We have denied our young people this right because we are willing to deny the Slovaks their rightful cultural heritage. We've let down a whole generation.

School districts abide by the will of the public that supports them. A public that has an opportunity to institute the study of a modern foreign language for communication skills and for understanding the culture of a peoples must take advantage of that opportunity. Not doing so implies a disregard for the responsibilities of adulthood and parenthood. We owe this generation the inheritance that is rightfully theirs.

Communities in Pennsylvania where Slovaks are living should petition the authorities. Learning competency in a language pays dividends a hundredfold. If the traditional Spanish or French has little meaning in the school system, then other languages approved by the legal code of the State should be considered, adopted, and taught. Slovak is among these.

Statement by Arthur S. Flemming Before the Subcommittee on General Education of the Committee on Education and Labor, U.S. House of Representatives, Tuesday, March 21, 1961, 10 a.m.

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. FRELINGHUYSEN. Mr. Speaker, under unanimous consent, I include in the RECORD a statement by former Secretary of Health, Education, and Welfare Arthur S. Flemming before the Subcommittee on General Education of the Committee on Education and Labor, House of Representatives, Tuesday, March 21, 1961:

STATEMENT BY ARTHUR S. FLEMMING BEFORE THE SUBCOMMITTEE ON GENERAL EDUCATION, COMMITTEE ON EDUCATION AND LABOR, U.S. HOUSE OF REPRESENTATIVES, TUESDAY, MARCH 21, 1961, 10 A.M.

Just prior to leaving the position of Secretary of Health, Education, and Welfare, I released a study prepared at my request by the Office of Education entitled, "Ten Year Aims in Education—Staffing and Constructing Public Elementary and Secondary Schools."

This study identified the following two objectives:

1. To have a professionally qualified and competent teacher in each classroom in America's public elementary and secondary schools—(a) by providing staff salaries that are competitive with those in other occupations requiring equivalent training and experience, and (b) by significantly improving selection procedures and preservice and in-service programs in teacher education.

2. To complete a construction program during the 5 school years after 1958–59 that will supply satisfactory schoolhousing for every public schoolchild by the fall of 1964; and a construction program during the second 5 years of the 10-year period through 1968–69 that will maintain the status of a satisfactory classroom for every child.

In order to achieve these 10-year objectives, the study stated that the following action would be required:

1. To provide teaching staff salaries in keeping with these aims will require, by 1963–64, average salaries 50 percent higher in purchasing power than those prevailing in 1958–59. To preserve this level of achievement for the remainder of the decade (1959–60 through 1968–69) will call for further upward adjustment of instructional salaries over the second 5 years, as necessary to maintain the new comparative position of

teaching among other competing occupations—an increase which, on the basis of present projections, may be tentatively assumed to be 2 percent per year. In some communities the salary levels need to be doubled or more than doubled by 1963–64, while a great many other school districts will need to effect increases of lesser magnitude.

The increase, in terms of the resultant national average salary level, is roughly equivalent to compressing into a 5-year period the amount of salary increase which would be achieved in 12 years according to the present trend. If instructional salaries were maintained at their 1958–59 level over the 10-year period, the total cost would be $82.6 billion. But with the salary increases proposed the 10-year cost would be $120.5 billion. Thus the increases over the period would total $37.9 billion, and the average annual cost of the salary increase would be $3.8 billion.

The task of accelerating the improvement in teacher selection, preparation, and in-service education that must accompany the salary increase if the staffing aim is to be achieved is primarily one of leadership in mobilizing resources, developing constructive public concern, and expanding cooperative professional action at the occupational level. Although the challenge is not, therefore, chiefly a financial one, it will call for outlays which are considerable, though not of the magnitude of the salary aim. It may be ventured that an expenditure of $1 billion over the 10-year period will be required on the part of the many institutions, professional groups, and governmental and other agencies to be included in this crucial partnership.

2. To achieve the stated aim for school facilities will require construction of an estimated 607,600 classrooms during the decade 1959–60 through 1968–69; 416,600 of these are required during the first 5 years, 1959–60 through 1963–64. The total capital outlay expenditure required to build these classrooms may be estimated at $25.5 billion in dollars of 1959 purchasing power. Capital outlay expenditures for schools are traditionally financed by issuing long-term obligations. If these same methods are used to finance the schools needed in the decade ahead, the total revenue that must be raised to provide these schools and to service the debt already existing may be estimated at $26.8 billion over the decade. Of this $26.8 billion, about one-half is needed for debt service on classrooms that had been constructed by 1958–59.

These conclusions were arrived at with the assistance of educational leaders representing all levels of public education and were subsequently discussed with representatives of national educational and community organizations in conference or by letter.

I believe that these conclusions constitute the best presentation to date of the magnitude of the task that confronts our Nation in the public elementary and secondary educational fields. They are not the last word on the nature and size of the task that lies ahead. They do, however, constitute a sound professional appraisal of that task.

It is clear from this appraisal that Government at all levels is going to find it necessary to obtain—over a 10-year period—at least $50 billion more in revenues for public elementary and secondary schools than is now available. I arrive at this figure by adding to the additional $37.9 billion that will be needed for teachers' salaries the $13.4 billion that will be needed for debt service on the classrooms that must be added to those constructed through the year 1958–59.

Our Nation must obtain—over this 10-year period—this additional $50 billion, or an average of $5 billion per year, over and above what we are now spending for public elementary and secondary education. In order to obtain it taxpayers, at all levels of Government, are going to be called upon to make genuine sacrifices. These sacrifices must be made, however, if our Nation is going to remain true to one of its most solemn commitments, namely, to provide every young person with the opportunity for a superior—not a mediocre—elementary and secondary education in public schools. As has always been the case, not all young people will take advantage of the opportunity. Some will attend private schools. But for those who take advantage of the opportunity, the commitment must be kept.

With this as background, it is my purpose first of all this morning to address myself to the issue of whether, in addition to providing Federal assistance to public elementary and secondary schools, we should also provide Federal assistance to private elementary and secondary schools. In doing so I will also consider the issue of whether we should provide Federal assistance to both public and private colleges and universities.

In considering these issues I believe it is important to recognize that, up to now, the Nation has followed one policy in the field of elementary and secondary education, and an entirely different policy in the field of higher education.

In the field of elementary and secondary education, as above noted, the Nation has been committed to a policy of providing our young people with the opportunity for a public elementary and secondary education. In harmony with this commitment we have used, with a few minor exceptions, our public funds to strengthen public elementary and secondary education.

In the field of higher education we have been committed to a policy of maintaining a dual system of both private and public colleges and universities. In harmony with this commitment whenever the Federal Government has made funds available in the field of higher education, it has made the assistance available to both public and private colleges.

I believe that at this point in the development of our total system of education we should continue to follow these two different policies.

Here are my reasons for believing that we should not depart from our present policy in the field of elementary and secondary education:

1. We must live up to our commitment to provide our young people with the opportunity for a superior—not a mediocre—public elementary and secondary education.

2. In order to live up to this commitment we must obtain over a period of the next 10 years at least $50 billion in additional revenues from taxpayers at all levels of government.

3. There is no question but that a substantial portion of the $50 billion must come from the Federal Government.

4. Until the Federal Government has played its part in underwriting the policy of providing our young people with the opportunity for a superior elementary and secondary education, it should continue to adhere to the policy of restricting its financial grants to the public schools. Any other policy would constitute a breach of faith with the young people of the Nation.

Here are my reasons for believing that we should not depart from our present policy in the field of higher education:

1. The Nation has never made a commitment in the field of higher education to provide all young people with the opportunity of attending a public college or university. As a result public colleges and universities do not have a prior and overriding claim on Federal funds.

2. Any deviation from the policy of providing Federal assistance to both private and public colleges and universities would seriously undermine our system of higher education, would impair our ability to meet the manpower demands of the future, and would, as a result, pose a substantial threat to the welfare and security of the Nation.

In summary:

1. I believe that continuing to restrict Federal grants to public elementary and secondary schools is in accordance with sound public policy. Any other policy would seriously impair the Nation's ability to fulfill its commitment to provide our young people with the opportunity of obtaining a superior elementary and secondary education in public schools.

2. I believe that continuing to make Federal grants available to both private and public colleges and universities is in accordance with sound public policy. Any policy that fails to recognize our commitment as a nation to the maintenance of a dual system of public and private colleges would make it impossible to meet the manpower requirements of the future and would seriously undermine, therefore, our welfare and security.

It is in the light of these beliefs that I would like now to discuss the two issues pending before this subcommittee, namely, whether Federal loans should be made available to private elementary and secondary schools, and whether Federal aid should be granted to public elementary and secondary schools in the manner proposed by the administration.

It is clear that it would not constitute sound public policy to operate a Federal loan program for private elementary and secondary schools in such a manner, for example, that the Federal Government would be borrowing money at a higher rate of interest than it could charge the private schools to which it made loans. Such a program would in reality be a program of Federal grants to private schools.

On the other hand, a program of Federal loans to private schools under which the Federal Government received interest payments at least comparable to the interest it paid in connection with its own borrowing operations and, at the same time, was compensated for all expenses incurred in connection with the program would not be in conflict with the policy of restricting Federal grants to public elementary and secondary schools.

I believe, therefore, that it would be wise for the Congress to give careful consideration to the possibility of inaugurating a genuine loan program. In doing so, the Congress will have available the experiences that the Office of Education has had in administering a comparable provision under title III of the National Defense Education Act—the title dealing with the purchase of equipment for the teaching of science, mathematics, and the languages. As far as I was able to observe during the time I served as Secretary of Health, Education, and Welfare, the administration of this provision did not give rise to any serious policy issues, particularly issues involving the traditional separation between church and state in this Nation.

It is true that a rather small percentage of the funds made available for loan purposes has been used up to the present time. The Congress will undoubtedly want to obtain testimony on this point from representatives of potential borrowers.

It is true also that some have questioned the constitutionality of such a program. I would hope, therefore, if such a program should be enacted that the law would be drafted in such a manner as to permit a prompt consideration of its constitutionality in the Federal courts.

I will not presume to make recommendations as to whether the issue of establishing a Federal loan program for private schools should be considered in a bill making grants to public schools or should be considered

separately. I do, however, want to state my conviction that whatever procedure will insure favorable and expeditious action on a program of Federal grants to public schools is the one that should be followed.

It is in light of this same conviction relative to the necessity for action in the area of Federal aid to public elementary and secondary schools that I now desire to comment on the proposals for strengthening elementary and secondary public education that have been placed before you by President Kennedy and Secretary Ribicoff.

I concur in the recommendation that Federal grants should be made to the States of approximately $2.3 billion for their public elementary and secondary schools.

I do not concur, however, in the recommendation that the grants should be available for use by the States for both school construction and teachers' salaries.

Rather I believe that the Federal funds should be earmarked for servicing debts already incurred for school construction, for servicing debts that may be incurred for new construction, and for the construction of new buildings on a pay-as-you-go basis.

Here are my reasons for this recommendation:

1. It would release funds for urgent increases in teachers' pay by taking up a substantial share of the heavy burden of construction costs.

I am convinced that it would make a substantial contribution in the direction of achieving the objectives in the areas of teachers' salaries that I discussed at the beginning of my testimony.

2. It would help materially in closing the gap between the existing number of classrooms and the number that will be required in the years that lie immediately ahead.

3. It would make possible the introduction of a requirement that the States must match the Federal funds that would be made available on a 50–50 basis.

This in turn will insure making available State funds in amounts comparable to the Federal funds thus expediting the action that must take place in the areas of teachers' salaries and classroom construction if our system of elementary and secondary education is to be strengthened.

4. It would attract the support of those citizens who are genuinely fearful of the Federal Government making grants that become a part of current operating budgets at the local school district level.

Some argue that there is no basis for such fears. The fact remains that they exist. There are many persons who will support a school construction program but who will not support a program that also calls for Federal grants for current operating budgets even though these grants are to be used for such a desirable objective as teachers' salaries. They believe that such grants afford too great a temptation for Federal controls.

It is difficult for me to express adequately in words my own convictions that nothing must be permitted to stand in the way of action in this area of Federal assistance to public elementary and secondary education. It is long overdue. It would be tragic if another session of Congress adjourned without significant steps having been taken in the direction of providing public elementary and secondary education with the financial underpinning that the Federal Government alone can provide.

I am confident that the representatives of some of the Nation's private schools that have appeared before this subcommittee recognize and respect the commitment that the Nation has made to provide our young people with the opportunity for a superior public elementary and secondary education. They know that additional resources are required in order to make it possible for the Nation to fulfill this commitment. They know that a substantial portion of these resources must come from the Federal Government. I believe, therefore, that because of their dedication to the task of making and keeping America strong, they will help to make it possible for our public elementary and secondary schools to receive financial help from the Federal Government.

I am also confident that the Congress will take steps to insure that the proposal advanced by these same representatives of some of the Nation's private schools for a Federal loan program for private elementary and secondary schools is given careful and thoughtful consideration.

Likewise, I am confident that some who believe that Federal grants should be available for use by the States for both school construction and teachers' salaries will yield on the question of teachers' salaries, knowing that by so doing they will help to insure favorable action and, at the same time, will be putting local school districts in a far more favorable position to increase teachers' salaries than will be the case if once again Congress fails to provide any Federal help to public elementary and secondary schools.

In brief, I am confident that we are going to close ranks and take action designed to strengthen the welfare and security of our Nation.

Tax Reform Is a Must

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. FISHER. Mr. Speaker, the need for tax reform in this country was never more urgent than it is today. The present hodgepodge system of patchwork in our tax concepts, filled with loopholes and contradictions, must be repaired.

Joseph A. Pechman, Brookings Institution economist, told the House Ways and Means Committee back in 1959 that "if all the eroding features of the tax law had been eliminated, the tax base would have been $59 billion larger than it actually was in 1957, and the revenues that were collected on 1957 incomes could have been raised with rates that were one-third lower in every taxable income bracket."

President Kennedy has pointed to the imperative need for tax reform. That need was recognized by former President Eisenhower. It was repeatedly referred to during the last presidential campaign. The necessity being self-evident, it is up to the Congress to do something about it.

Many proposals have been offered. The gentleman from Florida [Mr. HERLONG] and the gentleman from Tennessee [Mr. BAKER] have both introduced tax reform bills. They did so in the last Congress. Other Members have done likewise. In 1959 I introduced a companion bill, H.R. 4584. This year I have reintroduced that bill as H.R. 5529. These bills, I am sure, are not foolproof but they are steps in the right direction. They propose positive relief from unrealistic rates and they contain the elements of incentive-producing reforms.

Our system is so out of kelter with realities that it has been cited by Soviet Premier Khrushchev as evidence that we fail to use incentives to increase production to the extent that they are used in Soviet Russia. I would not concede that, but it does give us something to think about.

There are other areas of needed tax reform, including effective taxation of cooperatives and mutual finance companies to insure more substantial equity with ordinary taxable enterprise. Something needs to be done in the field of estate taxation to remove the present inducement to leave property in trust extending over many years, together with a reduction in rates. And there are loopholes that need to be closed.

PENDING BILLS

Under the pending reform bills to which I have referred, over a 5-year period individual rates would be compressed downward with reductions of over 50 percent in the middle brackets and the top rate coming down from 91 to 47 percent to coincide with the new top rate of corporate tax under the legislation. The first-bracket rate, applied to the lower income people, would be reduced from 20 to 15 percent, giving all individual taxpayers a minimum tax reduction of 25 percent.

This proposal has received substantial support from all over the country. It is not just a tax relief bill. It has a goal to achieve—that of permitting the more rapid accumulation of new capital out of current income, and moderating the tax destruction of capital already accumulated. The distinguished chairman of the Committee on Ways and Means, Mr. WILBUR MILLS, has been quoted as saying: "Taxes are too high, and at present rates have a strong tendency to blunt incentives and stifle economic growth."

We hear a lot these days of the New Frontier and the need to encourage economic growth. It is said we are suffering from economic roadblocks that strifle and retard our capabilities. If so, then let us treat the disease and not the symptoms. It is believed that the pending legislation would undoubtedly bring about the achievement of higher economic growth, improvements of jobs and creation of better jobs. This will encourage new businesses to start. It will help control inflation through greater production and productivity. It will serve to strengthen our economic system and our position of leadership, prestige, and influence in the free world.

In fact, at this time when our foreign trade balance is unfavorable, when we are finding it increasingly difficult to compete in the world markets in areas which we have dominated for generations, it becomes increasingly necessary that we get our economic house in better order. And a genuine reform of our income tax structure is, in my judgment, a prime requirement.

WOULD BENEFIT LOW INCOME GROUP

From the standpoint of our own citizens, those now in the lower income levels have perhaps the most to gain from increase in the flow of capital into the expansion of industry and the resultant

improvement of old jobs and creation of better jobs.

I am convinced that under the present law income taxe rates climb too steeply and are much too high for the good of our economy and the well-being of our citizens.

Moreover, the proposed reform will inevitably pave the way to greater and more consistent reduction in the Federal debt. And it can be expected to ease the pressures that cause inflation. The inflation of this era essentially reflects a greater demand from all sources for the combined product of economic activity than can be provided by capital formation under present tax rates. The constant upward pressure on interest rates which we have witnessed in recent years is simply a reflection of the inadequacy of new savings to do all of the things which all of our citizens want done to enhance their economic well-being. Stated differently, a greater rate of new savings is the only route to greater rates of increased production and productivity, which in turn are the means to better satisfaction of competing demands on the economy while dampening inflationary pressures. This is the view of competent economists.

After all, the bulk of income taxes in this country are paid by the great middle class who earn from $4,000 to $25,000 a year. And the tax burden is very heavy for many of them to carry. A family man earning $4,500 a year now works 22 days a month, on an average. Taxes, visible and invisible, take one-third of what he produces. Of course, every citizen has an obligation to contribute his own fair share to pay for the legitimate functions of Government. But when it goes beyond the range of being a fair share, that taxpayer finds his money which he earned being used by others who do not earn it.

It must have been that thought which prompted the late Senator Bob Taft to say: "You can socialize just as well by a steady increase in the burden of taxation beyond the 30 percent we have already reached as you can by Government seizure. The very imposition of heavy taxes is a limit on a man's freedom."

Let us hope, Mr. Speaker, that the Congress will face up to this problem. Just doing something about exemptions will not suffice. Doing something about loopholes, although important, will not suffice. The entire structure must be overhauled. There must be an increase in depreciation—tailored to those industries considered essential to national survival. They must be able to modernize their equipment. It is said that one-third of the Nation's plant and equipment is obsolete. Some $6 to $8 billion is drained off each year from industry which is actually needed for survival and to make the Nation grow.

As one man put it—taking this money is like harvesting corn or wheat before it is mature.

Industry should be able to deduct for basic research. Incentive capital should not be siphoned off by taxation. Such capital could be made to earn more revenue for the country than it provides in taxes, if it is invested in growth under favorable conditions.

TAX REDUCTION CALLS FOR REDUCED SPENDING

Mr. Speaker, tax reform such as I have outlined will be possible only if we can reduce Federal expenditure. More than just a balanced budget is needed if this reform is to be fully meaningful. It has been said, and I think correctly, that balancing the budget at too high a level will not by itself solve our inflation problem nor our growth problem. Taxes would have to remain high to finance that budget, even though reduced taxes might result in more income. The simple fact is that it is not necessary to reduce essential spending—such as that for defense which at all costs must be maintained, water and soil conservation, flood control, veterans' benefits, and things of that kind—but it is necessary to reduce nonessential spending and waste.

In the long run we will be able to reduce the debt only if we have a flourishing and growing economy. For that purpose tax rate reform is essential and the sooner we get it the better our chances will be for sustained long-term debt reduction.

REDUCED RATES AND MORE INCOME

The fact is that every time we have reduced rates in the past our economy has been stimulated to produce more revenue than before. That was true back in the 1920's and it was true after the 1947 reduction. Take West Germany for example. In that country the economic growth has been so rapid under moderate incentive-producing tax levels, that not long ago it became necessary to raise taxes so as to apply the brakes and siphon off more of the earnings and take the edge off their boom. A year ago it was reported that investment capital gains in West Germany had increased 12 percent in 1 year.

Mr. Speaker, it is imperative that the Congress reexamine this tax problem. We are operating today with an outmoded tax philosophy. It will be recalled that the "Communist Manifesto" by Karl Marx and Frederick Engels, lists the No. 2 objective of communism for overthrowing capitalism: "A heavy progressive or graduated income tax." If we are to retain the income tax system, then let us make it realistic and fair. Let us remove the inequities that restrict growth. Let us tailor our income tax structure and make it consistent with the incentives that contribute to economic growth under the free enterprise system.

The Late Honorable Walter Mann Mumma

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. RHODES of Pennsylvania. Mr. Speaker, the passing of our friend and colleague, the Honorable Walter Mann Mumma, was met with profound shock and heartfelt sympathy by all the Members of this body. His unselfish motivation, integrity of ideas and principles, and the deep sincerity with which he approached the responsibilities of this Chamber are missed by those of us who remain in this body. In all his work, Walter was a man of his word, ability, and resourcefulness, and one who always remained true to the dictates of his conscience.

As a congressional neighbor and personal friend of Mr. Mumma it was with deep regret that I heard of his untimely death. I have known Walter for many years and I know that he will be a great loss to the many constitutents, Republicans and Democrats, which he represented. I wish at this time to express my sympathy to his family and friends in Harrisburg, and hope that it may afford them some measure of solace to know that his many friends in the House of Representatives share in their sorrow.

Tribute to Robert Vahan, Editor, Armenian Mirror-Spectator

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. OSMERS. Mr. Speaker, the contributions made by Americans of Armenian origin are well know throughout the land. In a recent issue of the Hudson Gazette, of North Bergen, N.J., there appeared a tribute to Robert Vahan, editor in chief of the Armenian Mirror-Spectator of Boston, Mass.

Mr. Martin Turpanjian, president of the New Jersey League of Weekly Newspapers and publisher of the Hudson Gazette, has informed me that a plaque for distinguished service will be presented to Robert Vahan in the near future by the league. This plaque will be presented to Mr. Vahan because of the fine influence which the Armenian Mirror-Spectator exerts wherever it is circulated. It is my understanding that the Armenian Mirror-Spectator is distributed to people in many foreign countries.

In order that my colleagues may know of this fine tribute, I, under unanimous consent, place it in the Appendix of the RECORD:

Robert Vahan, editor-in-chief of the Armenian Mirror-Spectator, of Boston, has been elected an honorary member of the New Jersey League of Weekly Newspapers, Inc., it was announced last night by President M. Martin Turpanjian and Col. Mrs. Arthur A. Lyons, chairman of the board of directors, who is also the editor and publisher of Spotlight, coast-to-coast picture news weekly.

A plaque for distinguished services will be presented to Editor Bob Vahan soon. The executives of the league had glanced over hundreds of weekly and daily newspapers concerning the testimonial banquet tendered to President M. Martin Turpanjian on November 20, 1960, for having served as its

chief administrator for a period of 7 years and for being a member of the fourth estate more than 40 years. He is the editor of the Waldwick Jersey Parade and North Bergen Hudson Gazette. The article written by Bob Vahan in the Armenian Mirror-Spectator of Boston, a weekly newspaper, circulating in all parts of the world, was considered as being the best of all.

Appreciation in this age of haste and scramble has almost disappeared from our brash undisciplined civilization of the 20th century. But thank God there still remain certain personages who cling to the tradition pioneer ideals of commendable accolades that were so conspicuously glorified by the Founding Fathers in our colonial era.

And because we feel a deep religious conviction that appreciation in all its phases of commendation and its routine meritorious awards should be maintained as an integral and permanent part of our modern American society that we feel inspired to extoll and render the full measure of appraisal with its justifiable commendation to that stalwart energetic humane pioneer journalist, Robert Vahan, the dynamic editor of Armenian Mirror-Spectator of Boston.

Bob Vahan embodies in his character the precious asset of true humanitarianism. His cosmic consciousness is universal in its editorial philosophy. He is no narrow sectarian apologist. He has no clannish symptoms of self-provincialism. He accepts as his basic moral credo the Golden Rule of the Eternal Moralist of Nazareth. His editorial opinion is characterized by a sound basic sense of rationalized intelligence. He is no trite hackneyed sensational journalist. He is a stickler for the normal facts and the sheer truthful interpretation of all newspaper stories.

Bob Vahan is essentially an honest candid forthright realist. He does not slant, enlarge or distort the news to arouse and trigger by hysterical public clamor and civic anxiety. His editorial policy of the Armenian Mirror-Spectator has been consistently progressive and sagacious in its presentation of the realities of the routine incidents that embody the copy news material of his militant Armenian Mirror-Spectator. He does not stress or place an overemphasis of Armenian nationalism. He has always stressed the vital import and value of loyal Americanism.

Bob Vahan's personality is radiant with the true democratic affable characteristics that reflects an impelling magnetism. He has a warm, generous approach that is truly magnetic in its personal appeal. To know him is to admire him because he has that rare psychological mental gift to say the right thing at the right time and in the right place.

It can be truly said without profuse adulation or national bias that Bob Vahan is born with a tryst for destiny. And we take great pride in proclaiming him as the Editor of the Year.

The following represents the biography of Robert Vahan, who resides at 13 Appleton Terrace, Watertown, Mass. He was born June 28, 1921, in Constantinople. He is the son of Vahan Churgents Vahan and Minerva Eknayan Vahan. He is the husband of Maritza Bazarian Vahan. He has been editor of Armenian Mirror-Spectator of 296 Shawmut Avenue, Boston, Mass., for the past 10 years. He has attended Suffolk University and Boston University.

Work: public relations: Industrial and personal with American Taxicab Association, Bob Hope, Herminone Gingold, Irene Manning, Victor Jory, Cape Cod Conservatory, Rocky Marciano, Boys' Town, lobbying before Massachusetts Senate and U.S. regulatory agencies. Public opinion surveys.

Editorial: Publisher The Logan International weekly public service magazine at Boston's airport. General manager the Greater Boston Shopper weekly shopping newspaper.

Parent's birthplaces: Father, Kessab (now Syria) Cilicia; mother: Cairo (her parents from Tiflis and Istanbul).

Service: Combat veteran of World War II, European theater, decorated in action. Same outfit which met Russians in Leipsig area at Torgau.

Published in Boston Chamber of Commerce monthly and have been member of chamber, also member of St. James Armenian Church of Watertown, Armenian Democratic Liberal organization, National Association for Armenian Studies and Research, etc.

Have three children, two boys and a girl.

A Proposed National Highway Week

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. FALLON. Mr. Speaker, we in America are especially well pleased in the number of freedoms we enjoy in a world from which too many freedoms have disappeared in recent years. One of the greatest freedoms our people have is their freedom of mobility, made possible by the development of the Nation's highways.

A national system of highways in America has made it possible for us to move about with ease. Because of our highways, our people are granted greater choice in where they shall live, where they shall work, and where their businesses and industries shall be established.

Indeed, the importance of what has already been done in building the Nation's highways is readily translatable in terms of increased gross national product.

Forty-five years ago, in 1916, this Congress enacted our first Federal Aid Highway Act. Periodically we have reviewed the matter of Federal responsibility in coordinating highway construction programs across the land. As the highways made possible by the Federal-State roadbuilding partnership unfolded, linking North to South and East to West, new opportunities were brought to our people for traveling. The residents of the central portions of these United States are separated from the Atlantic or Pacific Ocean by little if any more than 2 days' travel over good highways. Only 50 years ago, their forebears lived out their lives without seeing either of these great bodies of water, because travel was too expensive or travel time too great. The Rocky Mountains, our magnificent national parks, the Grand Canyon, the Great Lakes—all the wonders of America—have all been brought closer to our families by the roads we have built.

Because of better roads, our national resources are more accessible. The output of our factories, and the products of our farms are more easily moved to the consumer, and in better condition, because of highways. Our national defense has been made more secure by the roads we already have.

But, Mr. Speaker, with all that has been done, roadbuilding has not kept up with America's needs for more and better highways. The Federal-Aid Highway Act of 1956 provides for construction and improvements on our interstate defense highways, and roadways subsidiary to that system to meet our traffic needs 14 years from now. The benefits of the roads already built extend to all our people. The need for an orderly continuation of the road building program is urgent.

In view of the tremendous contributions good roads make to our better living standards and to the prosperity of our Nation, I propose, through the introduction of House Concurrent Resolution 198, to call the public's attention to the importance of highways through the establishment of National Highway Week this year from May 21 to May 27.

Mr. Speaker, I urge every Member of this body to support favorable action on this resolution.

Salute to National Council of Jewish Women

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post Gazette, March 19, 1961:

FIFTY YEARS OF SERVICE

The biennial convention of the National Council of Jewish Women in Pittsburgh, Sunday through Thursday, will salute a half century of action in behalf of social progress by the council, the oldest Jewish women's organization in the Nation.

Measures which the council has backed over the years include aid to immigrants (NCJW had its own immigrant aid station on Ellis Island, at the request of the Government, for many years), Federal regulation of child labor, adequate housing and low-income groups, food and drug regulation, uniform marriage and divorce laws, wage and hour laws, social security, antilynching and civil rights legislation.

This public affairs program is particularly notable in that it has been attempted not by a political organization, but by a service and educational organization—with political action growing out of 900-odd community service projects across the country.

As the Jewish women meet in this city, they should feel proud of the myriad projects they early championed that have proved, on fruition, of benefit to all Americans. Above all, the council has striven to encourage women to participate in challenging tasks for social betterment. What it has helped to achieve has elevated the American standard—as well as the position of the American woman.

The Nation Magazine and the Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. ZABLOCKI. Mr. Speaker, the March 18 issue of the Nation magazine contained an editorial entitled "The Issue, Mr. Speaker," which commented on the Supreme Court decisions in the Wilkinson and the Braden cases, and on the House vote on the appropriations for the Committee on Un-American Activities.

Under leave to extend my remarks, I wish to place in the RECORD the text of that editorial, as well as the text of my letter to the Nation, replying to some statements contained in it. I believe that these two articles will prove of interest to the membership of this body:

[From the Nation, Mar. 18, 1961]

THE ISSUE, MR. SPEAKER

A day before the House of Representatives voted, 412 to 6, an increased appropriation for the Committee on Un-American Activities, the Supreme Court divided 5 to 4 in the Braden and Wilkinson cases. If the eloquent dissent of Justice Black had been the majority opinion, the Court would in effect have abolished the HUAC. Yet the impression prevails that since the HUAC received the nearly unanimous approval of the Congress, it must enjoy the nearly unanimous approval of the Nation. The Supreme Court is not, of course, an elected body, and divisions in it do not necessarily reflect national divisions; nevertheless, the San Francisco Chronicle hazards the opinion that this time the Court seems to mirror the split in the country.

By any reckoning, the Court's division on the issue is a more accurate mirror of national opinion than the vote in Congress. Reports from close observers confirm the view that a hundred or more votes would have been registered against the appropriation if a secret ballot had been used. It is a matter of serious concern when Members of Congress fail to vote their convictions on an issue of this importance. The remedy, of course, is for citizens who favor abolition to concentrate their attention on Congressmen who might have been expected to vote against the appropriation, but did not. "What is it about public office," inquires the Madison Capital Times, "that makes men so timid? Where were Representatives REUSS, JOHNSON and ZABLOCKI?" (liberal members of the Wisconsin delegation who failed to join their colleague, Representative ROBERT KASTENMEIER, in opposition to the appropriation). This is the right question to ask. The time has come to call the roll on those Members of Congress who, in conversation and correspondence, over teacups and cocktail glasses, agree that the HUAC should be abolished and then fail to vote their convictions. This year's best speech in the HUAC debate was delivered by Representative THOMAS ASHLEY, Democrat of Ohio:

"All of us are keenly aware that the forces of communism are unswervingly dedicated to the destruction of this and other free nations. But surely we are aware, too, that communism is not the only threat to our liberty. The individual freedoms guaranteed in the Bill of Rights can be lost or diluted through our own action or inaction, and if this is allowed to happen by our own hand, the loss of liberty is no less than if imposed by an alien adversary.

"Are we ready and willing to defend our individual freedoms in the House of Representatives as we are on the battlefield? I believe this is the issue, Mr. Speaker."

MARCH 20, 1961.

Mr. CAREY MCWILLIAMS,
Editor, the Nation,
New York, N.Y.

DEAR MR. MCWILLIAMS: I was surprised to read your editorial of March 18, entitled "The Issue, Mr. Speaker." It is outstanding not only for its poor logic, but also for its disregard for the laws of mathematics. Inasmuch as my name appears in it, I feel compelled to comment on it.

First, the Supreme Court and the U.S. House of Representatives acted on two entirely separate and distinct issues.

To review the issues involved:

The Supreme Court, on the one hand, ruled on the issue whether Wilkinson unlawfully refused to answer a question pertinent to a matter under inquiry before a subcommittee of the Committee on Un-American Activities. The question involved was, "Are you now a member of the Communist Party?" The majority of the Supreme Court held that the question was pertinent and that the refusal to answer it was unlawful. A similar issue was involved in the Braden case.

Teh House of Representatives, on the other hand, was deciding, in effect, whether the Committee on Un-American Activities should continue its operations within budgetary limitations recommended by the House Administration Committee. The decision was overwhelmingly in the affirmative.

In my opinion, you cannot in logic compare the two decisions, and further, as you have done in your editorial, try to infer from that comparison the public sentiment with respect to the Committee on Un-American Activities. Your conclusion is pure poppycock.

Second, in asserting that "a hundred or more" Representatives voted against their convictions in supporting the appropriation for the Committee on Un-American Activities, you have, in a reckless fashion, impugned the honesty and the motives of almost every Member of the House of Representatives. In doing this, you have resorted to the very same tactic which you find objectionable when used by others.

Third, even if your allegations were true, and if in a secret ballot a hundred or more Representatives would have voted against the appropriation of funds for the Committee on Un-American Activities, the vote in the House still would have been 3 to 1 in support of the committee' work. While the two—as I have already mentioned—are not comparable, I believe that even such a 3 to 1 House vote would indicate a more accurate mirror of national opinion than the 5 to 4 vote of the Supreme Court on the above-mentioned cases.

Fourth, since you saw fit to include my name—at leaast by placement—within the group of Congressmen who, in your opinion, failed to vote their convictions, I would like to set the record straight: I did vote my conscience and conviction and I believe that my vote is in harmony with the opinion of the majority of the people whom I have the privilege to represent.

I have, in the past, criticized some of the methods used by the Committee on Un-American Activities, and I intend to speak against any abuse of legislative power. At the same time, I believe that the committee's legislative accomplishments, and its work in exposing the methods and the true aims of the Communist movement, warrants its continuation. I intend, therefore, to continue to support the legitimate work of that committee.

Your cooperation in printing this reply will be appreciated.

Yours sincerely,

CLEMENT J. ZABLOCKI,
Member of Congress.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JAMES HARVEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. HARVEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the House the following resolution by the Saginaw Board of Education of March 14, 1961, and two newspaper editorials, all touching on the subject of "Federal Aid To Education."

In particular, the Saginaw Board of Education's resolution, as so ably supported by the Saginaw News editorial, "School Board's Stand Merits Commendation," of March 16, 1961, deserves close reading.

The second editorial, "The Federal Aid Mirage," which appeared in the March 14, 1961, edition of the Owosso Argus-Press, rates equal attention.

There being no objection, the resolution and editorials were ordered to be printed in the RECORD, as follows:

SAGINAW BOARD OF EDUCATION STATEMENT OF POSITION ON FEDERAL AID TO EDUCATION

To help crystallize public opinion and inform the citizens of the Saginaw School District, we, the members of the Saginaw Board of Education, wish to express our opinions concerning Federal aid to education.

We are opposed in principle to Federal aid in the field of education. We take this position because of many valid reasons, some of which are listed following:

1. This is not a new source of revenue. Any funds furnished additionally to those presently received would come at the expense of the same taxpayers who are now carrying the load, namely the citizens of this district and every other district.

2. Financial dependence on the Federal Government would weaken local control and option. We feel sure that it would eventually lead to Federal control of the educational system. Once the local control is lost, so is the flexibility and responsiveness to community desires that we now have.

3. We feel that the freedom of education is fundamental to our American way of life. If we surrender this freedom, we also surrender our freedom of choice to shape the future of our children and young adults. The way is then open for Federal regimentation of their thought, action and future. This could happen so gradually that its progress would be fairly imperceptible, but nonetheless irrevocable. Once we start down such a path, there is no return.

It is irrelevant to argue that the above would not happen. Since each generation is entrusted with the guardianship of our liberty, let us make sure that none of these things can possibly happen. Let us keep our present system. Imperfect as it may be, it is better than any other in the world, and

has brought us to our present high station among the nations of the world.

4. Federal aid to education would create a financially impossible mess. It is a pie-in-the-sky absurdly impractical Robin Hood scheme which would take money from the States (such as Michigan) which do an efficient job of educating their youngsters and give this money to those States which are too penurious or improvident to do a good job. This, claim the liberals and do-gooders, would establish equality of opportunity for all children. It would do no such thing. It would only serve to further magnify the inequities which already exist.

5. Federal aid to education would create a new bureau, and a new bureaucracy for its implementation. It would lead to a grouping of Federal "experts," the like of which we have not ever seen. Untold thousands of executives, administrators, examiners, inspectors, clerks, typists, and minor functionaries would be superimposed on our existing structures. And who would pay the bill? You and I, the taxpayer, and at the expense of education.

6. With Federal aid to education we can perceive only diminishing quality and flexibility as the Federal experts attempt to equate the needs of this community with the total concept. We can also perceive a greater burden for the taxpayer when he is forced to shoulder the burden of Federal Bureaucracy as well as the educational system he is already supporting.

The foregoing should not be interpreted to mean that all Federal aid to education is bad. Certain statistical gathering and reporting services of the U.S. Government are very worthwhile and could not be accomplished any other way.

It is when the Federal Government collects our own funds and then returns to us only a portion after deducting the expenses of administering and the shares going to States that don't raise sufficient funds themselves that we fail to see the logic of the program. Is there some magic in a Federal program that we fail to see—that we cannot accomplish ourselves otherwise? If we can send these tax dollars to Washington, then surely we can send them to Lansing or Saginaw and with greater effect. The closer to home we spend our tax dollars, the more we get for our money and the more control we have over how the money is spent. If we don't like what happens, we can change a local situation. Just try to change Washington.

This board of education has enough experience being dependent on a governmental source for funds to realize that we don't want any more of it. Roughly half of Saginaw's present school revenue comes from the State government. Each year in Michigan State aid becomes a political football and legislators try to make political hay with the education of our youngsters. Each year the situation becomes a little more complicated, a little less workable, a little more impossible.

Multiply this confusion by 50 States to get some idea of what Federal aid would bring. Imagine 50 partners with unequal interests trying to divide up the pie evenly. Such a prospect would be laughable if the consequences weren't so deadly serious.

In the final analysis the solution depends on us as citizens who will accept our responsibilities. We can have any kind of educational system that we desire without Federal aid. We need only to be wise enough, mature enough and responsible enough to realize that, one way or another, we must pay for what we get. And if we try to abdicate this responsibility of ours, we shall find out that we cannot, that the burden of payment will be imposed on us by higher authority anyway and without any hope of recourse.

To simply reject Federal aid to education is not enough. We must decide what level of educational achievement we desire, that we are willing and able to support such a program, and then follow up our decisions with appropriate action.

If the spectre of Federal aid to education does nothing but spur us on to a fuller realization and acceptance of our responsibilities as citizens, it will have served a useful purpose.

We wish to commend the people of Saginaw for their splendid support of our schools. Whenever any need has been fully demonstrated, they have risen to the occasion. We are confident that they will do so again in the future, as the need may arise.

Adopted March 14, 1961, by board of education.

SCHOOL BOARD'S STAND MERITS COMMENDATION

While Governor Swainson and State Superintendent of Public Instruction Lynn Bartlett were in Washington busily trying to paint a portrait of Michigan's solid support for the Federal aid-to-education bill, the Saginaw Board of Education was just as aggressively adopting a resolution of opposition.

The Governor and Bartlett first made the rounds of Michigan Democratic Congressmen, then put in an appearance before the House Education and Labor Committee conducting hearings on the measure. The Saginaw board communicated its resolution of opposition to Congressman JAMES HARVEY and a telegram informing the House committee that Michigan's two State officials did not speak for it.

Boards of education willing to state publicly their convictions on the issue of Federal versus State-local school aid have been conspicuous by their silence. The Saginaw board should be commended for taking a stand.

It is not the easy way and, as Board President Eugene P. Stansbury acknowledged, it could be misinterpreted as meaning that Saginaw schools do not need more money. But Mr. Stansbury touched on the very heart of the school aid issue when he said, "We may not need as much as some, but we need more than others. I have confidence the public will understand our position, and if we ever have to ask for money they will vote it."

This is putting the local school position right where it belongs—among the people of the community, to judge for themselves the need as represented by their own school board, then to decide whether or not they want it badly enough to pay for it.

The board's resolution is distinctive in still another direction. It does not stop short with mere opposition to the philosophy of Federal aid, as do many opponents of nationally centralized financing. This, it says, is not enough. "We must decide what level of educational achievement we desire, that we are willing and able to support such a program, and then follow up our decisions with appropriate action."

This constitutes both an invitation and a challenge to the community to develop the means for appropriate action. This is and always has been the other side of the coin confronting local citizens if they are to oppose successfully Federal encroachment in local affairs.

In Michigan, as in most other States, the easy appeal of Federal assistance has stemmed more from the denial of adequate taxing powers to local units of government than from any genuine belief that Federal aid is for free. The cities have turned to the Federal Government just as the schools have turned to their State governments because taxes on local property were about the only sources of revenue allowed to them. State legislatures could help local governments resist movements for Federal aid by granting broader local taxing powers.

Those who subscribe to Federal aid to education as a socially desirable means of insuring at least minimum opportunities for every child in every part of the land view arguments for local responsibility as narrow, even selfish. The answer to that is that wealthier States do contribute more in revenues to the Federal Government—and would not object to the Federal Government's granting direct assistance to any school districts suffering proven economic distress.

But States that have advanced their educational standards because of the people's enlightened desire to do so should not be herded and fleeced indiscriminately to make up for lackadaisical efforts in other States whose educational impoverishment is more of the spirit and will to do than of the pocketbook.

THE FEDERAL AID MIRAGE

Federal aid for local programs has considerable appeal to many people. They think that such Federal aid is giving help to programs of local importance and thus in some manner the people receiving such aid are saving money. Of course, that is not true but it is increasingly difficult to show the public otherwise.

The theory of Federal aid started in a small way as all such ideas start. There was need for help in certain areas to pursue some program recognized as a public necessity. So what was more natural than to first try to tap the State treasury for help and then when such burdens become hard for both State and local sources to finance, the appeal follows for Federal help.

Over the years, therefore, the Federal Government is being tapped for more and more money to turn back to States and local communities to finance various types of programs. There seems to be a feeling that money coming from either State or Federal sources means that someone else is paying the bigger part of the load.

That may be true in some sections of the Nation. But it does not hold true for Michigan. The taxpayers of this State are definitely helping to pay the load for other States when such programs of Federal aid are established. But the majority of the taxpayers either do not realize this or are mesmerized by the lure of money from Washington.

Take the argument for Federal aid for education, which is now before Congress. The increasing emphasis on the need for more educational facilities for the youth of the Nation gives impetus to programs of trying to get help from the Federal Government. The legislation now before Congress will provide Federal aid for both construction and also for the payment of teachers' salaries.

So those advocates of more education, regardless of cost, are getting vocal about this Federal aid bill for education. They are pulling out all stops in the campaign to get Congress to vote this measure. There probably will be some form of Federal aid to education passed in this session of Congress, but it can be hoped that it will be tempered.

The Federal aid provided under this bill sets up a measure of need related to local and State capacity to finance it as to the basis of the aid granted. In other words, the more prosperous States will have to pay part of their Federal taxes to help the more undeveloped sections in their educational requirements.

The State of Michigan will receive benefits of somewhat more than $17 per school pupil under this procedure. Some southern States would receive considerably more per pupil, because of the difference in financial rating. Perhaps the basis of need and financial ability must be the basis of the dividing of the levy, but the difference should be noted by the Michigan taxpayers.

Especially so since some of the States who would benefit by the proposed education levy are doing their best to wreck the economic strength of this State. It is in those States, which cannot afford to carry their educational load, that today through local and State tax and other concessions are doing all they can to attract industry from Michigan and other more prosperous areas.

Justice With Charity

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an interesting and informative editorial entitled "Justice With Charity," appearing in the March 10, 1961, issue of the Catholic Standard, the weekly newspaper of the Archdiocese of Washington.

JUSTICE WITH CHARITY

Is there any reason why the Washington Post cannot discuss a constitutional question, admittedly debatable, without imputing false motives to those who disagree, using smear-tactics employing inuendoes about the loyalty of Catholics to the Constitution and prejudging apodictically a specific question before it is submitted to the Supreme Court? Other newspapers can disagree with the position of Catholics and carry on a dialogue of reason, respecting the motives and rights of their opponents.

Many authorities, including professor Arthur Sutherland of Harvard University, an authority on constitutional law, support the position of Catholics, thus disproving the contention that our position is indefensible and obstructionist. We feel that the importance of a constitutional question and the demands of justice and charity, as we have said before, demand a discussion in a spirit of studious inquiry and respect for the views of others. Even a reasonable respect for freedom of expression demands such an attitude.

We also feel strongly that a constitutional question, as Federal aid to education, must consider all the amendments to the Constitution, especially the 14th as well as the 1st. The 14th amendment forbids any impairment of rights because of one's religion; the 1st amendment forbids Congress to establish a religion or to prohibit the free exercise thereof.

The judicious balancing of these provisions, which are complementary and not contradictory, is admittedly difficult. Catholics contend that by the first amendment their youth should receive equal treatment with other youthful citizens in educational benefits at the school of their choice. Catholics do not consider that such aid (by a loan or by a tuition grant) constitutes an infringement of the 1st or 14th amendments; obviously, many citizens do consider it an infringement. Wherefore the discussion.

Many opposing Federal aid to private schools quote the famous Everson case (the Washington Post quoted only the Everson case). The Everson case, which relates to both the 1st and the 14th amendments, contains a strong reason why loans with interest would be constitutional: "It is much too late to argue that legislation intended to facilitate the opportunity of children to get a secular education serves no public purpose." Catholics contend that a loan with interest for school construction (or tuition grants) certainly serves a public purpose. In fact, the only reason why public schools are constructed and conducted is that they serve a public purpose, the education of the children. Catholic schools perform the same function, with the addition of religious instruction.

The Everson case also states that "subsidies and loans to individuals" have long been commonplace practices in our national history.

Besides the Everson case, there are several well-established precedents for making loans bearing interest to private schools: loans are made for the construction of college dormitories, social centers, and related facilities; loans are made to elementary and secondary schools for securing scientific and foreign language equipment; grants are made to educational institutions to maintain a program of testing and guidance. Note that these grants and loans are made to the schools, not to the students or to their parents.

Despite all these precedents, the Post can dismiss the statement of the House majority leader that loans with interest are constitutional with this: "It is difficult to believe that he has ever read the opinions in the Everson case."

Well, fortunately the Supreme Court is still judging such matters and we believe in conducting any discussion as if that will still be the procedure.

The difference in the viewpoint toward aid to private schools—by loans bearing interest or by tuition grants—resolves itself to this: Are the private schools to be viewed as serving essentially a public purpose or just a church purpose? Catholics contend that parochial schools, all private schools, do serve a public purpose because their students receive the same education as that provided in a public school; Catholics also acknowledge that in addition, their students receive religious instruction. The opponents to aid to private schools contend that these schools serve essentially a church purpose, not a public purpose. The Supreme Court decisions acknowledge that the Catholic schools serve a public purpose but they also, naturally and necessarily, insist that no church, "religious activities or institutions" can be supported by tax moneys.

Curiously, predominantly Protestant countries, as England and The Netherlands, agree with the viewpoint of Catholics and consider Catholic schools, as other private schools, as serving a public purpose. In fact, in England and Netherlands, the government makes very large grants of money (not loans) for the construction of Catholic schools as it does for all private schools because they serve a public purpose. Despite the wave of sentiment and charity that wells up in us as the Feast of St. Patrick approaches, we cannot state that England and the Orange State are partial toward Catholics.

We realize that every country is entitled to have its own system, developed according to its constitutional history. We have always believed deeply in preserving reverence and respect for the Constitution and constitutional procedure. But the practice of other democracies which aid the public welfare should not be cavalierly disregarded. There is no grounds for dire warning of the Post that, "The only safe course is to keep Federal aid to education within the public schools." Where is the proof? There is overwhelming proof to the contrary.

May we repeat that discussion on constitutional matters should be carried out with respect for the beliefs of others and the authority of the Supreme Court? We are all fellow citizens and we all acknowledge the demands of justice and charity as well as the authority of the Supreme Court as the supreme arbiter.

Five Challenges to American Democracy

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by a leading scientist who pinpoints and analyzes five dangers the United States faces today. Edward Teller is a noted nuclear physicist whose work has earned him the title of "Father of the H-bomb." The article follows:

FIVE CHALLENGES TO AMERICAN DEMOCRACY
(By Edward Teller)

The Communist Party of the United States is small. It would be a mistake, however, to believe that it is insignificant. For many years it has pursued the goal of weakening our Government, of aiding the Soviet Union and of discrediting democracy. It has done so with skill and with some success.

The lifeblood of democracy is criticism and free discussion. For this criticism to be constructive, it must be objective and free of rancor. But it is inherent in human nature that discussions should become heated and bitter. One of the great challenges of the democratic way of life is to find methods by which our discussion can be kept moderate and helpful.

Communist Party members participate in public discussions with the aim of exacerbating evry conflict. They endeavor to show that problems cannot be solved in the context of our form of government; in fact, they do not aim at practical solutions, but try to use every imperfection in democracy to prove that democracy itself is not viable. By introducing into the discussion an all-too-human element they attack democracy at one of its sensitive points. And thus they induce doubts in many who are discontented or who are looking for a better way of life. Every Communist Party member has found frequent occasions to undermine faith in the process of gradual improvement. Communists often act in the name of a good cause rather than in the name of their party, but they have used each of these causes to make converts to their way of thinking, or at least to sow disunity among the democratic majority.

Communist Party activities have brought about countermeasures, some of which are ill-considered and aggravate the ill they want to cure. These are the countermeasures employed by the House Un-American Activities Committee and known to the whole world today as McCarthyism.

McCarthyism commits two basic mistakes: It strikes indiscriminately at real and imagined foes, and it limits freedom of discussion. The investigation of "un-American activities" has impugned the good faith of many who are completely without blame; it has leveled hurtful accusations at waverers; it has driven many into the camp of the enemy. "Witch hunting" has become the most effective target of anti-American propaganda, and has allowed Communists to masquerade under faked flags of freedom and democracy. What is worse, investigations of un-American activities have limited freedom of discussion. They have fostered an atmosphere where knowledge of Russia is suspect and acknowledgement of any Communist strength almost equal to treason.

Our best answer to Communist infiltration is not self-righteous investigation which presumes everything to be good only if it is American and everything to be evil if it is

not. Our answer must be full and free discussion. We can and should be convinced that our democracy will emerge stronger from such a discussion.

The world has become too complicated and we need specialists to make decisions for us. This is, in part, proper, but our reliance on specialists has become too great and there is a real danger that decisions will be made by a select few. Decision by the people is endangered. It is correct to say, of course, that the common man cannot hope to follow the complexities of political events in every country of the globe, but it is equally correct to maintain that in our shrinking world we are affected by the fate of every country. True, no layman can be familiar with all the intricacies of our modern technology. Few are familiar with the basic ideas on which our technical progress rests. At the same time, the future of our technical development depends on an intelligent appraisal of its foundations and its capabilities. Today, unfortunately, all this is left to the expert.

These conditions need not continue to be fully valid. Mass communication media could be used to acquaint our people with the history, habits and daily vicissitudes of our partners on this globe. Though science and technology have developed many ideas not readily accessible to every citizen, a great feat of integration has also been accomplished in science. Science thereby has become less complex and more systematic and can more easily be mastered by a student who has the determination to do so.

Detailed decision never has been appropriately made by complete discussion carried to the public. Much must be taken on faith by the voter. But it is dangerous if the last word on important issues is spoken by a group of specialists who are invested by popular belief with almost superhuman knowledge. The average man may safely turn to his neighbor for counsel on political questions. He knows the character of his neighbor and can judge to what extent he should follow the advice he gets. The specialist is invested with an aura of wisdom and impartiality which he actually possesses to no greater extent than his fellow beings.

Many specialists have accepted the responsibility thrust upon them with some reluctance. The real fault lies with the common man who shrinks from the heavy responsibilities he must undertake if democracy is to function.

It is generally believed that secrecy is necessary to limit the knowledge of the modern dangerous weapons. Yet there can be no quetsion that secrecy is not consonant with the full functioning of the democratic process. Secrecy can be used by those in power to hide their mistakes and it would be unrealistic to believe that this is never done. Democratic safeguards and checks have been established, but it is doubtful that these can ever become as effective as full and free discussion.

Secrecy has been adopted by the majority of nations as an aid to some phases of their government. The example of the United States has helped to strengthen this trend. At the same time secrecy inhibits communication between free nations and has erected a barrier which impedes the unity of the democratic countries. Our present policy of secrecy makes it difficult for us to present a completely convincing case against the Iron Curtain and the police measures of the Communist countries. We might press for an international agreement outlawing measures which restrict freedom of information and which would make the world safer and establish entry of genuine democratic ideas into the Soviet empire. Obviously, Russia will be slow to yield its reliance on secrecy, but the pressure of world opinion is a factor in Russian policy, too. So far, we have done little to apply such pressures.

We have, in fact, proceeded in the opposite direction. We have sought our safety in secrecy which is officially designated "security." What is the present value of this security? It has failed to prevent our worst enemies from acquiring every one of our major technical secrets. It has not delayed any country with fissionable materials from detonating an atomic bomb. To restrict the full functioning of the democratic process in order to buy this kind of "security" seems to indicate a diminished interest in democracy itself.

There is a further and deeper aspect of this question. Public interest in our secrets is not great. The average citizen is willing to leave the question of dangerous weapons to the specialist who is cleared. Many citizens seem averse to giving thought to the distasteful problem of these weapons. They would rather abolish the weapons themselves than learn about them. They do not even stop to inquire carefully how the question of secrets and weapons affect their fully justified and paramount desire for peace.

Secrecy and trust in the expert are twin dangers which tend to transform our democracy into a platonic government by the fully informed philosophers.

The dangers of the nuclear age require split-second decisions. These decisions can be submitted to the voter only after the fact. This is unavoidable. In principle, the delegation of authority for urgent decisions is not new and is in full agreement with a well-considered democratic philosophy. But the speed of the new age has affected us in still another manner. It calls for a faster change in our mental patterns than has been practicable in the past. We have turned away from isolationism with impressive determination, but we are already challenged to go further and to consider political and economic problems abroad on an equal footing with our domestic issues.

The basic challenge to democracy is whether or not we can adapt ourselves to our new environment with an unprecedented speed. It is clear that the world will not continue to exist half-slave and half-free. If all of it is to be free, we must be prepared for an exceptional and enduring effort which will require sacrifice, courage, and an unusually imaginative application of the principles of democracy.

The New Leader.

The New York Forum

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ZABLOCKI. Mr. Speaker, I would like to bring to the attention of my colleagues a special television program scheduled for presentation on April 20.

This 1-hour program is designed to brief Air Force Reserve officers on the changing role and the effectiveness of Government and the news media in focusing public attention on public affairs.

The participants in the program will include Dr. Arnold Toynbee, A. J. Liebling, of the New Yorker magazine, and Douglass Cater, of the Reporter magazine.

In the thought that it will prove of interest to my colleagues in the House, I am enclosing a copy of the letter containing further details which I received from Mr. Paul Melton, of WCBS–TV, the producer of this program, "The New York Forum":

WCBS-TV,
New York, N.Y., March 7, 1961.

Hon. CLEMENT J. ZABLOCKI,
U.S. House of Representatives,
Washington, D.C.

DEAR SIR: I should like you to know, as a fellow Air Force reservist, about an event scheduled for April 20 here in New York. The Air Force Reserve has asked me to produce at that time a keynote presentation for its sixth annual New York information seminar. This 1-hour session will brief Air Force officers on the shifting roles of Government and news media in giving public facts public attention in a mass society.

The idea is to take a hard look at basic beliefs regarding the theory and practice of public information. Dr. Arnold Toynbee will explore just why data on public issues is essential to a free society. He will also examine how the public earned its right to know and how that right has been guarded.

Having established why and how freedom demands facts, we will attempt to demonstrate that the responsibility of making these facts available is inherent now not only in Government but in news media. A. J. Liebling of the New Yorker will examine how effectively newsmen inform us about our Government today.

Finally, another speaker, probably Douglass Cater, will examine how well Government itself is going about the job of informing people about public affairs. In other words, we will examine whether censorship, handouts, regulation of news coverage, press agentry and political reprisals have dammed or polluted the stream of public information.

Charles Collingwood will narrate.

Do you agree that this presentation may deserve to be included in the CONGRESSIONAL RECORD?

Yours very truly,

PAUL MELTON,
Producer, the "New York Forum."

Greater Wilkes-Barre Industrial Fund Drive Goes Over Top

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Thursday, March 16, 1961, which reports and comments upon the truly amazing results of the Greater Wilkes-Barre industrial fund drive. The goal was $1,500,000 and as of last Wednesday this figure was topped by some $202,000, with still more to be pledged in the near future. This is a classic example of the full meaning of the often used term "Operation Bootstrap," and all of the people in my congressional district of Luzerne County who worked so hard and long and fully supported this badly needed fund drive are to be warmly congratulated for their faith in

the future of our area. I am sure the happy results of this drive bodes well for the economic advancement of our depressed area where unemployment at the present time runs some 17 percent of the work force.

The aforementioned editorial follows:

GREATER WILKES-BARRE HAS WON, BUT THERE IS A BIG JOB AHEAD

Greater Wilkes-Barre entered a new era last night when the 1961 Industrial Fund campaign to raise $1,500,000 for industrial development was oversubscribed by $202,076 with considerably more expected to come in the weeks and months ahead. Although the victory dinner and meeting in Irem Temple marked the close of the formal solicitation, actually the campaign is due to continue for 3 years—the period for which the pledges were made. This month and next especially, hundreds of unreported pledges are anticipated and until 1964 when payments will conclude new workers will sign for payroll deductions to match the contributions of fellow employees whose generosity helped to make their jobs possible.

Frankly, the outcome of the campaign exceeded the fondest expectations of the most optimistic boosters of the community. The response was overwhelming, as labor joined capital in an all-out effort in the public interest.

It was a happy coincidence that at the very moment cheers were ringing through Irem Temple, the Senate in Washington was enacting legislation to aid distressed areas in America, of which Greater Wilkes-Barre had the dubious distinction of being No. 1 on the list so many years. While the community will welcome a helping hand from Washington and Harrisburg and can put every dollar that is made available to good use, it is justifiably proud of the success of its efforts to help itself in the finest American tradition. It has not been content to sit back, bemoaning its fate and waiting for the Federal and State Governments to come to the rescue.

Perhaps no area has been hit so hard as Greater Wilkes-Barre. It has been knocked down, but never out, for it always has managed to get up from the floor and resume the battle with matchless courage and stamina. Britain, in its darkest hour, gave no more moving demonstration of pluck, for the trial by fire during the war lasted only a few short years, whereas Greater Wilkes-Barre has been lashed by disaster for more than a quarter century.

From all sides, its people and its communities have been battered. The anthracite industry, to which its economy was pegged, practically folded up and even today it's only a shadow of its former self. Nature struck blows that were as savage as any H-bomb, adding to the problems, but the brave men and women who stayed and carried on never faltered, never lost faith. Today, their service beyond the call of duty, for which thousands who earned them will receive no Medals of Honor on the homefront, is about to be rewarded.

With unparalleled generosity, unselfishness and sacrifice, they not only shared their limited means in outright gifts with no strings attached and no return on their money other than the benefits that accrue to the community, but they pledged their futures to the common cause.

During the past few weeks, the scent of victory has been in the air. Without being able to put our fingers on it or to explain it, we could sense a vast change, as barriers, erected in the community in years gone by, were swept away and all segments of the population marched forward together, shoulder to shoulder, with heads erect and confidence exuding. We invariably refrain from making predictions, but yesterday we could not resist the temptation to express the opinion editorially that there was a guarded optimism the campaign would go over the top and the minimum goal of $1,500,000 would be surpassed.

Let us not only take pride in this achievement, but let us tackle the future with the same solidarity in the ranks and unity of purpose that were the foundations of this triumph. We have won. With this spirit and with God's help, nothing can stop us now. We need only to consolidate our gains and reap the harvest.

To Andrew Hourigan, campaign chairman, to members of his organization, to contributors and solicitors, to those who offered their prayers and good wishes, as well as a helping hand in divers ways, our compliments not only for a magnificent performance, but for giving Greater Wilkes-Barre a new lease on life, for keeping faith with those who have gone before us and for meeting this major challenge, so future generations will have a stirring example to guide them if they are called on to keep a date with destiny.

The 153d Anniversary of the Hungarian Revolution

SPEECH
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. BUCKLEY. Mr. Speaker, in these days of world chaos and tribulation, when the struggle between freemen and the forces of tyranny is at its height, it is heartening to rise today to pay tribute to the brave Hungarian people in commemoration of the 153d anniversary of the Hungarian Revolution of March 15, 1848. This date is a national holiday to Hungarians throughout the world. It commemorates the valiant fight of the Hungarians against another form of tyranny that then existed—the oppressive Hapsburg dynasty. It is ironic that this revolution was finally crushed by the forces of the Austrian and Russian Armies. I say this is indeed ironic for there is still fresh in our minds the terrible cruelties imposed upon the Hungarian people by another Russian Army the forces of Red communism when they destroyed the October revolution of 1956.

The Russian Government itself has conceded that armed forces were used in 1956 to put down the free expression of the Hungarian people because they were determined to keep Hungary behind the Iron Curtain and because they knew of the extreme bitterness and despair of the Hungarian people under the puppet regime of terror than in power in Hungary. Since that date the United Nation General Assembly has successfully adopted 12 political resolutions on Hungary, demanding the withdrawal of Soviet troops and free elections under international control, while condemning the Soivet Union for the brutal crushing of the victorious Hungarian revolution.

Once again at the 15th session of the United Nations the Hungarian question is on the agenda. Once again I am certain that the sentiment of the free peoples of the world will be vigorously expressed in support of self-determination for the Hungarian people.

It is particularly tragic that in these days when free nations throughout the world are entering the community of the United Nations and increasing it daily—as witness the rapid development of freedom in the African Continent—that a nation such as Hungary which has had such a long tradition of liberty is still forced to live under a tyrannical yoke. However, in the inexorable movement of history I feel certain that liberty, freedom, and peace will once again come to the Hungarian nation.

Until that day arrives the spirit of these people shines forth both as an inspiration to us to continue on our democratic course and as a warning to be eternally vigilant against the forces that would deprive mankind of its fundamental rights.

I salute the people of Hungary and the Hungarian nation and I trust that in the not too distant future the true representatives of the Hungarian people will raise their voice in the free councils of the nations of the world.

An American Prize for Music and Art

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. THOMPSON of New Jersey. Mr. Speaker, on March 8, 1961, the newspapers reported that Pierre Salinger, White House press secretary, at a luncheon of the National Symphony Orchestra, suggested the establishment of an American music or art prize.

Great interest is being shown in this significant and worthy proposal, and it is being hailed as an historic step by civic and cultural leaders throughout our Nation.

National prizes are well known abroad where they have made major contributions to the discovery, encouragement, and advancement of young artists and thus have served important national purposes.

Young American artists should be similarly encouraged and it is to the credit of this administration that steps are at last being taken along these lines.

I am certain that my colleagues, from both parties, are ready to welcome this long overdue step and to assist this plan to become a reality without undue delay.

I include as part of my remarks articles from the Star, and the Post of Washington, D.C.:

[From the Evening Star, Mar. 20, 1961]

MOVE FOR ART, MUSIC PRIZES

President Kennedy is very interested in establishing an American music and art prize according to his press secretary, Pierre Salinger.

Mr. Salinger, said the President had asked him to explore the possibilities of such a prize

and had put him in charge of preliminary plans.

In a taped interview over WGMS yesterday, Mr. Salinger said that within the next 2 weeks a forming committee will be organized. He said the prize idea had received an overwhelming reaction and pledges of large amounts of money for the project have been received at the White House.

Mr. Salinger first suggested such a prize during a national Symphony Orchestra sustaining fund luncheon earlier this month, together with an idea borrowed from Violinist Isaac Stern for a national youth orchestra.

[From the Washington Post, Mar. 20, 1961]

MUSIC-ART PRIZE GETTING BIG SUPPORT, SALINGER SAYS

Presidential Press Secretary Pierre Salinger said yesterday there has been overwhelming response to the idea of a White House-sponsored American music-and-arts prize and the project is going forward.

Salinger said pledges of large amounts of money have been among the many communications received and within 2 weeks a forming committee will be organized. He said President Kennedy is very interested.

Salinger said also in a radio interview (WGMS) that there will be White House representation at the National Symphony Orchestra concerts, including the President and Mrs. Kennedy when their schedules permit.

The idea for such a national prize was first suggested by Salinger at a National Symphony fund luncheon early this month. The press secretary is an accomplished pianist and has played many concerts.

[From the Evening Star, Mar. 8, 1961]

PIERRE SALINGER SUGGESTS U.S. MUSIC OR ART PRIZE

(By Daisy Cleland)

Mr. Pierre Salinger, press secretary to the President, made a plea for music and the arts yesterday when he spoke at the National Symphony Orchestra's fund raising report luncheon.

The speaker called for two means in which he felt the youth of this country would benefit in the field of culture and in turn benefit the country.

The first he mentioned was "regional youth orchestras" which as "farm teams" would eventually "feed our national orchestras."

FOREIGN ASPECTS

Mr. Salinger said that a program of this kind could even reach abroad. This could be done with European tours of the youth orchestras which could stimulate interest among the youths in the countries visited.

The other suggestion Mr. Salinger had was the establishment of an American music or art prize.

However, he added, "I think for it to be effective it would have to be under the auspices of the White House."

Mr. Salinger foresaw in this latter suggestion that because the winners would come to Washington for proper recognition "there could focus a great deal (worldwide) of attention on this."

The speaker stressed, "I don't think America should be on the defensive about its music and its culture."

Mr. Salinger, who is a pianist in his own right, talked of "music and what it meant to me in my own life."

He started to study the piano when he was 5 years old, and said that he came from "a very musical family."

The personal experiences of meeting and hearing Rachmaninoff ("every time he came to San Francisco he was requested to play the 'Prelude in C Sharp Minor' and he hated it"), Stern, Yehudi Menuhin and Rubinstein made the speaker "remember as a boy the vista of music open up to me."

He added that after listening to Brahms, "Mindemith, and Ravel," "a kind of world opened to me, which I hope would be opened to others."

CHILDREN AND MUSIC

In stressing that he felt music was an important part in growing up, Mr. Salinger said, "They (children) should at least have the opportunity of hearing music as a child."

The press secretary added, "So many people go through life with a plug in their ear."

A surprise for the luncheon guests came when Mr. Salinger sat down at the piano after speaking, and played one of his own compositions. The piece is nameless, he said, and was composed when he was 15.

An interesting note is that Mr. Salinger first started to study in Toronto, Canada, when his family moved there.

His teacher was then Clement Hambourg at the Toronto Conservatory of Music. Mr. Hambourg has now gone into compositional jazz, and is running a gaslight club, according to Mr. Salinger.

A reunion will take place shortly between the teacher and student. Mr. Salinger said that he is going to Toronto on April 8 to speak at the Canadian National Newspaper Awards dinner, and that Mr. Hambourg had planned a concert for him.

Mrs. Dean Rusk, wife of the Secretary of State, was the guest of honor at the luncheon, and although not scheduled to speak, did ask to say a few words at the end of the reports.

She said that "it is exciting to come back to Washington after 10 years, and I am very moved to see your program."

[From the Washington Post, Mar. 8, 1961]

SALINGER NOTES NEED IN U.S. MUSIC

(By Marie McNair)

Presidential Press Secretary Pierre Salinger, who could get a job with the National Symphony Orchestra any time, thinks, the White House should establish an American music or art prize that would be sought by artists on a worldwide scale.

Before sitting down to demonstrate his own keyboard talents which once made him a child prodigy at the piano, the versatile Salinger told a luncheon meeting of National Symphony fund raisers yesterday that his proposed award would "be an affirmative step in the cultural field." Financing would come from private sources.

Salinger stressed that his award proposal is still in the idea stage, and he did not indicate whether the project has been discussed with President Kennedy. The prize should not be any ordinary prize, he said, but one with prestige enough to be sought by artists throughout the world.

He laments the fact that so many Americans never have the opportunity to know music, and he feels education in both music and art should begin with children. "It is sad that in this country, in spite of the great opportunities, such a small percentage of the people know and understand music, compared to the people of Europe," he said, adding: "So many people go through life with a plug in one ear."

Salinger's own performance at the piano was a composition he wrote at the age of 15. It was a moody, Gershwin-sounding piece of music he never gave a name.

Salinger was the speaker for the occasion. Mrs. Dean Rusk, wife of the Secretary of State, was a special guest, and had been told she didn't have to speak. But she became so enthusiastic that she couldn't restrain herself. She got up and told the workers what a privilege it was to be there and to represent the Secretary of State and his coworkers. "It's very exciting to be back here after 10 years," she said, to "find how magnificently the symphony's program has developed."

The President's press secretary began studying music when he was 5 and for a time it was thought he might become a concert pianist. He gave it up, however, when he was 12 years old.

Music has continued to play a part in his life and he told his audience yesterday that he's in favor of establishing a national student orchestra with teams throughout the country. They would tour the United States playing on college campuses and later possibly visit colleges in Europe.

U.S. Troubles Called Internal

EXTENSION OF REMARKS

OF

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. KEITH. Mr. Speaker, in this troubled era, when we are engaged in a struggle for men's minds with the Communist bloc nations, it is indeed encouraging to see American clergymen taking the lead in the spiritual struggle.

On November 13, Rev. Eugene D. Dolloff, pastor of the First Baptist Church in New Bedford, Mass., preached an inspiring sermon pointing out that communism can be conquered on a spiritual level.

In order that my colleagues and others who read the CONGRESSIONAL RECORD may have the benefit of Dr. Dolloff's message, I am inserting in the Appendix excerpts from his sermon, as reported in the New Bedford Standard Times:

U.S. TROUBLES CALLED INTERNAL—REV. DR. DOLLOFF WARNS OF SPIRITUAL LAXITY

"America hates everything for which communism stands, yet unwittingly the United States is probably communism's greatest ally," declared the Rev. Eugene Dinsmore Dolloff in a sermon on "Communism's Greatest Ally," at the First Baptist Church yesterday.

"This is due to internal weakness resulting from moral and spiritual deterioration," he continued.

"Communism is clever, far-sighted, optimistic. Russia does not seek, will do everything possible to prevent a 'hot war' with the United States. They believe, as things now exist, that America will become so weakened as to destroy herself, or make her ultimate overthrow easily possible a decade or two in the future. Poison is equally lethal taken by design or through accident."

EMPHASIS IN WRONG PLACES

"A thoughtful person, who is realistic, must observe evidence to validate this communistic belief. In our country today it appears that greater emphasis is placed upon beer than bread; Cadillacs and Chevrolets than Christ, cosmetics than the church; the dollar sign than the sign of the Star of Judaism or the sign of the Cross of Christianity; gambling than God; hormones than the home; liquor business than the business of the Lord; salacious literature than the Scriptures; saloons than salvation, stomach than the soul; Sunday as a gala holiday than a holy day; taxes than truth; victuals than virtue.

"America leads the world in motor cars, telephones, radios, schools, missiles. We also lead the world in murders, suicides, broken homes, and divorces. Church membership and attendance have reached an alltime high; so also has crime—far ahead

of population increase and increase in church membership and attendance.

"But have the moral and spiritual supports—the inner braces—been crumbling? Material prosperity is of small consequence if there is 'something lacking on the inside.'

"History offers eloquent witness to this assertion. Look upon ancient Israel. Behold mighty Babylon. Consider Rome—'Eternal Rome.' When corruption gnawed away their inward integrity they all collapsed."

URGED TO READ

"There is a cure available, there is 'a balm in Gilead.' However, even the most potent medicine cannot avail unless it is taken. Our own Nation must face up to the need, and then take its medicine. And let it be known beyond all peradventure that communism can be conquered only on a spiritual level.

"I suggest that we take three principles from the Communists' own book—'fight fire with fire.'

"Read the Book. All members of the party are required to read the writings of Marx, Engels, and Lenin. This must be done. By the same token the first challenge to Americans is to read God's Book—read it faithfully.

"Study the Book—daily. Adherents of the party must study their 'textbooks' every day. No exception to this rule. So every patriotic American is challenged to study God's Book—daily. Never are we to regard it as an outmoded antique, of value at best only to innocent children.

"Apply the principles of the Book to daily living. That is the only reason why party members read and study their 'textbooks.' So every American should adapt and become adept in the application of God's teachings to every phase of life. Whatever He says we should do.

"Communism is a merciless, heartless, horrible, godless reality. But, freedom-loving, God-fearing people have an all-sufficient serum by which its terrible venom can be conquered. This is the limitless potency of the Judaic-Christian religion—God's power working through stouthearted men."

"Operation Abolition"

EXTENSION OF REMARKS

OF

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ROUSSELOT. Mr. Speaker, a great many charges have been raised against the film "Operation Abolition," and many of my constituents have expressed deep interest in knowing the facts behind this film. I have, therefore, prepared a study which I believe is a straightforward answer to these charges. Under unanimous consent, I include this study in the Appendix of the RECORD:

CHARGES AND FACTUAL ANSWERS CONCERNING THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES FILM "OPERATION ABOLITION"

1. Charge: The demonstrators were not Communist inspired and Communist led.

Fact: (a) George Christopher, mayor of San Francisco, quoted from the San Francisco Examiner, May 18, 1960: "The mayor said that in his opinion last Friday's riot was Communist directed and that for the most part, unknowing and misguided students were innocent pawns of trained Communist agitators skilled in crowd control tactics."

(b) J. Edgar Hoover, quoted from Communist Target, Youth: "It is vitally important to set the record straight on the extent to which Communists were responsible for the disgraceful and riotous conditions which prevailed during the House Committee on Un-American Activities hearings. It is vitally important that not only the students involved in that incident, but also students throughout the Nation whom Communists hope to exploit in similar situations, recognize the Communist tactics which resulted in what experienced west coast observers familiar with Communist strategy and tactics have termed the most successful Communist coup to occur in the San Francisco area in 25 years.

(c) Judge Albert A. Axelrod, presiding judge at the San Francisco municipal court where those arrested at the riots appeared, made the following statement quoted on page A2 of the Washington Post, December 25, 1960: "I very definitely agree with the view of FBI Director J. Edgar Hoover that the city hall riot of last May 13 was instigated by Communist subversives."

(d) To clarify his position, which had been distorted in some quarters, Mayor Christopher made the following statement in his office on January 18, 1961: "Known Communists, and I repeat this emphatically, known Communists were in the lead of this demonstration. The students were dupes who joined some of these causers of agitation, believing it is an innocent and harmless expression of civil liberties, not realizing that while they are doing this they are at the same time violating every precept of the liberties they profess to cherish."

2. Charge: The San Francisco police were brutal in their handling of the students. No witnesses have been produced who can verify that the rioters provocated the physical conflict.

Fact: (a) J. Edgar Hoover, as quoted from "Communist Target, Youth": "One of the judges in a municipal courtroom in the city hall ordered the mob dispersed because the noise made it impossible for him to hold court. When an attempt was made to carry out the order, the crowd responded by throwing shoes and jostling the officers. An officer warned that fire hoses would have to be used if the crowd did not disperse, but the crowd, instigated by Communists who had maneuvered themselves into strategic positions, became more unruly. One of the demonstrators provided the spark that touched off the flame of violence. Leaping a barricade that had been erected, he grabbed an officer's night stick and began beating the officer over the head. The mob surged forward as if to storm the doors, and a police inspector ordered the fire hose turned on. At a party meeting on the night of May 20, 1960, Archie Brown (Editor's note: Archie Brown is second in command of the Communist Party in California) disclosed how the party intended to use a followup campaign with campus students as the target. He stated that the party planned to emphasize police brutality as a rallying cry to attract sympathy of student groups."

(b) Dave Hope, reporter, stated in an article on January 25, 1961, in the Oakland Tribune: "I was there. I was in the committee room, in the hallway, on the rotunda. I mingled with the demonstrators, watched the picket lines." On the following day in the Oakland Tribune in another riot article, he said, "I didn't hear any orders, but I did hear the police ask, even beg, the students to be quiet and to leave the city hall. All through the morning the police were polite and courteous. Even when the mob's mood turned ugly after the noon recess, and the hose was brought out, the students were warned repeatedly for a period of at least 10 minutes before the water was turned on. That didn't happen until one student grabbed an officer's night stick and slugged him with it." It has been claimed that no one was ever charged for this, however, that is dead wrong. Hope went on to say, "Robert J. Meisenbach, a University of California student who was then living in Berkeley, was arrested and charged with assault. His trial is still pending, now set for March 6."

(c) In the January 25 article, Hope went on to say, "Police were careful not to use excessive force. When two or three officers carry out one person, they're being gentle. The party never gets rough until it's man for man. So there was no chance for martyrdom and this was disappointing. Martyrs must above all else be dignified. You can't be a martyr when soaking wet you're skidded unceremoniously down a flight of stairs on the part of your anatomy that should have been spanked more frequently in your childhood."

(d) The San Francisco Chronicle, Saturday, May 14, 1960, in a lead article on page 1, reported that eight policemen and four students were injured. By the ratio of injuries it would appear that the so-called brutality was felt more by the police than the students.

3. Charge: The film is edited, distorted, out of sequence and deliberately slants the facts.

Fact: (a) Obviously, the film is edited, as is every film ever made. Three days of hearings, including the interviews of 46 witnesses cannot be shown in a 45-minute film without editing and ommission of most of the material. One thing is certain—the film does not show anything which in fact did not occur during the period of the hearings.

(b) If, as has been claimed, there had been religious students present who wore armbands to distinguish them from the other protestors, the bands would have been visible in the film. For certainly, the films scanned the crowd in a most comprehensive way and any armbands present could not have been deleted from the film.

(c) There are two errors in the film: One, Harry Bridges is shown leaving the city hall and the accompanying editorial comment says this was shortly before the riots. In fact, he arrived shortly after the rioters had been cleared by the use of fire hoses. The important fact is that Harry Bridges was there. Two, a sequence taken on Saturday was included in the Thursday sequence. David Hope stated in the Oakland Tribune, January 25, 1961, ". . . It is astonishing that no more serious mistakes were made in putting the film together and drafting the commentary."

(d) Mayor Christopher, in his statement of January 18, 1961, summed up by saying, "The pictures I believe speak for themselves. They are true. They are authentic. They tell the real story and, of course, at the same time, they are most unfortunate, to say the least."

4. Charge: The hearing room was unfairly "stacked" with those sympathetic to the Committee.

Fact: (a) J. Edgar Hoover, in "Communist Target, Youth," stated, "Approximately 25 percent of the spectators in the room were individuals under subpena and their friends, relatives, attorneys, and sympathizers. This group applauded and cheered the antics of Brown and Brodsky and booed, hissed, and ridiculed the committee at every opportunity."

(b) Seven Baptist ministers from the San Francisco Bay area, who were in attendance at the hearings, issued a joint statement which was printed on May 17, 1960, in the publication of the Foothill Baptist Church, 1530 Foothill Boulevard, Oakland, Calif., which stated, in part: "We sat in the rear of the room (hearing room) on a raised platform where we could easily observe the

proceedings, right in the midst of the student demonstrators. We studied the crowd carefully for hours and could easily discern which were the masterminds of the mob riots. It is our certain conviction that this indefensible demonstration against law and order was conceived, planned and directed by a few hard-core Communist agitators who were carrying out their textbook orders on insurrection with classic success."

These statements, as well as the film sequences taken within the hearing room, make it all to plain that, if anything, too many persons actively opposed to the Committee on Un-American Activities were inside the hearing room.

5. Charge: Sheriff Carberry of San Francisco stated, "There was no act of physical aggression on the part of the students."

Fact: The above quotation was attributed to Sheriff Carberry by Paul Jacobs in his article attacking the film which was published in the November 24, 1960 issue of the Reporter magazine. On December 6, 1960, Sheriff Carberry issued the following statement concerning the above quote:

"I did not make that statement. I do not know the author of the article, Paul Jacobs, and have never spoken to him and have never been interviewed by him.

"I was on the scene on Thursday and Friday (May 12 and 13) up to luncheon time when I went for a luncheon conference with the chairman of the committee, Mr. Willis. The disorders took place during the luncheon and I was in no position to know anything about them.

"I did not make that statement."

6. Charge: The film fails to name non-Communist groups by whom the protest against the committee was endorsed.

Fact: No one disputes that assertion. The important fact here is that those who were part of the rioting responded to the orders and directions of known, identifiable Communists. Furthermore, the HCUA might have been subject to justifiable criticism, if in the course of naming and identifying the known Communists who are shown in the film, the names of other, non-Commuist groups and persons were mentioned. The HCUA showed admirable and patriotic restraint in not identifying those groups so that the groups could not be subjected to "guilt by association."

7. Charge: Judge Axelrod, presiding judge of the San Francisco municipal court where the rioters were brought, stated: "I am convinced that they (the rioters) are not engaged in subversive activities nor in spreading subversive propaganda."

Fact: In a news article in the December 25, 1960 Washington Post, dateline San Francisco, December 24, 1960 (AP), Judge Axelrod is quoted as saying, "At no time did I condone their conduct. A single sentence (ed: the one quoted above in the charge) from my decision, quoted out of context, created that false impression. . ." After the sentence quoted above, the Judge went on to say, "However, they chose the wrong means to accomplish their purpose and let themselves become victims of those who profit by creating unrest, riots and the type of conduct which is outlawed by the penal code section I have quoted. As the result, they were arrested, fingerprinted, and photographed, and their efforts achieved a directly opposite result."

8. Charge: The film used to make "Operation Abolition" was obtained by the HCUA improperly and before the private TV stations which took the film could view it. Also, no credit lines are given. Furthermore, the sale of this film by a private firm is in violation of the copyrights of the stations which took the films.

Fact: (a) The film was obtained by subpoena, which is the normal legal way that evidence is obtained by any investigatory body or court of law. The TV people who took the film made no objections to this procedure. A copy of the film was made by Video Productions, Inc., Washington, at the request of the HCUA and quickly returned to the stations.

(b) No credit lines were placed on the film because the film was presented as an official document of the HCUA to be submitted to the Congress. In such cases, credit lines are not normally included, for the document is officially authenticated by the presenting committee and not by a private individual or firm.

(c) No copyright infringement suits have been filed against Video Productions, Inc., nor are any planned, so far as is known.

9. Charge: The film must be inaccurate because of all the furor and controversy that it has created.

Fact: Dave Hope, writing in the Oakland Tribune of January 25, 1961, sums it up: "From the audience reaction (to the film) I would say it is extremely effective and that is why extraordinary effort is made to discredit it. Few people have seen Communists in action. Here they are shown when called before the hearing, screaming imprecations, insults, and contempt at a committee of the U.S. Congress. Almost maniacal in their challenge to law and order, they present an ugly picture that cannot be adequately described in words but becomes all too vivid in the film. For those who took part in the riot and their apologists, the film is just too accurate, too revealing. That's why it is so bitterly attacked."

Pacific Northwest Being Threatened With a Loss of Its Low-Cost Power

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. WESTLAND. Mr. Speaker, the Secretary of Interior on March 9, 1961, appointed a five-man departmental task force to study the feasibility of a high-voltage transmission line between the Pacific Northwest and California. On the same day in another press release he said he has approved recommendations to proceed with surveys and design work on an all-Federal transmission line to distribute electricity from northern California to southern California.

The recommendation as approved would allow construction now of lines from the Trinity River project in northern California so they could be converted to a 500-kilovolt transmission line to Tracy, Calif., with the possible future use as a section of the proposed Pacific Northwest-California intertie to be studied by the task force.

Mr. Speaker, it appears to me the Pacific Northwest again is being threatened with a loss of its low-cost power. Back in April 1959, I warned that a clever move to rob the Pacific Northwest and the State of Washington of low-cost power was underway. I again repeat this warning with the added emphasis that the California interests now apparently have a champion in the Nation's Capital.

A task force made up of persons in the Department of Interior, it seems to me, would be subservient to the Secretary who appointed them. The term "task force" has the connotation of being a group especially selected to promote an interest or to get a particular job done. Members of this task force include Charles L. Luce, Bonneville Power Administrator; Morgan Dubrow, Washington office manager of the Bonneville Power Administration; Bernard Goldhammer, BPA commercial operations officer; Hugh P. Dugan, regional director of the Bureau of Reclamation; and Milton A. Case, general engineer in the assistant secretary's Washington office. A study group consisting of disinterested persons outside the Department, on the other hand, is a different proposition.

But, Mr. Speaker, is a study of this kind necessary? It would be surprising if it is needed in light of the fact that Mr. Luce has stated the Pacific Northwest will have a power shortage by 1965. Also, since March 1953 there have been studies of one sort or another. The Federal Power Commission reported the feasibility of 230-kilovolt intertie between Oregon and its neighbor to the south. Later Bonneville found that a 230-kilovolt line was feasible and advisable, but a larger line was not. Only one study, authorized by the Governor of California and paid for by California taxpayers, supported a high-voltage intertie, and its recommendation was based on numerous hypotheses.

The Secretary of the Interior said on March 9 that the estimated cost of federally constructed Trinity lines would be $28,800,000. I cannot understand the need for this huge outlay of taxpayers' money when the Bureau of Reclamation has been offered a contract for wheeling power over existing lines at one-half mill a kilowatt-hour.

Advocates of such an intertie between the Pacific Northwest and California first talked about dump power. But they knew and still know that if they can get a federally owned line into California, they will get firm power. Once the foot is in the door, there wil be no way to close it. Also, it is conceivable that the principle of a nationwide grid could be established, whereby, this Chamber could be lighted by electricity from the Pacific Northwest.

Mr. Speaker, I am not opposed to the possible sale of surplus seasonal power to California or other States if the sale would result in lower power costs for the Pacific Northwest, but I believe a high-load federally constructed line would inevitably lead to the transmission of firm power from Bonneville to California. Full integration, ideal as it might seem in terms of engineering principles, could result economically to the detriment of the Pacific Northwest in terms of increased regional power costs, retarded industrial growth and fewer new payrolls.

We in the Pacific Northwest need our Bonneville power for future growth. We need our present industries and we want to expand them. We want new industries to come to our great Pacific Northwest. Mr. Speaker, I intend to fight to keep our power from being turned over to California and other regions.

The Older Person and the Family in the Perspective of Jewish Tradition

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE OLDER PERSON AND THE FAMILY IN THE PERSPECTIVE OF JEWISH TRADITION

(Paper by Dr. Abraham J. Heschel, professor of Jewish ethics and mysticism of the Jewish Theological Seminary of America, at White House Conference on Aging, Jan. 9, 1961, Washington, D.C.)

I see the sick and the despised, the defeated and the bitter, the rejected and the lonely. I see them clustered together and alone. I hear them pray for the release that comes with death or clinging to a hope for somebody's affection that does not come to pass. I see them deprived and forgotten, masters yesterday, outcasts today.

What we owe the old is reverence, but all they ask for is consideration, attention, not to be discarded and forgotten. What they deserve is preference, yet we do not even grant them equality. One father finds it possible to sustain a dozen children, yet a dozen children find it impossible to sustain one father.

Perhaps this is the most embarrassing aspect of the situation. The care for the old is regarded as an act of charity rather than as the highest privilege. In the never dying utterance of the Ten Commandments, the God of Israel did not proclaim: Honor Me, revere Me. He proclaimed instead: Revere your father and your mother. There is no reverence for God without reverence for father and mother.

Father and mother are always older, more advanced in years. But is being advanced in years to be considered an advance or a retreat?

Ours is a twin problem: The attitude of society to the old and old age as well as the attitude of the old to being old.

The typical attitude to old age is characterized by fear, confusion, absurdity, self-deception, and dishonesty. It is painful and bizarre. Old age is something we are all anxious to attain. However, once attained we consider it a defeat, a form of capital punishment. Enabling us to reach old age, medical science may think, it gave us a blessing; however, we continue to act as if it were a disease.

More money and time are spent on the art of concealing the signs of old age than on the art of dealing with heart disease or cancer. You find more patients in the beauty parlors than in the hospitals. We would rather be bald than gray. A white hair is an abomination. Being old is a defeat, something to be ashamed of. Authenticity and honesty of existence are readily exchanged for false luster, for camouflage, sham, and deception.

A gray hair may destroy the chance for promotion, may cost a salesman his job and inwardly alienate a son from his father. The fear of being considered old has become a traumatic obsession. Only very few people are endowed with the rare and supreme courage to admit their true age without embarrassment. With the rest of us, courage and honesty go underground when the question of age is discussed. The most delightful resolution this Conference could pass would be to eliminate from now on any mention of the date of birth from the birth certificate.

A vast amount of human misery, as well as enormous cultural and spiritual damage, are due to these twin phenomena of our civilization: the contempt for the old and the traumatic fear of getting old. Monotheism has acquired a new meaning: the one and only thing that counts is being young. Youth is our god, and being young is divine. To be sure, youth is a very marvelous thing. However, the cult of youth is idolatry. Abraham is the grand old man, but the legend of Faust is pagan.

What is necessary is a revision of attitudes and conceptions. Old age is not a defeat but a victory, not a punishment but a privilege. In education we stress the importance of the adjustment of the young to society. Our task is to call for the adjustment of society to the old.

By what standards do we measure culture? It is customary to evaluate a nation by the magnitude of its scientific contributions or the quality of its artistic achievements. However, the true standard by which to gage a culture is the extent to which reverence, compassion, justice are to be found in the daily lives of a whole people, not only individuals.

The test of a people is how it behaves toward the old. It is easy to love children. Even tyrants and dictators make a point of being fond of children. But the affection and care for the old, the incurable, the helpless, are the true gold mines of a culture.

In our own days, a new type of fear has evolved in the hearts of men; the fear of medical bills. In the spirit of the principle that reverence for the old takes precedence over reverence for God, we are compelled to confess that a nation should be ready to sell, if necessary, the treasures from its art collections and the sacred objects from its houses of worship in order to help one sick man.

Is there anything as holy, as urgent, as noble, as the effort of the whole nation to provide medical care for the old?

This is one of the great Biblical insights: The needs of suffering humanity are a matter of personal as well as public responsibility. The representatives of the community are held responsible for the neglect of human life, if they have failed to provide properly for those in need. The ancient sages realized that it was not enough to trust to individual benevolence, and that care for the sick was a responsibility of the community.

It is in accord with this tradition that all major religious organizations have endorsed the principle of government responsibility and the use of the social security mechanism as the most effective medium for dealing with the problem of medical care for the aged.

It is marvelous indeed that for the first time in history, our society is ready and able to provide for the material needs of its senior citizens. Yet in addition to the problem of material security we must face the problem of psychological and spiritual security.

How to save the old from despondency, despair? How to lend beauty to being old? How to regain the authenticity of old age?

Old age is a major challenge to the inner life; it takes both wisdom and strength not to succumb to it. According to all the standards we employ socially as well as privately, the aged person is condemned as inferior. In terms of manpower he is a liability, a burden, a drain on our resources. Conditioned to operate as a machine for making and spending money, with all other relationships dependent upon its efficiency, the moment the machine is out of order and beyond repair, one begins to feel like a ghost without a sense of reality. The aged may be described as a person who does not dream anymore, devoid of ambition, and living in fear of losing his status. Regarding himself as a person who has outlived his usefulness, he feels as if he had to apologize for being alive.

The tragedy is that old age comes upon us as a shock for which we are unprepared. If life is defined exclusively in terms of functions and activities, is it still worth living when these functions and activities are sharply curtailed?

The tragedy, I repeat, is that most of us are unprepared for old age. We know a great deal about what to do with things, even what to do with people; we hardly know what to do with ourselves. We know how to act in public; we do not know what to do in privacy. Old age involves the problem of what to do with privacy.

While we do not officially define old age as a second childhood, some of the programs we devise are highly effective in helping the aged to become children. The preoccupation with games and hobbies, the over emphasis upon recreation, while certainly conducive to eliminating boredom temporarily, hardly contribute to inner strength. The effect is rather a pickled existence, preserved in brine with spices.

What is the role of recreation in the life of the aged? Is it merely to serve as a substitute for work one has done in earlier years? It seems to me that recreation is serving a different purpose, and that an over indulgence in recreational activities aggrevates, rather than ameliorates, a condition it is trying to deal with, namely, the trivialization of existence. In the past it was ritual and prayer that staved off that danger.

For thousands of years human existence was not simply confined to the satisfaction of trivial needs. Through prayer and ritual man was able to remain open to the wonder and mystery of existence, to lend a tinge of glory to daily deeds.

Modern man has discarded ritual, failed to learn the art of prayer, but found a substitute for both in occupational routine. He severed relations to God, to the cosmos, or even to his people, but became engrossed in the search for success. The excitement of success took the place of inspiration. Upon his retirement from labor or business, games and hobbies, the country club or golf take the place of church, synagogue, ritual, and prayer. This, then, is the fact: hobbies have become a substitute for ritual, not only for work. Should we not clearly distinguish between recreation as a substitution and recreation as a solution?

Authentic human existence includes both work and worship, utilization and celebration. We have a right to consume because we have the power to celebrate. The man of our time is losing the power to celebrate, instead of participating in spiritual celebration, he seeks to be amused or entertained. It is upon reaching the summit of his years, that man discovers that entertainment is no substitute for celebration.

What are the basic spiritual ills of old age?

1. The sense of being useless to, and rejected by, family and society;
2. The sense of inner emptiness and boredom;
3. Loneliness and the fear of time.

Let us analyze the root as well as the cure of these three ills.

I. THE SENSE OF BEING USELESS TO SOCIETY

While it is vitally important to see man in his relation to society, we must not forget that society is not man's only and ultimate referent. In spite of the fact that our ideologies and institutions continue to imply that the worth of a person is equivalent to his usefulness to society, every one of us entertains the keen expectation that other people will not regard him merely because of what he is worth to them, because he

serves to satisfy other people's needs, but as a being significant and valuable in himself. Just as the grandeur of the sun or an oak tree is not reducible to the functions it fulfills, so the grandeur of a human life is not reducible to the needs it is capable of satisfying. Even he who does not regard himself as an absolute end, rebels against being treated as a means to an end, as subservient to other men. The rich, the men of the world, want to be loved for their own sake, for their essence, whatever it may mean, not for their achievements or possessions. Nor do the old and sick expect help because of what they may give us in return. Who needs the handicapped, the incurably sick, the maintenance of whom is a drain on the treasury of the State? It is, moreover, obvious that such service does not claim all of one's life and can therefore not be the ultimate answer to his quest of meaning for life as a whole. Man has more to give than what other men are able or willing to accept. To say that life could consist of care for others, of incessant service to the world, would be a vulgar boast. What we are able to bestow upon others is usually less and rarely more than a tithe.

There are alleys in the soul where man walks alone, ways that do not lead to society, a world of privacy that shrinks from the public eye. Life comprises not only arable, productive land, but also mountains of dreams, an underground of sorrow, towers of yearning, which can hardly be utilized to the last for the good of society, unless man be converted into a machine in which every screw must serve a function or be removed. It is a profiteering state which, trying to exploit the individual, asks all of man for itself.

Human existence cannot derive its ultimate meaning from society, because society itself is in need of meaning. It is as legitimate to ask: Is mankind needed?—as it is to ask: Am I needed?

Humanity begins in the individual man, just as history takes its rise from a singular event. It is always one man at a time whom we keep in mind when we pledge: "With malice toward none, with charity for all," or when trying to fulfill: "Love thy neighbor as thyself." The term "mankind," which in biology denotes the human species, has an entirely different meaning in the realm of ethics and religion. Here mankind is not conceived as a species, as an abstract concept, stripped from its concrete reality, but as an abundance of specific individuals; as a community of persons rather than as a herd or a multitude of nondescripts.

While it is true that the good of all counts more than the good of one, it is the concrete individual who lends meaning to the human race. We do not think that a human being is valuable because he is a member of the race; it is rather the opposite: the human race is valuable because it is composed of human beings.

II. SENSE OF INNER EMPTINESS AND BOREDOM

Old age is an age of anguish and boredom. The only answer to such anguish is a sense of significant being.

The sense of significant being is a thing of the spirit. Stunts, buffers, games, hobbies, slogans are all evasions. What is necessary is an approach, a getting close to the sources of the spirit. Not the suppression of the sense of futility, but its solution; not reading material to while away one's time, but learning to exalt one's faculties is the answer; not entertainment but celebration.

To attain a sense of significant being we must learn to be involved in thoughts that are ahead of what we already comprehend, to be involved in deeds that will generate higher motivations.

There is a level of existence where one cannot think anymore in terms of self-centered needs and satisfactions, where the problem that cannot be silenced is: who needs me Who needs mankind? How does one relate himself to a source of ultimate meaning? The cry for such relatedness which gains intensity with old age is a cry for a referent that transcends personal existence. It is not experienced as a need from within but as a situation of being exposed to a demand from without.

Significant being is not measured by the amount of needs that agitate a person but by the intensity and depth of the response to a wisdom in relation to which my mind is an afterthought, by the discovery that the moment to come is an anticipation, an expectation, waiting to receive my existence. Significant being means experiencing moments of time as a comprehension which embraces me.

What a person lives by is not only a sense of belonging but also a sense of indebtedness. The need to be needed corresponds to a fact: something is asked of many, of every man. Getting older must not be taken to mean a process of suspending the requirements and commitments under which a person lives. To be is to obey. A person must never cease to be.

Our work for the aged is handicapped by our clinging to the dogmatic belief in the immutability of man. We conceive of his inner life as a closed system, as an automatic, unilinear, irreversible process which cannot be altered, and of old age as a stage of stagnation into which a person enters with his habits, follies, and prejudices. To be good to the old is to cater to their prejudices and eccentricities.

May I suggest that man's potential for change and growth is much greater than we are willing to admit and that old age be regarded not as the age of stagnation but as the age of opportunities for inner growth?

The years of old age may enable us to attain the high values we failed to sense, the insights we have missed, the wisdom we ignored. They are indeed formative years, rich in possibilities to unlearn the follies of a lifetime, to see through inbred self-deceptions, to deepen understanding and compassion, to widen the horizon of honesty, to refine the sense of fairness.

One ought to enter old age the way one enters the senior year at a university, in exciting anticipation of consummation. Rich in perspective and experienced in failure, the old person is capable of shedding prejudices and the fever of vested interests. He does not see anymore in every fellow man a person who stands in his way, and competitiveness may cease to be his way of thinking.

What the Nation needs is senior universities, universities for the aged where wise men should teach the potentially wise, where the purpose of learning is not a career, but where the purpose of learning is learning itself.

The goal is not to keep the old man busy, but to remind him that every moment is an opportunity for greatness. Inner purification is at least as important as hobbies and recreation. The elimination of resentments, of residues of bitterness, of jealousies and wrangling, is certainly a goal for which one must strive.

Only very few people realize that it is the days of our youth that we prepare ourselves for old age.

This is an imperative we must be conscious of even in youth. Prepare spiritually for old age and learn how to cultivate it. The ancient equation of old age and wisdom is far from being a misconception. However, age is no guarantee for wisdom. A Hebrew proverb maintains: "A wise old man, the older he gets, the wiser he becomes; a vulgar old man, the older he gets, the less wise he becomes." People are anxious to save up financial means for old age; they should also be anxious to prepare a spiritual income for old age. That ancient principle—listen to the voice of the old—becomes meaningless when the old have nothing meaningful to say. Wisdom, maturity, tranquillity do not come all of a sudden when we retire from business. We must begin teaching in public schools about the virtues that come to fruition, about the wisdom and peace that arrive in old age. Reverence for the old must be an essential part of elementary education at school, and particularly at home.

III. LONELINESS AND THE FEAR OF TIME

One of the major ills of old age as well as one of the roots of the general fear of old age is the fear of time. It is like living on a craggy ridge over a wide abyss. Time is the only aspect of existence which is completely beyond man's control. He may succeed in conquering space, in sending satellites around the moon, but time remains immune to his power; not even General Motors can bring back a moment gone by. Being used to dealing with things he can manage, the encounter with time is the most stunning shock that comes to man. In his younger years, he is too busy to react to it; it is in old age that time may become a nightmare.

Indeed, we know what to do with space but do not know what to do about time, except to make it subservient to space, or to while it away to kill time. However, time is life, and to kill time is to murder. Most of us seem to labor for the sake of things of space. As a result we suffer from a deeply rooted dread of time and stand aghast when compelled to look into its face. Time to us is sarcasm, a slick treacherous monster with a jaw like a furnace incinerating every moment of our lives. Shrinking, therefore, from facing time, we escape for shelter to things of space. The intentions we are unable to carry out we deposit in space; possessions become symbols of our repressions, jubilees of frustrations. But things of space are not fireproof; they only add fuel to the flames.

Most of us do not live in time but run away from it; we do not see its face, but its makeup. The past is either forgotten or preserved as a cliche, and the present moment is either bartered for a silly trinket or beclouded by false anticipations. The present moment is a zero, and so is the next moment, and a vast stretch of life turns out to be a series of zeros, with no real number in front.

Blind to the marvel of the present moment, we live with memories of moments missed, in anxiety about an emptiness that lies ahead. We are totally unprepared when the problem strikes us in unmitigated form.

It is impossible for man to shirk the problem of time. The more we think the more we realize; we cannot conquer time through space. We can only master time in time.

Time is man's most important frontier, the advance region of our age, a region where man's true freedom lies. Space divides us, time unites us. We wage wars over things of space; the treasures of time lie open to every man.

Time has independent ultimate significance; it is of more majesty and more provocative of awe than even a sky studded with stars.

Time is the process of creation, and things of space are results of creation. When looking at space we see the products of creation; when intuiting time we hear the process of creation. Things of space exhibit a deceptive independence. They show off a veneer of limited permanence. Things created conceal the Creator. It is the dimension of time wherein man meets God, wherein man becomes aware that every instant is an act of creation, a Beginning, opening up new roads for ultimate realizations. Time is the presence of God is the world of space, and it is within time that we are able to sense the unity of all beings.

Time is perpetual presence, perpetual novelty. Every moment is a new arrival, a new bestowal. Just to be is a blessing; just to live is holy. The moment is the marvel; it is in evading it that boredom begins that ends in despair.

Old age has the vicious tendency of depriving a person of the present. The aged thinks of himself as belonging to the past. But it is precisely the openness to the present that he must strive for.

He who lives with a sense for the presence knows that to get older does not mean to lose time but rather to gain time. And, he also knows that in all his deeds, the chief task of man is to sanctify time. All it takes to sanctify time is God, a soul, and a moment. And the three are always here.

It is still considered proper to expect that the first responsibility in planning for the senior citizen rests with the family. Such expectation presupposes the concept of a family which is not only an economic unit but also an interplay of profoundly personal relations. It thinks of the family not only as a process of living together but also of a series of decisive acts and events in which all members are involved and by which they are inwardly affected.

What is characteristic of the modern family is that on the level of profound personal experience—parents and children live apart. The experiences shared at home are perfunctory rather than creative. In the past, it was the role of the father to lead the children through moments of exaltation. Whatever stood out as venerable and lofty was associated with the father. Now we are entering a social structure in which the father is becoming obsolete, and in which there are only three ages: childhood, adolescence and old age. The husband of the mother is not a father, he is a regular guy, a playmate for the boys, engaged in the same foibles and subject to similar impulses. Since he neither represents the legacy of the past nor capable of keeping pace with the boys in the pursuit of the future, his status is rather precarious.

Children today experience their highest moments of exaltation in a children's world, in which there is no room for parents. But unless a fellowship of spiritual experience is reestablished the parent will remain an outsider to the child's soul. This is one of the beauties of the human spirit. We appreciate what we share, we do not appreciate what we receive. Friendship, affection is not acquired by giving presents. Friendship, affection comes about by two people sharing significant moment, by having an experience in common. You do not attain the affection of your teenage son by giving him an expensive car.

It is not necessary for man to submit to the constant corrosion of his finest sensibilities and to accept as inevitable the liquidation of the inner man. It is within the power of man to save the secret substance that holds the world of man together.

The real bond between two generations is the insights they share, the appreciation they have in common, the moments of inner experience in which they meet. A parent is not only an economic provider, playmate, shelter, and affection. A human being is in need of security, he is also in need of inspiration, of exaltation and a transcendent meaning of existence. And to a child, the parent represents the inspiration, the exaltation and the meaning. To my child, I am either the embodiment or the distortion of the spirit. No book, no image, no symbol can replace my role in the imagination and the recesses of my child's soul.

It is easy to speak about the things we are committed to; it is hard to communicate the commitment itself. It is easy to convey the resentments we harbor; it is hard to communicate the praise, the worship, the sense of the ineffable.

We have nearly lost the art of conveying to our children our ability to cherish the things that cannot be quantified.

This, then, is a most urgent problem: How to convey the inexpressible legacy, the moments of insight, how to invoke unconditional commitment to justice and compassion, a sensitivity to the stillness of the holy, attachment to sacred words?

There is no human being who does not carry a treasure in his soul; a moment of insight, a memory of love, a dream of excellence, a call to worship.

We must seek ways to overcome the traumatic fear of being old, prejudice, discrimination against those advanced in years. All men are created equal, including those advanced in years. Being old is not necessarily the same as being stale. The effort to restore the dignity of old age will depend upon our ability to revive the equation of old age and wisdom. Wisdom is the substance upon which the inner security of the old will forever depend. But the attainment of wisdom is the work of a life time.

Old men need a vision, not only recreation.

Old men need a dream, not only a memory.

It takes three things to attain a sense of significant being: God, a soul, and a moment. And the three are always here.

Just to be is a blessing. Just to live is holy.

Nationwide Traffic in Obscene Materials

EXTENSION OF REMARKS

OF

HON. WILLIAM W. SCRANTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. SCRANTON. Mr. Speaker, a number of Representatives and Senators have introduced legislation in both Houses calling for the establishment of a Presidential Commission to deal with the nationwide traffic in obscene materials. Similar legislation was also introduced last year. It passed in the Senate, but failed to get out of committee in the House.

There is growing concern over this problem among America's parents. Since children and adolescents are the prime targets of the smut peddlers, this concern is understandable. And since it has been estimated that the traffic in obscene materials in the United States has now reached a volume of $1 billion a year, it is evident that their concern is most timely.

It would seem that Members of Congress can be no less concerned with this problem. For those Members who may not have had the opportunity to give serious consideration to the proposals calling for a Presidential commission to look into this problem, I am inserting here excerpts of letters from representative clergymen from my home district. It is clear that their views reflect the thinking of clergymen and concerned citizens in general across the Nation, and it would seem clear that the Congress has a definite obligation to respond to this concern.

The excerpts follow:

Father Karl Luther Memford, St. John's Lutheran Church, Scranton, Pa.: "* * * Let me commend you on proposing an indispensable foundation for a truly needed attack on a real evil. From my experience both in newspaper work and as an Air Force chaplain in two wars, I can verify the insidious and pervasive nature of obscene literature. Perhaps printed matter would be a more accurate description than 'literature' * * *."

Rt. Rev. Msgr. Thomas J. Cawley, editor in chief, the Catholic Light, Scranton, Pa.: "The February 23 issue of the Catholic Light which I enclose will advise you of my own concern with the traffic in smut and of my feeling that House bill 3686 which you sponsored will go a long way toward eliminating this threat to the moral health of all American citizens, regardless of their age or station in life.

"I note with gratitude and pleasure that you recognize the need for cooperation on every level, if any dent whatsoever is to be made in this nefarious business. For years the Light has been insisting that neither laws, nor parents, nor churches, nor committees will ever succeed by themselves. Each needs all the others; all need the help of each.

"Even then the battle will be fierce, for evil, greedy men do not easily surrender millions of dollars however tainted they may be.

"Accordingly, you may expect a fight at every step of the way."

Rev. Dr. William D. Golightly, Immanuel Baptist Church, Scranton, Pa.: "* * * I am of the opinion that you are on the right track. If this bill is passed it ought to accomplish the things many of us have hoped for through the years. It is my personal opinion that much can be done to prevent the transmission of such material by the combined efforts of Federal, State, and local governments. I sincerely hope your bill will be passed. Your bill seems to lay the responsibility where it belongs for it calls upon all of us to perform a duty.

"I am personally pleased that some decided step has been taken to combat the traffic in obscene literature and hope and pray for the success of your bill."

Rev. Dr. Mark R. Thompson, Westminster Presbyterian Church, Scranton, Pa.: "* * * My impression is that this bill provides for a channel at the Federal level to deal with this traffic which is as much a national as a local problem. Very few people are ever against anything that can be done to ferret out the kind of materials that apparently are being made easily available to our youth. As I understand it most of the criticism and the danger of such legislation and action springs from those who administer it. At this point the makeup of the Commission should be helpful.

"In my mind the last agency that should ever have expediting powers in the matter of dealing with such materials or in matters pertaining to censorship is the police department. In some cities a temporary enthusiasm without much in the way of a thoughtful, definitive policy has created a kind of gestapo attitude which in turn takes away from the effort the support of the very people that you need.

"When I was closely involved in the Navy's concern for the protection of moral standards, I became aware of the degree to which our Nation's moral health has been threatened by the professional promoters of pornography. I certainly think that anything that can be done, without violating the freedoms in which we believe to bring about a healthier community in which to raise our families, will be a great service to our Nation."

Rev. Dr. Richard K. White, St. Luke's Church, Scranton, Pa.: "* * * For many years I have felt that there should be some general law shaping and controlling much of our printed matter of the noxious and obscene type and especially the media by which it is circulated (in many cases through our postal department in rather devious

methods of disposal). Much of the material you refer to in your bill is just plain filth and no real excuse for its publication or traffic, except by those who profit upon the curiosity of the youth and mentally unbalanced. We could certainly live without it. The youthful minds could profit by using this time to better advantage.

"The problem is how to get to the grassroots and stunt its growth. Your bill seems to be the logical approach in this direction and the cross section of representation on the Commission should prove valuable in that they will be a nonpartisan group interested in general welfare rather than political in nature, which sometimes kills a good moral approach to the question. Your bill takes these things into consideration with the hope of overcoming the sleeper element, which causes most bills like this to die in committee."

Mr. Goldberg Speaks Firmly on Union Responsibility

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star under date of March 16, 1961.

I believe that it will be of interest to the entire membership of the Congress, and I respectfully commend it to their reading:

MR. GOLDBERG SPEAKS FIRMLY ON UNION RESPONSIBILITY

Arthur J. Goldberg, Secretary of Labor, has proved himself to be a man who can shake a stern finger at either management or labor. Indeed, we have the impression that he has of late been shaking his finger most sternly at labor. More precisely, we have the impression that Secretary Goldberg is speaking now from the perspective of a public servant who represents not only labor, from whence he came, but capital and the public.

The Secretary is to be congratulated on his apparent recognition of the responsibility that he now has to the entire Nation. There were some in the business community who had their doubts about the special counsel for the AFL–CIO who received the Kennedy call. But Arthur Goldberg clearly was speaking in the public interest in Philadelphia recently when he said that "labor organizations and labor leaders who abide by the letter of the Labor-Management Reporting and Disclosure Act of 1959 are observing only the minimum standards of conduct expected of them."

We may note, for the record, that Goldberg has not always spoken thus. Last year, in the Northwestern University Law Review, he wrote of a Landrum-Griffin law weighted against labor. Then—and understandably so—he voiced the labor viewpoint.

But in Philadelphia, the Secretary spoke from another point of view, and it is to his credit that he did. Thus, it seems to us, there is a persuasive answer to the chief question raised by the Goldberg appointment: Could this man of great talents once known as labor's idea man accept fully his new responsibilities to the entire public?

Obviously the Goldberg record in the Cabinet cannot yet be assessed. We may note, however, that labor which he once represented so assiduously has become big business. The test of labor's maturity lies in a willingness to acknowledge its proper place as only one part of the economy. In a sense, the test applies to Goldberg, too.

Thus it is doubly significant that he should, at a union convention, stress that "the problems of society, and programs to solve them, are the problems of each member of society, not somebody else's entirely." We see in this new Arthur Goldberg a strong hope for the future of labor-management relations in the United States.

United Nations Activities in Africa

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1961

Mr. LINDSAY. Mr. Speaker, I have recently had the privilege of listening to a uniquely farsighted and penetrating statement by Mr. Paul G. Hoffman entitled "United Nations Activities in Africa." Mr. Hoffman, the Managing Director of the United Nations Special Fund, delivered these remarks on March 13 to the delegates of more than 100 national organizations meeting at the Statler-Hilton Hotel in Washington, D.C., in the annual meeting of the American Association for the United Nations. The general theme of the conference was "The United Nations in Crisis."

Mr. Hoffman's current position as Managing Director of the United Nations Special Fund is his most recent contribution in a long and distinguished career, largely in the public service. Mr. Hoffman began his business career as a salesman for the Studebaker Corp. in Los Angeles in 1911, becoming vice president of the corporation in 1925, and president in 1933. From 1942 to 1948 he served with distinction as chairman of the board of trustees of the Committee for Economic Development and as Administrator of the U.S. Economic Cooperation Administration. In 1950 Mr. Hoffman was appointed president and trustee of the Ford Foundation, a position from which he resigned in 1953 to become chairman of the board of the Studebaker Corp. and then of the merged Studebaker-Packard Corp.

During the 11th regular session of the General Assembly, Mr. Hoffman was a member of the U.S. delegation, serving principally as delegate to the Economic and Financial Committee of the Assembly. He is the author of "Seven Roads to Safety" and "Peace Can Be Won," and was awarded the Freedom House Award in 1951.

Paul Hoffman is a distinguished American and an outstanding international public servant. As a dynamic Managing Director of the United Nations Special Fund for economic development, he has contributed new strength and effectiveness to the world organization.

Mr. Speaker, I am certain that Paul Hoffman's recent speech on "United Nations Activities in Africa" will be of real interest and instructiveness to the Congress and I, therefore, have asked unanimous consent that these remarks be inserted in the RECORD:

UNITED NATIONS ACTIVITIES IN AFRICA

No matter what any Texan present may think, the eyes of the world are not on Texas—they are on Africa. Hardly a day goes by without some new crisis in the Congo and these, together with eruptions in other countries, have kept Africa in the headlines. The news of Africa has been of conflicting but a great deal of quiet work has been going on to assist the African nations inspeeding their economic development. I have been asked to tell you the part the United Nations is playing in this effort.

I shall first try to give you an idea of the dimensions and character of the developmental problem in Africa. The continent is larger than all of North America and Western Europe combined. It comprises one-fifth of the world's total land area. There are some thirty countries, colonies and territories for which the U.N. has some measure of responsibility. The population of these countries is presently estimated at 240 million.

Africa is a continent of contrasts. Most of its countries are rich in natural resources—some have virtually none. Most of the countries are under-populated, but Egypt and several other countries are faced with serious problems of overpopulation. Near Lake Chad is a land area with the world's heaviest rainfall—386 inches per year—while in the nearby Sahara Desert only an occasional raindrop falls. Africa has two of the world's largest rivers, the Nile and the Congo, but they are the only two with unimpeded access to the sea. In Egypt we have the world's oldest civilization, while in Central Africa there are large areas untouched by civilization, where natives live much as did the Neanderthal Man.

Not only is there a diversity of conditions among the countries of Africa but oftentimes within a country one finds land that is lush and land that is sterile, swamp lands and deserts, to say nothing of peoples, some sophisticated and some primitive. Clearly, talk of an overall program for the development of Africa is utterly unrealistic. Every country requires a program hand tailored to its condition.

And yet, with all the diversity in Africa there are certain characteristics shared by almost all countries in a marked degree:

1. The leaders of these countries are faced with a demand for the immediate conquest of poverty, illiteracy and chronic ill health. In the case of the newly emerging countries, the demand for a better life is particularly insistent because the people of these countries were too often led to believe that independence would automatically bring prosperity.

2. All countries lack comprehensive knowledge of their physical or natural resources.

3. All of them are desperately short of trained government administrators, professional men, business leaders and skilled workers.

Assisting the African countries in acquiring a comprehensive knowledge of their physical or natural resources presents no insurmountable obstacles. The techniques for analyzing soils, charting river flows, investigating minerals resources, appraising forests, analyzing potentials for commercial fishing, are known. The U.N. and the Specialized Agencies have had a rich experience in this type of work. They have also had a decade of experience in other fields of technical assistance. Thousands of experts have taught new methods, new skills to the nationals in more than 100 countries and territories. And almost 10,000 nationals of the less developed countries have been given

fellowships for training in institutions in the more advanced countries.

The technical assistance program of the U.N. for Africa has been sharply stepped up from 1960 to 1961. In 1960, something over $4 million was devoted to such activities. In 1961, more than $10 million.

The Special Fund is assisting in the financing of some 15 surveys calling for total expenditures of $18.5 million, to which the Special Fund contribution is approximately $10 million.

I have recently returned from a trip to Africa where I inspected a number of our Special Fund projects. As a specific example of a rich but little used resource I cite the Niger River. A study for the development of that river has been underway and is, in fact, just about completed. There is every evidence that, with the construction of a 150-foot dam, the waters of that river will be available for the irrigation of thousands and thousands of acres of potentially rich land, for the generation of millions of kilowatts of cheap power, and navigation on the river will be greatly improved.

Let me give another specific example from another country—Ethiopia. One of its principal rivers is the Awash. Here again, its waters have been used but little and yet preliminary studies indicate that, with control of the waters of that river, the Awash Valley can become one of the most fertile valleys in all Africa. In fact, the prospects of this are so bright that a British syndicate signed an agreement with the Ethiopian Government to supply $35 million of capital for a settlement project in the valley, provided the intensive survey, now underway with United Nations assistance, measures up to the preliminary findings.

And now I would like to talk about the problems of assisting the African countries in making better use of their human resources. There is plenty of evidence that the people of these African countries can be trained to be good administrators, good engineers, good doctors, good technicians and good farmers. The size of the task, however, is staggering. Of the 240 million people in Africa, I do not believe that 80 percent can read or write, and I would be surprised if as much as 30 percent of the children of school age are currently attending school. It would be good if all Africans at or over school age could read and write, but that would be far from enough. Millions upon millions of these people must be given secondary education as well. There are also immense needs for vocational training. And finally, as a critical factor in economic development, we have the necessity to train vast numbers of higher and middle level administrative, scientific and technical personnel.

How many of these are required over the coming decade? Global figures for Africa are simply not available, but a clue is given in the case of Nigeria, whose needs for skilled manpower have been estimated rather carefully. Nigeria will need to train over the next 10 years 20,000 top-level administrators, professional technicians, managers and business executives. It will also need some 40,000 middle-level technicians—for building and industrial programs, for health services, teaching, and for supervisory positions in government and business. Now these are the requirements for people trained for highly skilled occupations and for only one country in Africa. And they represent the top of the educational and training pyramid. Think of what this implies in terms of the broader lower part of the pyramid that will also be necessary—of the enrollment in grade schools and high schools, and of the number of teachers, school buildings, libraries, and laboratories required.

Here indeed is a staggering job, one that is impossible with the resources currently available for it. But there is no time to lose in getting on with the task, for education and technical training must go in advance of significant economic development. Happily, as I said, the people have the capacity to learn.

The U.N. hopes to make a most significant contribution in the educational field. Both UNESCO and ILO have quite substantial programs financed from their own funds and by the United Nations Expanded Program of Technical Assistance. In addition, the special fund is assisting in the financing of a total of 24 educational and training projects calling for expenditure of more than $50 million, to which the special fund will contribute approximately $20 million. An idea of the emphasis we in the Fund are putting on training is disclosed by the fact that in our May 1961 program eight of our thirteen recommended projects for the African countries are in the training field.

In furtherance of the work of the United Nations, the Specialized Agencies and the special fund, the United Nations is rapidly developing a chain of permanent offices throughout Africa. Resident representatives are now actively at work in Ghana, Nigeria, Somalia, Togo, and the Congo, and are in the process of appointment to Madagascar, Senegal, Tanganyika, and the countries of the former French community in Africa south of the Sahara.

A report on U.N. activities in Africa would not be complete without special mention of its civilian operations in the Congo. Over 175 U.N. advisers and experts, plus some 65 dedicated Red Cross personnel working under the U.N. banner have labored selflessly over the past 6 months striving to restore the economic level of the Congo and to carry on essential public services. Since the crises of July 1960, U.N. emergency programs have helped in the reactivation of the port and railway systems of the country, the distribution of huge quantities of food and milk to the needy, a start on public works programs for employment relief, and protection of the water supply in major centers. The telecommunication system of the country has been kept running largely through U.N. efforts, as have the major airports, through the uphill efforts of air traffic control, air radio maintenance, and meteorological teams. With the departure of hundreds of doctors, the hospitals of the country have been kept in operation by WHO and Red Cross teams, working often under the most difficult conditions. May I cite just one isolated but illustrative activity, the organization by the U.N. Public Health Adviser in Luluabourg of a "refuse" week, during which 3 months accumulation of garbage was removed in this important city, thus preventing the obvious and serious consequences which might have ensued. More recently, the U.N. has undertaken a herculean program of relief—both food and medical assistance—to the 300,000 destitute refugees in Kasai Province. Within the past few weeks, a daily death toll of 200 in this region has been cut by over 75 percent.

Less spectacular but constructive progress has been made through U.N. assistance in preventing financial collapse, in preventive medical programs, in training of civil servants, in the revision of the social security scheme, in the arrangement of training abroad for Congolese in the fields of medicine, meteorology, labor instruction, etc.

Admittedly, this unprecedented effort of the U.N. in a single country has suffered from the political events and governmental instability, but it is a record of marked accomplishment, with the groundwork laid for long term economic improvement once the political situation has improved materially.

In conclusion I would like to offer certain suggestions which would, I believe add to the effectiveness of our aid programs not only in Africa but in all parts of the world. I suggest:

First, that we must put an end to all talk that implies that assistance from one nation to another is an act of charity. Such an approach is paternalism and paternalism has no place in relations among sovereign nations. There is only one relationship that is sound—and that is one of partnership. All nations must in their own self-interest accept proportionate responsibility for the achievement of a rapidly expanding world economy. The first responsibility of each country is to speed its own development. Its second responsibility is to assist other nations in accordance with its means. No nation is so rich that it cannot profit from an expanding world economy and no nation is so poor that it cannot help other nations.

Second, that helping low-income countries speed their development should be accepted as an objective worthy to be pursued for its own sake. Economic aid should not be thought of as an instrumentality of the cold war nor for obtaining a preferred commercial position for a donor country. There are practical as well as ethical reasons for concentrating on the one goal of economic development. The practical reason is that without such concentration the chance for success is remote. We all know that speeding development is much more difficult than promoting recovery. Nevertheless, I do not believe that the Marshall program would have been successful if it had not been for our concentration on the one goal of recovery. We refuse to become involved in the cold war and never sought a commercial advantage for the United States. We adhered strictly to the guidelines laid down by General Marshall in his commencement address at Harvard University in June 1947 when he stated:

"Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist."

Third, that much greater emphasis should be placed on preinvestment activities. Included in preinvestment activities are sending experts into a country under technical assistance programs; bringing nationals out of countries on fellowships for training in the more advanced countries; making surveys of natural resources; and assisting in the establishment of indigenous educational and training institutes. Billions of dollars of investment have been lost because millions were not spent in adequate preparatory activities.

Fourth, that a very pragmatic approach be employed in determining whether aid should be given through the United Nations, through regional organizations or on a bilateral basis, namely, which channel will yield the most development per dollar. I would be less than frank if I did not say that if this test is applied the result is certain to be a substantially increased use of the U.N. There are several reasons. First, as I said earlier because in the U.N. and its 13 specialized agencies reposes the richest experience that can be found anywhere in virtually every field of development activity. The U.N. draws on the whole world for its technicians. Second, assistance through the U.N. guarantees that there is no paternalism. U.N. assistance is a completely cooperative endeavor with a voice given to countries whatever their size or wealth and with all countries contributing to the cost. Third, because the low-income countries prefer assistance through the U.N., it is possible for the U.N. to insist upon the recipient countries putting forth a maximum of self-help. As proof that this can be done, I cite the fact that the Special Fund's contribution to the 115 projects thus far approved by the Governing Council is $96 million, that of the recipient countries $131 million, for a total of $227 million.

Fifth, that new emphasis be given to adjusting the educational program of the less-developed countries so that they will make a maximum contribution to the achievement of their economic goals. This means that primary, secondary, vocational, technical, and university education must have their appropriate share of whatever educational funds are available. In most of the less-developed countries of which I have knowledge, far too little attention has been given to secondary school education. The need is for a balanced program.

Sixth, that the advanced countries give careful thought to finding means to increase the supply of experts which have so important a part to play in the developmental process. At the present time there is an appalling shortage of fisheries, forestry, and soil experts, to say nothing about engineers and qualified teachers.

I am sure that out of this conference will come suggestions which are much more valuable than those I have offered. I am sure also that we are all of one mind that we must approach our task of assisting the less-developed countries with boldness, imagination, and new vigor. This decade of the 1960's is a crucial period in human history. If no answer is forthcoming to the yearnings of these hundreds of millions of desperately poor people for better living conditions, we will be faced with a world of dangerously explosive unrest. On the other hand, if in this period momentum is built up which will insure in time the conquest of poverty, illiteracy, and chronic ill health, we will have a better world than any of us have dared dream of.

The Fryingpan-Arkansas Reclamation Project

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD an article reviewing one of Colorado's major proposed reclamation projects, the Fryingpan-Arkansas. The article was written by Mr. Bert Hanna and appeared recently as a series in the Denver Post. Mr. Hanna has done an excellent job of summing up what is involved in this project and what its construction would mean to the development of the West.

THE FRYINGPAN DREAM

(By Bert Hanna)

"And not by eastern windows only,
When daylight comes, comes in the light;
In front, the sun climbs slow, how slowly,
But westward, look, the land is bright."

This quotation from Arthur Hugh Clough was used by John F. Kennedy in a speech at the Western Democratic Conference in Albuquerque last spring.

He used to dramatize his expressed determination to push for western development—to make the western land brighter—if nominated and elected president.

Colorado Congressmen are counting on this promise to aid them in their unremitting efforts to obtain authorization at long last for the huge Fryingpan-Arkansas reclamation project in the 87th Congress.

This is the major immediate goal of this State as a part of the New Frontier of the new administration, as it has been a goal in past administrations.

Kennedy has pledged that he will support this undertaking of such tremendous importance to the future economy and the water and power needs of both the Arkansas River Valley and the Colorado River Valley of this State.

President Eisenhower supported it.

This year, a fresh, dynamic approach seems to be needed in the view of most western Congressmen.

The Fryingpan-Arkansas plan stands as a symbol of political frustrations of the past and of hopes for the future.

It is hard to find romance or poetry in just plain water, particularly at this season of the year.

But when you try to translate water development in terms of people and their needs for ecnomic survival and security, there is heart interest not confined to dull engineering reports, statistics, studies, maps.

Many people, despite all that has been written about the Fryingpan, probably think of it as a cooking utensil, just as they probably vision the potential Savery-Pot project in northwestern Colorado as culinary art.

What is the Fryingpan?

Briefly, it is a multiple-purpose development designed as a major step in maximum utilization of water and related resources in the upper Arkansas River Basin in Colorado.

It is estimated to cost some $170 million at present prices.

By multiple purpose is meant domestic and irrigation water, reservoirs of power for industrial development, flood and sediment control, antipollution, fish and wildlife conservation and recreation.

The project involves the annual transmountain diversion of 69,000 acre-feet of water from the Colorado River Basin to the Arkansas River Basin, along with protection of western slope water users.

The project, despite its cost, is designed as an independent, self-sustaining unit.

It would readily integrate into a comprehensive plan for resource development in the broad, fertile plains of the Arkansas.

MORE WATER VITAL FOR REGION

Water is what the thousands of people in this area must have—more and more water. Without it, their economy will become stagnant, their future limited. There would be no place here for the population explosions from the teeming cities.

The development would provide:

1. About 190,000 acre-feet of water annually to supplement the present inadequate irrigation supply in the Arkansas Valley.

Only part of this would come from the diversion.

The rest would be supplied by adequate storage facilities for Arkansas River water now going to waste, particularly in the winter, and the trapping floodflows and their conversion to beneficial use.

In case you didn't know it, an acre-foot is the amount of water it takes to cover an acre of ground 1 foot deep.

It equals 326,000 gallons of water, and 190,000 acre-feet equal 62 billion gallons.

2. About 15,000 acre-feet of municipal and domestic water to improve the quality and supplement the supplies of Pueblo, Colorado Springs, and the valley towns of Manzanola, Rocky Ford, La Junta, Las Animas, Lamar, Wiley, and Eads.

Domestic water also would be made available to the farm population of the Arkansas Valley.

3. About 505 million kilowatt-hours of electrical energy annually. That's a lot of energy. It is enough to supply municipal consumption for a city of 250,000 annually.

4. Flood protection to the Arkansas Valley between the proposed Pueblo Reservoir and the existing John Martin Reservoir.

Diversion of water from the Fryingpan River watershed would be accomplished through a system of collection tunnels and conduits to tap tributary streams.

The water would be carried to a central point on the Fryingpan River, thence under the Continental Divide through the 5-mile Fryingpan-Arkansas tunnel, below Leadville.

Eastern and western slope agreement on project operations provides various measures for protection of rights and interests on both slopes of Colorado.

The plan now calls for construction of Ruedi Reservoir near Basalt to store 100,000 acre-feet of water for western slope use, in place of an originally planned dam near Aspen.

This dam and reservoir is designed to meet replacement requirements of the Fryingpan-Arkansas project and provide an additional regulated water supply for other uses on the western slope.

The amount of water to be imported through the Fryingpan diversion is declared well within Colorado's share of the waters of the Colorado River Basin, as allocated by the Colorado River and upper Colorado River compacts.

Storage of imported water, reregulation of native waters and storage of flood flows would be accomplished by enlargment of the existing Sugar Loaf and Twin Lakes Reservoirs on the eastern slope and construction of a reservoir near Pueblo.

The Fryingpan has been under consideration for over 30 years.

A tremendous engineering effort has been put forth to investigate all its phases.

The project has been ready for authorization for 8 years.

However, it was not until recently that all interested parties in Colorado were able to agree on the extent of the development.

STATE UNITED IN BACKING PROJECT

Felix L. Sparks, director of the Colorado Water Conservation Board, told the Upper Colorado River Commission recently:

"All segments of Colorado have dedicated themselves to solving the Fryingpan-Arkansas problem.

"It can now be stated without reservation that the people of this State are now determinedly united to secure the construction of this important project.

"To date, the people of Colorado have spent more than $500,000 in preparing the necessary plans and agreements to make this project become a reality.

"The Federal Government has spent over $1 million for the same purpose.

"There is no reason in equity or commonsense why this project should be delayed any further."

NEW LIFE

Picture if you will a great and formidable mountain bastion extending across a State.

On the western side of this rugged fortress is a beautiful, clear, rushing stream fed by rivulets from snow banks, winding through high, green mountain meadows.

That is the Fryingpan.

On the other, eastern side is a vast plain with a river that as it flows through large and small cities and farming communities gradually fades away into a sorrowful little trickle, soon lost and gone in the shimmering heat of what looks like a dry arroyo.

That often is the Arkansas.

This contrast affords the motivation for the renewed effort to make these streams work together to bring new life and beauty and hope for people.

A sort of wedding of two streams to create the long-sought Fryingpan-Arkansas project, which again will come before the Congress for authorization this year.

RUSHING WATERS

The Fryingpan as it flows into the Roaring Fort River to help create the western upper

basin supply for the Colorado River often has a roaring, tumultous head of water.

And that water often flows, wasted, unchecked and unused, into the great Gulf of California.

The vision of Colorado water people and the U.S. Bureau of Reclamation is to trap some of that water and convert it to beneficial use in the State where it originates. And to benefit both east and west slopes in the process.

Colorado is legally entitled to a substantial share of that water.

Let's explore some of the economic benefits that would accrue from the Fryingpan-Arkansas project to bring some of that water over to the Eastern Plains.

1. The undertaking, in part, is a rescue mission, a plan to make the most out of available water supplies

It is not a cure-all for the tremendous water problems of southeastern Colorado.

The latest reevaluation studies of the Bureau of Reclamation show that without the project the Arkansas Valley lands were short of water in 46 of the last 47 years studied.

The project would eliminate these shortages in 20 out of the 46 years and greatly reduce the shortages in other years.

Often the shortages have been critical.

Effects of shortages include:

Marginal operations of many farms.

Migration from farms during series of bad water years.

Inclination toward consolidation of farms.

Lack of adequate domestic water supplies to keep pace with population growth; hence, a population shift from some portions of the valley into other more promising areas.

Supply Varies

It should be pointed out that there is a wide variation in effects of water shortage.

Dependent on water rights, some farms will always have an ample supply.

Some characteristically will have a partial supply and some will get enough water only in the best years.

A reclamation table shows that the total project water is 192,600 acre-feet, although the transmountain importation is only about 70,000 acre-feet as an annual average.

Evaluations of benefits to the project area of 280,600 acres has placed the annual benefits, direct and indirect, at more than $5 million.

But you cannot place all the actual benefits under a dollar sign.

You have to think of the housewife turning on a water tap in her home; the happiness of a farmer able to have enough water to irrigate his fields, the security that only adequate water can bring to a home.

In addition to benefits to project acreage, it is estimated that some 20,500 acre feet of water could be obtained for municipal and industrial use through the diversion tunnel under the Continental Divide.

There are nine cities, including Pueblo and Colorado Springs, that would receive additional supplies, with total annual benefits placed at about $1 million.

2. Water quality

A U.S. Public Health study in 1957 showed that of all the Nation's major rivers the Arkansas is one of the worst from the standpoint of pollution, from the standpoint of chloride content, alkalinity, hardness and turbidity.

The fresh supply from the Fryingpan would go a long way toward improving these conditions, in improving water quality.

Most of the valley towns below Pueblo obtain municipal water from pumped wells. Other valley communities use water from streams and springs. In general, the quality is poor because of excessive hardness.

While Colorado Springs obtains excellent water from the slopes of Pikes Peak, the city has indicated an urgent need for a supplemental supply which the Fryingpan would provide.

Pueblo obtains its municipal water from the Arkansas River. During periods of low flow, the water is of poor quality—relatively hard and unpalatable.

The towns of Manzanola, Rocky Ford, La Junta, Las Animas, and Lamar and the offstream towns of Crowley, Wiley and Eads have requested treated municipal water from the project to replace entirely their present supplies.

3. Power

Meeting powerload growth for preference customers is a problem east of the Rockies. The Reclamation Bureau has specified contract dates which inform the customers of the times when it will no longer be able to meet their growths.

The power generated by the Fryingpan-Arkansas project will bolster not only the project area but also the interconnected power system.

The western division power network of the Missouri River Basin project serves preference customers in Colorado, Wyoming, and western Nebraska with power from 16 reclamation bureau plants in Colorado and Wyoming.

The Fryingpan will be connected with this network and also with the great Colorado River storage project.

4. Benefits to valley economy from project work

From the moment of authorization of such projects, there is a psychological uplifting in the project area.

This later is augmented by direct spending for field studies and then construction expenditures which would go a long way toward relieving employment in southeastern cities.

Finally, there are the benefits to the economy from project operation.

Present plans envision a 13-year construction period, during which a large portion of the total project cost will be expended directly in the project area for labor, materials and equipment.

5. Valley support

Innumerable valley residents have poured their efforts and personal funds into project support through the frustrating years.

The personal burden is eased since formation of the Southeastern Colorado Water Conservancy District in 1958 and its resultant tax revenues.

The district, with State water conservation board support, is actively at work on projects that anticipate the ultimate construction of the Fryingpan.

Existing water rights and priorities will be fully respected in the new development. The Fryingpan supplements, does not superimpose or conflict.

6. Western slope benefits

Original plans for construction of a replacement reservoir at Aspen have been abandoned through local opposition. Now the plan calls for construction of a reservoir at Ruedi near Basalt, to store 100,000 acre-feet of water.

The Aspen Reservoir capacity was placed at 28,000 acre-feet—more than adequate to replace the amount of diversion involved.

Hence, the project is building for the future as yet undetermined uses on the western slope, possibly including oil shale development.

The Fryingpan will underwrite the additional cost of the Ruedi Reservoir but expects to be repaid when the western uses develop.

Thus, a bigger Colorado natural resources asset is being created.

WESTERN CHALLENGE

"There are some who say that the challenge is gone out of the West that the pioneer died along with the buffalo and the open range.

"I say to you that it simply isn't so. A new challenge is developing before our very eyes.

"Its wellspring is the amazing population growth our country is experiencing. The challenge is to coordinate resource development with this population explosion."

These observations by Floyd E. Dominy, U.S. Commissioner of Reclamation, highlighted the recent meeting of the National Reclamation Association at Bakersfield, Calif.

Dominy stressed in his talk the tremendous need for more development and conservation of water resources to keep pace with population growth through such great undertakings as the Fryingpan-Arkansas project in Colorado.

ABOUT THE COST

Inevitably, however, such discussions come around to money—to the question of justification of costs.

Testimony and documentation before the Select Committee on National Water Resources of the U.S. Senate indicates that between now and 1980 the Nation will have to invest more than $200 billion in the development of water resources.

But foes of developments in the 17 Western reclamation States have traditionally adopted the attitude that these undertakings are pork-barrel raids on the U.S. Treasury.

They overlook the salient fact that these multiple-purpose power and water projects pay their way.

That they make returns on the investments in actual earnings.

And that they make incalculable returns by creating new wealth, new industry, new hope and opportunity for people of ambition.

Summarizing its most recent reevaluation statement on the Fryingpan-Arkansas, the Reclamation Bureau said:

"As demonstrated by benefit-cost analysis, the Fryingpan-Arkansas is a highly productive development.

WHERE IT'S SPENT

"About 90 percent of the total project cost is reimbursable and over one-half of the repayable cost bears interest."

And Felix L. Sparks, director of the Colorado Water Conservation Board, discussing the estimated cost of $170 million for the Fryingpan, said:

"Long before the project cost is scheduled to be repaid, the direct and indirect benefits from its operation will run into hundreds of millions of dollars."

Let's explore the benefit-cost analysis.

The estimated $170 million cost would be distributed among the following principal features:

A system of about 70 miles of canals and tunnels on the western slope for collecting and transporting water from Hunter Creek and tributaries to the Fryingpan River.

Ruedi Dam and Reservoir with a capacity of about 100,000 acre-feet of water on the Fryingpan River 14 miles above Basalt, to provide replacement water and water for other beneficial western slope uses.

The 5.3-mile Fryingpan-Arkansas transmountain diversion tunnel below Leadville.

Enlargement of the existing Sugar Loaf and Twin Lakes Reservoirs on the eastern slope and construction of Pueblo Reservoir for a total eastern slope storage capacity of 777,000 acre-feet.

A power system consisting of about 52 miles of canals, seven powerplants with a total installed capacity of 123,900 kilowatts, seven switchyards, seven substations, and a primary transmission network to assure distribution of power to load centers.

(This power system by itself could take care of a city of 250,000, the Reclamation Bureau estimates.)

The $170 million estimated project cost includes the full estimated cost of Ruedi Dam and Reservoir ($12,831,000), of which $7,600,000 is assignable to the Fryingpan-Arkansas.

PLUS FIGURES

The Bureau's new economic justification study translates benefits in terms of dollars as follows:

First, annual irrigation benefits to the 280,600 acres in the project area.

Direct benefits to project service area, $2,471,100; to lands below existing John Martin Reservoir, $446,900; total, $2,918,000.

Indirect and public benefits to project service area, $1,768,550; to lands below John Martin Reservoir, $319,850; total, $2,088,000.

Total annual irrigation benefits, $5,006,400.

Annual benefits from construction costs of $13,761,000 for municipal water facilities, $1,116,900.

Annual benefits from marketing of power, $3,606,500, plus taxes of $531,000.

Annual benefits from flood and sediment control, $849,000.

Total all annual benefits, $10,578,000.

To understand the Reclamation Bureau's benefit-cost analysis, it is necessary to point out that for the purpose of this study, the net project costs was reduced to $164,674,000.

That is because construction of the Ruedi Dam and Reservoir on the west slope will cost $12,831,000 as compared with an estimate of $7,600,000 for building the originally planned dam at Aspen.

Thus, some $5,231,000 of the Ruedi Dam costs was not considered an actual obligation of the Fryingpan.

Of the additional costs assessed to the Ruedi development, some $3,300,000 is applied to future western slope use of the big new water supply and the remainder for nonreimbursable purposes.

THE BREAKDOWN

Taking those factors into account, the Reclamation Bureau has come up with this allocation summary:

Net project cost	$164,674,000
Payable interest during construction	2,696,000
Total investment	167,370,000
Nonreimbursable allocations:	
Flood control	15,226,000
Fish and wildlife	2,081,000
Balance: Reimbursable	150,063,000

Two and five-tenths percent interest bearing allocations:

Commercial power project costs	$59,342,000
Interest during construction	1,962,000
Total	61,304,000
Municipal water project costs	8,438,000
Interest during construction	279,000
Total	8,717,000
Delivery system project costs	13,671,000
Interest during construction	455,000
Total	14,216,000
Irrigation (non-interest-bearing allocation)	65,826,000
Total reimbursable	150,063,000

Revenues for repayment of project costs will be derived from conservancy district ad valorem taxes, water and power sales and payments to amortize the costs of the municipal water delivery system.

Federal construction of this delivery system is to be undertaken only if it is not feasible for communities involved in construct the works themselves.

Taxes from the newly formed Southeastern Colorado Water Conservancy District will provide a major source of revenue. The assessed value of all taxable property in that district amounts to upward of a half-billion dollars.

With the Fryingpan project in operation, a 1-mill tax would be levied by the district.

FLOOD CONTROL

Flood control is a very important aspect of the Fryingpan-Arkansas multiple-purpose development.

Along with that will come other benefits such as sediment control, fish and wildlife conservation, recreation.

Damaging floods of record have occurred in the western slope diversion area and in the Arkansas Valley extending down to Cannon City.

From there extending eastward, damaging floods increase in frequency to the mouth of the Purgatoire River in the extreme southeast.

The largest flood to ever occur in the project area struck Pueblo and environs with devastating force in June 1921.

RAINS TO BLAME

Intense rains caused enormous flows at Pueblo, reaching 103,000 second-feet.

Downstream tributaries contributed to the flood until the peak of 200,000 second-feet was reached at La Junta.

A second-foot is a cubic foot of water flowing in 1 second past a given point.

That's a lot of water roaring down a river in a period of minutes, tearing up the countryside and cities, then lost to beneficial use.

The 1921 flood killed at least 78 persons. Property damage exceeded $19 million, including $10 million in Pueblo.

As a result of the disaster, a barrier dam was built across the Arkansas 6 miles west of Pueblo and an improved floodway channel through the city was completed in 1926.

Another flood control structure, the John Martin Reservoir, located on the Arkansas near Lamar, Colo., was completed in 1949 by the U.S. Army Corps of Engineers.

This is a multiple-purpose project, with 281,000 acre-feet of its 701,000 acre-foot capacity allocated to flood control.

However, U.S. Reclamation Bureau studies show that a flood danger still exists from Pubelo downstream to the John Martin Reservoir.

BIG BENEFITS

The Corps of Engineers has estimated that the annual damages along that reach of the river averages nearly $1 million.

The Fryingpan project, it is concluded, would eliminate the big percentage of that damage, besides conserving water.

The corps has reevaluated the flood control benefits attributable to the project at $708,000 annually.

Much of the flood control would be achieved through construction of a new reservoir at Pueblo. It would impound 93,000 acre-feet of flood control storage and contribute greatly to increased municipal water supplies.

There are the associated needs.

Take sediment control.

An evaluation has been made of sediment control benefits of $141,000 annually from the proposed Pueblo Reservoir.

These benefits consist of:

Prolonging the useful life of John Martin Reservoir.

Reduction of annual operation and maintenance expenses at existing diversion works and canals between the two reservoirs.

An acute sedimentation problem long has affected irrigation in the main Arkansas Valley.

At Pueblo, the river annually transports a vast sea of sediment.

Much of it is deposited in reservoirs, canals, and laterals and more than a third of it becomes undesired deposits on irrigated lands.

Modification of the river channel by the deposits has made some diversion structures inoperative; other diversion structures have necessarily been raised.

DISPOSAL COSTLY

Removed sediment now lines some canal banks and further disposal has become very expensive.

"The only apparent immediate solution is provision of reservoir space specifically for the disposition of sediment," says the Reclamation Bureau study.

Fishing and hunting are sports of much financial significance in the diversion area and the Arkansas Valley.

The project has been so planned and operating rules have been formulated to prevent diversions of water beyond a minimum for preservation of fish life.

Provisions also have been made to minimize interference with wildlife habitat.

The mountainous portions of both slopes of the project area are important recreational areas at all seasons.

They combine such qualities as scenic beauty, wilderness character, remoteness, water for fishing, and skiing facilities.

All agencies concerned with the project are pledged to protect and improve the recreational advantages through operation of the project and to abide by recommendations of the National Park Service in this regard.

HOPES RAISED

"Look to the green within the mountain cup;
Look to the prairie parched for water's lack.
Look to the sun that pulls the oceans up;
Look to the cloud that gives the oceans back.
Look to your heart and may your wisdom grow
To power of lightning and to peace of snow."

This poem by Denver's Thomas Hornsby Ferrill illustrates murals by the late Allen True in the rotunda of the Colorado Capitol.

The art and poetry point up the tremendous importance of water to the growth and economy of this State.

They might very well serve to show the need for the wise conservation and development of water supplies through construction of the Fryingpan-Arkansas project and other similar undertakings.

The Fryingpan, which is again before Congress for authorization, is vital to the lifeblood of a vast area of southeastern Colorado, as well as the whole State's economy.

That is agreed by all water resources experts.

Felix L. Sparks, director of the Colorado Water Conservation Board, put the State's need for the Fryingpan and other multiple-purpose projects in simple terms in a statement before the Senate Select Committee on National Water Resources.

The committee held hearings here and elsewhere to come up with some answers for what has become one of the greatest national problems—water. It is due to report to the Congress in late January.

"I believe it is highly appropriate that this committee should meet here in Colorado," Sparks said.

"In this State are found the headwaters of four of the major rivers of the West—the Platte, the Arkansas, the Rio Grande, and the Colorado.

"These rivers are the life arteries of our State.

"These rivers or their tributaries are of similar importance to the majority of the States west of the Mississippi River.

"Geographically, Colorado occupies a unique position within the continental boundaries.

"Waters originating in other States are in nature not available for use in Colorado.

"On the other hand, all of the surface waters of the State, excepting natural losses, are available by gravity to 18 other States.

"This in itself would not be significant if it were not for the fact that by court decision and interstate compact we are compelled to deliver about 50 percent of our available surface water to other States.

"Within the next 50 years the water resources of the Colorado River Basin will have become almost entirely exhausted. Our major problem today lies in developing our remaining water resources at a pace commensurate with our population increase."

And Sparks pointed out that of the four major river basins of Colorado, the Arkansas has 24 percent of the State's total population but only 6.9 percent of the State's surface water production.

The Arkansas Basin occupies second place in population total and includes two of Colorado's major cities, Pueblo and Colorado Springs.

A significant portion of the flow of the Arkansas River must be shared with Kansas.

Thus, Sparks pointed out to the Senate Select Committee:

"Any appreciable population growth in the future will not be possible in the Arkansas Valley unless additional water resources are made available.

"One of the State's major reclamation projects, the Fryingpan-Arkansas, has long been planned to augment the already exhausted water supply of this area.

"No Federal reclamation project has as yet been constructed for the benefit of the Arkansas Valley, although the John Martin Reservoir, constructed by the Corps of Engineers, has contributed to the economy of the area."

The Fryingpan project to divert water from sources of headwaters of the Colorado River into the Arkansas to augment supplies for irrigation, power and municipal use has had rough sledding.

In its several outings in Congress, it encountered some of its most severe opposition from California.

That State long has been jealous of any water developments in the upper Colorado River Basin States on the theory that its own tremendous needs for Colorado River water will be jeopardized.

But water experts now suggest that California's position may soften somewhat in the realization that the Fryingpan development won't mean a thing to that State.

In the first place, it will take no water away from Californnia that it is entitled to.

The Fryingpan diversion is in accordance with water allotments under Colorado River compacts.

And what California is entitled to was carefully spelled out in the recent decision of a special master of the U.S. Supreme Court involving a long California-Arizona water suit.

The special master, Simon H. Rifkind, gave Arizona a clear-cut victory in its feud over water rights in the lower Colorado River Basin.

To understand what the decision is about, you have to know that the basic charter of Colorado River development apportions 7½ million acre-feet of water to the upper basin States of Colorado, Wyoming, Utah, and New Mexico.

It allows the lower basin States of California, Arizona and Nevada the same amount. California claimed a greater share of the river than Arizona contended she was entitled to.

LOST ON POINTS

California lost on two key points under Rifkind's findings.

First, Rifkind held that none of the more than 1 million acre-feet used by Arizona from the tributary Gila River can be charged against Arizona's 2 million acre-feet apportionment from the Colorado River.

Rifkind declared that Arizona's share of Colorado River water should come from the main stream.

Arizona's second major victory was in Rifkind's decision that the historic "first in use, first in right" doctrine does not apply to water apportioned btween States under the 1922 Colorado compact and 1929 Boulder Canyon Project Act.

This gives Arizona a priceless stake in almost 1 million acre-feet of water a year. While the decree must still be approved by the U.S. Supreme Court, it is extremely doubtful that the findings of the special master will be upset.

The decision has no bearing on Upper Colorado River Basin States providing they abide by compacts. But it does place a definite limitation on how far California can go in use of Colorado River water.

In other words, it simply means:

If the Fryingpan project is defeated, this won't create a single extra drop of water for California. California is already using more than her apportioned share of the river.

The great and growing water problem of the West, as well as the entire country, is brought into sharp focus in the work the Senate select committee is doing.

A recent report to that committee from a privately endowed research foundation, Resources for the Future, Inc., said the United States can meet its soaring water demands in most areas in the next 20 years.

But at best, this will cost from $54 to $74 billion for new dams, reservoirs and waste-treatment facilities.

A Report on "Operation Abolition"

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following report of a special study subcommittee unanimously adopted by the Santa Clara County Democratic Central Committee on February 16, 1961. Because of the widespread interest shown in the film, this central committee report has been made available to all interested parties:

A REPORT ON "OPERATION ABOLITION"

(By the Santa Clara County Democratic Central Committee)

In June 1959, a week before hearings of the House Un-American Activities Committee in San Francisco were scheduled to begin, they were postponed until September. In the meantime, names of over 40 northern California schoolteachers (plus 70 from southern California) subpenaed for the hearings were made public. Typifying protest over the delay, the San Francisco Chronicle editorialized: The teachers "* * * stand accused with no opportunity to clear themselves. This * * * procedure is hardly in accord with the best American practice, though it is not new with the House Un-American Activities Committee."

After another postponement (from September to October) the hearings were canceled. The House Un-American Activities Committee then, as the San Francisco Chronicle put it, "* * * unceremoniously dumped its files on 93 California teachers into the * * * office of superintendent of public instruction * * * Many of the files found their way to the local school boards. Some teachers * * * lost their jobs * * * although at least one * * * board * * * announced that the files * * * revealed information of no consequence." The Chronicle commented: "Is anyone really surprised * * * that the files used by this reckless committee are worthless, containing unverified charges and rumors from unnamed sources? Pressing an unfair advantage is standard operating procedure with the Un-American Committee."

In April 1960, House Un-American Activities Committee issued subpenas for hearings to be held in May. Student protests began to take shape informally with announcement of the House Un-American Activities Committee's plans. The student leaders in this connection came from organizations already established on the University of California campus. They have emphatically denied that Douglas Wachter, credited by House Un-American Activities Committee with organizing the demonstration, took any part in the mobilization of protest. At a meeting 2 weeks before the House Un-American Activities Committee's arrival, the students formed an ad hoc committee called Students for Civil Liberties (SCL) and drew up a petition for cancellation of the hearings and abolition of House Un-American Activities Committee. In a 4-day circulation the petition received 2,000 signatures.

Subsequently, the SCL scheduled a mass meeting at Union Square in San Francisco to coincide with the start of the hearings on May 12. The mass meeting was to be followed by a march to city hall where a picket line was to be formed. Throughout the bay area, protests against HUAC were endorsed by various religious, labor, and educational groups and individuals. Some 1,000 people attended the meeting in Union Square the day the hearings began.

The film "Operation Abolition," focuses primarily on events of May 13, the so-called riot. According to the HUAC version, as represented by the film, Communists planned the demonstrations, planned the riot itself, and converted the students into unwitting dupes. The film's narrator declares that the Communist Party activated trained agitators in the bay area months before the hearings and that professional Communist agitators in the halls led the crowds in chants and songs.

The HUAC also asserts that the riot was sparked by student violence. Both the film's commentary and the Hoover report flatly state that the riot started when a demonstrator leaped a barricade, grabbed an officer's night stick, and beat the officer over the head. Both further assert that the students then surged forward as if to storm the doors, and that Police Inspector Michael McGuire, at that point, ordered fire hoses into play. Police reports also blame the riot on student violence.

Our investigation, which included interviews of witnesses, news photos, tape recordings, a great many reports, and a careful analysis of the film itself, led to the following conclusions:

1. The known Communists referred to by HUAC did not participate in the organization of the student demonstrations.

2. The students inside City Hall were noisy, but not violent. The noise was in protest of HUAC's arbitrary admission policy giving preference to those with white-card passes issued by HUAC to members of certain HUAC-approved organizations. Our findings show that the police inspector's decision to use fire hoses in an attempt to disperse students then seated on the rotunda floor in

front of the barricades actually touched off the incident.

3. HUAC's claim that the hoses were turned on after a student jumped a barricade and allegedly assaulted a police officer is not true. The San Francisco district attorney's office in its prosecution of the student in question will maintain that the hoses were turned on before the alleged assault occured. Other evidence examined by this subcommittee is consistent with this finding.

On the morning after the riot, the HUAC altered its announced agenda to receive testimony from Chief of Police Cahill, Sheriff Carberry, and friendly witness Karl Prussion. While admittedly not a witness to any of the events, Chief Cahill built the case for the official version by citing hearsay evidence—the reports of officers in his department. Although Police Inspector McGuire was questioned, Committee Counsel Richard Arens carefully avoided examining him on the facts immediately prior to the hosing. Prussion warned the committee that the Communist press would charge police brutality. While he was speaking, readers of the San Francisco Chronicle and other bay area newspapers were reading accounts such as that of Mel Wax, Chronicle reporter, to the effect that "* * * never in 20 years as a reporter have I seen such brutality."

The committee staff rapidly subpenaed all available photographs, newsreel and TV camera footage, and tape records of the preceding day's events. Subsequently, the Washington Video Production, Inc., a commercial film company in Washington, D.C., issued the film "Operation Abolition." By lifting film strips out of context by rearranging the sequence of events, and by a grossly inaccurate narration, the producers of the film have rendered an extremely distorted version of the demonstration. A summary of some of the distortions follows this report.

The presentation of the movie usually attributes its filming and distribution to an organization known as Coalition of Patriotic Organizations. Our subcommittee has been unable to determine the present official position of HUAC regarding the controversy over the film. Two committee staff members were responsible for acquiring the newsreel films; Fulton Lewis III, a staff member, prepared the narration; and three members of the Committee appear in the movie. It was submitted by HUAC as part of its annual report to Congress.

Throughout the Nation, the movie has found a ready market. Large corporations have bought a great many copies. The Defense Department reportedly purchased 75 copies. Service clubs, fraternal organizations, government agencies, civil clubs, PTAs, and school departments have also purchased the film.

Having interviewed people who saw the film on the job, in service clubs, or elsewhere, this subcommittee discovered that, almost without exception, it was exhibited either with no additional commentary or with a one-sided commentary supporting the film's version of the events.

This subcommittee regretfully reports that the movie "Operation Abolition" has been successful in suppressing free discussion and in intimidating those opposed to practices of the House Committee on Un-American Activities.

This subcommittee unanimously approves the findings of this report and recommends:

1. Formation of a speakers' panel to be made available to exhibitors of the film so that the truth may be presented along with the movie.

2. Wide distribution of the pamphlet "In Search of Truth," prepared by the Bay Area Student Committee for the Abolition of the HUAC, wherever the film is shown.

3. Distribution of this report and the pamphlet "In Search of Truth" to members of the Democratic clubs of this county, Members of Congress, members of the State legislature, press representatives, and other interested parties.

Joseph F. Lewis, attorney; Edith S. Freidenrich, housewife; Arthur F. Ronz, steel company executive; Mervyn L. Cadwallader, college professor; William Stanton, attorney and college professor; Jacob M. Stone, M.D., physician; Harry Branch, insurance company executive.

The folowing summarizes some of the more flagrant distortions in the movie "Operation Abolition." The pamphlet "In Search of Truth" provides a more detailed analysis.

1. The film narrator states that a directive was issued by the students' civil liberties group to laugh out loud.

The truth: A student suggested this at a public meeting, but it was not adopted as policy by any organization involved.

2. The film narrator states that Harry Bridges is shown being escorted out of the city hall moments before the rioting broke out.

The truth: The J. Edgar Hoover report states that order had been restored when Bridges appeared.

3. The film shows a demonstration by known Communists in the hearing room and, by switching promptly to a scene of the hosing, seeks to establish a causal connection between these two incidents.

The truth: The first demonstration occurred on Thursday; none of the participants in it are shown or said to be present during the student demonistration in the rotunda during the noon recess on Friday. The so-called riot occurred Friday at 1:20 p.m.

4. The film narrator states that on Friday 200 members of the general public were admitted to the hearing room.

The truth: On Friday morning, highest estimates place 30 members of the public in the room and on Friday afternoon only 15. The narrator's figures can be supported only by considering the white-card holders as members of the general public. These passholders were permitted to go ahead of the long line of waiting students.

5. The film narrator says that the songs sung by the students were taken from the old Communist "People's Song Book."

The truth: They were heard to sing "The Star-Spangled Banner," "God Bless America," "Battle Hymn of the Republic," and "We Shall Not Be Moved" (a folk hymn revived during the sit-ins in the South).

6. The film narrator states that the students were warned to clear the building.

The truth: The students claim, with a tape recording for support, that Sheriff Carberry told them thay could stay in the rotunda and that they would be admitted on a first-come, first-served basis. They deny that McGuire warned them of the hosing. Some admit seeing the hose and sitting down in passive resistance. The AP photographer declares that while there was a warning, it could only have been heard, if at all, by students immediately in front of the barricade.

7. The film narrator states that one of the Communist professional agitators arrested was Vernon Bown, one of the notorious Louisville Seven and charged with sedition in 1954.

The truth: He does not state that Bown was identified on Friday morning as not being a member of the Communist Party. Further, his charge of attempting to overthrow a Southern State (i.e., defending a Negro family from segregationists) was dismissed by the U.S. Supreme Court.

Proposed Wilderness System Will Not Damage Commercial Interests

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD a statement by the Citizens Committee on Natural Resources on the Wilderness System legislation, of which I am a sponsor:

PROPOSED WILDERNESS SYSTEM WILL NOT DAMAGE COMMERCIAL INTERESTS

Attacks on the pending wilderness bill by livestock, timber, and other commercial interests are labeled false and misleading by Dr. Ira N. Gabrielson, chairman of the Citizens Committee on Natural Resources, because the proposed program will not damage these interests and will affect only a very small part of the Federal lands.

The opposition stirred up against the wilderness bill "by commercial interests with covetous eyes on even our last remaining areas of wilderness," the Citizens Committee described as "completely without justification."

Existing grazing privileges in the national forests are continued by a provision of the bill. No areas open to lumbering are affected. Mining on the national forest lands involved may be permitted if needed in the national interest. A special provision in the bill safeguards State water laws.

The wilderness bill, it was explained, has been carefully designed to avoid damage to existing interests and to fit into the land-use programs already established.

LESS THAN 2.2 PERCENT OF THE NATION

Only in 10 Western States where there are large acreages of Federal land are there considerable percentages of the land involved in programs to be established by the wilderness bill, according to the citizens committee. Even in these 10 States the maximum wilderness involved would vary from only 1 percent to only 7½ percent, or an average of about 4 percent of the so-called Western public land States.

The 10 Western States and the percentages of their areas involved are Idaho, 5.7 percent; Utah, less than 1 percent; Wyoming, less than 7½ percent; Oregon, 1½ percent; Montana, 4 percent; California, 5/10 percent; Colorado, less than 2 percent; Arizona, 5 percent; New Mexico, 1½ percent; and Washington, less than 6 percent.

Other States in which wilderness areas could be established by the proposed program are Nevada, North Dakota, South Dakota, Oklahoma, Texas, Minnesota, Michigan, Louisiana, Florida, Georgia, South Carolina, North Carolina, Tennessee, Kentucky, Virginia, Maine, Alaska, and Hawaii.

The total area of the United States involved would be less than 2.2 percent at the most, the citizens committee estimated.

National forest areas were estimated to be about 14,500,000 acres at the most and national park system areas to total less than 20 million acres. Within the national wildlife refuges and ranges the areas that could be designated have not been predicted in any detail, it was pointed out, and it is estimated that they would not in the extreme exceed 15 million acres.

A national total of 50 million acres was thus estimated to be considered an outside

maximum, out of the Nation's total of more than 2,300 million acres.

ONLY 5.7 PERCENT OF IDAHO

Only five areas in Idaho are involved, the Citizens Committee points out, and they comprise 5.7 percent of the state. More than 94 percent of the state is not affected at all by the bill.

Out of Idaho's total of 83,557 square miles, only 4,835 would be preserved as wilderness under this measure. Two of the areas in Idaho to be given protection are already in the national park system, and are not available for commercial use.

The other three areas are all within national forests, and have been for a long time set aside by the Forest Service for special protection. The wilderness bill would make all three of these subject to further studies before they can become permanent units of the wilderness system.

LESS THAN 1 PERCENT OF UTAH

Only six areas in Utah will be involved. These include 845 square miles, or less than 1 percent of the State's 84,916 square miles. Five of the areas are already in the national park system, two parks and three monuments. These are already unavailable for commercil use or exploitation.

Just one Utah area remains to be considered, the high Uintas primitive area. The wilderness bill will require further study of this area before its inclusion in the permanent wilderness system.

LESS THAN 7½ PERCENT OF WYOMING

Two of the areas in Wyoming to be given protection by the wildeness bill are already in the national park system and not available for any commercial use.

Of the other areas, eight are within national forests, and have for a long time been set aside by the Forest Service for special protection. The wilderness bill would make four of these subject to further studies before they become permanent units of the wilderness system.

Ten areas in Wyoming are involved, the Citizens Committee points out. More than 92 percent of Wyoming is not affected by the bill at all.

Out of Wyoming's total of 97,914 square miles, less than 7,262 would be preserved as wilderness under this measure. The bill does not withdraw any additional units or acreage.

ONLY 1½ PERCENT OF OREGON

Only 1½ per cent of Oregon, the Citizens Committee points out, is involved in the 11 areas of the State included in the proposed system. This means that more than 98½ percent of Oregon is not affected by the bill.

Out of Oregon's total of 96,981 square miles, only 1,508 would be preserved as wilderness under this measure. One of the areas in Oregon to be given protection by the wilderness bill is already in the national park system and not available for any commercial use.

The other 10 areas are all within national forests and have for a long time been set aside by the Forest Service for special protection. The wilderness bill makes one of these subject to further studies before it becomes a permanent unit of the wilderness system.

FOUR PERCENT OF MONTANA

Two of the units in Montana to be given protection by the wilderness bill are already in the national park system and not available for any commercial use. Of the other units, nine are all within national forests and have for a long time been set aside by the Forest Service for special protection. The wilderness bill would make seven of these subject to further studies before they become permanent units of the wilderness system. Three areas are now protected by the Fish and Wildlife Service. In all, 14 areas in Montana are involved, the Citizens Committee points out.

Out of Montana's total of 147,138 square miles, only 6,397 would be preserved as wilderness under this measure. More than 95 percent of Montana is not affected by the bill at all.

LESS THAN 5.1 PERCENT OF CALIFORNIA

Californial has more units and more acreage affected than any other State. Its 27 units include 5,775,053 acres. Californians are proud of the parks, monuments, and national forests. Yet these occupy only 9,023 square miles, or less than 5/10 percent of the State's total of 158,297. Of these units, nine are national parks or monuments, already removed from commercial exploitation.

The remaining 18 units are all in national forests and have for years been set aside by the Forest Service for special protection. The wilderness bill would make 16 of these subjects to further study, to make certain that only areas predominantly of wilderness value will be included.

LESS THAN 2 PERCENT OF COLORADO

Less than 2 percent of Colorado, the Citizens Committee points out, is involved in the 16 areas of the State included in the proposed system. This means that more than 98 percent of Colorado is not affected by the bill.

Out of Colorado's total of 104,247 square miles, ony 2,044 would be preserved as wilderness under this measure.

Five of the areas in Colorado to be protected by the wilderness bill are already in the national park system and not available for commercial use. The other 11 areas, all within national forests, have for a long time been set aside by the Forest Service for special protection. The bill makes nine of these subject to further studies before becoming permanent units of the system.

ONLY 5 PERCENT OF ARIZONA

Seventeen areas in Arizona are involved, the Citizens Committee points out, and they comprise only 5 percent of the State. This means that 95 percent of Arizona is not affected by the bill at all.

Out of the Arizona's total of 113,909 square miles, only 5,631 would be preserved as wilderness under this measure.

Six of the areas in Arizona to be given protection by the wilderness bill are already in the national park system and not available for any commercial use.

Of the other areas, nine are all within national forests and have for a long time been set aside by the Forest Service for special protection. The wilderness bill would require further studies of four of these before they become permanent units of the wilderness system. Two of the areas are game ranges protected by the U.S. Fish and Wildlife Service.

LESS THAN 1.5 PERCENT OF NEW MEXICO

Only eight areas in New Mexico are involved, the Citizens Committee points out, and they comprise less than 1.5 percent of the State. This means that more than 98.5 perecnt of New Mexico is not affected by the bill at all.

Out of New Mexico's total of 121,666 square mile, only 1,795 would be preserved as wilderness under this measure.

Two of the areas in New Mexico to be given protection by the wilderness bill are already in the national park system and not available for any commercial use.

The other six areas are all within national forests and have for a long time been set aside by the forest service for special protection. The wilderness bill even makes three of these subject to further studies before they become permanent units of the wilderness system.

LESS THAN 6 PERCENT OF WASHINGTON

Only 6 areas in Washington are involved, the Citizens Committee points out, and they comprise less than 6 percent of the State. This means that more than 94 percent of Washington is not affected by the bill.

Out of Washington's total of 68,192 square miles, only 3,942 would be preserved as wilderness under this measure.

Two of the areas in Washington to be given protection by the Wilderness Bill are already in the national park system and not available for any commercial use.

The other 4 areas are all within national forests and have long been set aside by the Forest Service for special protection. The bill requires that the largest of these—the 801,000-acre North Cascade primitive area—must be studied further before becoming a permanent unit of the wilderness system. The other national forest units are the 458,505-acre Glacier Peak wilderness area, the 82,680-acre Goat Rocks wild area, and the 42,411-acre Mount Adams wild area.

CONSERVATIONIST'S TASK FORCE HAS MAPS

The Citizens Committee on Natural Resources describes itself as a conservationists' task force for representing the public interest in legislation. Incorporated to advance conservation, restoration, and sound management of natural resources in the public interest, the committee, with a nationwide memership of 43 conservation leaders, maintains its headquarters at 1346 Connecticut Avenue NW., Washington, D.C.

Outline maps of each of the 10 Western States with potential wilderness system areas of significant acreage, showing to scale these areas, are available from the committee.

In Tribute to Carroll Reece

SPEECH

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. MILLER of New York. Mr. Speaker, I am sure that the immense personal loss I feel at the passing of our beloved colleague from Tennessee, CARROLL REECE, is shared not only by the Members of the House and those who, in the past, were privileged to serve with him, but by all Americans who are concerned with the welfare of our Nation to which he was so dedicated.

For more than 40 years, Mr. REECE served his country—on the battlefields of France in World War I, as a Member of Congress and as leader of the Republican Party. Although he was the most decorated Member of Congress, CARROLL REECE's wartime awards are more than matched by the accolades from literally thousands of persons whom he helped personally or as a Member of the House of Representatives. His generosity, kind understanding, personal courage, and willingness to give his immense personal energies and thought to the problems of all men, both great and small, made him unique in this age of cynicism and self-interest.

For he was more than just a soldier and a statesman. CARROLL REECE was a humanitarian, a gracious and courteous gentleman whose kindness was extended

in many forms to all who required it. His wisdom was as freely imparted as it was sought and his generosity was unbounded. But even more important, he was a friend whose loyalty brought him the reverence of all with whom he came into contact. Those of us who have had the arduous political task of campaigning for Republican candidates for Congress can appreciate fully his magnificent accomplishments as chairman of the Republican National Committee from 1946 to 1949 when he did perhaps more than anyone else to gain for his party the majority in this House.

The void he leaves in the Congress and on the American scene cannot be filled through the simple application of the electoral process, but will remain for years to come as a reminder to us all of the true qualities of Christian charity and kindness.

I am sure I am joined by everyone here and all other Americans in saying to the bereaved family of our beloved colleague: "Your loss is shared and your grief is, in part, our grief. Although we cannot return that which has been taken by the Almighty, our heartfelt sympathy is given you as freely as your husband and father gave of himself to others. The stature he attained in life cannot but become greater in death, as the humane acts he so long shielded in anonyomity at last come to light.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. LIPSCOMB. Mr. Speaker, March 25 will be a day of deep significance and importance to Byelorussians and their friends everywhere. On that day, 43 years ago, Byelorussia was proclaimed an independent state.

Byleorussia's existence as an independent state unfortunately was short lived. However, the strong spirit of its people which won that independence goes on. This spirit has existed over the course of many centuries and it is still strong and firm today.

Byelorussians can proudly boast of their long and glorious history, which antedates the history of Russia. Though that country early in modern times became a part of Russia and many attempts were made to eradicate all Byelorussian tradition and distinctive national traits, the Byelorussian people have never been willing to forgo and forget their national and individual identity. They have always wanted to regain their freedom and independence, and for centuries set political independence for their national goal. They obtained that goal in 1918.

In that year, when the decrepit czarist regime in Russia was no more, and the new Communist regime there was still in its infancy, the Byelorussians regained their freedom and proclaimed their independence by establishing the Byelorussian National Republic. At the time it was hoped that some 10 million Byelorussians, having become sovereign in their historic homeland and masters of their own destiny, would be allowed to enjoy the fruits of freedom in peace. Their subsequent history however took a sad and tragic turn.

Early in 1921, before the Byelorussians had sufficient time to consolidate and strengthen their government, Communists attacked and overran the country, thus putting an end to the independent Byelorussian National Republic. Since that time little is heard of the country or of its people. Today, and for more than four decades, these sturdy and stouthearted Byelorussians have been suffering under the ruthless regime of Communist totalitarian tyranny maintained by the Kremlin. These people, even the worst of tyrannies, have not given up their hope for freedom and independence. They still ever fervently cherish that noble ideal, and at this 43d anniversary of the independence day, all of us in the free world wish them strength and fortitude in their struggle against Communist tyranny.

Can We Afford Such Housing?

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. WIDNALL. Mr. Speaker, an editorial appearing in the March 18 edition of the Record, published in Hackensack in the Seventh New Jersey District, spotlights just one of the areas suggested in the new administration's housing message.

Since we will be considering housing legislation in this session, I would like to bring this editorial to the attention of my colleagues. It is entitled "Can We Afford Such Housing?" It could well be "All Is Not Gold That Glitters."

The editorial follows:

[From the Hackensack (N.J.) Record, Mar. 18, 1961]

CAN WE AFFORD SUCH HOUSING?

Generally speaking, Mr. Kennedy's programs are attractive and appealing, and his housing program—suggested slogan: a nation of homeowners—sounds well, as musicians say cautiously of a piece of new music. That's generally speaking. But we shall have to get down to the details of his Government insurance on 40-year mortgages at 5½ percent on homes up to $13,500, no downpayment. And the more deeply one gets into details, the more dismaying is this aspects of the New Frontier.

To the little guy earning $100 a week or so, unable to scare up in one piece the $2,500 he'd need for conventional financing and unable to qualify for subsidized low-rent housing, the President's planning must seem inspired. Mr. Kennedy, for his part, appears to be of at least two minds about the ultimate effect; recommending a 12- to 18-month test run for the program, he mused:

"A nation with ugly, crime-infested cities and haphazard suburbs does not present the same image to the world as a nation characterized by bright and orderly development."

What kind of bright and orderly development could be carried out under this program? In the first place, it does not meet the need, either for housing or for business stimulation, nationwide; where except in Florida and the Southwest can $13,500 these days put a habitable house on a habitable lot? In the second place, even if through some miracle of automation, prefabrication, and assistance such as Mr. Kennedy suggested from nonprofit church, fraternal, union, and municipal co-ops—even if some miracle made $13,500 houses economically possible, what would be the effect of such housing on land waste, suburban sprawl, urban blight? Would the community get housing it could tolerate? And, though his monthly payments totaled less than rental plus taxes and insurance, what kind of a buy would this be for the little guy? Purchasing at age 25, he'd pay two or three times the face value of the loan before he retired his debt at age 65, and what would today's $13,500 (or $10,000) house look like by that time? Bright and orderly development and this kind of housing just aren't compatible. A nation of homeowners is a high ideal. It is trusted Congress will look carefully at what we'd be acquiring along with the house.

Man of the Year

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Thursday, March 16, 1961, which comments upon the selection by the Friendly Sons of St. Patrick of Wilkes-Barre of Mr. Tom Hart as its Man of the Year. It was my privilege to extend this honor and recognition to Mr. Hart at last Friday's banquet held by the Friendly Sons and I received a great deal of personal pleasure and satisfaction in doing so because Mr. Hart is truly one of the most outstanding citizens in my Congressional District. I wish him continued good health and success in all of his future endeavors.

The aforementioned editorial follows:

MAN OF THE YEAR

The Friendly Sons of St. Patrick, at the annual dinner in Hotel Sterling on March 17, will add the name of Tom Hart, Wilkes-Barre realtor and Sugar Notch native, to the list of outstanding citizens who have been honored as Men of the Year at this gathering of Americans of Irish extraction. The recognition is no small distinction, for it is based on public service. The fact that a dozen men were considered and he was the choice is no small compliment in itself.

Tom Hart easily measures up to the exacting standards as a good citizen, neighbor and businessman. He is a credit to his Irish forebears and, incidentally, to the Friendly Sons of St. Patrick, one of a number of organizations in which he has played a leading role in the half century he has been active on the local scene.

Now heading for 76, he sets a stiff pace, with no diminution of zeal or enthusiasm as he makes the appointed rounds. He is

impervious to the passage of time and his appearance belies his years.

From Sugar Notch to Wilkes-Barre is a journey of 5 miles, but to Tom Hart the distance was not important. For him, it has been a march of triumph in the pattern of Ireland's famed patron whose day he shares in 1961.

U.S. District Court—Southern District of New York

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following material:

U.S. DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

(Leslie Taylor and Kevin Taylor, minors, by Wilbert Taylor and Hallie Taylor, their parents and next friends, and Marjorie Williams and Rosylyn Williams, minors by Rudolph Williams and Marjorie Williams, their parents and next friends, and Cheryl Ann Williams, a minor, by Ula Williams, her mother and next friend, and Lynn Garland, a minor, by Thomas Garland, her father and next friend, and Benjamin Hall, Lonnie Hall, Michelee Hall and Velma Hall, minors, by Barbara Hall, their mother and next friend, and Marilene Murphy, a minor, by Walter Murphy and Willene Murphy, her parents and next friends, and for these and all others similarly situated and who may become parties to this action, Plaintiffs, against the Board of Education of the City School District of the city of New Rochelle, and Herbert C. Clish, as superintendent of schools of the city school district of the city of New Rochelle, Defendants—60 Civ. 4098.)

AMICUS CURIAE

Irving R. Kaufman, D.J.: Planitiffs in this class action, proceeding through their parents, are 11 Negro infants who were formerly enrolled in the Lincoln School, a public elementary school operated by the defendants, the Board of Education of the city of New Rochelle, and Dr. Herbert C. Clish, that city's superintendent of schools.[1] It is admitted by the defendant that approximately 94 percent of the pupils at Lincoln are Negroes. Plaintiffs contend that the board has deliberately and intentionally created and maintained Lincoln School as a racially segregated school, and thus has violated the 14th amendment and the principles enunciated in *Brown* v. *Board of Education*, 347 U.S. 483 (1954).

The board operates the elementary school system in New Rochelle by means of the neighborhood school plan. Under this plan, as it functions in New Rochelle, the city is divided into 12 districts, each of which is served by a centrally located school. Pupils residing within a particular district are required to attend the school within that district, and permission to transfer to other schools is granted by the school authorities only in exceptional circumstances. Thus, as a result of this policy, the plaintiffs have been compelled to attend the Lincoln School. At the start of the 1960 school term, they sought to register in other elementary schools in the city having a more heterogeneous racial composition; permission to so register was uniformly denied, and this action then followed. During the pendency of this action, plaintiffs have withdrawn from the Lincoln School, and are receiving private tutoring.

In the fall of 1959, after much public agitation against the racial imbalance in the Lincoln School, the board proposed to replace the present Lincoln School building, admittedly antiquated, with a modern facility on the same site to serve the same neighborhood.[2] Financing for this proposal was approved in a referendum held on May 24, 1960. The plaintiffs view this decision by the board as the culmination of a course of conduct designed to maintain Lincoln as a racially segregated school. They thus seek an injunction restraining the defendant from proceeding with the construction of the new school. They also seek to enjoin the board from refusing to allow them to register in schools other than Lincoln which are not racially segregated, and from requiring them to register in the Lincoln School.

The defendant board vigorously contends that the charge of racial segregation is absurd. Its position is that no child is compelled to attend any school in the city of New Rochelle solely on the basis of race or color. It points out that two-thirds of the Negro elementary school children in New Rochelle attend public schools other than Lincoln, and that the city's two junior high schools and one senior high school are attended by all children regardless of race. It urges that the high proportion of Negroes in the Lincoln School is a result solely of residential patterns, rather than any desire on its part to maintain Lincoln as a segregated school. With respect to its decision to rebuild Lincoln School, the board contends that it was made only after an exhaustive study undertaken in good faith, which led it to conclude that the course chosen was the only feasible alternative. Thus, the defendant maintains that no constitutional rights of the plaintiffs have been infringed in any way.

After hearing and observing the witnesses, and carefully examining the large amount of documentary evidence submitted, I conclude that the defendant's conduct has violated the Constitution, denying the plaintiffs the right to the equal protection of the laws guaranteed by the 14th amendment. I find (1) that the Board of Education of New Rochelle, prior to 1949, intentionally created Lincoln School as a racially segregated school, and has not, since then, acted in good faith to implement desegregation as required by the 14th amendment;[3] and (2) that the conduct of the board of education even since 1949 has been motivated by the purposeful desire of maintaining the Lincoln School as a racially segregated school.[4]

I am mindful of the recent admonition of Mr. Justice Frankfurter, in *Gomillion* v. *Lightfoot* (29 U.S. Law Week 4024, U.S. Supreme Court, Nov. 14, 1960), as to the dangers of an undiscerning application of broad generalizations in a delicate area such as this, when important rights of individuals are so directly affected. Justice Frankfurter reemphasized what should always have been obvious: that it is the particular facts in each case which are determinative, and thus that it is incumbent upon the Court to examine these facts with scrupulous care. He said:

"Particularly in dealing with claims under broad provisions of the Constitution, which derive content by an interpretive process of inclusion and exclusion, it is imperative that generalizations, based on and qualified by the concrete situations that gave rise to them, must not be applied out of context in disregard of variant controlling facts."

In light of this admonition, before discussing what I conceive to be the controlling principles of law applicable to this case, and the legal import of the respective contentions raised by the parties, I will fully elaborate the facts which have impelled me to the conclusion that defendant's conduct has violated the Constitution.

THE FACTS

In order to comprehend the Lincoln problem, as it has evolved, familiarity with the geographic and racial character of the city of New Rochelle is necessary. The city has an elongated shape, its length from north to south being almost four times its average width. The settling of population started in the southern half of the town; in relatively recent years the northern end of the city has developed. That area, however, is now in the midst of a housing boom, and in the past 10 years two new elementary schools—Ward and Davis—have been built to accommodate north end students. There are virtually no Negroes in this area. The north-central part of town is served by two schools, Roosevelt in the west and Barnard in the east, with only the latter having a sizable Negro enrollment. The southern end of the city is also predominantly white in population and is served by two elementary schools—Trinity and Jefferson—which have 5 percent and 7 percent Negro enrollment, respectively. If a line were drawn east to west across the middle of New Rochelle, the area of predominantly Negro population would be found immediately south of that line, in the south-central portion of the city. The Lincoln School District lies in the center of this Negro area. Bordering Lincoln are five other elementary school districts—Mayflower, Stevenson, Washington, Columbus, and Webster—all of which contain a substantial Negro population. Washington School has a Negro enrollment of greater than 50 percent, while the Negro enrollment of the other four schools varies from approximately 17 percent to approximately 30 percent.

Lincoln School was built in 1898; there is no evidence as to the Negro population, if any, at that time. Marylynn G. Pierce, a member of the board of education, testified that there has been a tradition of a Negro school in New Rochelle for approximately 100 years, but she did not indicate how this tradition had been inherited by the Lincoln School. Events occurring subsequent to 1930 indicate that by that time the majority of the Negro population of the city was being served by the Lincoln School. In 1930, according to the uncontradicted testimony of Bertha O. White, corroborated in part by the testimony of Mrs. Pierce, and also by official school maps, a policy of gerrymandering was instituted which led to the confining of Negroes within the Lincoln School District by redrawing the district lines to coincide with Negro population movements. (See, e.g., record, pp. 131–134, 236–237). The testimony as to the gerrymandering revealed the following:

1. In 1930, the Webster School was built, to the northwest of Lincoln, and thus district lines in the area were redrawn. The boundary lines between Webster and Lincoln were so drawn that, in one section, they were extended to a point directly across the street from the Lincoln School. By this arrangement, an irregular corridor, which was of white population was carved out from Lincoln and placed in the Webster district. The result was that an area containing white students, directly adjoining the Lincoln School, was districted into the Webster School, despite the fact that this area was far closer to the Lincoln School than to Webster. It was testified that the purpose of this gerrymandering was to confine Negro pupils within the Lincoln district, while allowing whites living in the same area to attend a school which was not predominantly Negro in composition.

2. In the ensuing years, as the Negro population increased, expanding westward from the Lincoln district, the borders of Lincoln

Footnotes at end of speech.

were extended in this direction so as to contain the Negroes within them.

(3) During the same period in which the boundaries between Webster and Lincoln were being adjusted, other alterations were being made between the Lincoln district and the Mayflower district to the north, although these changes were never noted in board minutes, nor were they reflected on official school maps for many years. By means of these boundary changes, children living in a predominantly white area known as Rochelle Park, then located in the northeast corner of the Lincoln district, were assigned to the Mayflower School.

It is highly significant that the board has offered no evidence to refute the testimony indicating that this gerrymandering took place. Nor, did it proffer any explanation for this conduct to negate the obvious inference of a desire to segregate. In addition, board minutes for the period subsequent to 1930 indicate that Lincoln was considered in the community as the Negro school, and that the board intended it to be utilized after school hours as a meeting place for the Negro community (see joint exhibit VII supplemented by defendants; see also superintendent's report, February 2, 1937, submitted on consent of the parties).

In addition to this gerrymandering, the board instituted further policies to assure that the Lincoln School District would remain Negro, and to relieve white children of the burden of attending a predominantly Negro school. Thus, up until 1949, white children remaining in the Lincoln district were allowed to transfer to other elementary schools. For example, in the year 1949, board minutes indicate that 106 children residing in the Lincoln district were allowed by the board to attend other schools (defendants' exhibit SS). The board admitted, in a resolution of November 30, 1959, that "There was a time when the transfer of children to schools outside the school district of their residence was permitted and this operated unfairly in the Lincoln School district from which white parents were allowed to transfer their children, resulting in a high percentage of Negro children in Lincoln School" (defendants' exhibit I). This policy produced the anomaly, testified to by Mrs. White, of children living in adjoining houses attending different schools solely on the basis of their race (record, pp. 141–142). Further, it appears, for example, that white children living south of the Lincoln School were assigned to Mayflower School, approximately one-half a mile north of Lincoln. Thus, they apparently had to pass Lincoln each day on their way to school. (See plaintiffs' exhibit 6.) The inevitable result of this transfer policy, when combined with the earlier gerrymandering, was that by January of 1949, Lincoln had become a 100-percent Negro school. (See, e.g., plaintiffs' exhibit 24.)

The defendant's failure to rebut this evidence of gerrymandering and racially motivated transfers gains even greater significance from the fact that Mr. Sim Joe Smith, assistant superintendent of schools in New Rochelle since 1930, was present in the courtroom throughout the trial. It was testified that Mr. Smith approved transfers made during this period. When called to the stand by plaintiffs' attorney, Mr. Smith's testimony as to the operation of the transfer policy was vague and evasive, and evinced a conveniently faulty memory.

In examining the board's conduct subsequent to 1949, it must be remembered that this conduct must be viewed against its historical background and context. It must be examined and evaluated in its totality. Intent, purpose, and motivation, while unclear or uncertain if only isolated acts are considered, become defined and recognizable when a total course of conduct is carefully scrutinized.

By 1949, the segregated condition at Lincoln had come to public attention, and numerous civic groups exerted pressure on the board to alleviate it. As a result of this agitation, the board passed a resolution, on January 11, 1949, ending the policy of transferring white children out of the Lincoln School and indicating that readjustment of district lines would be considered.[5] At that time, however, the board did not redistrict in any way, nor has it done so until the present day. Thus, it has done nothing to eliminate the effects of the gerrymandering undertaken previously. Rather, it has chosen to maintain the status quo, imposing, in effect, a freeze on the artificially created boundaries of the Lincoln District. When it determined to maintain the status quo, the board could hardly have been unaware that this would necessarily perpetuate Lincoln as a predominantly Negro school. For example, on June 17, 1949, a letter written to the board by Kenneth B. Low, then president of the Council for Unity of New Rochelle (and later a member of the board) was reprinted in the New Rochelle Standard Star.

Low wrote:

"By the redistricting which was made at the time Webster School was built in 1930 the board participated in creating an overbalance of Negro pupils in Lincoln School which steadily increased with the development of the neighborhood until, by virtue of the board's transfer policy, it became an all-Negro school.

"To now enforce district lines, without changing the present Lincoln School District, is to create a situation in which the white pupils will be in a small minority and this appears to be completely unrealistic and undesirable. In our opinion it will result not only in bitter opposition by the parents of the white children in the district but eventually in the removal of these parents from the district and a consequent accentuation of the all-Negro character of the neighborhood and school.

"[S]ound educational policy calls for the integration of children of all races, creeds and national backgrounds in the public schools, which are the cradle of democracy to permit the separation of Negro children from white children throughout their primary school education is indefensible in this community.

"Any plan which will not freeze Lincoln School as an overwhelmingly Negro school would, in our opinion, be preferable to the present plan of action which we feel certain will seriously increase the tensions in this area.

"The board has seemingly overlooked the basic issue of the existence of an all-Negro school in New Rochelle. Similar conditions have been changed in other communities either by closing the Negro school or by redistricting to create a proper balance of white and Negro pupils" (plaintiffs' exhibit 23).

But no action on the part of the board was forthcoming. The board has steadfastly refused to alter the rigid neighborhood school policy with the result that the Lincoln School has continued to be a predominantly Negro school. Today it contains approximately 94 percent Negroes.

The years between 1949 and 1960 have been 11 years of agitation for New Rochelle. For 11 years, responsible civic-minded organizations and groups have urged that something be done to correct the Lincoln situation; for 11 years the board has discussed the problem, hired experts, made surveys, and constantly reiterated its belief in racial equality and the necessity for equal opportunities. But, in these 11 years, it has taken no action whatsoever to alter the racial imbalance in the Lincoln School. It has met the problem with mere words, barren of meaning, for they were never followed by deeds.

In 1954, the Supreme Court rendered its opinion in *Brown* v. *Board of Education, supra*. This decision heralded a new epoch in the quest for equality of the individual. it called for responsible public officials throughout the country to reappraise their thinking and policies, and to make every effort to afford Negroes the more meaningful equality guaranteed to them by the Constitution. The Brown decision, in short, was a lesson in democracy, directed to the public at large and more particularly to those responsible for the operation of the schools. It imposed a legal and moral obligation upon officials who had created or maintained segregated schools to undo the damage which they had fostered. And, compliance with the Supreme Court's edict was not to be less forthright in the North than in the South; no double standard was to be tolerated.

The Brown decision also increased the public agitation for change in New Rochelle. But the board paid little heed to the Brown doctrine, finding nothing in its conduct repugnant to Brown. In 1955 a survey of the physical facilities of the New Rochelle schools, conducted by the engineering firm of Englehardt, Englehardt, and Leggett, revealed that the Lincoln building was obsolete and thus would have to be retired. This conclusion reinforced the findings of a 1948 engineering survey conducted by Leland Hubbell Lyon. The report recommended that both the Lincoln and Washington schools be closed, and a combined school be built on the present Lincoln site.[6] With the necessity for making some change thus forced upon the board, it was thereby given an additional opportunity to eliminate segregation. Once again, no action was taken in this direction.

In December of 1956, a committee representing 14 civic groups interested in ameliorating the Lincoln situation requested the board to have a study of the problem made by the New York State Department of Education. As a result, at the board's request, Mr. Theron Johnson, an experienced, high-ranking administrator in the department, came to New Rochelle, conducted interviews and discussions, and surveyed the Lincoln problem. At the same time, the board proposed for the first time to rebuild Lincoln on the same site. This proposal was included in a comprehensive school referendum to be submitted to the voters in the spring of 1957. Mr. Johnson submitted his final report to the board on March 25, 1957, at which time the date for the referendum was approaching.[7] Johnson pointed out that "[t]he actions of previous boards running back over the years contributed to your present de facto segregation."

He said: "[a]lthough the board of education has frequently expresed its dissatisfaction with the existence of a predominantly Negro elementary school in New Rochelle, it has not fully taken the responsibility to implement its policy of integration. Although the board of education cannot be blamed for a residential pattern which facilitates segregation, it does have the responsibility to take the leadership in finding a way out. The impact is strongest on the schools and affects educational achievement and psychological development. If the board does not take the leadership no one else will. In studying the existing school attendance lines there were many instances where the boundary seemed to be neither reasonable nor consistent. It could only appear that special interests had been permitted to effect the assignment of children to schools. When this situation exists doubt will remain in the minds of many residents as to the board's intent."

Johnson's report concluded with a challenge to the board: a challenge to meet its

---

Footnotes at end of speech.

obligations, and to take the leadership in ending segregation.

He wrote: "In summary, then, we can say there have been no 'solutions' achieved. The search must continue but in a fashion which is productive and in a way which can draw the community together. The opportunities lie before the board of education and its administrative officials. You have the decision in your own hands" (plaintiffs' exhibit 15).

The board's response to this challenge was somewhat less than edifying. The board's president, Mr. Frederic Davidson, wrote immediately to the commissioner of education, asking that the report, which the board itself had initially requested, be recalled and repressed. The commissioner of education acceded to the board's request and the report was withdrawn. Meanwhile, undoubtedly due in large part to the publicity which the report had received, the portion of the referendum calling for a replacement of the Lincoln School was defeated by the voters.

Johnson's report had recommended, inter alia, that a comprehensive community study of the problem be undertaken. Accordingly, the board hired a distinguished group of educators, psychologists, and sociologists, headed by Dr. Dan Dodson, one of the country's foremost experts on the problems of integration. In December of 1957, this group after an exhaustive study, delivered its report, entitled "Racial Imbalance in Public Education in New Rochelle, N.Y." (popularly known as the Dodson Report). This report, like that of Mr. Johnson, concluded that the board had been derelict in its duties, and remiss in its attitudes. Moreover, Dr. Dodson testified that his initial proposed report had been even more severe in its criticism of the board, but that the final report submitted had been toned down so as to make it more acceptable. The Dodson Report framed the essential issue involved as follows:

"Specifically, if the board of education in the past, operating in a different social setting, encouraged or permitted the present situation to develop, does the present board of education have the obligation to undo any damages which may have accrued under previous decisions of its predecessors? Does the present board have an obligation to eradicate the imbalance of races in the Lincoln School which was permitted to develop under previous boards?" (p. 9).

The report pointed out that "it is basically through the mechanism of the public school that members of a group occupying an inferior position in our society can achieve equal opportunities. Help in breaking down economic, social, and cultural barriers should begin with the public schools" (p. 16).

Comparing the situation to that involved in the Brown case, the report said:

"It seems that morally the situation is little different than the situation which the U.S. Supreme Court in 1954 found to generate 'a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone' " (p. 18).

Dodson pointed out that change in New Rochelle was necessary; new facilities were required. Thus, the board was faced with the necessity of dealing with the racial problem at once. Procrastination had to give way to action.

"The board must realize that any building or utilization plan it adopts will implicitly make this decision. It is not possible to avoid the question of whether racial imbalance is going to be alleviated or encouraged. To do nothing about it is to encourage racial imbalance. To do nothing about it is a decision just as powerful and as important as a decision to try to do something about the imbalance" (p. 19).

The report pointed out that the board alone was in a position to immediately alleviate segregation:

"At this time the board of education is in a position to eliminate de facto segregation in schools by its decision on a matter which has to be resolved; namely, how to accommodate the increasing numbers of students in the public schools of New Rochelle. Obviously the racial imbalance in the schools is related to the housing patterns. The housing patterns, however, cannot be changed overnight. The school district boundaries can" (pp. 19–20).

The Dodson report discussed the concern for "status" of various schools which has apparently been a strong motivating factor in the board's conduct through the years.

"The panel was puzzled that in a city as dynamic as New Rochelle, in a decade with insignificant exceptions, few children from the outside have ever been sent into the three schools located in the low socioeconomic status neighborhoods" (p. 34).

Dodson commented on "what seems to be a lack of willingness on the part of the board to move district lines," and found that "acquiescence has heightened concern as to the 'status' of one school as against another with the result that there is almost a 'phobia' about the district lines in several of the schools surrounding Washington, Lincoln, and Columbus" (pp. 34–35).

The experts found, as a result of the survey, that the board had been largely responsible for the situation.

"The panel believes the board of education has adhered too rigidly to established district lines for elementary schools. It has tended to make underuse of some facilities at the expense of over-crowding in others. This policy has reinforced the 'status appeal' of some schools and depreciated others. It has helped fragment the community into neighborhoods identified by school attended and made more provincial the experience of all children" (p. 41).

With respect to the rebuilding of Lincoln School, Dodson said: "To do so would further reinforce the segregation of Negroes. It would leave two schools in the same neighborhood (Washington and Columbus) only partially used, and it would reinforce community fragmentation" (p. 43).

The Dodson report concluded with two comprehensive proposals designed to eliminate segregation in Lincoln School, and to provide a more balanced educational experience throughout the community. The first, and favored, alternative provided for (1) the rebuilding of a larger Lincoln School on the same site; (2) the discontinuance of Washington School; (3) extensive redistricting; and (4) the more flexible use of the neighborhood school policy in the future.

Dodson's second proposal involved the use of K–3 schools (kindergarten through third grade) so as to allow for greater flexibility in districting. Dodson made it clear that each of these two recommendations was submitted "as an integrated whole, rather than a series of separable proposals" (p. 3).

The Dodson report, in short, indicated clearly to the board that it alone had the responsibility of determining whether segregation in New Rochelle would continue. But, once again, the board took no action whatsoever to implement the Dodson recommendations, or any of the other proposals submitted to it by interested persons and groups, such as permissive zoning and dispersal of Lincoln pupils (see defendants' exhibit G). Of significance in interpreting this inaction is Dr. Dodson's testimony that during the course of the survey, he lost faith in the board's sincerity and willingness to come to grips with the racial problem (record, pp. 413–414).

One reason persisted in by the Board as an excuse for its failure to act was the administrative difficulties and costs involved in making any changes. However, it is noteworthy that no comprehensive survey of costs was ever undertaken (Record, page 589). Moreover, the difficulties allegedly envisioned in allowing Lincoln pupils to travel to other schools do not seem overly substantial. Although, in the north end, some children live as much as a mile from the school which they attend (Record, page 725), the radius of the Lincoln District is only a quarter of a mile. In addition, several of the schools in districts adjoining Lincoln are within half a mile of the Lincoln School (defendants' exhibit RR). Thus, even if Lincoln pupils were allowed to attend other elementary schools, their journey would still not be as great as that of many of these north-end children.

In November of 1959, the Board decided again to propose only the rebuilding of Lincoln School on its present site, despite the admonition of the Dodson Report that this course of action inevitably would lead to the furthering of segregation. Although both Dodson and Johnson had indicated that, unless the Board assumed positive responsibility, segregation would inevitably continue, the Board stated, in a resolution dated November 30, 1959:

"The solution to the problem of racial, religious or other concentrations of children does not lie with the schools, but rather with the community and its living patterns" (defendants' exhibit I).

This proposal was to be put to the voters by way of a referendum in May of 1960. The board's activities in an attempt to gain public support for the proposal give strong indication of the absence of good faith in meeting its obligations. It permitted the issue of segregation to be insinuated into the referendum campaign, to the extent that persons in the districts bordering Lincoln were fostered.[8]

Thus, principals in schools in these districts sent letters to parents urging support of the Lincoln proposal, indicating that integration was the primary issue and intimating that if Lincoln were not replaced, Negroes might be transferred in large numbers to the schools which their children were presently attending. (See plaintiffs exhibits 20 and 21; see also record, pp. 153, 161–162, 547, 606, 611–612.) Although the board had disciplinary authority over these school officials when acting in their official capacity, it took no action to censure them, or suppress the letters in any way. It insisted instead that the principals were merely exercising freedom of expression. Surely this is not the conduct of a public body seeking in good faith to reach a legitimate solution to a racial problem.

The board itself participated more directly in similar acts. In an advertisement, which Superintendent of Schools Herbert C. Clish admitted was prepared by the board's referendum committee (record, pp. 615–616, 619–620), opponents of the Lincoln proposal were branded as extremists and propagandists (plaintiffs' exhibit 9), despite the fact that numerous reputable civic organizations had publicly announced their opposition to it. In the same advertisement, the taxpayers of New Rochelle were warned of harsh financial consequences if the Lincoln proposal were defeated. The taxpayers were reminded that if the proposal failed, the new school could be built with 5-year bonds, a procedure which would greatly increase taxes in the city. Thus the board made it clear that it saw only one course of action: rebuild the Lincoln School on its present site. This, as Dodson made clear, could mean only the continuing of segregation at Lincoln.[9]

In addition, there was testimony as to pressure applied by Dr. Clish on PTA officials who were reluctant to support the Lincoln

---

Footnotes at end of speech.

proposal and the advertisement to be placed by the board's referendum committee (record, pp. 172–174). And, in the advertisement, it was stated that the Lincoln PTA had endorsed the proposal, when in fact it had never met to consider the matter (record, pp. 77–78, 534). At any rate, these pressures were successful, and the voters passed the Lincoln proposal by an overwhelming 3-to-1 majority. It is significant that although the board constantly reiterated that the new school was being built to benefit Lincoln district, this was the only district in which the proposal was defeated.

This, then, completes the picture of board intransigence and refusal to act through the years. The freeze placed by the board in 1949 on the already gerrymandered boundaries of the Lincoln district remained unchanged, despite 11 years of public agitation, pleas and advice from distinguished educators and sociologists. And, what is more, the board has not evidenced any intention to change its policies in the future.

THE LAW

I

Any discussion of the applicable law must begin with the case of *Brown* v. *Board of Education, supra*. Principles long accepted by psychologists and sociologists were given the stature of the law of the land. The Supreme Court made it clear that in the field of public education, separate but equal was inherently unequal, and hence violative of the Constitution. Thus, the operation of separate schools for whites and Negroes was proscribed. Those school authorities throughout the country which had operated such separate schools were instructed to implement desegregation, in good faith, "with all deliberate speed" (see *Brown* v. *Board of Education*, 349 U.S. 294, 301 (1955)).

I hold that the Board of Education of New Rochelle, by its conduct in the years prior to 1949, created and established the Lincoln School as a segregated, Negro school. Thus formulated, the present case falls squarely within the plain meaning of the Brown decision.

The board contends that since Lincoln School is not in form a component of a dual system of education for whites and Negroes such as was invalidated by Brown, and since the school contains 94 percent Negroes rather than 100 percent Negroes, there can be no violation of the 14th amendment or of the Brown principles. But, this contention misconstrues the underlying premise of the Brown rationale. That opinion, while dealing with a State-maintained dual system of education, was premised on the factual conclusion that a segregated education created and maintained by official acts had a detrimental and deleterious effect on the educational and mental development of the minority group children. The unanimous Court, speaking through Chief Justice Warren, declared that segregation of Negro children, especially in their formative years "generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone" (347 U.S. at 494). The court further emphasized the necessity of giving these minority-group children the opportunity for extensive contact with other children at an early stage in their educational experience, finding such contact to be indispensable if children of all races and creeds were to become inculcated with a meaningful understanding of the essentials of our democratic way of life. That the benefits inherent in an integrated education are essential to the proper development of all children has been reiterated time and again by the many witnesses in the present case, including those called by the defendant.

With these principles clear in mind, I see no basis to draw a distinction, legal or moral, between segregation established by the formality of a dual system of education, as in Brown, and that created by gerrymandering of school district lines and transferring of white children as in the instant case (cf. *Gomillion* v. *Lightfoot, supra*). The result is the same in each case: The conduct of responsible school officials has operated to deny to Negro children the opportunities for a full and meaningful educational experience guaranteed to them by the 14th amendment. Further, the fact that the Lincoln School contains approximately 6 percent whites, surely cannot divest Lincoln of its segregated character. In a community such as New Rochelle, the presence of some 29 white children certainly does not afford the 454 Negro children in the school the educational and social contacts and interaction envisioned by Brown.[10]

Having created a segregated school, the Constitution imposed upon the board the duty to end segregation, in good faith, and with all deliberate speed. It is patently clear that this obligation has not been fulfilled.

The board argues that the study which it has given to the problem, and the surveys which it has requested, conclusively indicate its good faith. But, history is made, and constitutional rights vindicated, by deeds, not by talk, resolutions, and fine phrases. As already indicated, the board has discussed the problem, hired experts, made surveys, and constantly reiterated verbally its belief in racial equality and the necessity for equal oportunities. But the fact remains that, in 11 years, not one single act was taken to implement these expressed principles. And, the board's attitude, as indicated by its overt conduct, has been one of negation; it has publicly disclaimed all responsibility for the Lincoln problem.

The board urges, however, that its decision to rebuild the Lincoln School on the same site constitutes a start in the right direction, since it is the first step outlined in the Dodson proposals.[11] But, the board has indicated that it has no intention of implementing the remainder of these proposals, which Dr. Dodson stated must be considered as an integrated whole. Dr. Dodson testified at the trial that the board's decision did violence to the spirit of his report (record, p. 439). Thus, it is most difficult to conceive of the rebuilding of the Lincoln School as good-faith compliance with an obligation to desegregate. In fact, this seems the one sure way to render certain continued segregation at Lincoln.

The board attempts to excuse its inaction on the ground that admittedly there is no "ideal" solution to the Lincoln problem. But, inability to find a perfect answer is hardly justification for refusal to do anything. Alternatives have been proposed by experts and prominent civic organizations. While not perfect, they contained much merit and offered a decided improvement over the board's policy of inertia. It hardly need be stated that there is never an ideal solution when the question of desegregation is faced squarely. Experience in the South has made clear, that the problems to be met in this area are most difficult and delicate. They involve the most intense, deep-seated aspirations and prejudices of persons and groups. Therefore, there can never be a solution which could conceivably please everyone. But, if this alone were sufficient to excuse inaction, progress in this vital area of human rights would be nonexistent. I cannot accept the proposition that in his relatively small community in the North, men of good will, wisdom and ingenuity could not have devised a plan for the orderly desegregation of the Lincoln School.

Footnotes at end of speech.

If school boards could satisfy their obligations under the 14th amendment merely by waiting complacently until an ideal solution presented itself, the Brown decision, and the advances in the area of individual equality which it represents, would be a virtual nullity. Brown, if it meant anything, meant much more than this. Necessarily implied in its proscription of segregation was the positive obligation of eliminating it. This obligation requires both good faith, and action with dispatch, and I am compelled to the conclusion that the Board of Education of New Rochelle has complied with neither of these requirements in the present case.

II

I also conclude that if a board of education enters into a course of conduct motivated by a purposeful desire to perpetuate and maintain a segregated school, the constitutional rights of those confined within this segregated establishment have been violated.

This principle has already been recognized by the courts. In *Henry* v. *Godsell*, 165 F. Supp. 87 (E.D. Mich. 1958), the Negro plaintiffs moved to enjoin the construction of a new school in an area predominantly populated by Negroes. The court denied the injunction, finding that the plaintiffs' constitutional rights had not been violated, but only after a specific finding that the school board had acted in good faith, and that its policies "were not motivated by racial considerations" (165 F. Supp. at 91). The court clearly considered the issue of intent and purpose to be controlling.

In *Sealy* v. *Department of Public Instruction of Penn.*, 159 F. Supp. 561 (E.D. Pa., 1957), aff'd. 252 F. 2d 898 (C.A. 3), cert. denied 356 U.S. 975 (1958), Negro children attacked the proposed location of a new junior high school as racially discriminatory. The court denied the injunction sought, but once again only after a specific finding of lack of intent to discriminate. The court found that "the record discloses in no instance a single iota of testimony that the consideration of the Darby Township School District Board, in the selection of the site for the proposed new junior high school and its construction thereon, was motivated by any racial discrimination whatsoever * * *" (159 F. Supp. at 563).

And its principal conclusion of law was that "None of the defendants herein named was in any way racially motivated, nor was any discrimination whatsoever regarding race exercised by any or all of them in the selection of the site or the approval given for the construction of a proposed junior high school in the upper section of Darby Township" (159 F. Supp. at 566).

These cases clearly imply their converse: If a board of education selects a school site, or otherwise operates its schools, with a purposeful desire to segregate, or to maintain segregation, the Constitution has been violated. See also *Clemons* v. *Board of Education of Hillsboro*, 228 F. 2d 853 (C.A. 6), cert. denied, 350 U.S. 1006 (1956); *Holland* v. *Board of Public Instruction*, 258 F. 2d 730 (C.A. 5, 1958). If such motivation is present, it makes no meaningful difference whether the segregation involved is maintained directly through formal separation, or indirectly through overrigid adherence to artifically created boundary lines, as in the present case. Similarly, it is of no moment whether the segregation is labeled by the defendant as "de jure" or "de facto", as long as the board, by its conduct, is responsible for it maintenance.[12]

Constitutional rights are determined by realities, not by labels or semantics. The Supreme Court has affirmed that courts must look through the guise in which school officials seek to clothe their unconstitutional

conduct. The court said, in *Cooper* v. *Aaron*, 358 U.S. 1, 19 (1958):

"It is, of course, quite true that the responsibility for public education is primarily the concern of the States, but it is equally true that such responsibilities, like all other State activity, must be exercised consistently with Federal constitutional requirements as they apply to State action. The Constitution created a Government dedicated to equal justice under law. The 14th amendment embodied and emphasized that ideal. State support of segregated schools through any arrangement, management, funds, or property cannot be squared with the amendment's command that no State shall deny to any person within its jurisdiction the equal protection of the laws. The right of a student not to be segregated on racial grounds in schools so maintained is indeed so fundamental and pervasive that it is embraced in the concept of due process of law."

Turning to the realities of the instant case, the inference is inescapable that the board's deliberate intransigence and inflexibility for the last 11 years in the face of public pressures and expert advice were motivated by a desire to continue Lincoln School as a racially segregated school, and thus not to alter the racial balance in the city's other elementary schools. This becomes especially clear when the board's conduct subsequent to 1949 is examined against the background of the pre-1949 gerrymandering and transfer of white children. No other rational purpose can be attributed to the board's almost fanatically rigid adherence to district lines which were established in the first instance out of a desire to separate whites and Negroes. This utter inflexibility has been sharply criticized by Mr. Johnson and Dr. Dodson, both of whom came to New Rochelle at the board's invitation, and both of whom were led to seriously question the board's good faith. Not one proposal which would alleviate segregation, submitted by these experts and others, has ever been instituted by the board, even on an experimental basis. When this course of conduct is viewed in its totality, the desire to maintain segregation is clear. This does not necessarily mean that individual members of the board are segregationists or racists. But it is apparent that they have failed to accept or recognize their moral and legal responsibilities and have chosen instead to yield to pressures of certain groups who wish to avoid an influx of Negro children into the schools in their districts.

The defendant argues, however, that the neighborhood school policy is a reasonable and educationally sound one, and thus that it is not violating the Constitution in adhering to it. But, this argument ignores the essential nature of the plaintiffs' position. They are not attacking the concept of the neighborhood school as an abstract proposition. They are, rather, attacking its application so as to deny opportunities guaranteed to them by the Constitution. It is a legal truism that "acts generally lawful may become unlawful when done to accomplish an unlawful end." *Western Union Telegraph Co.* v. *Foster*, 247 U.S. 105, 114 (1918) (Holmes, J.). Moreover, as Justice Frankfurter succinctly noted in his concurring opinion in *Cooper* v. *Aaron*, 358 U.S. 1, 25 (1958): "Local customs, however hardened by time, are not decreed in heaven."

The neighborhood school policy certainly is not sacrosanct. It is valid only insofar as it is operated within the confines established by the Constitution. It cannot be used as an instrument to confine Negroes within an area artificially delineated in the first instance by official acts. If it is so used, the Constitution has been violated and the courts must intervene.

This principle is well illustrated by the litigation involving desegregation of schools in Delaware. In *Evans* v. *Buchanan*, 172 F. Supp. 508 (D. Del. 1959), the court was required to pass upon the constitutionality of a desegregation plan submitted by State officials. The court approved a large portion of the plan, but disapproved a section providing "whenever possible, every pupil in the grades affected * * * shall have the choice of (a) attending the nearest school within the district in which he resides or (b) attending the school he would have attended prior to the effective date of this order."

In effect, therefore, the authorities were attempting to institute a neighborhood school policy. The court ordered this provision stricken from the plan, commenting "now, it is a fact that in Georgetown, for example, the majority of the Negroes live in a community know as The Hill. The colored school is close by. The white school is at a much greater distance. Interpreting the language * * * in the light of these facts, it would seem to result that no Negro student whose family resides on The Hill may ever enter the white school. Whatever may have been the reasons for this provision, it strikes me as unfair and is ordered to be stricken" (172 F. Supp. at 516).

When later asked to restore this provision to the plan, the court refused, and pointed out:

"Read against a background of geographical facts of which judicial knowledge may be taken, it provided that in many localities no colored student could ever attend a white school unless his parents thereafter changed their residence to a point closer to the white school than the colored school" *Evans* v. *Buchanan*, 173 F. Supp. 891, 892 (D. Del. 1959).

The court thus indicated that it would not permit the school authorities to confine integration to a bare token under the guise of a neighborhood school plan. The Evans dicision clearly answers the board's contention that since Negroes are free to move to other districts, they are not being required to attend a segregated school. Moreover, the board indicates a naivete in not recognizing the difficulties inherent in changing long established residential patterns.

The board raises several other contentions in an attempt to justify its conduct. With respect to its refusal to institute permissive zoning, or to allow the Negro children to register at other schools at the start of the 1960 school year, the board argues that it would be violative of the law to accord Negroes special privileges not allowed to other minority groups. It points to the fact that several other elementary schools in New Rochelle have student compositions which are primarily of one religious or national origin group, and argues that if permissive zoning privileges were afforded to the Lincoln pupils, the same privileges would have to be given to these other minorities. This, it says, would produce chaos throughout the school system. But, the Constitution is not this colorblind. The Brown decision dealt only with Negroes; it was based on factual findings which may not be applicable to other minority groups. Furthermore, the chaos envisioned by the board seems more fanciful than real, since no other groups or persons in New Rochelle have requested permission to attend schools outside the district in which they reside. Nor, is there evidence that any other school district was gerrymandered or deliberately set up to embrace an ethnic group. In addition, there are instances where it is not only justified, but necessary, to provide for such allegedly unequal treatment in order to achieve the equality guaranteed by the Constitution.[12]

The board also contends, with respect to its decision to rebuild Lincoln School on its present site, that it is empowered by State law with the authority and duty to select locations for schools. The existence of this authority, however, is not questioned by the plaintiffs. But this power, like any other, must be exercised in accordance with the demands of the Constitution. See *Cooper* v. *Aaron*, 358 U.S. 1, 19 (1958); cf. *Henry* v. *Godsell, supra; Sealy* v. *Department of Public Instruction of Penn., supra.* Similarly, the fact that the people of New Rochelle overwhelmingly approved this proposal by referendum is of no legal significance. Constitutional rights can certainly never be made dependent upon public choice; the consequences if they were, need hardly be labored.

Finally, the board's principal contention, which it has asserted throughout these proceedings, is that the existence of an all-Negro or a predominantly Negro school is not, in and of itself, a violation of the Constitution. The constant reiteration of this argument indicates the board's preoccupation with semantics at the expense of realities. This is not a case where the existence of an all-Negro school is an unfortunate fortuity. The Lincoln School was established as an all-Negro school by the gerrymandering of district lines, and by the transfer of white children residing in the district to schools outside the district. The Board of Education of the City of New Rochelle was responsible for both of these policies. Subsequent to 1949, the board by its arbitrary rejection of all proposals for change has purposefully maintained Lincoln as a segregated school. This decision is rendered on the facts in this case and holds that, in the instant situation, constitutional rights have been violated.

In conclusion, the words of Justice Frankfurter in *Cooper* v. *Aaron, supra,* indicating the attitude with which responsible public officials must necessarily approach these problems, bear repetition: "That the responsibility of those who exercise power in a democratic government is not to reflect inflamed public feeling but to help form its understand, is especially true when they are confronted with a problem like a racially discriminating public school system. This is the lesson to be drawn from the heartening experience in ending enforced racial segregation in the public schools in cities with Negro populations of large proportions. Compliance with decisions of this Court, as the constitutional organ of the supreme law of the land, has often, throughout our history, depended on active support by State and local authorities. It presupposes such support. To withhold it, and indeed to use political power to try to paralyze the supreme law, precludes the maintenance of our Federal system as we have known and cherished it for 170 years" (358 U.S. at 26).

Litigation is an unsatisfactory way to resolve issues such as have been presented here. It is costly, time consuming—causing further delays in the implementation of constitutional rights—and further inflames the emotions of the partisans. Men of goodwill, such as the individual members of the board submit they are, could have solved, and still can solve, the problem by exercising the judgment and understanding for which they presumably were chosen. The school board is a public body charged with a public responsibility. This responsibility must be exercised solely in the best interests of the children attending the schools. The board cannot relieve itself of this responsibility by giving the community whatever result might gratify the impulse of the moment. Nothing can be permitted to conflict with the board's moral and legal obligation.

THE DECREE

In determining the manner in which the Negro children residing within the Lincoln district are to be afforded the opportunities guaranteed by the Constitution, I will follow the procedure authorized by the Supreme Court in *Brown* v. *Board of Education*, 349 U.S. 294 (1955), and utilized by many district courts in implementing the

Footnotes at end of speech.

Brown principles. Thus, I deem it unnecessary at this time to determine the extent to which each of the items of relief requested by plaintiffs will be afforded. Instead, the board is hereby ordered to present to this court, on or before April 14, 1961, a plan for desegregation in accordance with this opinion, said desegregation to begin no later than the start of the 1961–62 school year. This court will retain jurisdiction of this action until such plan has been presented, approved by the court, and then implemented.

The foregoing opinion will constitute the court's finding of fact and conclusions of law.

---

[1] Hereinafter, any reference to the defendant will be to the board of education, since it is the party primarily involved in this litigation.

[2] Although Lincoln School presently has a maximum capacity of 622 and an enrollment of 483 children, the proposed new school will accommodate only 400. Thus, almost 100 children will be dispersed, presumably to neighboring schools, after construction of the new building is completed.

[3] It should be noted that under section 2502 of the New York State education law, the board of education is a corporate body, and as such bears a continuous responsibility for the operation of the New Rochelle public schools. This responsibility is not terminated or altered by the inevitable turnover in individual membership, which has occurred from 1930 to date. Otherwise, illegal ocnduct of a public body could rarely be challenged. Thus, the conduct of the board is, in law, viewed similarly to the conduct of any corporation; individual changes in membership have no legal significance in the context of this case. In addition, nothing in this opinion criticizing conduct of the board of education is meant to apply to those members who have urged that the present course of conduct in relation to the Lincoln School be altered.

[4] The plaintiffs also contended that the quality of education afforded at the Lincoln School was inferior and that the educational achievement of the Negro children at Lincoln had thus been curtailed. Much evidence as to teacher qualifications, teacher turnover, and various student test scores was introduced by both sides in this connection. But, in the view which I take of the case, it is not necessary to consider these claims. *Brown* v. *Board of Education, supra,* has determined that segregated schools established and maintained by official acts are inherently unequal as a matter of law.

[5] The resolution provided as follows:

"*Resolved,* That the board of education study present district lines with a view to setting up school districts in terms of the best interests of all the children and of the most complete utilization of the present physical plant; and be it further

"*Resolved,* That as of September 1, 1949, district lines as set by the board will be strictly adhered to according to best educational practices; and be it further

"*Resolved,* That effective at once all new entrants to the school system be admitted only to the school of the district in which they legally reside."

[6] The two schools are less than one-half a mile apart and Washington School is only partially filled.

[7] It is noteworthy that the board decided to replace Lincoln School without waiting for Mr. Johnson's final report, which was to deal with the Lincoln problem.

[8] The attitude of persons within the districts bordering Lincoln is illustrated by a statement prepared by the Mayflower Parent-Teacher Association at a time when the board was still considering alternatives to the replacement of Lincoln. The statement read, in part:

"In several schools where a well-integrated situation exists, the proportion of Negro students is steadily increasing each year. Even in those Mayflower neighborhoods where housing integration does exist, the turnover of homes is almost invariably from white to Negro students. In recent years, the proportion of Negro students at Mayflower has risen approximately 2 percent each year. Lincoln School rezoning would certainly hasten this process."

The statement criticized the Dodson proposals, commenting: "At the same time, the plan will increase the proportion of Negro children in several neighboring schools to such a degree that even according to Dodson's own quotation, a very rapid shift in proportion is likely to follow * * *" (plaintiff's exhibit 14).

It was testified that this statement was reecived by the board (record, pp. 301–302).

At approximately the same time, the president of the Daniel Webster Parent-Teacher Association wrote a letter to the board, which read, in part, as follows: "For several years Daniel Webster has been a well-integrated school. Because the increase of nonwhite pupils has been gradual, the neighborhood and school itself has been able to adapt and achieve a well-integrated atmosphere * * * [t]he Daniel Webster Parent-Teacher Association is most concerned about the recommendation in the Dodson report to increase the nonwhite population in this school to something around 30 percent. Any such move that would amount to a sudden readjustment in the school population would, in the opinion of the PTA, accelerate beyond control this normal and quite gradual adaptation that has been taking place in the school and neighborhood over the past several years * * * the Daniel Webster School Parent-Teacher Association Board cannot overemphasize what it feels to be a most important consideration, and that is the equilibrium of the student body * * *" (plaintiffs' exhibit 13).

[9] This would follow necessarily from the board's policy of refusal to allow children to transfer to schools in other districts.

[10] The converse of this situation occurred in *Gomillion* v. *Lightfoot, supra,* where the fact that a few Negroes were left within the city limits did not alter the illegal nature of the challenged rezoning.

[11] Actually, Dr. Dodson proposed a larger school at Lincoln to serve as a more workable basis for redistricting and integration.

[12] It is submitted that if these terms must be used, "de jure" should refer to segregation created or maintained by official act, regardless of its form. "De facto" should be limited to segregation resulting from fortuitous residential patterns. This decision does not purport to determine whether "de facto" segregation, in this sense, is violative of the Constitution.

[13] The board undoubtedly was aware of the permissive zoning policy instituted in New York City to cure a similar situation, under which children attending schools with a heavy concentration of Negroes and Puerto Ricans are permitted to transfer to underutilized schools with a more heterogeneous racial composition. The defendant board could not seriously have believed that, because of this policy, the New York City Board of Education was violating the Constitution. (See supplemental exhibit I.)

National Wildlife Week: March 19–25

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, March 21, 1961

Mr. WILEY. Mr. President, during March 19 to 25, the Nation is observing National Wildlife Week. The theme of this 1961 observance is "Multiple Use—Balanced Conservation for the Future."

The commendable objectives of the week include efforts to:

Alert the people of America to the need for multiple use for our natural resources;

Plan and build a sound conservation program for balanced resource management;

Encourage all citizens to become better informed on the need for preserving natural resources for benefiting humanity; and

Unite conservationists in their common cause.

Across the Nation, conservationists are working in a realistic way to carry on appropriate observances of the special week.

In Wisconsin, the Wildlife Week chairman is Bernard Shearier, of Wisconsin Rapids.

I ask unanimous consent to have a list of the State sponsors and the 1961 Wildlife Week chairmen printed in the Appendix of the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

STATE SPONSORS AND THEIR 1961 WILDLIFE WEEK CHAIRMEN

Alabama—Alabama Wildlife Federation: Dr. William Rowell, Jr., 11 Upham Street, Mobile, Ala.; Burt Weeks, State Administrative Building, Montgomery, Ala.

Alaska—Alaska Sportsmen's Council: Vernon Haik, Post Office Box 1161, Chugiak.

Arizona—Arizona Game Protective Association, Inc.: Gordon Evans, 102 West Cedar, Flagstaff, Ariz.

Arkansas—Arkansas Wildlife Federation: Dayle Wiley, Stuttgart, Ark.

California—California Wildlife Federation, Inc.: Eddie Bruce, 905 East Mission Drive, Rosemead, Calif.

Colorado—Colorado Wildlife Federation: Herb Hockstrasser, Fort Morgan Junior High School, Fort Morgan, Colo.; Con D. Tolman, 1530 Sherman Street, Denver, Colo.; Dr. Harley Glidden, Colorado State College, Greeley, Colo.; B. K. Linder, 149 North College, Fort College, Colo.; Richard Fawley, State Office Building, Denver, Colo.

Connecticut—Connecticut State League of Sportsmen's Clubs, Inc.: Donald J. Tragler, 76 Pine Ridge Road, Waterbury, Conn.; Malcolm H. Brinton, Department of Agriculture and Natural Resources, Hartford, Conn.; Harry Hammond, Old Tartia Road, East Hampton, Conn.

Delaware—Delaware Federation of Sportsmen and Conservation Clubs, Inc.: John Armstrong, Bayview Road, Middletown, Del.: Anthony Ferrara, 117 Mathes Avenue, Richardson Park, Wilmington, Del.; Mrs. Elizabeth Caulk, Chief, Information and Ed-

ucation, State Game and Fish Commission, Dover, Del.

District of Columbia—District of Columbia Wildlife Federation: Harry E. Radcliffe, 1500 Massachusetts Avenue NW., suite 436, Washington, D.C.

Florida—Florida Wildlife Federation: Thomas N. Anderson, 101 East Charlotte, Post Office Box 1179, Eustis, Fla.; Jack Wilber, Sanford, Fla.; Mary Lou Brook, Twin Palms, Leesburg, Fla.; Denver Ste. Clair, Game and Fresh Water Fish Commission, Ocala, Fla.

Georgia—Georgia Sportsmen's Federation: Ray E. Tyner, Post Office Box 508, Cordele, Ga.; Bob Short, Game and Fish Commission, Room 411, Capitol Building, Atlanta, Ga.; J. L. McIntyre, Rome, Ga.; Paul A. Jones, Sr., 826 Third Avenue, Albany, Ga.; Clyde Greenway, care of Sears Foundation, Tucker, Ga.

Hawaii—Hawaii Wildlife Federation: J. R. Woodworth, Post Office Box 5425, Honolulu, Hawaii; Bernard Thom, Post Office Box 1913, Honolulu, Hawaii; Martin Pence, 297 Wainuenue Avenue, Hilo, Hawaii; James Clapper, Okaikaa, Kauai, Hawaii; Henry Yamashita, Kaunakakai, Molokai, Hawaii.

Idaho—Idaho Wildlife Federation: Pierre Pulling, Idaho State College, Pocatello, Idaho; Cecil McCracken, Route 2, Box 244A, Coeur d'Alene, Idaho.

Illinois—Illinois Federation of Sportsmen's Clubs: Frank Wilkinson, 7519 West Fullerton Avenue, Elmwood Park, Ill.

Indiana—Indiana Conservation Council, Inc., Stanley C. Taylor, Rural Route No. 3, Georgetown, Ind.; Walter L. Thompson, 311 West Washington Street, Indianapolis, Ind.; Charles Klausen, 680 Lake Street, Hobart, Ind.; Raymond Keim, Rural Route No. 2, Peru, Ind.; John Taylor, Guilford, Ind.

Iowa—All Iowa Conservation Council, Inc.: John C. Welter, 1130 I Avenue NW., Cedar Rapids, Iowa; Marshall J. Reichert, Box 344, Waterloo, Iowa; M. E. Clark, 1535 B Avenue NE., Cedar Rapids, Iowa.

Kansas—Kansas Association for Wildlife, Inc.: Roger Arensdorf, 811 Avenue B, Dodge City, Kans.

Kentucky—The League of Kentucky Sportsmen, Inc.; John Murphy, 512 Scenic Drive, Park Hills, Ky.; Harry Towles, Department of Fish & Wildlife Resources, Frankfort, Ky.

Louisiana—Louisiana Wildlife Federation: T. H. Roge, Post Office Box 415, Norco, La.; Steven Harmon, Chief, Division of Education and Publicity, Wildlife and Fisheries Commission, 400 Royal Street, New Orleans, La.

Maine—Maine Fish and Game Association, Inc.: Clarence Roth, Gardiner, Rural Free Delivery, Litchfield, Maine.

Maryland—Maryland Department of Game and Inland Fish: Malcolm E. King, State Office Building, Annapolis, Md.

Massachusetts—Massachusetts Conservation Council: Allen H. Morgan, Drumlin Farm, South Great Road, South Lincoln, Mass.

Michigan—Michigan United Conservation Clubs: Harold P. Hackett, Post Office Box 22, Battle Creek, Mich.; Volmar J. Miller, Rural Route No. 3, Paw Paw, Mich.

Minnesota—Minnesota Conservation Federation: Roger E. Preuss, 2224 Grand Avenue S., Minneapolis, Minn.

Mississippi—Mississippi Wildlife Federation: W. V. Robertson, Post Office Box 296, Gulfport, Miss.; Jack Warren, Post Office Box 451, Jackson, Miss.; Edgar R. Jones, Post Office Box 372, Cleveland, Miss.; Charles E. Beckman, Post Office Box 111, Quitman, Miss.; Russell Husband, Route 1, Columbus, Miss.

Missouri—Conservation Federation of Missouri: Ed Stegner, 130 East McCarty Street, Jefferson City, Mo.; Perry Hawes, Missouri Power & Light Co., Jefferson City, Mo.

Montana—Montana Wildlife Federation: Kenneth K. Baldwin, Box 548, Bozeman, Mont.

Nebraska—Nebraska Council of Sportsmen's Clubs: B. O. Robinson, 212 Farm Credit Building, 206 South 19th Street, Omaha, Nebr.

Nevada—Nevada Federated Sportsmen, Inc.: Mrs. Alicia Beck, Post Office Box 1137, Carson City, Nev.; Hugh A. Shamberger, Department of Conservation and Natural Resources, State Office Building, Carson City, Nev.; Carl Pacini, Post Office Box 707, Elko, Nev.; M. Sgt. Phillip T. Gregory, Jr., 24 Hunter Drive, Las Vegas, Nev.; Gene McDowell, Fish and Game Commission, 51 Grove Street, Reno, Nev.

New Hampshire—Federated Sportsmen's Clubs of New Hampshire, Inc.: Rachel L. How New Jersey Treats Its Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. WIDNALL. Mr. Speaker, as we weigh the merits and demerits of Federal aid to education, I urge Members of the House and Senate alike to give earnest attention not only to what needs to be done, but to what has been done without the proposals now under consideration.

An editorial published on March 15 in the Herald-News of Passaic, N.J., gives a very clear picture of what our State has accomplished by way of providing public school education of a very high order. The editorial is entitled "How New Jersey Treats Its Schools." Under leave to revise and extend my remarks, the editorial follows:

HOW NEW JERSEY TREATS ITS SCHOOLS

To dispel any false impressions about public education in our State which may have been created by the recent discussions of local school budgets and the Federal aid-to-education legislation, the statistics which follow are offered. They are taken from the newest research report of the National Education Association, entitled "Rankings of the States, 1961."

How do New Jersey teacher salaries compare with those elsewhere?

Our State ranks fourth in the estimated average salary of classroom teachers with a figure of $5,930. In California, Alaska, and New York, in that order, the average salaries are higher.

Is New Jersey niggardly with funds for public schools?

The estimated current expenditure per pupil in New Jersey is $512. Only two States, Alaska and New York, spend more. The figure is the same for both, $585.

How does the size of New Jersey classes compare with those elsewhere?

The pupil-teacher ratio in New Jersey public elementary and secondary schools was 23.3 in the fall of 1959. Our State, along with Illinois and New York, ranked 10th in this respect.

These figures show that New Jersey is in the forefront among the States in providing for public education. The next question and answer discloses that New Jersey is doing this reasonably good job by itself, with a minimum of outside help.

How does New Jersey fare under the present Federal aid-to-education program?

It ranks 48th, only New York and Vermont doing more poorly. The Federal Government contributes 1.4 percent of the total amount received by the elementary and secondary schools in our State. Alaska, the top beneficiary, receives 17.1 percent of its school funds from Washington. Among others at the top of the list are Georgia, 10 percent; Mississippi, 9.6 percent; Nevada, 8.1 percent. Even California and Connecticut do twice as well as New Jersey, each receiving 3.3 percent.

New Jersey could not reasonably expect to do any better under President Kennedy's proposal to enlarge the Federal aid program.

Fair Deal for Cities

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. RODINO. Mr. Speaker, under unanimous consent I insert in the RECORD an editorial which appeared in the March 14 edition of the Newark Evening News. This article points to the urgent need to focus national attention on the plight of our cities.

As a sponsor of legislation to create a Department of Urban Affairs, I commend these comments to the attention of my colleagues:

FAIR DEAL FOR CITIES

Senator WILLIAMS of New Jersey, addressing the National Housing Conference, endorsed President Kennedy's proposal to create a department of housing and urban affairs. It is time that Congressmen from predominantly urban States joined to demand a fair deal for the cities.

In his special message on housing and community development, the President indicated the new department would be given responsibility not only for the Federal housing program, but would aid cities in planning, land use, transportation and numerous other problems.

Remolding our cities and improving patterns of community development, said the President, will "contribute to the Nation's economic recovery and its long-term economic growth." That growth is now jeopardized by the decay of the cities, which they can arrest by their own efforts no more than can the farm States meet their difficulties unaided.

Urban problems differ in kind, but not in economic importance, from those of agricultural areas. No one disputes the need for a Department of Agriculture; no one should dispute the need for a department concerned with, and administering aid for, urban areas.

As to where the money is coming from, the first place to look is the scandalous farm subsidy expenditures, which come from taxes mostly paid by urban and suburban areas. Federal allocations in 1959 averaged approximately $3,000 for farm families, as compared with $84 for an urban slum family. Somehow a better balance must be achieved.

A Tribute to the City of Dubuque

EXTENSION OF REMARKS
OF
HON. JAMES E. BROMWELL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BROMWELL. Mr. Speaker, the late Mr. Edward Matthews, of Illinois, left behind a bit of verse which his daughter, Miss Mary Matthews, of Springfield, has been kind enough to send me. Often our midwestern cities are praised; rarely are they praised in verse. For this reason as well as the unusual charm of this little poem, I include it here:

DUBUQUE

When from thy sight I passed, Dubuque!
I cast behind one lingering look.
One more look at thee I took.
And oh! thy deep majestic brook!

For my short stay I did rebuke
The haste with which I thee forsook.
This spot where Julien Dubuque
Potosi's hand in wedlock took.

Thy lovely place brought Pere Marquette
And Hennepin and Joliet,
In thy fair soil to sow the seed.
Of good, in thought and word and deed.

Hon. B. Carroll Reece

SPEECH
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1961

Mr. WIDNALL. Mr. Speaker, the Nation has lost one of its great men, with the passing of our colleague B. CARROLL REECE, distinguished Representative of the First Congressional District of Tennessee.

CARROLL REECE's long career of public service is well known to all of us. It spanned nearly 40 years and included an outstanding World War I record, followed by some 36 years of selfless service in the House of Representatives.

CARROLL REECE was a happy man because he was a good man. He possessed a rare blend of strength of character and gentleness. He was firm in pleading his convictions, but always temperate in his dealings with others. He was truly a gentleman.

It was my privilege to serve with CARROLL REECE in the House for 10 years. During this time I grew to know, admire, and respect him as one of the outstanding Members of Congress. He will be sorely missed by his colleagues in both House and Senate, all of whom join in expressing profound sympathy to Mrs. Reece and the members of his family.

Congressional Recess

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BARRY. Mr. Speaker, 13 Senators, headed by Senator MCGEE, of Wyoming, have introduced an excellent recommendation which should be seriously considered by the House. They suggest in Senate Concurrent Resolution 16 that Congress take its long recess in the summer instead of the early winter so that Members may go on vacation with their families.

I am today introducing an identical House concurrent resolution to give the House the opportunity of discussing this question. I think this proposal would increase the efficiency of the Congress and I urge that it be seriously studied.

Senator MCGEE said that when the children are out of school during July, August, and September, Congress is usually in session, preventing Members from leaving with their families. Then, when Congress adjourns late in August or early September, the children are getting ready to go back to school and a Member who wishes to return to his State must leave his family here.

To take care of any emergencies, the resolution would permit the leaders to call Congress back during the summer recess if necessary.

Since the end of the war it has become a fact of life that Congress is in session 9 or 10 months each year. The procedure of recessing during summer months would in no way change this. It would merely shift the period of our time off to a different season to make it possible to do some living with our families, our children—and I hasten to add, grandchildren.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

When Lyndon Johnson Talked to Businessmen

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. THORNBERRY. Mr. Speaker, on February 13, 1961, the Honorable LYNDON B. JOHNSON, the Vice President of the United States, delivered a significant address to a meeting called by the National Industrial Conference Board in Washington, D.C.

U.S. News & World Report made the following editorial comment on the Vice President's address:

A little-noticed speech by Vice President LYNDON JOHNSON, delivered in Washington on February 13, 1961, is attracting growing attention among businessmen and Members of Congress.

The speech, delivered at a meeting called by the National Industrial Conference Board, was cleared by the White House. It dealt with the attitude of the Kennedy administration toward business.

I ask that the Vice President's speech as carried in the U.S. News & World Report be included as these remarks:

WHEN LYNDON JOHNSON TALKED TO BUSINESSMEN

(From Vice President JOHNSON's address in Washington, February 13, 1961)

Today you have heard the President. You have met distinguished members of his Cabinet. I believe you can leave Washington confident that your Government is in able, strong and—above all—highly responsible hands.

In these moments, I would like to offer you a perspective on the role of your Government during this period—and to make several comments about the relationship of the business community to Government.

It is no secret—and no criticism—to say that, when many businessmen speak, write, or think about Government, they use more shorthand than their secretaries.

In that shorthand, "new" means "more" and "more" is an ugly word: nearly as ugly as words like "welfare" or "planning"—or that word not to be spoken in mixed company, "Democrats."

This shorthand needs revision.

Yesterday is yesterday. The idiom of yesterday's politics and yesterday's prejudices no longer applies—not even for the word "Democrats." If we are to respond successfully to the new facts we must face, we must leave yesterday's habits behind us.

This first fact must be understood first: Both abroad and at home we have arrived at the start of a new era. The arrival of this new administration is a coincidence—not the cause.

Whomever history might have installed in America's leadership at this time would have to face new facts—new facts requiring new responses.

We must not allow our old preconceptions and prejudices to keep us from facing the new facts of our national life today—at home or abroad. I want to make this absolutely clear. This Administration does not—and will not—seek great new powers by proclaiming great new perils.

The purpose of your national leadership is to accomplish, not to aggrandize—to accomplish what will make the liberty of the people secure, not to aggrandize Government to make the state supreme.

Peril there is. Peril there will continue to be. In candor, we shall acknowledge it. But powers there are, also. In candor, we acknowledge that, to meet the perils, our need is less for new powers than for new resolve in using those we have—using them with new precision, new energy, and new results.

At home, as abroad, we must treat what is ill without injuring what is well. In nothing that we do can we—or shall we—be oblivious to the weight which government itself today presses down upon the people and their enterprise. As we will not ask what cannot be borne, neither shall we ignore the needs which a free society cannot neglect.

We shall do what is right because it is right, never because it is cheap—remembering, always, that it is never right to be prodigal and never wrong to be prudent.

In saying these things, my purpose is not to offer gratuitous reassurances to the business community. I do not believe any administration, chosen by the people to lead the strongest and most stable government on earth, must or should endlessly avow itself to be responsible, loyal, or sincere.

If there be a brand of partisanship which does not permit such fundamentals to be presumed, then it is that partisanship—and not its targets—which needs to be examined and reexamined.

Today, as in times past, the business community is being urged and encouraged to take up positions of opposition, to trifles—by men of trifling purposes. With ill-concealed relish such men summon the American business community to work for the failure—rather than the success—of this American administration.

No American, of any walk of life, surrenders his integrity by working for—rather than against—the success of his government. When some call you to oppose, ask: Oppose what? Oppose why?

An economy which can afford millions for the few minutes' life of a missile can afford 2 pennies for 1 minute of human labor. A people who believe in God who marks the sparrow's fall can heed the calls from their fellow men which come from out the darkness of all the lands like the Congo.

To honor our system of private enterprise and sustain it, we must be certain its promise is fulfilled—not for the few, but for all: for yesterday's miner of coal as for today's operator of a computer; for the bedridden aged as for the healthy bodied young; for the man whose skin is not white as for the man whose skin is white.

When we talk of these things, we talk not of burdening private enterprise—but of unburdening it of those things which detract from its force in the world.

The success and survival of our system depends upon things of principle as well as profit—and I believe those who suggest otherwise understand neither the system nor you who are part of it.

Take with you from Washington the message that yesteday's shorthand won't do. New does not automatically mean more—more spending, more taxes, more government. For a new generation and a new administration, new means new—new responses to the new facts with which we are faced.

The interest of business—the interest of all Americans—lies not in the failure but in the success of the search for such new responses.

We invite you to the labors of the search and to the rewards of its success.

Hawaii's Foresight Lauded

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. FONG. Mr. President, as you and my colleagues in this body well know, my State of Hawaii is the 50th and newest State in the Union. I was most pleased to read in last night's edition of the Washington Evening Star a tribute to Hawaii.

While a half century ago one might have said that Hawaii was truly isolated—surrounded by the Pacific Ocean and situated 2,400 miles from the U.S. mainland—today, in this jet and space age, we consider the distance negligible. Those of you who have travelled there have been amazed to find such a modern community. I am very proud to say that Hawaii has always strived to meet its current needs as well as its needs of the future. The progress we have made pays tribute to the foresight and diligence of the people of Hawaii.

Mr. President, I ask unanimous consent that the Washington Evening Star editorial of March 21, 1961, entitled "Planning in Paradise" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLANNING IN PARADISE

As befits the youngest member of the family of States, Hawaii is making plans for its future betterment. And it is doing so in a way that sounds practical and realistic—with the advice of qualified counsel and through a long-term program involving many lines of action.

Possessed of many valuable natural resources, starting with climate and the fertility of much of its land area, the island State contemplates a 20-year program of land and economic development to cost an estimated $703 million. Holding high pri-

ority in the planning is the problem of transport, not only on and between the islands themselves (only 8 among 20 are now classified as inhabited) but between the island group and the west coast mainland of the United States. Highways, airports and harbors figure largely in this study, but for interisland purposes a private consultant agency has been engaged to examine expanded passenger and freight services by sea and air. Wisely, too, the planners are not overlooking the human needs in the light of estimates that the State's population by 1980 will have increased from its present 620,000 to about twice that total. In this social category, the State Department of Planning lists the requirements of more schools of all types, libraries, public health centers and hospitals.

It is not without reason that Hawaii calls itself "the Paradise of the Pacific." Its potential is as great as its attractiveness, and it is to the credit of its State government that plans are being made to make the bright future a reality.

Resolution on Farm Program

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. NELSEN. Mr. Speaker, a vast amount of mail has reached my desk dealing with issues before the Congress of the United States. Farm legislation of course has stimulated much comment.

A tendency that seems to prevail has been the disposition to line up into groups where one group proposes and the other opposes. This deals with farm organizations as well as political parties.

One of the most refreshing letters that I have received of recent date contains the note: "The signers of this resolution are a group of farmers union, farm bureau, and local farmers."

The enclosed proposal they sent me contains the following resolution which is copied below in full:

LAFAYETTE, MINN.
March 15, 1961.

Representative ANCHER NELSEN:

Resolved, At the present time we definitely want a farm program.

1. Program should be based on tillable acres rather than past history.

2. Curtail incentive payments that tend to increase surpluses.

3. Curtail further Federal grants to reclamation projects that tend to increase surpluses.

4. Administrative procedures and details to be made workable so that the individual farmer has an opportunity to obtain his own level of security.

Mr. Speaker, attached to that resolution was a sheet with the abovementioned note:

The signers of this resolution are a group of Farmers Union, Farm Bureau, and local farmers.

The following signatures were affixed:

LeRoy Martins, Amos L. Hayes, Kenneth R. Eckberg, Levern Carlson, Martin Fluegge, Clayton Peterson, Harley Traurig, Russell H. Malmberg, Willie Prodoehl, Lester W. Peterson, Merton Johnson, Evan Nelson, Marvin Rhodes, Elmer Longhorst, John E. Webster, Carl M. Youngblom, Albert Ulrich, Jay Salisbury, Carl Martins, Verl Koecher, Edwin Pierson, Rud. L. Bode, Alfred H. Bode.

Mr. Speaker, there appeared in the New Ulm (Minn.) Journal on March 16 an editorial pointing up the spirit of cooperation in this resolution and that editorial is appended hereto in full:

ON THE RIGHT TRACK

A group of Nicollet County farmers put aside partisanship Tuesday and sat down to decide what they want in the way of a farm program. They were about equally divided between the conservative Farm Bureau and the liberal Farmers Union, plus some independents. The county presidents of both groups, Verl Koecher of the Bureau, and J. Salisbury of the Union, were present.

It was significant that these two rivals for the right to speak for the farmer should meet together at Bernadotte Town Hall. It was real grassroots level, because the men are operators of family farms from 160 acres to almost a section. Two of them have half a section regularly in corn.

After a lively discussion, they came up with this program:

"*Resolved*, At the present time we want a farm program based on tillable acres rather than past history. Our program would curtail incentive payments that tend to increase surpluses. It would curtail further Federal grants for reclamation projects that tend to increase surpluses."

The group suggested that administrative procedures and details be made workable so that the individual farmer has an opportunity to obtain his own level of security.

Copies of the program were sent to Secretary of Agriculture Freeman, Senators Humphrey and McCarthy, and Representative Nelsen in Washington.

Koecher said the Bernadotte men would welcome others joining in the effort. It would be good if the spirit of cooperation would spread. The farmers have touched a sore spot in asking a halt to some reclamation projects. It is absurd to be draining swamps to provide more tillable acres, yet paying to put dry land in the soil bank. Take it from there, Orville.

Pattern of River Development

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. SCOTT. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Bulletin of March 19, 1961, entitled "Pattern of River Development."

This editorial points up the importance of the Delaware River to the four-State area comprising Delaware, New Jersey, Pennsylvania, and New York.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PATTERN OF RIVER DEVELOPMENT

The Arkansas, like the Delaware, is one of America's great rivers. The Arkansas is longer; the Delaware serves more people in more ways. Development of the Arkansas is well along; that of the Delaware is in the talking and planning stage. Yet both, in their different ways, will follow much the same pattern.

The Arkansas has lost prominence because it is a tributary of the mighty Mississippi, yet it ranges through the State of its name, across corners of Oklahoma and Kansas, and drains a considerable part of Colorado, where the famed Royal Gorge marks the route it cuts through mountains on its way to the sea.

Development of the Arkansas is a $1,200 million project, more than twice the estimated cost of conserving the water of the Delaware. One reason for the added expense is that barge traffic is planned along the Arkansas, while there is no thought of locks on the upper reaches of the Delaware. But power, flood control, regulation of water flow in dry weather, and recreation are inherent in both.

The job along the Arkansas is slated for completion by 1975; there is little hope that the Delaware job can be done before 1980, and shortages as early as 1970 are forecast for some places. The work on the tributary of the Mississippi has been done largely with Federal money under the guidance of the Army Engineers. There is the expectation that the Delaware's main task will be done in the same way, but with assistance from the four States involved—Delaware, New Jersey, Pennsylvania, and New York.

Out on the plains, barge traffic is an important factor in river development. In the East, the emphasis is on provision of enough water to supply the domestic and industrial needs of an area population that will reach more than 20 million within the next 20 years. Senators from the area affected by the Delaware are urging that its improvement be started without delay, so that burgeoning population and industry may suffer no shortages.

Realization is general that the Delaware Basin's improvement will require time—much time. If it is not started within the next year or two it may miss the opportunity to provide for the mounting needs of the growing four-State area.

The program outlined is not a fantastic dream, but merely the foresight needed to come up with adequate water when the forecasts of growth are realized.

Charles R. Hook

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BROWN. Mr. Speaker, under leave to extend and revise my own remarks in the Appendix of the RECORD, I include an article carried in the Middletown Journal, an Ohio newspaper, relative to the recent retirement of Charles R. Hook, who resigned as director of the Armco Steel Corp. after 58 years of service.

Mr. Hook for many years has been one of the outstanding citizens of Ohio. He has served his Government and his country in many ways. During the life of the two Hoover Commissions he was chairman of the Task Force on Business Organization of the Defense Department, and as a result of the recommendations made by his task force and himself, many untold millions of dollars have been saved Federal taxpayers.

So it is a pleasure to quote herewith the newspaper article to which I have referred, inasmuch as it gives much additional information as to the many achievements of Mr. Hook throughout the years, which have been of such great benefit to our national life.

INDUSTRIALIST LEAVES BOARD OF STEEL FIRM

Charles R. Hook announced today he has resigned as a director of Armco Steel Corp. after 58 years' service with the company.

"When a fellow reaches 80 years of age he ought to have more time to devote to his own affairs," Hook declared. "So I am withdrawing from all business responsibilities. I recently retired as a director of the Westinghouse Electric Corp. and the Equitable Life Assurance Society.

"My term as a member of the board of directors of Armco would have expired in April. But since I plan to go to Florida in a few days to spend the remainder of the winter. I asked the board to accept my earlier resignation.

"My interest in Armco and Armco people will continue as long as I live. Over my 58 years at Armco, everyone has been very good to me, and I appreciate most sincerely all the friendly cooperation that I have received," he said emphatically.

"Even though I will be vacationing in Florida, I am not going to be idle. When a fellow has worked for nearly 70 years, he just can't spend his time in a rocking chair. I intend to continue to work for those organizations fighting to preserve free enterprise and democratic government.

"One of the organizations that made valuable contribution to the well-being of our country was the Hoover Commission. During its life, I served as chairman of the Committee on Business Organization of the Department of Defense. It has been my pleasure since the Commission made its report to the Congress to continue to work with former President Hoover as chairman of the Committee of Hoover Commission Task Force Members.

"President Kennedy is thoroughly familiar with the recommendations of the Hoover Commission to eliminate wasteful Government expenditures and lighten the burden of the taxpayers. In fact, while a Senator he took an active part in implementing the recommendations of the Hoover Commission. His father, Joseph Kennedy, was a member of the Commission," Hook explained.

"In announcing my resignation from the board of directors, I am particularly encouraged by the high caliber of Armco's management," Hook concluded. "I don't believe that any company has a more interested and able board of directors. I know from experience that the administrative management of the company is the most alert, capable and progressive in the steel industry. The men who manage Armco today have grown up under 'Armco Policies,' and will see to it that they continue to guide the company in the years ahead. Under such capable leadership, the future of Armco is bound to be bright."

Armco's board of directors accepted Hook's resignation "with the greatest regret" and adopted resolutions which paid tribute to his leadership and the great contribution he has made to Armco's progress.

"The growth of Armco over the years has been due in large measure to his strong leadership and exceptional understanding of business principles and human relations," the board's resolutions declared. "His ability as one of America's outstanding business leaders has been recognized everywhere * * * at future sessions of this board, we will miss his wise counsel and warm personality."

Armco President L. T. Johnston also expressed his regrets. "Mr. Hook will always be 'Mr. Armco' to all of us who have been associated with him for so many years. In spite of his heavy responsibilities, he has never been too busy to talk over our problems and give us the benefit of his long experience. Fortunately, he will still be available for advice and counsel for he will continue to occupy an office in Armco's general office building," Johnston said.

How Hook rose from a $2-a-week office boy in a Cincinnati steel plant to become an internationally known industrialist is one of the most interesting success stories that can be written. Wishing to know the steel business from the ground up, he asked to be transferred into the plant as a laborer.

After learning the roll-turning trade he became a foreman in an Indiana steel plant. Joining Armco in 1902 as night superintendent, he became general superintendent, vice president in charge of operations, and in 1930, president of the company. A director of Armco since 1918, he served as chairman of the board for 11 years.

During his Armco career he still found time to take an active part in a long list of national business organizations. He served as president of the National Association of Manufacturers in 1938, and later as its chairman. He was appointed a member of the Business Advisory Council of the U.S. Department of Commerce in 1935. He was elected a public member of the board of governors of the New York Stock Exchange in 1953.

The U.S. Government has frequently made use of his knowledge and experience. In 1938, President Roosevelt appointed him a member of an American mission sent abroad to study labor conditions in England and Sweden. Again he was asked to undertake a mission of importance early in World War II when the war effort was hampered by a serious shortage of steel. Hook was appointed chairman of the joint steel mission set up by the United States and Britain to study the steel industry in England and recommend how the combined production of the two countries could best be utilized.

President Truman also called upon him for assignments on several occasions. Truman made him a member of the Joint Labor-Management Conference. In 1952 he was appointed to the Government mission headed by Charles Sawyer, and went overseas again to study Europe's economy. He was made chairman of an advisory commission on service pay for the Armed Forces in 1947.

In spite of his many responsibilities, Hook has always devoted a large part of his time to helping American youth. For many years he took an active part in Boy Scout work both locally and as a member of the national council. He has served as president and chairman of the board of junior achievement.

He has frequently been honored for contributions to public service. The steel industry gave him the Gary Medal for outstanding achievement in the field of human relations in industry and for his more than half-century of service to the industry.

He was named Man of the Year by the National Association of Manufacturers in 1955.

Four years ago he received the Governor's Award, the highest honor Ohio can confer on a native son.

The American Society for Metals awarded him a medal for encouraging the advancement of metallurgical research.

The American Management Association and the American Society of Mechanical Engineers jointly presented him with the Gantt Medal for "distinguished achievement in industrial management as a service to the community."

Probably the award he prizes most is the Silver Buffalo, the highest honor the Boy Scouts of American can bestow.

Although Hook was unable to go to college, 11 universities and colleges have conferred honorary degrees upon him.

Mr. and Mrs. Hook will continue to make their home at 7 Alameda Circle.

Charles R. Hook

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. ROGERS of Florida. Mr. Speaker, I would like to join my colleague from Ohio [Mr. BROWN] and express best wishes to Mr. Charles R. Hook as he begins an active retirement in Florida.

Mr. Hook and I met and worked together on the Hoover Commission recommendations during recent years and his dedication to service to his country is well known by all who have worked with him.

We in Florida welcome Mr. Hook to our State, and hope he will spend a good deal of his time with us. His business and civic talents will find new avenues of expression in our fast-growing State, and we will encourage him to take an active interest in the development and expansion of Florida.

Revival of Art in Little Rock

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. FULBRIGHT. Mr. President, the city of Little Rock, Ark., is rapidly becoming one of the leading art centers in the South. A cultural renaissance is taking place in the city, which should set an example for other cities throughout the Nation.

An interesting article concerning the revival of art in Little Rock appeared recently in the Arkansas Gazette. This article points out what can be done to enrich the cultural life of a community through active leadership by interested citizens. I commend this article to the attention of my colleagues and other readers of the CONGRESSIONAL RECORD. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RENAISSANCE OF ART IN LITTLE ROCK (AND ARKANSAS) NEAR EPIDEMIC STAGE

(By Bill Lewis)

Little Rock is emerging from its own artistic dark ages.

There's a renaissance in art and rarely will a walk downtown fail to provide evidence of it.

What's more, the revival is spreading—all over the state and beyond, to persons hitherto disinterested in art and to other cultural areas like music, dance and drama.

The epidemic proportions of this new interest will be more than ever in evidence in the fourth Arkansas Arts Festival next month when sidewalks, store windows, banks and art galleries will bloom forth with colorful collections. Every downtown shopper will turn art critic—and perhaps even collector.

For aside from the pure pleasure of daubing canvas with paint and having others appraise the results, the revival is meeting a sterner test: Artists are selling and the people are buying.

This burgeoning new interest was scarcely spontaneous. Little Rock has long had a tight little coterie of artists, many of them talented, and known, and it's had a moderate share of monied collectors, mostly unknown.

It's also had amateur painters who, until about 4 years ago, hid their lights under a bushel or turned the walls of their homes into one-man gallery showings, with no onlookers.

An event of no mean consequence to Arkansas artists and amateurs took place at Hayden Lake, Idaho, on June 11, 1956. Jeanette Edris became Mrs. Winthrop Rockefeller and, subsequently, an Arkansan.

SEVERAL CONTRIBUTORS

There have been several outstanding contributors to the art boom—Mrs. David D. Terry, founder of the Art Festival; William E. Steadman, Jr., the temperamental former director of the city Fine Arts Museum, and others. But ask almost anyone now who was chiefly responsible, and the answer is the same: Mrs. Jeanette Rockefeller.

Mrs. Rockefeller, in the view of one local artist, had in years of exposure to art developed "excellent taste and a great deal of knowledge." She, the artist said, is "very genuinely interested in promoting art and other culture, for its educational aspects as well as for its cultural aspects."

"She and her husband have worked furiously, touring the State at their own expense raising money for the arts center," he said. "Mrs. Rockefeller arranges and pays for getting shows down here."

Five years ago, the city Fine Arts Museum was a moribund repository of mostly prints and one visit would have done for years. (Some decorators decry the use of prints for home interiors; artists are aghast at using them for museum interiors.) Original works were as scarce then as prints are now.

DINER'S PART

One bright spot was an annual Arkansas Artists' Competition, to which a newcomer named Jack Diner, medical illustrator at the university medical center and a serious artist on the side, offered some works. His arrival in Arkansas coincided with a blossoming art revival.

Diner was impressed with the talent the Arkansas show attracted, and distressed that it had so few places to be seen. The university's art colony (or department, in this case) was turning out some first-rate work. But largely because of the remoteness of the campus to the rest of the State, the university was making little headway in passing the word.

Diner asked the university administration for permission to begin holding one-man shows in a ready-made gallery—the student lounge—at the medical center. He absorbed the expenses, and the shows were a hit.

THEN CAME STEADMAN

Early in 1958 came Steadman, a brisque easterer with experience in museum management at West Point and elsewhere. The Rockefellers and others supplemented his city salary of $200 a month.

The upheavel at the Fine Arts Museum was immediate and thorough. Steadman began shuffling the collection around. He redecorated the old place, adding air conditioning and a music system, new lights and new life. New art, begged, borrowed, and rented began appearing at the museum, and so did new patrons.

Steadman started courses in art, mostly for children. The kids came, and so did their parents, often for the first time. Usually, the parents had something new to see on each trip. There were shows for local talent, and sales began to materalize from them.

Until then, Little Rock art collectors were spending their money at Chicago, New York, and New Orleans. Steadman's shows got them started to buying local art, and it's not unusual now to find the likes of a David Bing—who lives at 523 East Sixth Street—hanging besides a Picasso or a Braque in a Little Rock home—not bad company.

Diner was one of Steadman's first teachers of children.

Back then, about one Little Rock private gallery was in operation "Sunday painters displayed their paintings of cats playing with balls of cotton and such," an artist said of it.

The university (Fayetteville) group, principally Dr. David Durst, the art department head, began showing at Little Rock. Their talents become better known.

THE ARTS FESTIVAL

Then in 1958 Mrs. Terry inaugurated the Arkansas Arts Festival—an event that brought all of the performing arts into play in one week packed with shows, shows and more shows of all kinds of art from all kinds of artists. They all got a showing, whether on a clothesline at MacArthur Park or in a choice display window on Main Street. It was a tremendous impetus to the whole field.

"This definitely proved to everyone, I think," said Diner, "that there was talent here, and no question there was a huge amount of sales. Mrs. Rockefeller was very encouraging: She went to the clothesline show and bought several pictures."

The museum was by then a going concern. However Steadman, whose brusqueness in getting it, irritated some people, departed after about a year. The momentum the museum had acquired by then was continued and is gaining.

INFECTION SPREADS

Since the first festival, the art infection has spread: Hot Springs formerly had a small, struggling group called the Southern Artists Association and when one of the artists, Val Matthews, began to talk about "What Little Rock has done," she began to get results. The association bought an old skating rink and converted it into a combined art exhibition area and community theater, and it now brings in art teachers from all over Arkansas to teach. Pine Bluff officials have been talking about their own arts festival. One-man shows are springing up in other places—like the College of the Ozarks at Clarksville.

In 1957, the Junior League of Little Rock adopted as its major project the construction of a community arts center at Little Rock. (As the project progressed and funds for it were needed from all of Arkansas, the name itself was made the Arkansas Arts Center and its program is being planned to comply.)

The league, Little Rock businessmen, and the Rockefellers joined forces in the fund campaign, concluding it successfully last year. Center officials hope to have the structure under construction this spring. It will provide a home for virtually all the performing arts, crafts and artists. It also will have facilities for teaching the arts to all Arkansans.

The junior league has written letters, stuffed envelopes and provided other clerical manpower and legwork for the center. It was responsible for the hiring of Mrs. Anne H. Webb as artistic director of the center. Under Mrs. Webb, the variety of art shows has been continued (with considerable emphasis on Arkansas and regional talent). The center's teaching program also has been expanded to include classes in art for all ages, group classes in music, the forming recently of the center's own chamber orchestra—which already has given one concert, and, a ballet class which will provide the corps de ballet for future Arkansas opera productions.

SPECIAL AUTO

The center is having an artmobile built to carry traveling exhibits to communities throughout the State, and it is sending exhibitions of prints to towns that otherwise would have no art activities.

"When we started a year and three months ago," said Mrs. Webb, "we were not at all sure what the response would be; we didn't know whether the thing would be a success or not.

"We've had excellent response from the beginning, and there has been a steady use of facilities of the art center ever since they were begun. Because of that, we have been able to constantly raise the standard of teaching, and we are now seeing a need for the best possible teaching in every field."

The renaissance has been a small boon to art supply stores.

The Jungkind Co., for instance, has removed its greeting card section to make way for an expansion of the art supply department. A spokesman for that firm estimated interest in the field had expanded threefold in the last 2 or 3 years.

Not the smallest attraction about art is that the least it requires in the way of an investment are a drawing pad and pencil. Small sets of beginners' oils may be obtained for less than $3 and the sets go up to $30.

"It's just like fishing," said Miss Alice Young of Jungkind's. "You can start with a few small worms and work up."

Jungkind's, incidentally, regularly displays art in its windows.

Hungarian Freedom Day

SPEECH

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. ROOSEVELT. Mr. Speaker, the revolutionary events of 1848 raised the hopes and revived the aspirations of all oppressed peoples. These momentous events foreshadowed the overthrow of autocracies, the establishment of democratic governments, and also the return of individual freedoms to the peoples who had been robbed of them under autocratic regimes. The Hungarian people at that time had been suffering under Austria's stern rule for more than 200 years, and their lot had worsened under the ruthless regime headed by arch-reactionary Metternich. The year 1848 offered the Hungarians the chance to regain at least a part of their freedom by forming an autonomous entity within the Austrian Empire.

Early in the year, as the revolutionary wave swept to all parts of Europe, governing leaders in many capitals literally

fled for their lives. In Vienna demonstrators nearly overthrew the Government, and the detested Metternich fled the city. Hungarian patriotic leaders in Budapest were following these startling happenings with keen interest. They knew that the Government in Vienna was badly shaken and was on the defensive. The Hungarian leaders proceeded calmly. Without resorting to the use of force, they presented to the Government a petition in which they demanded freedom and autonomy. On March 15 the Government responded by granting freedom and autonomy to the Hungarian people. That memorable day has become Hungarian Liberation Day, their national holiday.

The spirit of March 15, 1848, lives on in the hearts of the Hungarian people and is commemorated annually on the anniversary of that historic day. This spirit, which secured freedom for the Hungarian people 113 years ago, also roused them to fight their Communist oppressors in 1956. Though that gallant fight for freedom was ruthlessly crushed by the Red army, there is no doubt that the Hungarian people's love of freedom is as strong as ever.

The moral support of the free world for the Hungarian aspirations has been expressed in resolutions of the United Nations General Assembly, just as it is being voiced today in the Congress of the United States. Let us hope that these demonstrations of support will help the Hungarian people sustain their spirit, the spirit of Hungarian Liberation Day, through all adversity.

Total War Against Unemployment

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Inquirer of March 19, 1961, entitled "Total War Against Unemployment."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOTAL WAR AGAINST UNEMPLOYMENT

America's battle against unemployment has gained momentum on several fronts during the past week. This is genuine cause for encouragement.

But the fight has hardly begun. The Nation must mobilize its economic resources in a mighty effort. It is no time to tolerate interminable delay by the faint-hearted and the half-hearted.

The unemployment problem can be licked—with compassionate understanding and vigorous action.

Congress, aroused at last from a profound stupor, has advanced two major anti-unemployment bills. One, approved by the Senate and now awaiting the attention of a House-Senate conference committee, provides emergency extension of unemployment compensation for up to 13 additional weeks. Another bill, passed by the Senate and sent to the House, calls for Federal grants and loans to stimulate industrial development in chronically depressed areas.

While Congress was shaking off its complacency there were other hopeful signs. Business is picking up along many lines. Employment opportunities—in some areas, at least—may improve noticeably in the weeks ahead.

What now? Where does the country go from here in its efforts to help the unemployed?

First of all, it seems to us, the unemployment compensation bill ought to be speeded toward final enactment before it is old enough to grow whiskers. It has been a long wait for the jobless—including many in Pennsylvania—who exhausted their unemployment benefits weeks ago and are in dire need of assistance.

Depressed areas legislation should be kept moving through the congressional mill, too. We urge that it be tailored specifically to the needs of depressed areas and not be generalized to the point where its effectiveness is lost. Under the eligibility formula in the Senate bill more than a hundred communities would share in the $394 million program. Acutely suffering cities and towns—as found in the coal regions of Pennsyvania, for example—should get the bulk of this aid. Congress ought to guard against writing the bill so loosely that it becomes a pork-barrel handout instead of a depressed areas benefit.

Extension of unemployment compensation, it should be noted, is a way of buying time until the jobless can get jobs. The only satisfactory solution to unemployment is employment. This is the goal to fix firmly to the fore.

President Kennedy has spoken of the need for tax incentives to spur industrial growth and employment expansion. Progress in this direction cannot begin too soon.

Shifting plants and jobs from one locale to another should not be the objective. The need is for new plants or additions to existing plants.

Creation of new jobs—permanent ones—should be the criterion for receiving tax incentives. This will require expansion of markets at home and abroad.

Superior salesmanship is required as never before—not to build artificial demands but to satisfy real wants. It is reasonable to believe that vocational opportunities in sales and servicing will provide a substantial number of new jobs to help offset layoffs resulting from automation.

Government, industry, and labor—together—must join forces in an all-out war against unemployment. To do this successfully they must be a peace among themselves. The need for labor-management harmony is paramount. It is, in the final analysis, the key that will unlock the door to millions of new jobs sought by waiting and willing workers.

Minimum Wage

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Wausau Daily Record-Herald, Wausau, Wis., one of the leading daily newspapers in Wisconsin.

The editorial is as follows:

MINIMUM WAGE

It's very easy to favor raising minimum wage and difficult to register against—at first glance. There is a strong humanitarian motive cited by proponents.

However, there could be some faulty reasoning involved. We've all jumped at "good deals" before, only to regret it later. What looks like a good deal isn't always that.

Particularly unfortunate about the present legislation is the plan to extend coverage to include retail business. This industry provides marginal employment for beginners, teenagers, part-time housewives and others whose productive worth is limited. An out-of-line wage would automatically eliminate many jobs. A wage boost is somewhat less than good if you lose your job.

Life magazine recently commented editorially: "That is certainly not going to help the unemployed any. Some jobs just aren't worth more than $1 an hour and to make them illegal is to eliminate them."

Senator GOLDWATER has cited the case of a Michigan retail firm which did $2 million in business in a recent year and had a net profit of $34,000. Had the minimum wage law been in effect, the firm would have lost $100,000. In the Senator's words, "The company would have had either to fire some of its employees, or to go out of business entirely, depriving all of its 135 employees of jobs."

The New York Herald Tribune has described the proposal "a bad bill at the wrong time," referring, of course, to the recession. Senator FULBRIGHT concurs with this thinking, arguing that it would be "poor timing" to press it under present domestic and world conditions. Some leaders of both parties theerfore can see serious objections.

There are a few "you don'ts" which could be listed about this bill.

You don't get the unemployed back to work by raising minimum wage. You don't help depressed areas with wage boosts which raise construction costs of needed new plants. You don't raise the living standard—poor or not so poor—by raising costs and prices.

Experience has shown a minimum wage hike can cost jobs. When the last minimum raise went in effect in 1956, despite an expanding economy, the Labor Department noted "significant declines" in employment in most of the low wage industry segments studied.

Our feeling is that the individual States can do a far fairer and more effective job of handing wage and hour laws than can the Federal Government. They can better make legisltion fit varying local needs and conditions.

The Federal bill will be voted on soon in Congress. Why not contact your representatives now.

Migrant Farmworkers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. WILEY. Mr. President, annually, the American farmer faces a special problem in obtaining labor to harvest seasonal crops.

For the most part, this problem is separate from the normal employment situation. However, the growers of vegetables, fruits, and other commodities requiring seasonal workers face particular problems in obtaining an ade-

quate supply of such laborers at the right time.

Currently, legislation is pending before Congress relating to migratory labor. As I understand, hearings may be scheduled in the near future.

Because the acquisition of such workers has become a difficult seasonal—and sometimes a political—problem for the American farmer, I believe that Congress should now attempt to crystalize a long-range policy to establish stability in this field.

We recognize, of course, that imported labor—particularly because of our current high rate of unemployment—should not be allowed to displace jobs for American workers. Nevertheless, there are circumstances in which the obtaining of large numbers of laborers is essential to our domestic farm economy.

Recently, the Janesville Daily Gazette published an article analyzing the situation in relation to the obtaining of Mexican labor for Wisconsin.

Reflecting upon this particular asset of a significant issue before us, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MIGRANT FARMWORKERS

Congress soon must decide on extension of a Federal plan under which Mexican labor may enter the United States to carry on agricultural labor. The matter is one which has held little public attention until now.

But as a result of a recent television film, classified as a documentary by some, and as the rawest type of propaganda by others, there is a national awareness of the problem. The confusing part is that it is not one problem but several.

The first, of course, is the social problem which arises when uneducated and unskilled families move from place to place, often under contract, to handle the planting and harvesting of food crops. Special concern attaches to the children of these families because proper schooling under these circumstances becomes difficult.

There are also the economic problems. From the grower standpoint, migratory workers are an essential part of the system for getting work done on time. Nature sets the time schedule, and expects human-workers to meet it. Otherwise the crops are lost.

The combination of emergency work needs and the ignorance of many of the field-workers is one which often leads to charges of exploitation. It is easy to believe that these charges often are true. It would be remarkable if some did not attempt to take advantage. Still, evidence has been produced to show that wage rates, working conditions, housing and arrangements for schooling of children have been making steady progress, and that the general situation is greatly improved over that of a few years ago.

Unemployment in the United States is now a new factor in the debate. The anti-Mexican campaign is based on the theme of American employment. Not many domestic ful, however, that the proposed extension would make any significant difference in American employment. Not many domestic farmworkers are interested in the types of work done by Mexicans in vegetable and fruit crops. To suggest that migratory farm-work would give help in the industrial centers of unemployment borders on the unbelievable. The jobless factory workers would be interested in that type of thing only as a last resort.

If it should be otherwise, it is obvious that an expanded force of American migrant workers would be created—hardly a goal to be sought. Meanwhile union organizing efforts in some sections have placed crops in real danger. Strikes, to be effective, have of course been timed for the critical days.

Considering the small amount of employment which might be created, it would appear that extension of the Mexican labor program is desirable. It can be granted that working conditions provided for these people may sometimes fall below proper standards. But from a realistic viewpoint it must be recognized that even so they fare better with these jobs then they would if temporary entry in the the United States were denied them.

The extension would at least provide some guarantee that the necessary food harvests would be carried through, and that food supplies would be available.

Man and God in Warsaw

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. DERWINSKI. Mr. Speaker, peaceful coexistence has been a magic phrase for years. Misguided individuals, many of whom, unfortunately, seem to congregate in our State Department, advocate economic concessions to Communist governments, forgetting the atheistic dogma that is the foundation for all Communist thinking. The editorial, "Man and God in Warsaw," in the Washington Evening Star, Tuesday, March 21, is a penetrating observation of the latest church and state conflict which has erupted in the satellite nation of Poland:

MAN AND GOD IN WARSAW

Once again, with characteristic eloquence and courage, Cardinal Wyszynski of Poland has spoken out against the Communist regime's effort to atheize his countrymen, the overwhelming majority of whom are Roman Catholics.

Back in 1953, after having similarly resisted incessant Red attacks on Catholicism among the Poles, Cardinal Wyszynski was imprisoned by Warsaw's Stalinist dictatorship. In 1956, however, he was liberated as a result of the great revolt against that Moscow-imposed tyranny. The revolt, which came close to exploding into armed violence against the Soviet Union (as in Hungary), brought Wladyslaw Gomulka to power as head of a new "anti-Stalinist" regime, and this regime promptly negotiated a state-church accord promising to put an end to past repressive measures against faith in God and to remove all barriers to the "realization of the principles of full fredom of religious life."

But within the past year or so, with mounting intensity, the Reds of Warsaw have been carrying out a campaign to poison the minds of the Polish people not only against the Vatican and the church in general, but also against the very idea of believing in God. Denying all this, Mr. Gomulka has accused Cardinal Wyszynski of seeking to provoke the "persecution and martydom" of Catholics in Poland solely and simply to fight against communism and its programs—totalitarian programs that regiment the mass, and make the individual a creature of the state, in order to promote material progress, so called. As to that, affirming that man's spirit is "eternally in rebellion against slavery and falsehood," the cardinal has had this to say:

"Man is not made just to be a consumer animal. Man is called to something higher. The world assigns programs to men: 'Eat and shut up.' And Christ says to the world: 'I tell you man does not live by bread alone.' It is only necessary to ask what serves man better? Whether he licks their boots (the rulers) like a serf renouncing his freedom, his reason, his will; or whether he stands upright with his head high, courageously professing truth, defending his human dignity?"

Cardinal Wyszynski has no doubt about the human soul's ultimate destiny. Speaking from his pulpit in Warsaw to the Communist rulers, he has declared: "I tell you, you Caesars, you will bow to your God, and you will serve only Him. Satan is mighty, but man will not bow his head before him. * * * I tell you, you will serve only your God, because man is too noble to serve anyone but God."

Metaphysically and otherwise, this is perhaps a too hopeful view of the future, but freemen everywhere have reason to applaud and embrace it.

Honorary Membership of President Kennedy in Zuni Indian Tribe of New Mexico

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. ANDERSON. Mr. President, it gives me pleasure to report that President Kennedy has been taken into the Zuni Indian Tribe of New Mexico as an honorary member. A certificate of tribal membership was presented to the President yesterday at the White House by Mrs. Clara B. Gonzales, educational supervisor of the Zuni Indian Reservation in New Mexico. She and other recipients of the National Civil Service League's Career Service Award visited the White House yesterday.

I ask unanimous consent that an account of this visit which was published in the Washington Star of March 21, 1961, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY IS TRIBE MEMBER

(By Mohammed H. Rauf, Jr.)

The Zuni Indians of New Mexico have decided to appoint President Kennedy an honorary member of the tribe.

They also have conferred upon him the title of "A-chi-ya-la-to-pa," which means a very wise, powerful and prominent being.

Mrs. Clara B. Gonzales, educational supervisor of the Zuni settlement, presented the President today with a certificate conferring upon him the title and the rights and privileges of a governor as long as the green grass grows, and the rivers flow.

The title is derived from the name of a Zuni mythical hero with wings, who was supposed to hover over the tribe and protect it from all evil.

A GIFT

Gifts that will go with the certificate include a bolo tie, with a figure of the hero done in turquoise shells inlaid in silver.

Mrs. Gonzales, an employee of the Bureau of Indian Affairs, Department of Interior, has been with the Zunis for more than 30 years, supervising the education and general uplift of the 4,200 members of the tribe.

Called "tsita" or mother by the Zunis, the hazel-eyed educator will be the recipient today of a career service award of the National Civil Service League for "competence, character, and outstanding achievements" in the discharge of her duties.

She is the only woman among 10 recipients this year of the award. Included in the list is John D. Jernegan, U.S. Ambassador in Iraq.

The Louisiana-born Mrs. Gonzales is credited with instituting almost 100 percent literacy among the Zunis, and also stimulating a desire for higher education among the younger generation.

Mrs. Gonzales, who is a member of the New Mexico Education Association and the American Association of School Administrators, said that the urge for college education is equally strong among the Zuni women.

She cited the case of young Carmelita Allapowa, one of the first women to graduate in nursing from the University of New Mexico.

Mrs. Gonzales said that the tribe is being modernized at a very fast pace.

Until recently it had a matriarchal system of society. This meant that when a man married, it was he who went to live with the bride's family, until the couple had their own house. Also, the children bore the name of the wife's people.

But now, said the educator, the children are given the father's name, and other facets of a matriarchal society are breaking down.

Marriage is not a question now of selection by the parents. The custom of dating has become fully established.

The younger generation speaks English, dresses in western clothes, drives automobiles, and dances "rock 'n roll," and is as impatient to get ahead as young people in other parts of the country.

The tribe has made a name for itself in jewelry making. Mrs. Gonzales displayed a squash-blossom, silver turquoise necklace she was wearing, and said it sells for about $75.

Other handmade jewelry includes bracelets, belts, watch chains, brooches, and pins.

Dryden Reports United States Is Not Using All Available Talent in Space Effort

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, the Committee on Science and Astronautics has begun a comprehensive review of the American space program in order to determine where we stand now and what has to be done in the future to place this country in the forefront in space.

Under unanimous consent, I call the attention of Members of the House to an informative article on the launching of our hearings in Aviation Week of February 20, 1961:

DRYDEN REPORTS UNITED STATES IS NOT USING ALL AVAILABLE TALENT IN SPACE EFFORT

(By Ford Eastman)

WASHINGTON.—The United States is not using all of the scientific or industrial talent available in its space program, Dr. Hugh L. Dryden, Deputy Administrator of the National Aeronautics and Space Administration, told the House Science and Astronautics Committee last week.

Dr. Dryden, responding to committee questions on whether the United States could expand its current space program, said there is surplus talent in both industry and universities that could be used in an expanded and accelerated space program. He also told the committee that "we as a Nation are in a scientific and technical competition with the Russians" and that NASA is working as hard as it can with the resources that are available to it.

OPENING WITNESS

He appeared as the opening witness in a major inquiry into the current status of the U.S. space program to determine whether its rate of progress is sufficient to catch and overtake the Soviet effort in this field and whether it is adequate to meet both U.S. scientific and military requirements. Dr. Dryden was scheduled to be followed by top technical officials from the Secretary of Defense's staff and by research and development commanders of the Army, Navy, and Air Force.

Dr. Dryden also told the committee that the new NASA Administrator, James E. Webb, had been ordered to make a comprehensive review of the Agency's space program and submit recommendations to President Kennedy for its revision or expansion.

He credited the current Soviet space achievements to a 4-year lead over the United States in organizing a national space effort and to a technical superiority in developing large thrust booster rockets. He noted the Soviets organized an interplanetary group of their Academy of Sciences in 1954, some 4 years before NASA was created in the United States.

The Soviets have been using their standard ICBM rocket booster as the first stage of their recent Venus probes, but have boosted their capacity for putting payloads into orbit to 7 tons by using improved second stage rockets.

DRYDEN WARNING

Dr. Dryden warned that the United States would not be able to match this current Soviet payload capacity until 1964, when the Saturn clustered booster is to be available, and he indicated that the Soviets would continue to employ their basic booster capacity to undertake a variety of space missions during this period that will be beyond any U.S. technical capability. These may include soft landings on the Moon, orbiting and returning a two-man astronaut team, and deep space probes to the area of Mars, he said.

Initial U.S. attempt to reach the vicinity of Venus will be made in August 1962 when two shots in the Centaur liquid hydrogen second stage rocket test program will be aimed at Venus with a 1,100-pound payload. Dr. Dryden emphasized that these shots are primarily Centaur test shots in the early development test cycle of this vehicle. The programing toward Venus is being included in the hopes of achieving a scientific bonus and is not the main purpose of the shots.

VENUS SCHEDULE

The first all-out Venus shots would be scheduled in March 1964, when the Centaur is to have completed its test program and should offer the capacity for a "very sophisticated job of reconnaissance" in the Venus area. Saturn is to be initially available for Venus probes in October 1965, Dr. Dryden said.

Dr. Dryden warned that there is no way to buy "a year or two of time" in booster development and that the United States will have to "sweat it out" until its big booster program produces the vehicles capable of putting large payloads into space. He pointed out that it is now impossible for U.S. boosters to put a scientific payload in the vicinity of Venus except on the days when Venus is closest to the earth, while the Soviets were able to make their shot almost a month after the optimum date of January 13 had passed because of their much greater booster thrust.

Dr. Dryden also said that:

U.S. guidance systems are "as good as the Russians" and that bigger and better systems are available, but the United States does not have the booster power to use them.

Scientific information gathered through Soviet space experiments and released at scientific meetings has been sketchy and not as detailed as U.S. scientists prefer. He said he did not know if Russians are withholding details of their experiments or if they did not have the information to begin with.

The United States has generally collected more valuable scientific information, especially in the communications satellite field, and made this available to all nations, than has Russia.

The United States favors talking with Russia at every opportunity in an effort to effect cooperation in space exploration projects, but it has been difficult to find a field in which Russia would readily consent to cooperate. Russia insists that there are political problems to be solved first.

Use of solid fuels for booster rockets will grow at a normal rate, but will not be used as a replacement for Saturn in heavy space missions. There are problems connected with transporting solid fuel rockets, more burning time is required to achieve a greater overall impulse and greater reliability is required.

National Home Rule Road Program

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. YOUNG of North Dakota. Mr. President, last year, Fargo, N. Dak., received an All America City Award sponsored by Look magazine and the National Municipal League. I just received a letter from Mayor Herschel Lashkowitz, of this outstanding city, together with a copy of a resolution adopted by the Fargo City Commission. The resolution requests the enactment of a national home rule road program and makes other recommendations relative to the highway trust fund.

Fargo is North Dakota's largest city and I believe that the views expressed in the resolution and in the letter from Mayor Lashkowitz represent those of a great many North Dakotans. In think they would be of interest to Senators and other readers to the CONGRESSIONAL RECORD. Therefore, I ask unanimous consent to have the letter and the resolution printed in the Appendix of the RECORD.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

CITY OF FARGO, N. DAK.,
BOARD OF COMMISSIONERS,
March 15, 1961.

The Hon. MILTON R. YOUNG,
U.S. Senator, from the State of North Dakota,
Senate Office Building, Washington, D.C.

DEAR SENATOR YOUNG: You will please find enclosed herein a certified copy of a resolution adopted by the Fargo City Commission requesting the enactment of a National home rule road program and providing that the Federal gasoline and excise taxes be placed in a highway trust fund.

We feel that the home-rule-for-municipalities philosophy has great merit and we would appreciate your placing the enclosed resolution, together with this letter, in the CONGRESSIONAL RECORD and please call this to the attention of your colleagues for their consideration.

Thanking you in advance for this courtesy and with kindest regards,

Respectfully yours,
HERSCHEL LASHKOWITZ,
Mayor.

NATIONAL HOME RULE ROAD PROGRAM

Be it resolved by the Board of City Commissioners of the City of Fargo:

Whereas official Government records show that there are 3,400,000 miles of public roads in the United States, 2,600,000 miles are State and local roads, and 755,278 miles are Federal-aid roads; and

Whereas in 1960 the Federal Government collected $4,300 million from the motorists in gasoline and other excise taxes for Federal-aid road improvements. Of this sum, $3,400 million or 59.6 percent, was authorized for expenditure on the Federal-aid system, and $1,700 million, or 40.4 percent, was diverted for other Government purposes; and

Whereas of the money allocated for Federal aid, $2,500 million was authorized for improvements on the Federal Interstate System, which is estimated will carry only 20 percent of the total highway traffic when completed; and

Whereas the State and local roads now carrying 34 percent of the total traffic receive no Federal-aid funds; and

Whereas, the motor fund diversion and taxing policies of the Federal Government have forced our State and local road officials to curtail essential improvements on the State and local roads which traffic figures show are of great benefit to the motorists; and

Whereas as a direct result of this policy the motoring public has been deprived of billions of dollars worth of critically needed road improvements, and hundreds of thousands of our fellow citizens have been deprived of employment: Now, therefore, be it

Resolved, That we, the undersigned, hereby endorse amendments to the Federal Aid Highway Acts to provide a national home rule road program to require that all Federal gasoline and excise taxes be placed in the highway trust fund to be used exclusively for road improvement purposes, 60 percent of the trust fund to be used to continue improvements on the Federal-aid system and the other 40 percent to be allocated to the States—20 percent to be used for State highways and the other 20 percent to be allocated by the States to their political subdivisions on a fair population and mileage basis for the improvement of local roads.

This program, when enacted by Congress, will end the multibillion-dollar diversion of motor revenues; guarantee the motorists a balanced program of improvements on all classes of roads—Federal, State and local; promote the civic welfare of every community in the Nation; help restore national prosperity by providing employment for over 400,000 men on the roads and in the road-building material, equipment, and construction industries; and be it further

Resolved, That copies of this resolution be forwarded to the local newspapers, radio and television stations and to our U.S. Senators and Representatives in Congress to request their aid in securing prompt action by Congress.

The Burma Surgeon Today

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Wednesday, March 22, 1961

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a major portion of a script from a television program entitled "The Burma Surgeon Today." It was televised on Sunday, March 5, 1961, throughout the United States, by the Columbia Broadcasting System. It is a highly dramatic public service presentation. It reminds us of the road traveled by Dr. Gordon Seagrave during World War II. I think all of us who read it will be moved by it.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

THE BURMA SURGEON TODAY

(An episode in "The Twentieth Century" as broadcast over the CBS television network, Sunday, March 5, 1961)

Mr. CRONKITE. He is Dr. Gordon Seagrave, the Burma Surgeon. He is still in Burma today. In World War II, he and a small band of volunteer Burmese nurses—perhaps the most decorated medical unit in the annals of the U.S. Army—made history in retreat and in bloody fight back to Burma with American Gen. "Vinegar" Joe Stilwell. At war's end, Seagrave returned to his bombed-out hospital at Namkhan. Later, during Burma's civil war, trying to protect the hospital from a second destruction by rival forces, he was arrested, tried for treason, convicted and imprisoned by the Government of Burma. He appealed and was acquitted and exonerated. He returned to his hospital—his health broken. He is there now.

At Namkhan, 19 staff nurses, 77 student nurses and two doctors serve an area of 400,000 people. Gordon Seagrave was born in Burma. Today he is the only American at Namkhan. When civil war erupted in 1948, his wife and two sons went back to the United States to stay. Another son had drowned as a boy in the lake near the hospital. Gordon Seagrave's salary is $90 a month out of which he pays for his own food. It costs $75,000 a year to finance Namkhan, almost all raised through voluntary contributions in the United States and elsewhere. Only private patients must pay. The needy pay nothing. Those who can, donate something—a chicken, some rice or tea, a little money in the collection box. At Namkhan, Gordon Seagrave has taught the shy and the ignorant to put their trust in modern medicine as well as their faith in God. To Namkhan, travel the young and old—over jungle miles—to see the Burma Surgeon. This is the story of a man and his dream—not a biography but the man himself—entirely in his own words.

Dr. SEAGRAVE: Bring that next patient in, will you? What's holding you girls up? This is a new ——— that just came in. A history of 3 months of diarrhea which began as a real dysentery with blood. Since then the stools have been indigested—a slight cough beginning yesterday and night blindness which is getting to be quite common around here.

(Crying of baby.)

Dr. SEAGRAVE. A child with his mouth open like that, looks for all the world, as though he's geting ready to kick off.

(Sound of baby and nurses voices.)

Dr. SEAGRAVE (in Burmese). He hasn't got strength enough to really give a cry. I don't like to hear sick babies cry, but I'd rather hear them cry than unable to cry.

(Baby cries.)

(Sound of nurses voices.)

Dr. SEAGRAVE (in Burmese). All right, darling.

Dr. SEAGRAVE. Thank you, ———. A funny thing about these Chinese is that we can get most of them well. They look like they're already dead when they come in. Yet, they respond to these new drugs that we got from the drug firms in America.

I didn't want to come to Namkhan. It didn't make any difference to me where I came, just so long as it was into Burma. You see, I was born in Rangoon and my people had been working for Burma ever since 1834 and 1835, when two grandfathers came out. My ancestors were all either preachers or schoolteachers, but I was determined I was going to be a doctor, and it didn't matter to me what part of Burma I went into, just so long as I was serving Burma. Then when I got to Rangoon, they told me if I came to Namkhan I'd find a hospital already built and that I'd have the good will of the people; that I'd be able to start right out. And then, when I came up here and I saw that little, old hospital building and I walked inside and there was just one patient in there and the largest number of inpatients that they'd had in a year was 28. That meant that the hospital was empty almost all the time. Well, I just broke down and cried. I shed real tears. A disgraceful thing for a man to say, but when you prepared your whole life to do something and it just doesn't turn out as though you could possibly succeed. Namkhan is just a little village, you know. There weren't any really rich people there. It was a large marketplace and it didn't seem to me that there'd ever been any funds coming in to build up a big practice. And so, the only thing I could do was to make the best of a bad bargain and learn the language. And I spent 3 or 4 months learning the language and learning the people. And during that 3 or 4 months, I began to get an entirely different idea about these people. I could see that their medical need and surgical need was about as great as you could find anywhere in the world. I came out here to Burma with almost no instruments excepting those that I'd gotten out of a wastebasket in a hospital where I interned in Baltimore. But the thing that was important to me, especially at the beginning, was the fact that as an American—just one American—just one American medical man, I just couldn't do one thing for these people that was worth while. I had to have assistance among the Burmese whom I could train. I looked all over Burma to try to get doctors and nurses. I didn't have the money in the first place and they didn't have the doctors and the nurses in the second place. And I decided that since training doctors was completely out of the question, I'd start training nurses.

Girls, first aid treatment, fractured clavicle, tying the bandage.

Dr. SEAGRAVE (in Burmese). I hope you girls have brought your safety pins. You tie any granny knots today and you and I are going to have a fight. When you girls get done, come and show me. This bandage is too narrow. You begin at the elbow—tighter—the rest is all right. That's the first time you two girls haven't given me a

granny knot for some days. Who's first? That's too high. It has to begin at the elbow—here. That's a granny knot. And then, I tried teaching doctors and that was very, very difficult for quite a while. You know a doctor has a peculiar psychology. The great number of doctors think that if they pass medical school and pass a Government examination, their State boards, then they've reached the pinnacle and they don't have to learn anything more. But my point is that surgery, especially, is a thing that you just don't learn up here. You learn it in your fingers. You've got to transmit your—the knowledge that you've learned in—in medical school from your brain to your fingertips and that was where I always came up against it here in Burma, trying to train doctors. It was years before I finally got doctors that I could really teach. Here we have this man Silgaro, Dr. Silgaro, who is helping me here in the hospital now.

Dr. SILGARO. Somebody send for the old man, please.

Dr. SEAGRAVE. Is that a cyst?

Dr. SILGARO. No, it looks as though a tumor has spread to the other organs. If you would look down here, you could see the bleeding of the——

Dr. SEAGRAVE. Do you mind if I get my hands in there?

Dr. SILGARO. I think it would be better if you did.

Dr. SEAGRAVE. Dr. Silgaro is not the only one that I've taught to do things so that he can do them better than I can. As for grandma, our matron, I taught her how to pull teeth. Without the Burmese personnel that we've got here we couldn't do any work at all. And of that Burmese group, the most important group of all is that superb group of senior staff nurses. Back there in the war, it was the toughness of these girls, you know, that made a success of things. I could move them around into all kinds of places. Now, the Americans didn't believe that. We started out of Burma with General Stillwell. There were some 18 of these girls along with me and my American officers. And I was told that one of the high ranking officers on Stillwell's staff said that these girls, with their little short legs, would never be able to march out of Burma and keep up with the long-legged Americans. Well, General Stillwell squashed that and he told me that I was to get my girls in here somehow or other and if I couldn't keep up with him just because their legs were short, then I could follow at my own pace. We not only kept up, but when got to a stop these girls took care of the Americans' feet. The 18 girls that marched out of Burma with us, every single one of them got a personal Presidential citation and a Bronze Star. Now, I got a Bronze Star by the skin of my teeth, coming back in but I didn't get any for going out and I never got a personal Presidential citation.

You know what these girls pray about every morning when we have chapel service? They pray that the good Lord will forever increase the size of this hospital until it reaches the nth degree. And every time they pray that prayer I'm scared because the good Lord listens to them. And we don't have the facilities to accommodate our patients. We have 262 patients here today—inpatients. We have a total of 250 beds. That means that the other 12 are lying on the floor somewheres. Let alone all of their relatives and friends that come along with them. When they come a long distance, they don't dare come alone for fear they'll die and nobody'll be here to bury them. They don't know whether to trust us to get them well or not, you see. But it's cruel to have these patients come in with conditions like this and have no place to put them. We haven't built a single building here which wasn't filled before the building was completed. And the question of building decent buildings to house them is—is really a terrific problem.

All through the east, all through India, all through Asia, the really needy man is—is the peasant, the common man. Now, beginning in a village like this, we reach those people first and those people are the people that get converted to all kinds of peculiar doctrines which they don't know anything about. You help them and then later on your influence spreads to some of the bigger towns and you can help the other people too. Now, only a private institution like this one can do that kind of a thing. If the U.S. Government helps the Government of the Union of Burma, no matter how many millions of dollars to do something or other, whatever they do has to start from the cities and then it spreads out. Eventually, we hope and pray to the common man in the villages, who is the real man of Asia. We can begin backward.

We can begin in a place like this, that can't afford to give us the equipment that we want. We never have had enough money to do one darn thing. But we can go ahead and give them good treatment. We can give them good surgery.

It's absolutely ridiculous, you know, the situation with regard to the children here. We see cases of malnutrition and starvation, which in the old days were always allowed to die at home and now they bring them to the hospital—emaciated little skeletons. It just breaks my heart to look at them. It nauseates me. It nauseated my son, too, actually when he came to visit me a couple of years ago. He went around in the hospital. He saw these—these horribly ill patients, men, women, and children—and he'd come back and tell me at dinner time that he just couldn't stand it. He was nauseated. He just couldn't eat. And he said: "Why don't you feel that way, daddy?" And I says: "I do." "Well," I said, "there's a difference between you and me. There's just one little difference that makes it tolerable and that is with me I know that I can probably help them and you know you can't help them. That's what makes you sick."

It took me years to get the women of this country to come to us for—for delivery. They'd get into the most horrible complications and they'd come here with the baby dead and with the woman dying. And that is about all I saw for 5 years. And so, we've put on a regular campaign with them, to persuade them to come ahead of time. Now, by George, they're doing just that. They're coming here ahead of time and we got a whole line of them already to deliver right away in the hospital now.

(Nurses work on baby.)

Dr. SEAGRAVE. What language does that baby speak? What is the baby, Emily? A boy or a girl?

EMILY. A boy.

Dr. SEAGRAVE. Well then, maybe someday that boy will grow up to be a Prime Minister of Burma. I was so darned busy during the operation I didn't have a chance to look. Is that—that baby the one I delivered just now?

NURSE. Yes.

Dr. SEAGRAVE. That's not a bad looking baby. It's pink enough now; I thought you said it was a blue baby.

NURSE. It was very blue at the beginning.

Dr. SEAGRAVE. What did you do, give it some oxygen?

NURSE. We gave everything.

Dr. SEAGRAVE. You gave it the whole works, huh? Well, thank the Lord we've got a live baby. If you get a live baby and a live woman, and this woman is more than alive, grandma says, then that's what I call a real success.

I've been ill—again and again and again. Sometimes I've been so ill that I've wondered whether I'd wake up the next morning. And that's what frightens me. My friends in America have tried to force me to go back on account of my health. And I know it would improve if I once got to America. But I'm still scared that accidents might happen on the way there, or on the way back. And I know it's corny. I've been told it was corny by a good many people. The only way that I can prove to these Burmese here in Burma that I have meant every word that I ever said to them on the subject is for me to die right here in Namkhan. They're scared to death that I'll die somewhere else. I don't want to die on the road back to the States. I don't even want to die in the United States, no matter how much I love the United States. By George, 267 patients. I'm going to need an extra cup of coffee on that.

Address by Hon. Willy Brandt, Mayor of West Berlin

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22, 1961

Mr. HUMPHREY. Mr. President, our shores have recently been graced by the presence of the Honorable Willy Brandt, the dynamic governing mayor of Berlin. It goes without saying that his far-sighted leadership has made West Berlin a thriving island in a sea of Communist tyranny.

As the United States moves forward in the New Frontier of progress under the Kennedy administration, it is well to note that our American fervor has transcended all physical barriers in communication with our friends abroad. Thus, Mr. President, I wish to share with my colleagues Mayor Brandt's March 13 speech at the Roosevelt Day dinner entitled "New Frontiers for German Democracy," and request at this time unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW FRONTIERS FOR GERMAN DEMOCRACY—THE ROLE OF GERMANY IN WORLD AFFAIRS

(Speech of Willy Brandt, Governing Mayor of Berlin, to the Washington Chapter, Roosevelt Day Dinner at the Shoreham Hotel, March 13, 1961)

It is a great honor for me to be able to speak to you here in Washington on the occasion of Roosevelt Day.

My subject—"New Frontiers for German Democracy"—is not of my own choosing. I hope it will not be misunderstood—not in the German phrase, either. We are not speaking, of course, about the frontier lines on the map of Europe. What we are talking about are the new purposes which we must aim at in order to come closer to freedom from fear and freedom from want—despite all the difficulties.

I do not intend to conduct my election campaign in the United States. I am here as the governing mayor of Berlin, that is to say: of a city not only threatened and struggled over but also full of creative energy and of faith in the future. We can be proud of the rebuilding of our city as a

symbol of common effort and of an unbreakable will to remain free. I come to you as a man who is charged with political responsibility in his own country and who is convinced that he may speak as a friend to friends.

It is not for me to become involved in the conflicts and differences between political parties in this country, but in this moment I should like to be an ordinary European who respectfully pays tribute to a great democratic leader and social reformer of the United States. It is not a question as to when and where he may have been wrong. It is easy to be wise—20 years after the decision had to be taken. He who does nothing will make no mistakes.

In my image of Franklin D. Roosevelt there appears his profound conviction of the dignity of every single human being and his knowledge that freedom is indivisible, that democracy cannot be static. This image includes the awareness of a grave responsibility towards the whole world—to look upon it as one big family. I am happy to find this spirit alive.

For a moment, however, let me conjure up for you the world situation of 1932 and 1933. Roosevelt gave one answer to the great crisis, Hitler was the other answer. Perhaps much could have been spared to all of us if the American answer had been given sooner. No one can prove it. Nor would this relieve anyone of his share of the responsibility but it directs our attention to one important point—that in the life of nations there is nearly always more than one alternative and that the study of history is worth nothing if it teaches us merely that everything turned out the way it did because it had to turn out that way.

I speak to you as mayor of Berlin, and I am speaking of two things becouse of which my city has reason to be grateful to Franklin Roosevelt.

First of all, a general observation: We could not have survived if there had not been the transformation of the United States' firm democratic tradition into a firm and lasting commitment to assume responsibility and leadership within a community of free nations. There emerged from this a foreign policy which overcame the Berlin blockade and which leaves American soldiers and civil servants in my city—because a few million foreigners wish to remain free.

Berlin also has much to be grateful for to that part of the New Deal which led to the Marshall plan. Following the blockade—little more than 10 years ago—about one-half of the employable population in my city were out of jobs. The Federal Republic was still too young and itself still too poor. In this situation the Marshall plan's undogmatic and effective aid saved us.

Every visitor to my city can see for himself that we have spent the American taxpayer's money conscientiously and successfully. We can be proud that it has been possible—through common endeavours—to turn a heap of rubble into a new center of economic and cultural activity. It is not only in keeping with the Berliners' wish but just as much with the vital interest of the United States that the freedom of my city must never be traded for the false flag of a free city. This would be the death of freedom itself.

Of course, I need not have come to Washington to find out that the President of the United States has not the slightest intention of giving up the obligations assumed in Berlin. The opposite is the case and I am thankful for it. As Senator HUMPHREY told me when he was on his way to Moscow in November 1958: A new policy cannot be based on the breach of international obligations and on moral capitulation.

We in Berlin well understand the need for international economic assistance and cooperation.

The Federal Republic—it must be said—is not as wealthy as many people think. Some of my compatriots have managed to convey a wrong impression to the world, as far as that is concerned. But for me there can be no doubt that my country must make its fair contribution to the burdens of the western community, and that we must be ready for continuing adequate contributions to development aid. Reasonable arrangements to this end made by the present government with the allies will be honored by an alternative government. Natural limits are set only by the obligation which we have at home to demonstrate every day anew to a divided people the strength and success of democracy. Our people's immunity against Communist infiltration is a factor of security—also as far as our allies are concerned.

We have been helped. Together with our friends in Europe and America we must prepare for an attack against hunger and poverty, against epidemics and ignorance.

President Kennedy knows of the multitude of hopes which he has aroused throughout the world. He can be certain of the support of all of us when he sets out to come to the aid of starving and suffering peoples by tested means and by new ones—not in order to gain allies in the cold war but to help to assure mankind's future.

Your President's plan to establish a Peace Corps has found a worldwide echo. Among the young people in my country, too, I have encountered great interest and a number of organizations are already active in this field. I have asked some of my friends to look after this important task. We shall have to evolve our own forms, but at the same time we would like to be ready in case suitable methods of international cooperation should offer themselves.

I would like to recall Roosevelt's word of "the one big family." Perhaps it is different here, but in my country there are sometimes members of a family that one prefers to see leaving rather than coming. That is not a good family spirit—but it is not a good family spirit, either, to get together only on holidays and to be nice to one another. What we need is honesty and earnestness. Ineffective declarations and noncommittal protocol gatherings we don't need so much.

My country has become a dependable member of the western community of nations; so much can be taken for granted. But I believe—quite seriously—that being a dependable follower is not enough.

We have been led in a new direction—perhaps a little hastily in the direction of rearmament. We were taken by the hand and given assistance along the way. Having left this state behind us—in material respects, I mean—we shall also have to shed the remaining egg shells of our history. This means that we have to contribute our own proposals or objections as an independent partner in the western alliance with more emphasis than in the past, and then, of course, to put our weight behind the common policy without any qualification.

But—some may ask me—"Are you able to do that—has democracy struck roots among you, or must we expect bitter disappointments?"

Let me answer with a personal statement: After the Second World War I could not have returned from Scandinavia to my country unless I had hoped for a better future or believed in the good qualities of my people. I did the right thing then and I have not been disappointed. My hope and my faith in the German people's future—cautiously held at first, I will admit—have been confirmed more strongly than I could have expected then. Contemptible insinuations and the resulting disappointments have not made the slightest difference to this.

Do not think—I beg you—that I am trying to explain away any of the crimes perpetrated in the name of Germany. Anyone in Germany who seeks to gain advantage from an appeal to the evil past may achieve momentary success, but in the end he will be hit by a boomerang.

We have to contend with the shadows of the past; that remains a task. But the problems of the present time lie elsewhere. The young generation is our big chance. We have not gathered experiences with a totalitarian regime in order to put up with a dictatorship of another color. But we will have to bear in mind that freedom is more than mere anticommunism.
